Transportation of baggage allowed by Army Regulations of 1st March, 1825, revised 20th October, 1827, paragraph 1053.

Per diem allowance to officers superintending the erection of fortifications: Army Regulations, 1st March, 1825, paragraph 893.

Per diem allowance to topographical officers whilst engaged in the field on surveys: Army Regulations, 1st March, 1825, paragraph 917.

Per diem allowance to officers on court-martial duty: paragraph 1041.

Commissions on disbursements to topographical engineers: order of the War Department, 26th March, 1825.

For per diem allowances to officers superintending the erection of barracks, roads, &c.: order of the War Department, 11th June, 1828.

Commissions to officers (not being disbursing officers) on disbursements in Quartermaster's department, per order of the Secretary of War of 2d March, 1818.

PETER HAGNER, *Auditor.*

TREASURY DEPARTMENT, *Third Auditor's Office, April* 20, 1830.

No. 3.

TREASURY DEPARTMENT, *Third Auditor's Office, April* 20, 1830.

SIR: I have the honor to transmit the following statements, prepared in conformity with your directions, and in compliance with the resolutions of the House of Representatives of the 4th February, 1830, so far as the same appertain to this office:

1st. Statement of allowances made to officers of the army, within the years 1828 and 1829, for transportation of baggage, per diem, and travelling allowance on court-martial duty, and for extra services. (The statement No. 1 here referred to is incorporated in statement A, Doc. No. 2.)

2d. Statement of the allowances made or accrued to the major general and his staff, and persons employed in and about his office, during the years 1828 and 1829; of all those employed upon bureau or other duty in or about the offices of the Adjutant General, Commissary General of Subsistence, Colonel of Ordnance, Paymaster General, the chief of the corps of engineers, and the Surgeon General, including the head of each department. (The statement No. 2 here referred to is incorporated in the statement marked No. 3.)

3d. Statement showing the extra allowances made to surgeons and assistant surgeons for attending upon persons in the army, or in the military or engineer service of the government, within the years 1828 and 1829; also the names of all citizen surgeons who have been employed within the years aforesaid, respectively, and the compensation to each. (See document No. 4, letter D.)

The statement of allowances made to officers of the army within the years 1828 and 1829, it will be perceived, does not embrace allowances of any previous years, as called for by the second paragraph, it having been found that, to have extended the examinations and prepare the statments for that purpose, more time would have been necessary than it is probable the present session of Congress would continue; and as, on a former call of the committee on retrenchment, statements have been furnished from this office of the allowances made to officers of the army for several preceding years, from which the information may be derived as to such of the officers as are contained in the present statement, and who have received previous allowances, it was considered proper to furnish the present statements without further delay. If, however, it shall be deemed necessary, notwithstanding these circumstances, that the examinations and statements should be made for the previous periods, it shall be commenced and be completed as early as practicable.

I have the honor to be, respectfully, your obedient servant,

PETER HAGNER, *Auditor.*

Hon. JOHN H. EATON, *Secretary of War.*

Statement showing the pay, emoluments, and allowances made or accrued to the major general and his staff, and persons employed in and about his office during the years 1828 *and* 1829; *of all those employed upon bureau or other duty in or about the offices of the Adjutant General, Commissary General of Subsistence, Quartermaster General, Colonel of Ordnance, Paymaster General, the chief of the corps of engineers, and the Surgeon General for the same period; made in pursuance of the third paragraph of the resolution of the House of Representatives of the 4th of February,* 1830.

No. 4.

SURGEON GENERAL'S OFFICE, *February* 22, 1830.

SIR: In compliance with that portion of the resolution of the House of Representatives of the 4th instant referred to this office, I enclose a statement (A) of the names of the surgeons and assistant surgeons of the army who have been absent from the regular posts during the years 1828 and 1829, respectively, and of the whole period of their absence, agreeably to the orders issued to and the reports received from them.

In a few cases the precise time taken to execute an order cannot be ascertained, but the error does not exceed a few days.

Under existing regulations commanding officers of posts are authorized to grant temporary leave of absence for a period not exceeding three, and commanding officers of departments for a period not exceeding thirty days.

Generally the surgeons obtain a friend to attend the sick during their absence, or pay the expense themselves; and as the period is short, no report is made to the department, unless a private physician is employed and paid by the public. These, therefore, are the only cases I am able to state under the head of "on leave of absence."

With regard to the amount accruing to them during such absence, those under orders, on the march, in arrest, and on courts-martial, are entitled to their full pay and emoluments; those on furlough, or on leave of absence, to their pay, rations, forage, and private servants, but not to fuel, quarters, transportation, or other contingent allowances. What amount they may severally have received during this period I am unable to state.

Surgeons and assistant surgeons are required to render their professional services "to the officers, non-commissioned officers, musicians, privates, and enlisted artificers and laborers in the service of the United States;" and I am not aware that extra allowances have been made to them on account of any person belonging to the army. No such allowance is authorized out of the funds of the Medical department; and if any has been made under special orders, I can find no record of it. In two or three cases, I understand, they have been paid, by officers superintending the erection of fortifications in their vicinity, to attend the slaves or hired laborers employed on the works, part of the contract with the masters being that they shall be furnished with medical attendance; but I am not informed of the names of the surgeons, the period of their employment, or the amount paid them, and do not know how they can be ascertained, except by reference to the accounts of the several officers of the Engineer department who have had the superintendence of such works within the period referred to.

I also enclose statements (B and C) of the names of the citizen physicians who have been employed within the years 1828 and 1829, respectively, (except those whose accounts for the last quarter of 1829 have not yet been received,) of the time of such employment, and the compensation to each. In those cases, however, where they have been engaged to accompany detachments on the march, instead of the period of employment, I have recorded the places from and to which the troops were ordered, as "from St. Louis to Fort Snelling," "from Baltimore to Cantonment Brooke," &c., &c.; and am, therefore, under the necessity of reporting them accordingly. Where they have been employed to attend on officers stationed at places where no army surgeon can be obtained, their accounts are rendered for a certain number of visits in the course of the quarter or year, so as not to admit of a statement of the period of employment, but only of the amount paid on account of each within the years specified.

Very respectfully, your obedient servant,

JOS. LOVELL, *Surgeon General.*

Hon. J. H. EATON, *Secretary of War.*

A.

Statement of the names of the surgeons and assistant surgeons of the army who have, within the years 1828 *and* 1829, *been absent from the regular posts of the army, and the whole time of their absence.*

Names.	Period.	Remarks.

ENGINEER DEPARTMENT, *Washington.*

21st Congress.] No. 454. [1st Session.

PROCEEDINGS OF A COURT-MARTIAL IN THE CASE OF ADJUTANT GENERAL ROGER JONES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 14, 1830.

DEPARTMENT OF WAR, *May* 14, 1830.

SIR: In compliance with the resolution of the House of Representatives of the 28th ultimo, I have the honor to enclose to you herewith "a copy of the proceedings of the court-martial lately held in the city of Washington for the trial of the Adjutant General of the army of the United States."

Very respectfully,

J. H. EATON.

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives*

HEADQUARTERS OF THE ARMY, *Washington, May* 14, 1830.

SIR: In compliance with your instructions, I have the honor to transmit herewith the copy of the proceedings of the general court-martial in the case of Adjutant General Roger Jones, called for by a resolution of the House of Representatives, dated the 28th of April.

I have the honor to be, very respectfully, your most obedient servant,

ALEX. MACOMB, *Major General Commanding the Army.*

Hon. JOHN H. EATON, *Secretary of War.*

Copy of the proceedings of a general court-martial, convened at Washington, D. C., in virtue of the following order, to wit:

ORDER No. 7.

ADJUTANT GENERAL'S OFFICE, *Washington, February* 12, 1830.

A general court-martial, to consist of thirteen members, will assemble at the city of Washington, at 11 o'clock, a. m., on the 22d day of February instant, or as soon thereafter as practicable, for the trial of Colonel R. Jones, Adjutant General of the army, on such charges and specifications as the judge advocate may lay before the court.

The following officers are detailed to compose the court, to wit:

Brevet Brigadier General H. Atkinson, 6th regiment of infantry, *president.*
Brevet Brigadier General J. R. Fenwick, 4th regiment of artillery.
Brevet Brigadier General J. McNeil, 1st regiment of infantry.
Brevet Brigadier General John E. Wool, inspector general.
Brevet Brigadier General W. K. Armistead, 3d regiment of artillery.
Colonel James House, 1st regiment of artillery.
Brevet Colonel W. Lindsay, 3d regiment of artillery.
Colonel George Croghan, inspector general.
Colonel William Lawrence, 5th regiment of infantry.
Brevet Colonel W. Morgan, 3d regiment of infantry.
Brevet Lieutenant Colonel James Bankhead, 3d regiment of artillery.
Brevet Lieutenant Colonel W. J. Worth, 1st regiment of artillery.
Brevet Lieutenant Colonel A. S. Brooks, 1st regiment of artillery.

Supernumeraries.

Brevet Major M. M. Payne, 4th regiment of artillery.
Brevet Major M. Mason, 1st regiment of artillery.
Brevet Major R. A. Zantzinger, 2d regiment of artillery.
Brevet Captain R. L. Armstrong, *judge advocate.*

By order of Alexander Macomb, major general commanding the army.

S. COOPER, *Acting Adjutant General.*

FEBRUARY 22, 1830.

The court met in pursuance with the preceding order.

Present: General Atkinson, president; General Armistead, Colonels House, Lindsay, and Morgan; Lieutenant Colonels Bankhead and Worth, members; Majors Payne and Zantzinger, supernumeraries; Captain Armstrong, judge advocate.

There not being a competent number present the court was adjourned until 12 m. on the ensuing day.

FEBRUARY 23, 1830.

The court met pursuant to adjournment.

Present as yesterday. Also General McNeil and Colonel Croghan, members; Major Mason, a supernumerary member.

There not being a competent number present yet, the court was adjourned till 12 m. on the 24th instant.

FEBRUARY 24, 1830.

The court met pursuant to adjournment.

Present: All but Generals Fenwick and Wool, in consequence of whose absence Majors Payne and Mason, supernumeraries, became members of the court.

At this stage of its proceedings Lieutenant Colonel Bankhead submitted the following claim to the court: [In support of this claim, on his part, Lieutenant Colonel Bankhead was permitted to read the following paper to wit.—See Appendix for the document in question, marked T.]

"I claim to sit upon the court as a colonel from the date, and in virtue of my former commission as Adjutant General."

The court having been cleared upon this proposition decided, on being re-opened, that they will not enter into an examination of the claim asserted by Lieutenant Colonel Bankhead, and that he shall be held to take his seat according to the rank assigned him in the order convening the court.

Major Zantzinger then applied to be relieved from the court, in aid of which application he read the following.—(See in Appendix paper marked Z.)

The court cleared and re-opened. Decide that they will not dispense with Major Zantzinger's attendance.

The accused then prayed to be allowed the aid of counsel; which being granted, S. A. Storrow, esq., appeared in court as his counsel.

The court then adjourned till 10 a. m. on the ensuing day.

FEBRUARY 25, 1830.

The court met pursuant to adjournment.

Present as yesterday.

The court then having been duly sworn in presence of the accused, who being previously asked if he objected to any of its members, and replying in the negative, proceeded to the trial of Colonel Roger Jones, Adjutant General, arraigned before them on the following charges and specifications, to wit:

CHARGE 1st.—*Disobedience of orders.*

Specification 1st.—In this, that he, the said Adjutant General R. Jones, did, at Washington, D. C., and on or about the 16th of January, 1830, officially promulgate Special Order No. 7, under date of January 16, 1830, in violation of express orders to him, Colonel R. Jones, from Major General Alexander Macomb, touching the promulgation of orders, special or general in their provisions.

Specification 2d.—In this, that he, the said Adjutant General R Jones, did, at Washington, D. C., and on or about the 18th of January, 1830, officially promulgate Special Order No. 8, under date of January 18, 1830, in violation of express orders to him, Colonel R. Jones, from Major General Alexander Macomb, touching the promulgation of orders, special or general in their provisions.

Specification 3d.—In this, that he, the said Adjutant General R. Jones, did, at Washington, D. C., and on or about the 18th of January, 1830, officially promulgate Special Order No. 9, under date of January 18, 1830, in violation of express orders to him, Colonel R. Jones, from Major General Alexander Macomb, touching the promulgation of orders, special or general in their provisions.

Specification 4th.—In this, that he, the said Colonel R. Jones, did, at Washington, D. C., on or about the 21st of January, 1830, officially promulgate Special Order No. 11, under date of January 21, 1830, in violation of express orders to him, Colonel R. Jones, from Major General Alexander Macomb, touching the promulgation of orders, special or general in their provisions.

Specification 5th.—In this, that he, the said Adjutant General R. Jones, did, at Washington, D. C., and on or about the 1st of January, 1830, publish, or cause to be officially published, the Army Register for the year 1830, without previously informing Major General Alexander Macomb of such publication; this in violation of express orders to him, Colonel R. Jones, from the aforesaid Major General A. Macomb.

CHARGE 2d.—*Conduct subversive of good order and military discipline.*

Specification 1st.—In this, that he, the said Adjutant General R. Jones, at Washington, D. C., and on or about the 20th of December, 1829, while submitting to the Secretary of War, for his election between them, as models for the contemplated Register of 1830, two Army Registers, the one being that for 1828, and the other that for 1829, did conceal from the Secretary of War the fact that there were substantial differences between the two Registers here mentioned, and that he, Colonel R. Jones, and Major General A. Macomb were in direct issue upon the point of their respective propriety.

Specification 2d.—In this, that at Washington, D. C., and on or about the 23d of January, 1829, he, the said Colonel R. Jones, did confessedly procure the Secretary of War's approval of the form given to the Army Register for 1830, for the purpose of counteracting the particular views entertained upon the subject of the manner and matter of this official document by Major General A. Macomb.

CHARGE 3d.—*Disrespect towards his commanding officer.*

Specification.—In this, that he, the said Colonel R. Jones, Adjutant General of the United States Army, as aforesaid, on being told, in a conversation held between him, Colonel R. Jones, and the commanding general, Alexander Macomb, esq., that his clandestine procurement of the Secretary of War's approval of the form given to the Army Register for 1830 was disrespectful towards himself, the said Major General A. Macomb, and would as such probably require the cognizance of a general court-martial, did reply, in a

loud and violent tone of voice: "I defy you, sir, I defy you," or words of similar import. This in the office of the said Colonel R. Jones, and on or about the 23d of January, 1830.

By order:

R. L. ARMSTRONG, *A. J. A. E. Dept.*

WASHINGTON, D. C., *February* 23, 1830.

The accused here submitted to the court the following remarks and documents in support of an application made by him to the court to be dispensed from pleading to the charges just read:

"Prior to my definite answer to the document just read by the judge advocate, I beg leave to call the attention of the court to an incident which presents an anomaly in our service, and would in any service. I need cite no authorities, your own experience will fill the void. He that is arraigned shall be furnished at the earliest *possible* period with information of the charges against which he is called to defend himself. The charges *once furnished* they are beyond the reach of him who furnished them. A prisoner in this claims but the privilege of light to see and know that of which he is accused, and to receive time and facilities requisite to rebut it.

"Until a late hour of the last evening I was not apprised that this accustomed, this prescriptive course had been departed from. On the eighth of the present month I received from the commanding general of the army, who stands before you as my prosecutor, a communication containing charges and specifications regularly drawn, and officially signed by the judge advocate, accompanied by a letter from himself, wherein he avowed them as such. I consider that the prosecutor had herein fulfilled the condition of the law, and that I was legally informed of the points on which I was to defend myself. The letter and the accompanying charges, with my own acknowledgment of the same, are herewith submitted to the court. Upon these charges I demanded my witnesses, and stood ready to be tried before you, my fellow soldiers, and my country. At a late hour of the last evening, on the second day of the appointment of the court, I am furnished with a new set of charges, seemingly as official as the former. On which of these am I to be arraigned? The law is imperative that charges shall not be altered by prosecutor or judge advocate, either in substance or form, after they have been officially furnished; and yet they have been altered both in substance and in form. The sole, and that a most closely guarded power of alteration rests in the one who orders the court. In the exercise of that power, apparent in the present case, each set of charges had the same signature. But the one who ordered the court is at the same time my prosecutor, and the law inhibits a *prosecutor* from making *alterations*. I respectfully request the court to relieve me and the service from the embarrassment resulting from his acting, or at least seeming to act in this two-fold capacity; if as my prosecutor alone, the charges must stand as he gave them to me; if as my commander and prosecutor in one, it is fit that these appear upon the record, an authority from himself to do in one capacity that which he has no right to do on another.

"To render it apparent that this is no groundless complaint, I give but a single instance of the evils under which I labor. On the 8th of February I was officially furnished with a set of charges and specifications; one of them, the third specification of the second charge, alleged fraud practiced, either directly or indirectly, by myself upon the Secretary of War. This declaration is exhibited to that officer himself, and to the President of the United States, and for the space of sixteen days stands in the face of day beyond the reach of denial or disproof by me. The letter of General Macomb, of the 8th of February, even invites me to become a party to it, and to spread, by what he terms a 'satisfactory acknowledgment,' my own mantle over my own dishonor. Under this injurious imputation I have labored for sixteen days. I have sought to meet it. Yet, at the very hour when the truth or falsehood of it was to become the subject of proof, it has disappeared, withdrawn by the one who urged and asserted it. Upon a course such as this I forbear commentary; it is amply capable of making its own.

"I beg the court to be assured that I dwell upon this point not that it bears upon myself; but that a principle thus established may be made to bear fatally upon others. It is against that principle that I respectfully but positively protest. On any set of charges that may be exhibited to you I am ready to be tried, let me but know what they are. If it be determined (and it rests with the court so to determine) that the one last furnished was legally furnished, I am ready for trial at any hour; give me but time to call together my witnesses."

The following documents, referred to above, were then submitted to the court by the accused:

Charges and specifications preferred against Colonel R. Jones, Adjutant General of the United States army.

CHARGE 1st.—*Disobedience of orders.*

Specification 1*st.*—In this, that he, the said Roger Jones, Adjutant General of the United States army, did, at Washington, D. C., in violation of the usages of the service, the inherent proprieties of the case, and the express and repeated orders of Major General Alexander Macomb, officially promulgate to the army, without the knowledge or sanction of the said Alexander Macomb, the following orders, to wit:

Special Order No. 7, of January 16, 1830.
Special Order No. 8, of January 18, 1830.
Special Order No. 9, of January 18, 1830.
Special Order No. 11, of January 21, 1830.

Specification 2*d.*—In this, that the said Roger Jones, Adjutant General of the United States army, did, at Washington, D. C., and on or about the 1st of January, 1830, publish, or cause to be officially published, an Army Register for 1830, without informing Major General Alexander Macomb of such publication, all this in violation of express orders to him, Colonel R. Jones, from the aforesaid Major General A. Macomb.

CHARGE 2d.—*Conduct subversive of good order and military discipline.*

Specification 1*st.*—In this, that he, the said Colonel R. Jones, on being informed, in an official conversation held between him Colonel R. Jones and Major General A. Macomb, in the office of the said Roger Jones, that his *clandestine procurement* of certain authority from the Secretary of War for the form given to the Army Register of 1830 was considered by him as disrespectful and contemptuous towards himself, the said Major General Alexander Macomb, and was such as to require the eventful cognizance of a

general court-martial, did loudly and openly defy him, the said General A. Macomb, to adopt that course. This through the following, or words of a like import, to wit: "I defy you," and on or about the 23d of January, 1830.

Specification 2d.—In this, that he, the said Colonel R. Jones, did, at Washington, District of Columbia, and on or about January 1, 1830, procure the expression of a preference by the Secretary of War for the form given to the Army Register for 1828, with a view to the adoption of a similar form for 1830, through the concealment of the very important fact that the propriety of this very form had, upon a previous occasion or previous occasions, been strongly contested by him, the aforesaid Alexander Macomb, in opposition to the said Colonel R Jones's opinions and views of the matter.

Specification 3d.—That in order to procure the Secretary of War's adoption of the form given to the Army Register for 1830 he did, in a conversation of an official nature with the said Secretary of War, and at Washington, District of Columbia, on or about December 23, 1829, directly or indirectly, give the said Secretary of War reasons for believing his, Colonel R. Jones's, sentiments upon this matter to be in correspondence with those of General Alexander Macomb.

Specification 4th.—That at Washington, District of Columbia, and on or about December 23, 1829, he, the said Colonel R. Jones, procured the Secretary of War's preference for the form given the Army Register for 1830, purposely to counteract the views entertained upon this matter by Major General Alexander Macomb.

By order:

R. L. ARMSTRONG, *A. J. A. E. D.*

HEADQUARTERS OF THE ARMY, *Washington, February* 8, 1830.

Sir: I received your letter of the 2d instant on the morning of the 3d, asking for a copy of the charges and specifications which were to be preferred against you.

It was my intention to have proceeded directly to bring your conduct before a general court-martial, and with that view had ordered a court to be detailed, and the judge advocate to make out the charges in form, a copy of which charges is herewith transmitted.

In this stage of the matter, the Secretary of War being desirous to know the grounds of the accusation, it was deemed respectful on my part to stay any proceedings until the Secretary would have time to consider the matter, as having reference in some respects to the War Department.

The President has been made acquainted with the whole subject, and the charges and specifications which represent your conduct as highly improper and insubordinate he has seen. He would be willing to let the matter take the course pointed out by the law in such cases, yet, desirous of maintaining the harmony of the service, as well as subordination in every branch of it, has intimated to me that it would be desirable that I should afford you an opportunity of making satisfactory acknowledgments for the aberrations from duty pointed out by the charges and specifications.

Respectfully,

A. MACOMB, *Major General Commanding the Army.*

Colonel R. JONES, *Adjutant General, Washington.*

WASHINGTON, *February* 11, 1830.

SIR: I have received your letter of the 8th instant, stating that the charges preferred by you against me had been submitted to the President of the United States, and that, acting upon his desire to prevent further difficulties, you "afforded me an opportunity of making satisfactory acknowledgments," &c.

During the time I have had the honor to discharge the duties of Adjutant General of the army I have a consciousness of having committed no act which would require an acknowledgment to be made. That errors may occasionally have taken place in the discharge of my official and arduous duties I shall not deny, because all men are liable to them. In this case I am aware of none. If any can be imputed I claim the right of saying, for it is correct, that it should be ascribed to error of opinion or judgment, and not to any disposition to infract any rule, law, or ordinance established for the government of the army. This I say in justice to myself, and not from apprehension of meeting any charge which can be furnished against me before a military court.

I am, sir, respectfully, your obedient servant,

R. JONES, *Adjutant General, in arrest.*

Major General ALEXANDER MACOMB, *Commanding the Army, Washington.*

FEBRUARY 24, 1830.

SIR: I have the honor to inform you that the following words were omitted in the copy of the charges sent you yesterday, to wit: "*As models for the contemplated Register of* 1830."

You will please, therefore, consider those words as inserted in the first specification of the second charge, immediately after the words "*for his election between them.*"

I have the honor to be, very respectfully, sir, your obedient servant,

R. L. ARMSTRONG, *J. A. G. C. M.*

Colonel R. JONES, *Adjutant General.*

FEBRUARY 24, 1830.

Received in the court, half past eleven o'clock.

R. JONES, *Adjutant General, in arrest.*

The court cleared. The court reopened; decided upon the above application that Colonel R. Jones shall plead to the charges on which he was arraigned in court.

Whereupon he pleaded *not guilty*.

The accused now submitted the following letter to the inspection of the court, and requested that, of the witnesses there named, summonses might be sent to Major General Scott and Major Kirby.

ADJUTANT GENERAL'S OFFICE, *Washington, February* 13, 1830.

SIR: It appears from summonses left with me for transmittal, that General Scott, Lieutenant Colonel Walbach, and Major Kirby, are required here as witnesses on the part of Colonel Jones. The commanding general has instructed me to advise you touching this subject, that these summonses will be withheld till the convention of the court shall furnish the accused with an opportunity of making it distinctly clear that these officers are in possession of *facts* which it will be important to him to establish. This measure he has resorted to from consideration to the interests of the service, which require the presence, at their several stations, of the officers in question, and from the utter impossibility under which he labors of even imagining how or wherefore it should be essential to Colonel Jones to compel the attendance on his trial of gentlemen having no sort of direct acquaintance with the matter charged against him, inasmuch as they were one and all absent from the seat of government during the period referred to in those charges. The ultimate decision of this question will, however, rest with the court, which, he doubts not, will, upon the expositions of the accused, take such measures as a discreet sense of justice to both parties in the trial may suggest. You will lose no time in informing Colonel Jones of this the general's determination.

I have the honor to be, respectfully, sir, your obedient servant,

S. COOPER, *Acting Adjutant General.*

Captain R. L. ARMSTRONG, *Judge Advocate.*

The court cleared; the court reopened. Direct the judge advocate to transmit the necessary summonses.

Copies of special orders Nos. 7, 8, 9, and 11, admitted by Colonel Jones to be authentic, were here produced in evidence of the 1st, 2d, 3d, and 4th specifications of the 1st charge, on the part of the prosecution.

Special order No. 7.

ADJUTANT GENERAL'S OFFICE, *Washington, January* 16, 1830.

Brevet Second Lieutenant J. F. Kennedy, of the 1st regiment of artillery, having been relieved from duty at the Military Academy, will report for orders to the commanding general of the eastern department.

By order of Major General Macomb.

R. JONES, *Adjutant General.*

ADJUTANT GENERAL'S OFFICE, *Washington, February* 16, 1830.

A true copy from the original on file in this office.

S. COOPER, *Acting Adjutant General.*

Special order No. 8.

ADJUTANT GENERAL'S OFFICE, *Washington, January* 18, 1830.

Second Lieutenant R. E. Temple, of the 3d regiment of artillery, is relieved from duty at the Military Academy; he will accordingly join his company and report for duty without delay.

By order of Major General Macomb.

R. JONES, *Adjutant General.*

ADJUTANT GENERAL'S OFFICE, *Washington, February* 16, 1830.

A true copy from the original on file in this office.

S. COOPER, *Acting Adjutant General.*

Special order No. 9.

ADJUTANT GENERAL'S OFFICE, *Washington, January* 18, 1830.

As soon as Assistant Surgeon Minus shall have been relieved at Fort Moultrie (C. H.) by Dr. Macomb, he will proceed without delay to Oglethorpe barrack, (Savannah,) and report for duty.

Dr. McMahon will repair to Cantonment Brooke, without delay, and report for duty.

By order of Major General Macomb.

R. JONES, *Adjutant General.*

ADJUTANT GENERAL'S OFFICE, *Washington, February* 16, 1830.

A true copy from the original on file in this office.

S. COOPER, *Acting Adjutant General.*

Special order No. 11.

ADJUTANT GENERAL'S OFFICE, *Washington, January* 21, 1830.

Leave of absence is granted to Lieutenant S. V. R. Ryon, of the 1st artillery, until the 6th February proximo. At the expiration thereof Lieutenant Ryon will join his company.

By order of Major General Macomb.

R. JONES, *Adjutant General.*

ADJUTANT GENERAL'S OFFICE, *Washington, February* 16, 1830.

A true copy from the original on file in this office.

S. COOPER, *Acting Adjutant General.*

Fifth specification of the first charge.—Colonel R. Jones has admitted that, on or about the period alleged in the specification, the Army Register for 1830 was officially published by him at Washington, D. C.

Major General A. MACOMB, a witness for prosecution, having been duly sworn, says:

First specification of the first charge.—"I have repeatedly given Colonel Jones orders never to publish any orders without my first seeing them, or without special instructions from me. Orders to that effect had been given him prior to January 16, 1830."

Special order No. 7 being here submitted to General Macomb, he says: "I never authorized that order, but remember something of Lieutenant Kennedy's transfer having been applied for by an officer attached to General Scott's office. The application being considered by me as irregular, I returned it, with an indorsement to this effect: 'If General Scott desires the services of Lieutenant Kennedy, an official application from him to that effect will be taken into consideration.'"

Special order No. 8 being here submitted to the inspection of the witness, he says: "I never authorized that order; the first intimation I had of its existence was through Lieutenant Temple's father."

Special order No. 9: "I did not authorize that order, nor did I see it till after the arrest of the Adjutant General."

Special order No. 11 being here submitted to the inspection of the witness, he says: "I never authorized that order."

Specification fifth of the first charge.—"I directed Colonel Jones, prior to the publication of the Register for 1830, not to publish it without first submitting it to my inspection. That Register, however, was published without having been submitted to me" The Register for 1830, admitted by Colonel Jones to be authentic, was here submitted to the court.—(See in Appendix the official army list for 1830.)

Specification first of the second charge.—General Macomb in continuation: "Colonel Jones and myself differed as to the respective propriety of the army lists for 1828 and 1829; he contending for that of 1828, and I for that of 1829. This subject had been matter of frequent and animated discussion between us." The army lists for 1828 and 1829, admitted by Colonel Jones to be authentic, were here produced in evidence by the prosecution.—(See those lists in Appendix.)

Specification second of the second charge.—General Macomb in continuation: "Colonel Jones stated to me, while in his office, on or about the 23d day of January, 1829, (I think Saturday,) that he had procured the Secretary of War's approval of the form given to the Army Register for 1830, for the purpose of counteracting my views upon that subject. The difference between the Registers of 1828 and 1829 were considered by me as essential differences, and were so treated by me in my discussions upon the subject with Colonel Jones."

Specifications under the third charge.—"I held a conversation with Colonel Jones, in his office, on the 23d day of January, 1830. I came to inquire why he had published the Army Register for 1830 without having first submitted it to me, in conformity with my previous instructions. Upon so inquiring of him, he replied that it was his business to publish Army Registers, and not that of the commanding general. I then reminded him how repeatedly I had urged upon him the impropriety of publishing any orders or documents without first submitting them to me, and proceeded to state that, even were an order received from the Secretary of War or the President, that order should be shown me before going to the army. I moreover brought to his recollection the various discussions held between us during the past year on the subject of the Army Register for 1829, when every opportunity was given him to sustain his opinion both with me and the Secretary of War. I stated further that I regretted to see him taking every measure to defeat me in my designs to have the Army Register made out in conformity with the laws organizing the military peace establishment. He replied that he was determined to have his own way, and therefore had been to the Secretary of War to obtain his sanction of the form adopted in 1828. I asked him if he had any authority from the Secretary of War, and he exultingly showed me an Army Register of 1828, with this indorsement in the handwriting of the Secretary of War: 'This being the most concise, is preferred.' I then asked him why he did not, as in duty bound, show me this before, and at the same time expresed the regret I felt at his having gone, without authority from me, or my knowledge, to the Secretary, when he knew that, upon a former occasion, I had taken so active an interest in having the Register made out as printed in 1829. In the course of this conversation I asked him how he could have gone in that *underhanded manner;* to which word, as he took exception, I told him I had had recourse with no other purpose than that of describing the manner of his visit and agency with the Secretary of War in relation to the document in question; that nothing offensive was intended by it. I further told him that he had no business to go to the Secretary's upon subjects relating to my duty, without being sent by me or being sent for by him. He replied that he hoped I did not mean to interdict officers from going to the Secretary of War; to which I answered negatively, affirming that our duties were so connected that nothing ought to be done without a perfect understanding between us. I added, I regret exceedingly Colonel Jones, that the manner in which you have treated me in relation to this business of the Register, in publishing orders without my authority, and in the general disposition manifested by you to usurp my powers, will oblige me, however reluctantly, to order your arrest. He replied, he never before heard of a commanding officer's saying he would order the arrest of a subordinate, or speak in that way to a subordinate. I then said it was the only treatment by which such conduct as his could be settled; that I had forborne for a long time from personal considerations of regard and esteem; but, since my authority was set at nought, I feared I should have no other alternative. 'This,' he said, 'is exactly, sir, what I would

wish, and I defy you, sir, to do it; I defy you.' These last words were spoken with a good deal of warmth. In the preceding relation I may have failed of giving the express words of the accused, but am positive that they are in effect equal to those given."

The court then adjourned till 11 a. m. on the ensuing morning.

FEBRUARY 26, 1830.

The court met pursuant to adjournment. All present except Colonel Lawrence, reported sick, and in consequence of whose absence the court adjourned till 11 a. m. on the 27th of the month.

FEBRUARY 27, 1830.

The court met pursuant to adjournment. All present except Colonel Lawrence, still unable to attend, and in consequence of whose absence the court adjourned till 11 a. m. on the 1st of March, Sunday being the intervening day.

MARCH 1, 1830.

The court met pursuant to adjournment. All present except Colonel Lawrence, still unwell; in consequence of which the remaining supernumerary, Major Zantzinger, became a member of the court.

Cross-examination of General Macomb.

Question 1. You observe, in your testimony, that you stated to the Adjutant General that, even if he received an order from the Secretary of War or the President of the United States, he should first bring it to you before promulgating it to the army. You further state that you repeatedly gave him orders to issue nothing to the army without orders from yourself. Have you any record of orders thus given to the Adjutant General?

Answer. I have not.

Question 2. If your orders to that effect were verbal, was any one present?

Answer. No; no one was present Out of delicacy to the Adjutant General, I sent for him privately into my own room, and there admonished him of the impropriety of issuing orders in my name without my having first approved them, or of publishing such as came from the War Department or the President without my first seeing them. This was done at various times.

Question 3. Do you recollect the specific order, on seeing which you gave this admonition to the Adjutant General?

Answer. I cannot state any specific order at this time; but immediately after my entering upon the command of the army there was an order, I think, concerning promotions, also several other orders, and one touching the medical department, without signature, but printed, and laid on my table by the Adjutant General.

Question 4. Did the application for Lieutenant Kennedy come through the engineer office?

Answer. I cannot say; the papers will speak for themselves.

Question 5. At the time of Lieutenant Kennedy's first application had you a full conversation with the Adjutant General respecting it?

Answer. I had.

Question 6. In the course of it did you not remark substantially to this effect, that it was not to the *service* of Lieutenant Kennedy on the staff of General Scott to which you objected, but to the informality of the mode in which the application was made?

Answer. I did.

Question 7. Are not the order-book and the special order-book in the Adjutant General's office both open to your daily inspection and available for your purposes?

Answer. I presume they are.

Question 8. Under what authority is the Army Register published?

Answer. I consider the publication of the Register to be necessarily an executive act; sometimes it is devolved upon an agent or official organ.

Question 9. Is it under a resolution of either House of Congress?

Answer. I do not know of any resolution.

Question 10. Does it appear, by any record, that the duty of publishing an Army Register was ever specially delegated to the commanding general of the army?

Answer. I do not know that it ever was.

Question 11. Was the phrase "in an *underhanded way*," which you have acknowledged you applied to me, *repeated?* Was it repeated *twice*, or *thrice*, or oftener?

Answer. It had been used once before, when an exception similar to that spoken of was taken, and an explanation similar to that mentioned was given.

Question by the court. Will you explain to the court how orders are usually framed and issued from general headquarters?

Answer. Orders of a general import are written by myself, or prepared by the Adjutant General, in pursuance of particular instructions. In cases of minor interest they are in like manner either written by myself or prepared, after consultation, by the Adjutant General. They are then examined and revised in the most minute manner. Sometimes my aids are called in to hear them, for the purpose of making any suggestion as to their phraseology. They are then given to the Adjutant General to be published for the army, unless there be matter in the orders which I conceive it necessary to submit to the Secretary of War, or to officers of the administrative branch of the staff who might be affected thereby. There is a general direction to the Adjutant General to prepare all orders the service may require to be issued, and to submit them to me for my examination and approval before publication.

Question. For what purpose is the Adjutant General the organ of the government, and for what is he the organ of the commanding general?

Answer. The Adjutant General is placed under the orders of the major general commanding the army in conformity with the law fixing the military peace establishment. When I came into command I discovered that there were orders issued to the army with the words *by order*, but no designation of the authority whose order was referred to. It became a subject of conversation between the Adjutant General and myself, in which I insisted that he being the Adjutant General, and attached to the commanding

officer of the army, no orders ought to be issued but by the authority of that officer. Colonel Jones was tenacious in opposition, and presented me with his views, both verbally and in writing. I did not agree with him on the subject of his having any independent control or authority; but persisting in them, the subject was referred to General P. B. Porter, the then Secretary of War, and it was by him determined that all orders, regulations, and communications to the army should go forth through the commanding general, to be signed by the Adjutant General under his orders.

[A question being here proposed to the witness by the prosecution, and an objection to it, founded upon its alleged irregularity at this stage of the examination, made by the accused, the court was cleared.]

The court re-opened: decide that the right of *re-examining* witnesses will be allowed both parties, provided the questions put under this rule be such as to elucidate matter developed in the cross-examination, or have for object the preservation of a witness's consistency on all such points where he is really or apparently in contradiction with himself.

The court then adjourned till 10 a. m. on the ensuing day.

MARCH 2, 1830.

Present all but General McNeill and the judge advocate, reported sick; in consequence of which joint absence the court adjourned till 10 a. m. on the ensuing day.

MARCH 3, 1830.

The court met pursuant to adjournment. All present.

General MACOMB, in continuation:

Question by judge advocate, (re-examination of witnesses.) You state, in your reply to the 6th interrogatory of the cross-examination, that you had a *full conversation* with Colonel Jones touching the application from department headquarters for Lieutenant Kennedy. Did you then and there authorize Colonel Jones, directly or indirectly, to meet the case whenever it should be presented to you anew?

Answer. I did not.

[Their authenticity having been acknowledged by the accused, there were here presented to the court papers marked H. K, L, M, and N, in behalf of the prosecution.—(See *Appendix.*) The act of June, 1821, organizing the peace establishment, was referred to, and a deposition of J. H. Eaton, esq., Secretary of War, (of which the following is a copy,) submitted, both in behalf of the prosecution:]

Interrogatories proposed to the Secretary of War, a witness in behalf of the prosecution, by the judge advocate of the court convened for the trial of Colonel Jones.

Question 1. Did the Adjutant General, R. Jones, at Washington, and on or about the 20th of December, 1829, submit two Registers to you for your inspection and election between them as models for the contemplated Register for 1830?

Answer. The Adjutant General did make such a submission to me about the time stated in the interrogatory.

J. H. EATON.

Question 2. Were those Registers for the years 1828 and 1829?

Answer. It was the last, (for 1829,) and one for the preceding years 1827 and 1828, that were submitted to me.

J. H. EATON.

Question 3. What did Colonel Jones state to be the differences between the two Registers thus submitted to you?

This question will be answered in the reply given to the 4th interrogatory.

J. H. EATON.

Question 4. Did he intimate, either directly or indirectly, that Major General Macomb and himself were at issue upon the subject of those Registers? of their respective propriety it is meant.

Answer. I have no recollection that Colonel Jones made any statement to me going to show that any difference or disagreement as to the form of the Register existed between himself and General Macomb. He spoke of those of 1827 and 1828 as preferable, in his opinion, especially for the reason that they were more concise; that they were in the form heretofore published. This was on Saturday. I took them home, and on Monday or Tuesday directed the Adjutant General to publish the Register after the model of 1828, to the exclusion of that of 1829.

Question by the prisoner. The word "underhanded" has been used: was there anything of that character in the communication made by the Adjutant General to yourself in this business? Was it made in open day, and in office hours, as all communications are made?

Answer. There was nothing underhanded perceived by me. Colonel Jones came to the office about one or two o'clock in the day, and conversed with me after the manner I have already stated.

J. H. EATON.

Question 2. Since you have been in office as Secretary of War have not the major part of your communications been made direct to the Adjutant General?

Answer. Communications have gone from the War Department both to the major general and to the Adjutant General; most frequently, however, they have gone to the latter. Applications to be discharged from the army, for the appointment of sutlers, and in cases where information wanted was on file in the Adjutant General's office, the application and references have been usually made directly to the Adjutant General. J. H. EATON.

The above answers are in the handwriting of the witness.

J. H. EATON.

MARCH 3, 1830.

Sworn to before me, at Washington, D. C., this 9th day of March, 1830.

R. L. ARMSTRONG, *Judge Advocate of the Court.*

The court then adjourned till 10 a. m. on the ensuing day.

MARCH 4, 1830.

The court met pursuant to adjournment. All present.

The evidence for the prosecution having terminated here, the following remarks were submitted to the court by the accused as the opening of his case:

The testimony for the prosecution being closed, I respectfully submit to the court the following as my grounds of defence:

Under the first specification of the first charge it is alleged that I communicated to Lieutenant Kennedy an order to attach himself to the staff of General Scott, and that the commanding general was not duly apprised of the fact. In justification of the transaction I shall plead the relations necessarily existing between officers holding the respective stations of General Macomb and myself, where the ordinary interchange of communications is oral or of tacit understanding between the parties. It is already before the court that the incident in question was the subject of a "full conversation" between General Macomb and myself, and that the informality of the application was the only obstacle to an assent to it, provided General Scott united in the request. I shall endeavor to add to this that the application thus declared informal was remanded to the office of the Engineer department for correction, reissued therefrom in an amended shape, and thus rendered formal. I shall exhibit the assent of General Scott in an order issued from his department, and manifest that on the removal of these contingent obstacles the "full conversation" did not require repetition, but that the order was issued as a matter of course. The nature of the incident does not admit of verbal testimony beyond that of General Macomb. There are documents which cover the whole ground, and they will be submitted.

Under the second specification of the same charge it is alleged that I gave to Lieutenant Temple, on his being relieved from special duty, orders to join his regiment, and that the commanding general was not furnished with the knowledge of the fact. I shall ground my defence upon the nature of the ministerial duties of my office, and the character of the transaction itself. I shall aim to show, by the testimony of officers experienced in the duties of the staff, that where an officer of a grade not higher than Lieutenant Temple reports for orders on being relieved from special duty, without application either for further special duty or for indulgence, he joins his regiment in conformity, if I may so say, to the natural order of things, rather than by any act of the volition of his commanding general. For the performance of such acts I consider a staff officer to possess his general's power in advance—the relief of a general from the burden of such small duties being one of the causes for the existence of a staff.

As to the third specification of the same charge, I shall endeavor to prove that the allegation involves no military fault, either of act or intention, but to have arisen from the twofold relation in which I stand—the one to the Secretary of War, and the other to the commanding general.

The specification declares that I promulgated an order for the assignment of stations to Doctors Minis and McMahon, and that the commanding general was not cognizant of the fact. My defence will aim to prove that my course was in the regular path of my duty, and as such compulsory; that it amounted virtually not to the giving of an order, but to the transmission of one already given. The testimony will develop that the Medical department is a branch of service under the special control of the *Secretary of War* through the Surgeon General; that the order in question was communicated to me by the Surgeon General, the acknowledged organ of the Secretary for such matters, and as such was, according to the usages of the service, the act of the Secretary himself, which I could neither resist nor control.

The fourth specification of the same charge alleges that a furlough of 16 days was given to Lieutenant Ryan, without knowledge of the commanding general. I shall endeavor to render it apparent that the application for the furlough in question came from such a quarter, and in such a shape, that no fair room was left in my mind, however erroneous may have been the impression, for doubt that the very mode in which the matter was presented was my authority for the order that followed it.

The fifth specification of the first charge, the first and second of the second charge, and the words, "clandestine procurement," in the only specification of the last, allege, in various shapes, that I caused an Army Register to be published; that there was secrecy in the course which led to the publication; that the commanding general was not informed of the fact of the publication, and that the Register itself was not consonant to his views. In refutation of the general matter set forth in these specifications, I shall aim to prove: 1st. That my agency in the affair was with the Secretary of War; that it was simple, open, and direct; in exact conformity to all official transactions that draw me near to that officer. 2d. That the acts of examining, selecting, and causing to be published, were those of the Secretary of War, not of myself. 3d. That the duty in question was not military duty proper; that it was a ministerial duty, specially assigned to the Secretary of War by the Senate of the United States, to be performed by himself or whosoever he might select, and which had been, by ordinary usage, deputed, as far as preparation is involved, to the Adjutant General. 4th. That this duty, as far as it is deputed to the Adjutant General, constitutes, with others not specially defined, one branch of the two-fold relation borne by the Adjutant General to the War Department and to the commanding general; that, although this double relation gives him no "separate and distinct authority," it binds him to a separate and distinct obedience, as will be made manifest by orders received and by orders executed, by the records of his own office, and by that of the Department of War.

As to the specification under the third charge, I labor under peculiar difficulty, as the transaction touches a private conversation said to have taken place not in office hours, and in the presence of no one excepting myself and the individual who adduces the charge. Specifications such as these cover the weak part of the process of courts-martial, where the allegation of one party to the issue bears upon the other, and renders him in effect, not in name, a witness in his own cause. Yet to what may be advanced under this specification, I am not without disproof:

These will be the attempted grounds of defence, either as to the matter set forth in the specifications, or as to the criminality which is alleged to be attached to it; the specifications being disproved, the charges fall of themselves.

Major General THOMAS S. JESUP, a witness for defence, was duly sworn.

Question 1, *by the accused.* Have you not served as Adjutant General in the field and on the peace establishment?

Answer. I served in the army with General Hull, as brigade major, and performed the duties of Adju-

tant General during the campaign. I also served as Adjutant General in the northern division, under the late General Brown.

Question 2. When a second lieutenant was relieved from special duty, and reported for orders without soliciting either special duty or furlough, where would he have been ordered to repair?

Answer. As a matter of course he would be ordered to his regiment.

Question 3. Would you have submitted such a matter to the commanding general, or would you have issued the order as a thing of course?

Answer. As a matter of courtesy I might have submitted it to the commanding general, but should not have thought it necessary. To have sent an officer to any other place but his regiment, I should have thought it essential to take his orders upon the case.

Question 4. Are not a portion of the duties of the Adjutant General purely ministerial, and derived of course from the Secretary of War?

Answer. A portion of the duties performed by the Adjutant General I consider ministerial. I don't know by what authority he performs them.

Question 5. Is the present office of Adjutant General, in its duties, as far as known to yourself, a continuance of various offices of similar name and character, established at the seat of government, to wit, the Adjutant and Inspector's office, the Inspector's office, the Adjutant and Inspector General's office?

Answer. I have always so considered it, so far as the Executive is concerned.

Cross-examined.

Question 1. Is the Adjutant General, in your opinion, necessarily, and in virtue of his office, the organ of the Secretary of War, or may not that functionary discharge his duties through any other organ?

Answer. I consider that the Secretary of War may discharge his duties through any official organ he chooses to select. I suppose, however, an express delegation of certain duties to have been made from him to the Adjutant General.

The grounds of this opinion consist in the fact of his performing certain duties which are essentially those of the Secretary of War himself, and not of any military man, to wit, the publication of the laws, everything relating to commissions, the Army Register, and the duties connected with the militia.

Question 2 Had you any particular instructions from the officers under whom you did duty as Adjutant General, as to the mode of issuing orders?

Answer. I have no recollection of any particular instructions, nor do I believe I had any such. Every order relating to details was considered by me, as a matter of course, to be discharged by the Adjutant General, without reference to the commanding general.

Question 3. Do I understand you to assert an exclusive and independent authority as Adjutant General in matters of mere detail?

Answer. No officer has any authority independent of his superior officer; but, as before stated, in matters of mere detail, I should have considered it my duty to have issued an order without consulting my superior officer.

Question 4. What do you consider matters of mere detail?

Answer. Everything determined by the roster.

Question 5. You have informed the court of what you would have done in the case of a second lieutenant relieved from duty, and reporting for orders, &c.; could you have done this without consulting the commanding general had you had opportunities of easy access to him?

Answer. I should no doubt have consulted him, but should not have thought it necessary. I should not have considered his order to me, essential to strengthen my own authority as Adjutant General to have given the order referred to.

Question 6. Do I understand you to assert any independent authority as Adjutant General to have done so, or merely to imply that his order to you was not necessary to make yours valid?

Answer. I mean that I should have considered myself to be discharging a duty in this case devolving on me as Adjutant General, to wit: keeping officers with their regiments.

Question 7. In matters involving discretion, do you consider the discretion vested in the commanding general or the Adjutant General?

Answer. In matters of discretion, I consider the discretion to devolve upon the commanding general, and not the Adjutant General.

Dr. Lovell, Surgeon General, a witness for defence, duly sworn, says:

Question 1. Are you the direct organ between the Secretary of War and the Adjutant General in all matters touching your department?

Answer. I know of no communications having been made from the Secretary of War, except through me.

[Its authenticity having been acknowledged by the prosecution, paper marked P (see Appendix) was here submitted in behalf of the accused.]

Question 2. When communications of a character such as this are given by the Secretary of War to yourself, and through yourself to the Adjutant General, is not an order promulgated, as a thing of course, according to the usages of the service?

Answer. I have always so considered it, because I frequently inform the surgeons that an order will be issued at the same time that I transmit the application for such orders to the Adjutant General, considering the business as finished.

Lieutenant Ryan, of artillery, a witness for defence, being duly sworn, says:

Question 1. What day did you report in person at the Adjutant General's office, in the month of January last?

Answer. On or about the 16th.

Question 2. What was my reply when you made verbal application for a short leave of absence?

Answer. That it would be necessary to make it in writing.

Question 3. What was the date of your letter of application, and where was it written?

Answer. It was dated the 16th, written 21st, and in the office of the aid of General Macomb.

Question 4. Who wrote your letter of appointment [application]?

Answer. Aide-de-Camp Cooper.

Question 5. Did you receive the furlough on the day of your written application?

Answer. I did.

Lieutenant COOPER, a witness for defence, being duly sworn, says:

[Its authenticity having been acknowledged by the prosecutor, paper marked Q (see Appendix) was here submitted in behalf of the accused.]

Question 1. Please state under what circumstances the annexed application passed from your office to that of the Adjutant General.

Answer. It was written by me at the instance of Lieutenant Ryan, as he was ignorant of the form in which such application should run. He signed it, and I then sent it by an orderly attached to the aide-de-camp's office.

Sergeant CHARLES BAKER, attached to the Adjutant General's office, a witness for defence, being duly sworn, says:

Question 1. Were you at headquarters, on or about the 22d of the last month, when a conversation took place between the general and the Adjutant General respecting the arrest of the latter? What was the hour? Was there anybody near? And what conversation did you hear?

Answer. I was. It was about half after 3 p. m. There was no one near but myself. I heard General Macomb say to Colonel Jones, "if it was not for the regard I have for your family, I should arrest you;" and Colonel Jones replied, "very well, General, as you please."

Question 2. Did you hear anything else?

Answer. No. This was all I heard. I was standing in the door of an adjoining room midway between the two rooms.

The court then adjourned until 11 o'clock a. m. the ensuing day.

MARCH 5, 1830.

The court met pursuant to adjournment. All present.

Major General W. SCOTT, a witness for defence, having been duly sworn, says:

Question 1, *by accused.* It is known that you served in the capacity of Adjutant General. In the course of that service were there not administrative duties which you performed in virtue of your office, and under the authority of your commanding general, yet without special reference to him?

Answer. I cannot call to recollection the various acts of that description which I performed. That there were such I well remember, and will endeavor to specify some of them, to wit: I remember upon one occasion General Dearborn having instructed me to send a detachment to a particular station, specifying the number of the companies to be sent, but not designating the regiments from which they were to be taken, a discretion was invested in me so to select. I also recollect several cases of this sort, to wit: officers joining the army, under orders to report to the commanding general, were by me sent to their respective regiments, or to the branches of the staff to which they severally appertained; and these I considered as matters of course, without any special reference to the general commanding the army. These acts, as they severally became known to the commanding general, were viewed by him in the same light in which I myself had viewed them.

Question 2. What is the theory and practice of armies, according to your personal knowledge, as to the distribution of duties between the commander of an army and the chief of his staff?

Answer. The first great division of duty between the commander of an army and the officer having charge of the department of orders, commonly called the chief of the staff, throws upon the latter that description of duties which may be called clerical, and which will be found in the regulations under the head of "*theory of the staff*," leaving to the commander all matters of higher volition or discretion. In proportion to the extent of the particular command or army will be other and miscellaneous duties devolving upon the chief of the staff, which involve some discretion more or less. As, for example, a commander giving directions to send a colonel or other officer of a given grade, if he omitted naming the individual officer, the designation of the individual would devolve on the chief of the staff; the same thing in the case of a company or regiment, or other corps, where the particular corps was not designated. Hence it has frequently happened that the rank of this chief of the staff will be found to correspond with the extent of the command of the army; nevertheless, the staff officer performs all the foregoing acts, whether by particular instructions or not, in the name of his commander.

Question 3. Does the practice of the service show that a moiety of the duties of the Adjutant General of the army at the seat of government are of a civil or ministerial character, *under the Secretary of War*, and that they are such as, under different organizations of the army, have been heretofore performed by some such staff officer, such as was "the Inspector of the Army," the "Adjutant and Inspector," and more recently "the Adjutant and Inspector General."

Answer. I can answer that there are a proportion of the duties of the staff officer designated in the question, of that description. As, for example, all matters relating to the militia; the publication, from time to time, of acts of Congress relating to the army; the preparation and publication of the Army Register, which, I suppose, in point of fact as well as of law, to be the act of the Executive, signified through the Secretary of War and the Adjutant General.

Cross-examined.

Question by judge advocate. Is the authority of the Adjutant General ever independent of that of the general officer upon whose staff he may be serving, except in virtue of some powers expressly delegated by higher authority than that of such general officer?

Answer. There can be no absolute independence on the part of the staff officer, as he may be governed either by previous instructions, or have his acts subsequently corrected on inspection. Such instructions may either be express or implied—implied by the previous practice between the parties in similar cases; nevertheless, there will always be a large class of duties to be performed by the staff officer, in the absence of such instructions, as mere matters of course, or matters involving, as has been said before, some little discretion, more or less, according to the rank of the staff officer, or, what in general will be found the same thing, the extent of the command. This discretion devolves from the necessity of the case, in order to leave the commander more at leasure for the higher duties of volition or discretion.

Question 2, by judge advocate. You say there can be no "*absolute independence.*" Independence I understand to imply entire freedom of will and action—the right of conforming to one's own will in opposition to that of others. In this sense of the term, is the staff officer in the *smallest degree independent* of his military commander for official purposes?

Answer. The staff officer can never set up his own will against the will of his commander in matters of duty properly belonging to the commander.

[Their authenticity having been acknowledged by the prosecution, various papers, marked R, were here submitted in behalf of the accused, (see appendix;) also paper marked O, (see appendix.)]

MARCH 9, 1830.

The court met pursuant to adjournment. All present.

The accused informing the court that he was not yet ready to give in his defence, the court adjourned till 10 a. m. on the ensuing day.

MARCH 10, 1830.

The court met pursuant to adjournment. All present.

The accused being asked if he was ready to proceed, read the following defence:

MR. PRESIDENT AND GENTLEMEN OF THE COURT: If I am embarrassed in addressing you, my situation assigns the reason. We have often met before; never in relations like the present. It is usual in an attitude like mine to make appeals to sympathy: I am silent. If the justice of the service and the country has claims upon me, let them be answered. I am ready to receive it at your hands; nor shall I doubt either the righteousness of the decision or the purity of the intention. I claim that you think of me as a stranger. If I have violated the laws; if I have shrunk from my duty; if I have discharged it unworthily, let there be an oblivion of all that has ever passed between us, and remember only that I am an offender.

The formalities of the service have caused the charges under which I stand arraigned to be signed only by the judge advocate. He who ordered the arrest; who threatened it before it was ordered; who instituted the charges, and appears as the *only* witness to sustain them, is one and the same person. In him, the commanding general of the army of the United States, I see the actual prosecutor; my defence will treat him as such. Not that I shall seek in it the justification of one harsh expression; I know too well what is due to his rank, to myself, and to those whom I now address.

It is already part of your record that circulation was given to charges containing allegations much severer than those which are now before you, and that they shrunk when the hour of proof arrived. The present is not the time to answer or discuss them; I dismiss them with this passing remark. It is upon your record that I was invited to avoid the scrutiny by assenting to charges which he that urged has withdrawn, and making acknowledgment for offences which that withdrawal denies to have existed. I wish to have it likewise on the record, that to such a proposition I knew but one answer; I made it, and I am here.

Before entering upon the minor and exact details of the trial, it is requisite that I should remark upon the singular outline of it. General Macomb, who acknowledges his own excitement, who avows his own dissatisfaction, and represents himself as the aggrieved party, is the sole witness against me. His testimony is as to himself and to me; it represents his attitude and mine. At the outset he asserts that he had repeatedly given me orders, and that mine violated them. I ask, "is there any record of orders thus violated?" He answers "no." "Is there any record of an order which reproved the alledged violation and forbade it for the future?" He answers "no." "Did any one witness any verbal reproof for such misconduct, or inhibition of it for the future?" He answers "no." I ask, "if he recollects any specific order, the sight of which assured him of my disobedience and called for his admonition?" He answers that he "cannot state any specific order." Still, for what no one saw, no one heard, and which the general's own memory does not define, do I stand here a prisoner. I am sensible of what is due to a sworn witness, but when naked and unsustained declarations are made against me, I, of right, declare in return. If in so doing my declarations bear hard upon General Macomb, he has placed himself within reach of the pressure, and must bear it. If all that is left to me is to confront assertion by assertion, I take my stand before you as he already has taken his. Excitement confuses the memory, and General Macomb acknowledges that he was not exempt from it. He states that there is no record of any order that I have violated, or, on such a violation being known, of any that forbade the continuance of it; that no one heard the reproof for disobedience, and that he himself does not recollect any specific order that gave occasion for it. I agree with him in all this, and carry it further—*that there existed no such orders:* I heard none, I saw none, I knew of occasion for none. The delicate admonitions to which General Macomb refers may exist in his memory; they have no place in mine. From the 29th of May, 1828, when General Macomb assumed the command of the army, until the 23d of January, 1830, when he announced his dissatisfaction at the publication of the ARMY REGISTER, and speedily followed it by my arrest, he uttered no complaint of disobedience to me, and I sought to give him no occasion to do so. He suggested certain modifications in the mode of issuing REGULATIONS *emanating from the War Department:* they were discussed and conformed to. There was before us the undefined character of certain of the duties of the Adjutant General, in the relation he bears to the *Department of War,* independent of the commanding general; but these called for reflections, not strife; and the difficulties were referred for final solution to the Secretary of War. I have yet to learn that this respectful reference to a common head can be construed into disrespect to any one.

The general asserts that he could not agree with me on the "independent control and authority" which I claimed for myself. I asked for no such agreement, for I entertained no such opinions. I have always known the powers of a staff officer to be derivative, not independent; and all the powers I ever asked for myself were those that would enable me to discharge my duties towards the army and towards him who now accuses me. But if I repudiate all independent authority for myself, I did not deny that others had authority over me. I found myself the depositary of records, the property of the nation, and over which no military commander had any control. It was a point of reference for the Secretary of War; the volume on your table manifests it. I was the organ of his military communications; the orders to the army assert it. I was the subject of his immediate orders; the records of my office are full of them. These established no "independent authority in me;" but did they not prove that a twofold authority rested on

me? Each was imperative, each in its own action distinct. I resisted neither, but where they crossed each other's path I so asserted it, and sought to have them defined. The indistinctness of these relations, and their conflict, may have thrown a cloud about the mind of General Macomb, but as to those which existed simply between him and myself, there was no room for doubt. He, my sole military commander: I, exclusively his adjutant general; I acknowledge his authority to be primary; mine as to him, reflected; the impelling principle to rest in him, the subordinate action in me; in him, the power to move the whole; in me, to keep the parts in place.

This vindication of my opinions, this counter-declaration, this reference to the attitude in which General Macomb has placed himself, and the bearing of that attitude upon his testimony, are all I have to assert. I repeat it, that I assault no one; I have uttered my assertions with all the decorum that comports with a manly protection of myself.

These initiatory remarks being finished, I shall present a synopsis of what is brought against me and my defences; then each specification in its place, and testimony that bears upon it.

Under the *first specification* of the first charge, I shall prove that the alleged violation of orders was in conformity to order, both in intention and act. By General Macomb's testimony, and the documents upon your table, I shall manifest that what he obviously ordered I obviously obeyed.

As to the *second specification* of the same charge, I shall throw before me the shield of my duty to the general himself in the unvarying duties of my office; such duties as he had a right to demand that I performed without a demand.

Under the *third specification*, I shall prove that the very act upon which I am arraigned is the only one that, under similar circumstances, the service has *ever known*, or that, under existing regulations, it ever can know.

As to the *fourth specification*, the furlough of Lieutenant Ryan, it is a shadow. The testimony must explain itself; and if the explanation be imperfect, I leave the benefit of what doubt may remain to whoever may be willing to receive it.

In the *fifth specification* of the first charge, and first and second of the second charge, my course will, from necessity, be complicated. I throw off at once the invidious matter with which these specifications are loaded; allegations of causeless secrecy; of intentions, which, if compassed, would have done me no good; of motives, which, if they existed at all, no human being ever could have known, and for which no human being ever was arraigned before. I contend not with these weak devices. The strife would be unworthy of me. I go to the act itself, and shall justify it. The process shall render it apparent that the commanding general of the army of the United States has overlooked or radically mistaken one-half of the duties of the Adjutant General of that army. Under these specifications I shall assert that in certain cases my office is a separate, and, as to the commanding general, an independent bureau of the War Department; that in these cases my responsibility binds me to the *Secretary of War*, and not to the commanding general; and that the present is one of those cases.

As to the last charge and its attendant specifications, testimony will appear against testimony. I trust that there may be no occasion for me to put my own character into the scale.

This is the ground before me, and I commence my march.

The *first specification* under the charge of disobedience of orders is that of a special order given to Lieutenant Kennedy, under the date of the 16th of January, 1830, in alleged violation of the orders of General Macomb. The testimony is as follows: General Macomb and the documents on your table declare that there was an application from Lieutenant Kennedy for service in the staff of Major General Scott; that it came from the Military Academy, through the office of the Engineer department and that of General Macomb, and that upon the receipt of it, he had (to use his own words) a "full conversation" with me respecting it. In this "full conversation," General Macomb acknowledges that he objected, not to the object of the application, but to the informality of it, or, in his own words, that "it was not to the service of Lieutenant Kennedy in the staff of General Scott that he objected, but to the mode in which the application for it was made." For the correction of this informality, he caused the application to be remanded to the office from whence it came; and in addition to thus recommitting it, indorsed with his own hands, and under his own signature, these words: "The request of Major General Scott is necessary to effect the purpose herein mentioned." Orders may be contingent as well as direct. These very admissions, independently of anything beyond them that might well have been unfolded in the "full conversation" to which General Macomb refers, left no doubt in my mind that I had received his, and that they were subject to the two contingencies which he had suggested, one of which he himself sought to remove. Formality of application was to be compassed, and with it the request of General Scott; these attained, the will of General Macomb rested on the object, and it remained for orders from my office to give effect to that will. The paper originally submitted was an application to be relieved—not an actual relief; it was directed to the commanding general, and not to me. Lieutenant Kennedy being at the Military Academy, and as such, under the orders of the Secretary of War, through the Engineer department, the formalities of the service required that he should be regularly relieved and reported by one authority, and thus brought within the reach of the other. For this purpose the paper was remanded by General Macomb to the Engineer department. On its being re-issued from that department, Lieutenant Kennedy was relieved and directed to report, not to the commanding general, but to me, by letter, for orders, and in that manner he did report to me. One contingency was passed. The formality required had thus been complied with. Lieutenant Kennedy was fairly before me, officially reported for orders. Before issuing them it remained for me to remove the second contingency, to compass which, I transmitted, on the 4th of January, the application and report to the headquarters of General Scott. The assent of that officer was declared by a special order to Lieutenant Kennedy himself, of the 8th of January. The removal of the informality and the assent of General Scott left me no option; the will of the commanding general, as expressed by himself, now bore upon the object, and in intended conformity to that will, I issued the special order of the 16th January, for which I am now arraigned! If I did not, in this small affair, refer to General Macomb at every turn of it, it was because I considered that the unequivocal expression of his will rendered the reference intrusive. A "full conversation," his own reference to the Engineer department, and his written memorandum, left me, as his staff officer, but one course, and that was to obey his orders, implied or asserted, contingent or direct. I intended to obey them. I did obey them.

Under the *second specification* it is alleged that I communicated a special order to Lieutenant Temple. The only verbal testimony on the part of the prosecution is that of General Macomb himself, who states that he did not authorize the order, and the absence of that authority constitutes the offence. On my own part I adduce a single document—no more. It is a regular report from the Engineer department, of

Lieutenant Temple, to me, as Adjutant General, for orders. It is in proof that on being relieved from special duty, he was ordered to join his regiment. The issue is simple. Did I in this usurp the authority of my superior? or did I perform the very sort of duty for which I am a member of his staff? And for what purposes am I in the staff of the commanding general? In peace, I transmit orders for him, I embody intelligence for him, I maintain the distinctness of the separate parts of his command, report their position, their strength, the absence or presence of those who constitute them. In war, if his army moves, I regulate its march; if it halts, I establish its position; if it is drawn out for battle, I arrange it. In these various acts is there no subordinate discretion which enables me to couple the will of the commander with the attainment of his objects? At each new combination of difficulty is there not a new development of power? Is there no capacity to surmount contingent obstacles, to mete out time, to assign place, to coerce action, to vary and adapt means? If an adjutant general possesses not authority such as this—if there be in him no power commensurate with the resistance he has to remove, a commanding general leans upon his staff in vain. Yet these powers are positive; that which I exercised in the case in question was *negative*. A second lieutenant stood before me, relieved from orders, and soliciting orders. I had no alternative. I directed him (it would be no abuse of terms to say I suffered him) to go to the only place where an officer without special orders can go. He joined his regiment. Had I met the same officer apart from his command in an hour of emergency, can there be a doubt that I had the right to order him, or a doubt as to the spot to which I ought to have ordered him? Yet this act would have been *positive*. Can the greater be given and I withheld from the less? Had I given Lieutenant Temple an "order" for specific service, it would have been an act of primary volition, done in my own wrong. This, on the contrary, came, if I may so say, of itself, in simple illustration of a military principle, that he that has no special duty, that enjoys no special indulgence, has but one place, and that place his *regiment*. Yet, obvious as this position is, I should have submitted the case to General Macomb could I have thought that he required it. In the absence of such thought, the act enabled me to assure him that every officer under his command, unaccounted for by his or by higher special orders, was at his post. Lest my own opinions should prove fallacious, what says Major General JESUP, himself once an adjutant general? "Under circumstances exactly like the present, I should have ordered an officer to join his regiment as a *thing of course*." "I might have submitted it to the commanding general from courtesy, but I should not have considered it necessary." "The same would have been the case if the commanding general had been at my elbow." "I claim no independent power—that is, no power to resist—for an adjutant general, but the very necessities of his chief demand that he should have the power to act." What says General SCOTT, the oldest major general in the army, himself once an adjutant general? "Officers joining the army under orders to report to the commanding general were by me sent to their respective regiments, and this I considered a *matter of course*, without special reference to the commanding general of the army." I rest it here. I have given General Macomb but small ground to complain, if, when his officers asked where to go, I pointed to their places.

The *third specification* alleges a fault in the promulgation of a special order whereby Surgeons Minis and McMahon were assigned to certain stations. The testimony requires no comment. What says the Surgeon General? "I am the direct organ for medical purposes from the Secretary of War to the Adjutant General." "I made from the Secretary a communication upon this very subject to the Adjutant General." "This communication called for an order, and the order was issued as *a thing of course*." "On the receipt of such communications orders always come of course. When I transmit such communications to the Adjutant General I consider the business as finished, and so advise the surgeons." Is this distinct? I say, as a soldier, I did as I was bid, and he that bid me had the right under the Constitution and laws to do so. What he had the right to order, had I the right to resist? If there be guilt here, there must be a mistake as to the culprit.

The *fourth specification* covers a leave of absence for sixteen days given to Lieutenant Ryan. It is alleged that General Macomb was not cognizant of the fact. I perceive that such is the case. I regret it. Such was not my intention. It is in evidence that Lieutenant Ryan made personal application to me for a furlough, and was refused, the regulations requiring that it should be in writing. On a certain day, while engaged in the active duties of my office, a written application was presented to me by an orderly stationed at headquarters. All this is in evidence. Had I received the application from the hand of Lieutenant Ryan himself, or through any other channel whatever, I should have known but one course, and that was to submit it to General Macomb. But the handwriting of his aide-de-camp and the presence of his orderly gave to my mind, however erroneous may have been the impression, the irresistible assurance that it came from the general himself, and of course with his assent. I acted upon this impression, with the full assurance that I was obeying his commands. I handed the application to Lieutenant Davidson, who filled out an order forthwith, and it was issued in an hour. My mistake was not apparent until some days had elapsed. If any benefit can accrue to any one from an incident so purely unintentional and fortuitous, I envy him not the possession of it.

The *fifth specification* of the first charge, and first and second of the second charge, touch the publication of the Army Register. The one asserts that it was published in direct violation of orders from General Macomb! The testimony exhibits no such order; and, in the absence of it, I look in vain for the violation. Another asserts that I *concealed* from the Secretary of War that there were substantial differences between the Registers of 1828 and 1829.* The Secretary testifies that I did *not* conceal; on the contrary, that I asserted that there were differences, and that that of 1828 had the advantage of that of 1829. The third declares that I procured the Secretary's approval of the form used for the Register of 1830 for the express purpose of thwarting the views of General Macomb. To this no one can testify but myself, and I have not yet been called on to do so. The words "clandestine procurement" bear on the same matter. They are swept away by the Secretary's own declaration that my reference to him was open, regular, official, like all other transactions. It consisted in submitting the two forms to him with one single remark. His examination, selection, and order did the rest. Where stand, then, the various allegations in regard to the Army Register? The testimony has left none of them.

For all purposes of defence, the inquiry under this specification might end here. Yet, as General Macomb asks, and peremptorily asks, "by what authority I published the Army Register of 1830 without first submitting it to *him?*" I answer by a brief analysis of what an army register is; whose duty it is to publish it; and what the character of the office through which it ever has been published. An army register is a compendious abstract from the records of the office of the Adjutant General; an enumeration

* See copy of Army Register for 1828, marked BB, indorsed by the Secretary of War thus: "This plan, as being concise and plain, is preferred."—J. H. E.

of names dates, and grades, in matter unchangeable, involving no military opinion, varying no military relation, leading to no military result It derives its existence from the Senate of the United States, which body, in 1815, enjoined it as annual duty on the *Secretary of War*. By him it has been assigned, by sub-delegation, to the Adjutant General of the army. The resolution of the Senate is on your table. I see neither in this origin nor in the process any call for the agency of a commanding general.

Such is an Army Register; such the source from whence it is derived. What is the character of the office through which the Secretary prepares it for the Senate? Prior to the year 1802 the small machinery of the War Department was carried on by agents purely civil. During that year there was first attached to it, under the name of the "Adjutant and Inspector's," an office intended to infuse a portion of the intelligence of the army proper into the War Department. The records of courts-martial, the monthly returns and muster-rolls, the certificates of absences, the inventories of the effects of deceased officers and soldiers, all of which the articles of war required to be deposited in the Department of War, were committed to this new office as a separate bureau of it. The returns of militia, required by the act of 1803 to be made to the Department of War, received the same direction. From that period until the year 1813 the office remained the same, although managed by officers of different denominations of the staff. Its agency became yearly more extensive, and applied itself to all cases where the President, through the Secretary of War, acted upon the army proper. It was the organ of communication from the Secretary, and the depository of every character of military intelligence from the army. It contained the record of appointments, promotions, resignations, and dismissals, and promulgated them—incidents over which, either as to promulgation or registry, no military man, as such, has any control. The accumulation of duties called, in 1813, for a change of name and rank; it became the office of the "Adjutant and Inspector General." In 1815 the duty now before us, that of preparing an army register, was assigned to it, simply because that duty was but a transcript of a portion of its records. It has so remained its duty until the present day. In the year 1818 the organization of the present staff created a new accession of duties. In 1821 the designation was changed to that of the office of the "Adjutant General," the duties and archives remaining the same. In 1821 the headquarters of the major general were, by orders, established in the District of Columbia, whenever that general "should not be employed on tours of duty and visits of inspection." This incident created no abrogation of past relations, no diminution of previous responsibilities, but added to duties already existing the additional one of transmitting the orders of the commanding general when he should be at the seat of government; when absent, the same to devolve upon his aids, who were created *assistant adjutant generals* for that purpose. Such is the brief history of the office I now hold; its functions ascertained and defined by the unbroken series which I have traced from 1802, and which then caused it to be a separate and distinct bureau of the Department of War. It is in reference to these duties that I claim not a "separate authority," but acknowledge a separate allegiance. In what is exacted from this office, in the regular chain of communications which its records manifest between itself and the Secretary of War, in the authority acting through it and upon it of the highest administrative power—apparent in the very order whereby my signature announced to the army the appointment of General Macomb to his present command—in these do I find an answer to the inquiry, "By what authority I undertake to publish the Army Register without first submitting it to *him?*"

I am now at the last specification, and I come to it with pain. It imputes to me expressions which, as a gentleman, I had no occasion to use—as an officer I should not have used. I trust that I am too little accustomed to aberrations from the path of either to render it likely that I did use them. I abjure all attempts to taunt, to outrage, to insult They form no part of my character. You, gentlemen of the court, who have long known me, will not require the disclaimer. General Macomb came before me when the ordinary duties of our offices were over. He came under feelings of acknowledged excitement. He uttered expressions, the harsh import of which he says he retracted, and your records show it. He complained, reproved, and threatened; his own testimony so establishes it. Over perturbations such as these the memory exercises but feeble power; the disturbed mirror presents no true reflection. Either as to my words or his own General Macomb presents most inadequate testimony. His own excitement forbids it. He asserts that I caught warmth from his warmth, and when he threatened me with arrest that I threw him back a defiance in words, "I defy you, sir," but subjects them to the qualification "*or words to that effect*, as well as I can remember." The attitude was a peculiar one. We were, or thought we were, alone. General Macomb sought me and commenced the conversation. It referred to official relations, but was not itself official. He used words to which my self-respect bade me take exceptions. I did. He withdrew them; he acknowledges that he did so; his harshness was urged home to me in another shape. Was there no defensive power left to me? If I, too, had kindled and repelled heat by heat—I am an officer, but I am a man! still my recollection does not fail me; I recollect General Macomb's threat, and I recollect my answer to it; fortunately I am not the only one who heard it. A man of most unimpeachable character, Sergeant Baker, known to us in his present station for many years, asserts that my words were, "very well, general, as you please," the only answer I did make; the only answer, under similar circumstances, I would make. Let the two stand side by side. Sergeant Baker, at least, is no party to the issue. A court-martial is no place for small interpretations, for constructions, for glosses—I make none; I present the testimony nakedly; I leave all commentary to you.

Mr. President, and gentlemen of the court, my task is done, yours is about to commence. Take with you, retain with you, exercise over me, the qualities I have long known you to possess. Whatever may be your decision, it cannot restore me to where I stood before. It cannot remove the consciousness of hours painfully spent when I was not the rightful possessor of my own sword.

R. JONES, *Adjutant General of the Army of the United States.*

Was laid upon the table of the court, as a portion of the accused's defence, paper marked A A, with explanatory documents marked A, B, C, D, E, and F.

A A.

ADDENDA.—The 5th specification of charge 1st, Army Register.

DEFENCE—Concluded.

I am here charged with an offence founded on the allegation that I published, or caused to be published, the official Army Register for 1830 "without informing Major General Alexander Macomb of such publication." Yes, such is this offence, Mr. President! The specification goes on to state that "this is in violation of express orders to him, Colonel R. Jones, from the aforesaid Major General Alexander Macomb."

What is the Army Register?

It is an abstract of all the commissions in the army, methodically arranged according to grade and dates, and the order of precedency with these respectively. Hence it is a high Executive act over which no person whatever has the least possible control other than the President of the United States and the Secretary of War. The major general might as well interfere with the form and substance of the commissions themselves as with the abstract of those commissions. I shall, therefore, show that the mere circumstance of "general headquarters" of the army being in the "District of Columbia," when the major general is "not on visits of inspection and tours of duty," can no more authorize that officer to give any order concerning the publication of the *Army* Register than his location here would authorize his interfering with the publication of the *Navy* Register.

According to invariable usage the Adjutant General of the army has been charged with certain duties "relative to military commissions" which devolve on the Secretary of the Department of War by the law of its constitution. Among these duties is the manual labor and preparation of the abstract or register of these commissions. When thus prepared the *projét* is submitted to the Secretary of War, who, after examining and correcting it, if he find the latter necessary, adds his sanction and orders its publication.

It follows as a consequence that, so far as regards *this division* of the practical duties of the Adjutant General, under the Secretary of War and as his recognized agent, in charge of the archives of his department, "*relative to military commissions*," that no military officer, of whatever grade or station, can stand to him in the ordinary relation of a military superior or commanding officer. For instance, if the major general were to order the Adjutant General to write and publish an order dismissing a commissioned officer from the army, or to send a letter of appointment of brigadier general in the militia of the District of Columbia to any citizen, he would disregard such order, because the constitutional exercise of this prerogative belongs exclusively to the President, and the constitutional organ of his will touching such matters is the Secretary of War and not the major general.

The Adjutant General, therefore, like the other heads of the staff which environ the War Office, has charge of a separate bureau, to wit: the bureau "*relative to military commissions;*" and, in consideration of this practically acknowledged decision of the government, this staff officer has been placed, in certain respects, on the same footing with the Quartermaster General, the Commissary General, Chief Engineer, and Colonel of Ordnance.—(*Vide* two orders of the Secretary of War, dated, respectively, January 27, 1821, and March 31, 1826, marked A.)

Before advancing one step further in this division of my defence, it will be necessary first to trace the origin as well as to ascertain the real authority under which is published the official annual Army Register. I proceed to show this authority.

IN THE SENATE OF THE UNITED STATES, *Saturday, July* 31, 1813.

"*Resolved*, That the Secretary of the Department of War be directed to lay before the Senate, at its next session, a roster of all the commissioned officers in the army of the United States, in such form as will enable the Senate to judge upon all questions of regular or irregular promotions."

WEDNESDAY, *December* 13, 1815.

"*Resolved*, That the Secretary of War and the Secretary of the Navy be requested to furnish annually, on the first of January, each member of the Senate with a copy of the register of the officers of the army and navy of the United States."

OFFICE OF SECRETARY OF THE SENATE OF THE UNITED STATES, *March* 4, 1830.

It is hereby certified that the foregoing extracts, contained in this page, have been correctly copied from the journals of the Senate.

Attest: WALTER LOWRIE, *Secretary.*

(*Vide* document B.)

These two plain resolutions, Mr. President, as well as the uniform practice of the War Department, settle the question as to the abstract right of Major General Macomb to *assume* jurisdiction over the official Army Register annually published to the army, as well as required annually for the Senate of the United States.

Have I not sustained the declaration that the major general, in virtue of his *army commission, has as much lawful right* to control or to give orders about the Navy Register as he has about the Army Register?

In demonstrating to this court the official relation which, in virtue of long-established usage, the Adjutant General, stationed at the seat of government, bears to the *Secretary of War*, it becomes indispensably necessary to inquire—

1st. What is the *office* of the Adjutant General of the army, as established at the seat of government?

2d. What has been the practical, though unwritten, *duties* of the Adjutant General, which the established usage of the War Department, habitually recognized by the Secretary of War as being enjoined upon the staff officer, in addition to his written duties, set forth in the Book of Regulations?

I.—The Adjutant General's Office.

This office, established at the seat of government, is the depository of all the records which refer to the *personnel* of the army in war and in peace, and of the military history of every officer and soldier, from the earliest period of the government, as far as these may have escaped two conflagrations of the War Office, or may otherwise have been preserved. It is here where all military appointments and commissions are made out, under the authority of the *Secretary of War*, by this staff officer, as his accredited agent according to law and the provisions of the Constitution.* It is in this office where the monthly returns of the troops and muster-rolls of companies are received and preserved for the use of the *Department of War*;—(*vide* 13th and 19th Articles of War, and Nos. 875, 878, and 879 of General Regulations)—where the "original proceedings" of courts-martial, which the law requires to be preserved by the *Secretary of War*, are deposited and entered; where the inventory of the effects of deceased officers and soldiers are forwarded and recorded.—(See 90th, 94th, and 95th Articles of War, and Nos. 880, 1490, and 1491 of General Regulations.)

It is in the Adjutant General's office where are deposited, for safe keeping, the annual *returns of the militia* of the several States and Territories, and of the arms, munitions, and accoutrements belonging to the same, required by law to be made to the President of the United States.

All these documents and records pertain to an executive department of the government, called the *War Office*, in the fulfilment of the requirements of the laws, being necessary for the daily use and reference of the civil functionaries at the seat of government, and therefore they are entirely disconnected with any relation which can be imagined as pertaining to *any general officer of the army* who may be placed in the immediate command of the troops, and whose "headquarters" happen to be in "the District of Columbia" *when not on visits of inspection and tours of duty.*"†

II.—Practical Duties of the Unwritten Law.‡

That is, duties practically devolved on the Adjutant General, as the agent or organ of the War Department, in the execution of certain powers and duties devolved on the "Secretary of the Department of War," "*relative to military commissions*," by the law of its constitution, or by particular law.

I shall frequently have occasion to quote the words "*relative to military commissions*," because this phrase necessarily includes all duties and authority which can be involved in the "publication" of an official Army Register, and because it is the very term used in the law of '89, which, in any way, is expressive of the specific duties enjoined by that law upon the Secretary of War.

The records and the practice of the War Department *prove* that the Adjutant General has been responsible to the Secretary for the following enumerated duties which pertain to the Secretary of War in his capacity of a civil executive functionary of the government, to wit:

1. The registry of all appointments in the army; 2. Of promotions; 3. Of resignations; 4. Of deaths; 5. Of dismissals; 6. *Of all commissioned officers*, and of their commissions.

7. To publish and distribute the official Army Register, *under the Secretary of War*, pursuant to resolutions of the Senate.

8. To make up and submit to the Secretary of War the annual returns of the militia for Congress, as enjoined by the act of March 2, 1803.

9. To make special reports to the Secretary of War "relative to military commissions," and on other subjects, as the records of the office abundantly prove, &c.

It will be plainly perceived, then, that the *Adjutant General's office*, at the seat of government, has been for many years an important and kindred branch of the "Department of War," and that it is the place where everything "relative to *military commissions*," *under the Secretary of War*, "agreeably to the Constitution," is conducted and registered.

These every-day practical duties of the Adjutant General, under the Secretary of War, may properly be termed *civil*, in contradistinction to his *military* staff duties under the *major general* in his appropriate character as *commander* of the *troops;* and the former are the same description of civil duties which at various epochs of legislation since the year 1797 have always been performed by some *staff* officer stationed at the seat of government, who at one period was denominated the "*Inspector*," at another the "*Adjutant and Inspector*," at another the "*Adjutant and Inspector General;*" and finally, since 1821, the "*Adjutant General.*"

After the reduction in 1821, the "headquarters" of the army, as is well known, were ordered to be established in the "District of Columbia;" that is, when the major general should not be on "visits of inspection and tours of duty." Out of this state of things consequent to the reduction of the army in 1821, the ci-devant Adjutant and Inspector General's office, (which to that period had pertained *exclusively* to the War Office,) but now denominated the "Adjutant General's office," was also in practice made available for and accessible to the commanding general of the army, for all purposes which had reference to his jurisdiction over the *troops, military posts*, and *military commands.*

Like the late Adjutant and Inspector General, prior to 1821, the *Adjutant General*, since the reduction of 1821, has been the keeper of the records already enumerated, *under the Secretary of War, to whom he only has been responsible for all the duties which are connected in any manner whatever with* "military commissions." This fact is attested by the records.

It has remained, however, as it would seem, for the present major general, in addition to his authority as commander of the troops, to claim some jurisdiction over some of those high executive functions which by the Constitution and the laws devolve on the President of the United States and Secretary of War. I refer to the class which have been enumerated and exhibited in the above analysis.

It is true, I believe, that the major general has expressed as his *opinion*, and, in substance, has said, *that the Adjutant General has nothing to do with the Secretary of War; that he had no right to hold any direct official intercourse with him; that the Adjutant General ought, in the first place, to submit to him for his inspection and remark all official lists for* promotions *and* appointments, *&c., &c., previously to their being submitted for the final action of the Secretary of War, &c.*

It may be easily imagined, Mr. President and gentlemen of the court, the real difficulties of my two-fold official relations; and I am sure you will give full credence to all that I may affirm with respect to

* *Vide* act of August 7, 1789, Cross's M. Law, p. 48. † *Vide* General Order of May 17, 1821. ‡ *Vide* paper C.

my deep solicitude and desire to discharge *rightfully* and *properly all the duties of my station.* In proof of this I submit herewith an authentic copy of my letter to the Secretary of War, dated December 10, 1829.*

The Secretary of War received these communications from my own hands with his usual courtesy and kindness, and promised to give the subject-matter his attention and consideration at as early a day as his other duties would permit. It has turned out, however, that, before any *written* rule could be made by the proper authority, my arrest and trial have taken place; but, most fortunately for me, the established usage of the service, in reference to the direct channel of communication between the Adjutant General and Secretary of War, has continued to be practically recognized by the *common superior;* the consummation, therefore, by the Secretary himself, of this direct official intercourse with the Adjutant General almost to the day of his arrest, amounts in fact to an official *veto*, and that practically expressed, upon the doctrine and *opinions* of the major general in command of the army, with regard to the duties and station of the Adjutant General at the seat of government. In proof of this I submit some original manuscripts in the handwriting of the Secretary, which will show that in sundry instances he, like his predecessors, regards the Adjutant General as a staff officer, whose practical duties, *in part*, are in *direct* subordination to the Secretary of War. In one of these papers will be found the following order endorsed in the handwriting of the Secretary of War:

"Colonel JONES: Direct the commanding officer at Savannah," &c.

Another one of these documents, also in the handwriting of Mr. Eaton, bearing date January 9, 1830, commences thus:

"Colonel JONES: I wish your opinion on the enclosed papers," &c.†

These fragments of official memoranda are strikingly illustrative of the usage in relation to the official intercourse which subsists between the Adjutant General and the Secretary of War; and although some of them refer to matters of small import, yet the more conclusively do they prove this official relation. In proof of the more important official relation between the Adjutant General and the Secretary I will cite the record of "official reports to the Secretary of War," which has been submitted and received as evidence in the case; but, for greater convenience, I will specially designate some of this evidence by referring to particular dates and pages, to wit:

See letter of December 3, 1825, page 9; letter of February 11, 1826, page 37; letter of May 11, 1826, page 33; report of December 6, 1827, page 49; letter of February 3, 1827, page 63; letter of March 20, 1827, page 60; report of August 22, 1827, page 73; report of February 11, 1828, page 103; letter of July 10, 1828, page 122; letter of December 22, 1828, page 133; letter of December 26, 1828, page 137; report of June 4, 1829, page 163; letter of September 9, 1829, page 167; report of December 3, 1829, page 181; letter, &c., of December 7, 1829, page 193; &c., &c., &c.

For yet easier reference I cite and submit a printed document (No. 61,) of the 1st session of the 19th Congress, of the House of Representatives, (1826,) and also a printed document (No. 41) of the 2d session of the 20th Congress, House of Representatives, (1828.)—(*Vide* printed documents, F.)

My letter, addressed to the Secretary of War, of December 7, 1829, is illustrative of the established usage of the department in reference to the annual lists of army appointments and promotions hitherto preserved by the Adjutant General for the Secretary of War, and over which the major general (although of a different opinion) cannot, in the nature of things, of his own volition, in any shape or form, exercise *any control or authority.*

It may plainly be deduced from the foregoing historical narrative, which I very much regret to have found necessary to spread upon this record, that the practical duties of the Adjutant General as already exhibited and explained, are positively of twofold relationship; that *one class* of those duties essentially partakes of a civil or ministerial character, under the "Secretary for the Department of War," being his responsible and active agent for the incipient arrangement and preparation as well as preservation of all papers and documents "relative to military commissions;" that the other class is purely *military*, being the *chief of the staff* of the major general commanding the army, during the continuance of headquarters in the "District of Columbia," and to whose authority as such I have ever yielded a willing obedience.

These two avenues, which lead directly, the one to the Secretary of War, the other to the general-in-chief, and through which my daily practical duties have required me to travel ever since I have had the honor to hold my present appointment, are plainly presented to view; that which conducts me straightforward to the War Office is studded with land-marks planted by the Secretary of War himself, at every step of the way. *The records prove this fact*—the Secretary himself has said it. But why need I thus delineate with minuteness this official chart of my practical duties? You, gentlemen of the court, practically and well understand all the bearings of this subject touching the affair of the Army Register, and the causes which have induced this investigation.

Nearly every member of this tribunal, from personal observation and official intercourse, know how to class, how to divide, and how to appreciate the *relative* duties of the Adjutant General of the army at *the seat of government.*

I deem myself fortunate, indeed, in having the merits of this case which, somehow or other, have been contrived to be mixed up with a charge of disrespect and contempt of authority toward the commanding general, submitted to the adjudication of so enlightened and honorable a tribunal as the court before which I now stand. The military acumen, as well as quick perception, as civilians, evinced by every member of this court, and which must now neccessarily be brought into action, when contemplating and discussing the *theory* and practice of our military service, as well as the theory and genius of our civil institutions, as referring to that service, justify me in reposing implicit confidence in your opinion and your judgment touching these *relative* duties of the Adjutant General, as connected with the Secretary of War, and as connected with the general-in-chief. As military men, and as civilians, all must perceive how widely different are the duties of an Adjutant General at the "general headquarters" of an army, if established at any point remote from the city of Washington, and the duties of the same Adjutant General at "general headquarters," as at present established at the *seat of government.*

In their individual capacities almost every member of this court knows, from his own experience, that that moiety of the practical duties of the Adjutant General, "relative to military commissions," has ever been considered as being in direct subordinancy to the Secretary of War; and, as a judicial tribunal, I feel cofident they can but decide that the official course which the Adjutant General has pursued, in

* See the letter and the documents therein referred to, marked D.

† The documents here referred to are marked and numbered from 1 to 5—E.

connexion with the "publication" of the Army Register for 1830, was right; was consistent with his duty, and the *usage* of the public service, as connected with the War Department, is not indicative, as it assuredly was not intended to be, of any sentiment of disrespect either toward the person or authority of the major general. For, acting on a line of official duty, independent of the major general, how can it be imagined that the Adjutant General meditated any disrespect by the mere fulfilment of the official obligations of that independent duty?

Having established the twofold official relation which the Adjutant General bears to the public service, the one direct to the Secretary of War, the other direct to the major general, as chief of the staff; and having proved, to conviction, that the abstract of "military commissions," called the Army Register, involves a high executive act, pertaining to the President and SECRETARY OF WAR, it follows, therefore, that the major general could have had no legal control whatever over the publication of that document.

What, then, is the irresistible conclusion from the foregoing premises? I answer, that any order from *any* general officer to the Adjutant General, concerning the *preparation* or "*publication*" *of the official* ARMY REGISTER, would be out of the line of his duty; would be an assumption of authority, contrary to the Constitution and laws of the country.

ROGER JONES.

Explanatory documents, marked A, B, C, D, E, and F, accompanying the paper marked A A.

A.

DEPARTMENT OF WAR, *July* 27, 1821.

SIR: The Quartermaster General, Commissary General of Subsistence, the Colonel of Engineers, and the Chief of the Ordnance department, while stationed at the seat of government, will be allowed double rations from this date.

I have the honor to be your obedient servant,

J. C CALHOUN.

PAYMASTER GENERAL.

WAR DEPARTMENT, *March* 31, 1826.

The order of the War Department, dated July 27, 1821, authorizing the allowance of double rations to certain staff officers therein enumerated, will be extended to the Adjutant General.

The Paymaster General will settle Colonel Jones's accounts for double rations.

JAMES BARBOUR.

PAYMASTER GENERAL.

True copies: N. TOWSON, *P. M. G.*

B.

"IN SENATE OF THE UNITED STATES, *Saturday, July* 31, 1813.

"*Resolved*, That the Secretary of the Department of War be directed to lay before the Senate, at its next session, a roster of all the commissioned officers in the army of the United States, in such form as will enable the Senate to judge upon all questions of regular or irregular promotions."

"WEDNESDAY, *December* 13, 1815.

"*Resolved*, That the Secretary of War and the Secretary of the Navy be requested to furnish annually, on the first of January, each member of the Senate with a copy of the register of the officers of the army and navy of the United States."

OFFICE OF SECRETARY OF THE SENATE OF THE UNITED STATES, *March* 4, 1830.

It is hereby certified that the foregoing extracts, contained on this page, have been correctly copied from the journals of the Senate.

Attest: WALTER LOWRIE, *Secretary.*

C.

Extract of general orders, dated "Adjutant and Inspector General's Office, May 17, 1821."

"The headquarters of Major General Brown will be in the District of Columbia; the headquarters of the western department will be at Louisville, Kentucky; and the headquarters of the eastern department will be at Governor's island, New York, when the generals are not on visits of inspection and tours of duty."

A true extract.

W. B. DAVIDSON, *Lieutenant United States Artillery.*

D.

ADJUTANT GENERAL'S OFFICE, *Washington, December* 10, 1829.

SIR: The dilemma in which I have found myself since June, 1828, in regard to the limitations and divisions of the *relative* duties of my office, and the consequent anxiety I feel to discharge rightfully and properly all the duties of my station, will, I trust, be deemed a sufficient apology for this renewed effort, now respectfully made, to obtain some *written rule*, which, as amendatory of article 66, of Army Regulations, will authoritatively *determine* the functions of the Adjutant General. This dilemma arises only from the circumstance of Major General Macomb having more than once declared that the Adjutant General *ought* not to have any official contact with the Secretary of War, and having also expressed himself in language which cannot be misunderstood, that, as general-in-chief of the army, *his* prerogatives, (primarily) encircle nearly all such executive or ministerial functions which pertain to the *War Office*, relative to military commissions as are classed and arranged at page 4 of the document marked (B,) herewith respectfully submitted; and that the list of promotions and appointments, &c., for which the Adjutant General has heretofore been *responsible only* to the Secretary of War, should be submitted to the general-in-chief. With such views and *opinions* entertained by so distinguished and elevated a personage as the commanding general of the army, I have more than once felt it to be a solemn duty to solicit the attention of your predecessor, General P. B. Porter, to the subject; and finally, on the 24th of January, 1829, I addressed a respectful communication to him, of which the paper just referred to is a revised extract. For reasons above stated, I respectfully submit for your perusal and examination the projét of a general regulation marked (A,) which I beg leave to request may be laid before the President for his consideration and decision. The accompanying paper (B) presents the particular subject under consideration in as fair a light as so brief an analysis of the theory of the general staff, which environs the War Department, with some practical illustrations, would permit.

As a soldier, I need scarcely say, that I shall be perfectly contented with any decision which the President may be pleased to make in the premises; but I do confess that the claim of *any jurisdiction* by the commanding general over that moiety of my practical duties which has always been in DIRECT *subordinancy to the* SECRETARY OF WAR, induces some degree of individual solicitude on *account of the uncertainty in determining* what these practical duties really are; while I do not doubt that the public interest calls for the adoption of some *written** rule that cannot be mistaken by subordinates who may have respective parts to perform, as the substitute of an *usage* which, although long, *very long established*, may not by all be understood, as indeed the adverse *opinions* of the present commanding general of the army sufficiently attest.

I am, sir, with great respect, your obedient servant,

R. JONES, *Adjutant General*

Hon. JOHN H. EATON, *Secretary of War.*

(B.)

"ADJUTANT GENERAL'S DEPARTMENT."

ARTICLE 66, G. R.

Duties of the Adjutant General of the army, as connected with the Secretary of War, as connected with the general officer in command of the army.

The General Regulations of the Army enumerate the several divisions of the staff and military bureau which environ the War Department. These are as follows, and in the order here enumerated:

"The Adjutant General's department."
"Engineer department."
"Ordnance department."
"Quartermaster's department."
"Subsistence department."
"Pay department."
"Medical department."

These several departments constitute so many avenues through which the various acts and measures of the Executive which refer to *commissions* and *appointments* in the army, to permanent *fortifications*, the construction of *ordnance*, quartermaster's supplies, *subsistence* of troops, &c., are communicated and executed; and such is the symmetry in this organization, that whilst each member of the military staff of the *War Department* is confined to the sphere of his own peculiar functions, all regard the Secretary as the common superior—the head of the harmonious whole. The duties of the respective chiefs of staffs who are stationed at Washington are well ascertained and clearly defined, except those of the Adjutant General, whose *practical* duties are only *partially* expressed and defined, and these for the most part have reference only to troops and armies operating in the field.

It becomes then necessary to inquire what *is the office* of the Adjutant General of the army at the seat of government, and what the practical duties which the common law of the service enjoins upon him in *addition* to those which are written in the book of regulations?

I. The Adjutant General's office at the seat of government is the depository of all the records of the army; of the military history of every officer and soldier, from the earliest period of the government, as far as these have escaped two conflagrations or may otherwise have been preserved.

It is here where all military appointments and commissions are made out and registered; where all enlisted soldiers are entered and recorded, and their enlistments filed, &c., &c.

It is in this office where the monthly returns of the troops and muster-rolls of companies, enjoined by the 13th and 19th Articles of War, are received and preserved; where the "original proceedings of courts-martial," pursuant to the 90th article, are deposited and entered; where the inventory of the effects of deceased officers and soldiers, under the 94th article, are forwarded and recorded, &c.

* "The government ought precisely to *determine* the functions, duties, and rights of all military men—soldiers, officers, chiefs of corps, generals."—(*Vattel.*)

It will be plainly perceived, then, that the Adjutant General's office is now (as kindred offices for more than twenty years have been) an important division of the archives of that branch of the executive government denominated by law "the Department of War," and that it is the place where everything "*relative to military commissions,*" UNDER THE SECRETARY OF WAR, is conducted and registered.

II. *Duties of the unwritten law.*—The Adjutant General is responsible to the *Secretary of War* for the *registry of all military officers,* and it is his duty to keep an accurate record of all—

1. *Appointments* in the army;
2. *Promotions;*
3. *Resignations;*
4. *Dismissals;*
5. The *promulgation* of these events;
6. Of all *commissioned officers* of the army, and of their *commissions;*
7. The annual register of the army, required by resolutions of the Senate passed in 1813 and 1815, &c., &c.;
8. General returns of the militia for both houses of Congress, enjoined by the act of March 2, 1803.
9. It is his duty to announce such regulations, from time to time, as the Secretary of War, with the approbation of the President, may deem expedient and necessary;
10. To make special reports to the Secretary of War, as the records of the office abundantly prove, &c.

These practical duties of the Adjutant General, under the *Secretary of War,* may be properly termed *administrative,* in contradistinction to his military staff duties under the *general-in-chief;* and the former are essentially the same class of duties which at various epochs of legislation since 1797 to the present day have always been performed by some such *staff* officer, sometimes denominated "the Inspector," "the Adjutant and Inspector," "the Adjutant and Inspector General," and finally, since 1821, "the *Adjutant General.*" Have any of these, or similar executive functions, ever been *assigned* to any general officer of the line of the army? Are they compatible with the high military duties of a commander of the army? Ought a general-in-chief to desire these comparatively subordinate responsibilities? And can it be the *interest* of the army thus virtually to relinquish the glories of the field, and necessarily abstain from "*visits of inspection* and tours of duty?" for if the major general be absent from "headquarters" (*i. e.,* Washington city,) on "tours of inspection," how can he, in truth and in fact, *be* responsible to the Secretary of War for the accuracy and preservation of these records? After the reduction, in 1821, the "headquarters" of the army were ordered to be established in the District of Columbia, when the major general should not be "*on visits of inspection* and *tours of duty;*"* and to avoid an useless duplication of the muster-rolls, monthly returns of the army, &c., &c., which habitually and always had been transmitted to the seat of government for the use and information of the *Department of War,* these also were made available for the practical purpose of the major general in his *appropriate character of commander* of the army. Out of this state of things, therefore, forced by circumstances consequent upon the reduction of 1821, the ci-devant "Adjutant Inspector General's *office,*" which pertained exclusively to the War Department, but now denominated "the Adjutant General's office," was *also,* in practice, made available for, and accessible to, the *commanding general* of the *army,* for whatever referred to *troops, posts,* and military *commands;* whilst all the records and documents which were "RELATIVE TO MILITARY COMMISSIONS" were, in the nature of things, retained and reserved for the sole and paramount jurisdiction and action of the Secretary of War. Like his predecessor, (the late Adjutant and Inspector General,) the *Adjutant General,* but not the *general-in-chief,* continued to be the keeper of the records already enumerated, under the SECRETARY OF WAR, to whom he only is responsible for all the duties which are connected in any manner whatever with "*military commissions.*" On the other hand, the Adjutant General is likewise responsible to the general-in-chief, as chief of the staff, according to the definitions of duties found in the general regulations for the army.—(Vide articles 44 and 66, Nos. 455, 458, &c.)

It has already been remarked, that the administrative duties of the Adjutant General, under the Secretary of War, are just such as were performed by the late Adjutant and Inspector General from 1813 to to 1821. It has remained, however, for the present general-in-chief of the army to claim jurisdiction over some of the administrative duties enumerated and exhibited in the above analysis; which duties, during the command of the lamented General Brown, were practically acknowledged at the War Office as pertaining to the Adjutant General. Thus, for example, until *recently,* all papers and documents referring to *commissions* and *appointments* were habitually sent down from the Secretary's office *direct* to the Adjutant General; but since the 1st of June, 1828, it would now seem as if it were attempted to pass through the hands of the *major general* who commands the officers certain *executive functions* which refer to their commissions and to their rank! Now, it is believed that such a practice, in the nature of things, never could have been contemplated by the Executive, no more than such a practice *could* obtain if "*general headquarters*" were located an hundred miles from the seat of government. In all the other divisions of the staff the practice continues to be rational and without innovation. If the honorable Secretary, for example, requires information respecting the progress of the *fortifications,* or of the construction of the *cannon* necessary to garnish them when completed, where is the resort for such information? Is it to the general-in-chief? No; recourse is had to the Colonels of Engineers and of Ordnance. Does he demand a report on the state of supply of *provisions* or of *medical stores* for the army, is reference had to the major general commanding the army? No; the Commissary General of Subsistence and the Surgeon General are the officers who would naturally be called upon to furnish such reports. Wherefore, then, let it be respectfully inquired, attribute to a general-in-chief functions which would officially connect him with the arrangement of "*military commissions*" at the seat of government, and thereby estrange him from a higher destiny in the field. The general-in-chief in command of the army is even denied any right of jurisdiction over *fortifications* while they are in progress of construction, and over the *ordnance* and the *clothing* for the troops, until the one is placed in the bastion and the other in the soldier's knapsack. How much less reasonable, then, is it to imagine that a general-in-chief, under our well-defined government, can advantageously have anything to do with the *rank* of officers or "*military commissions,*" which, indeed, the law places beyond his touch?†

* "The headquarters of Major General Brown will be in the District of Columbia," "*when not on visits of inspection and tours of duty.*"—(General order of the War Department of May 17, 1821.) This order (it is believed) constitutes the sole authority in virtue of which the general officer commanding the army is located in the *city of Washington.* The very terms of the order imply temporary residence, military vocation, *active,* and not *sedentary* duties, &c., &c.

† The duties of a general-in-chief, and as commander of the troops, are supposed to be purely *military* duties; his supreme authority as such is felt and obeyed at every post and garrison; he commands the army; he directs the movement and combination of its parts; he is supposed to have made "visits of inspection" to every fortification and every important point along our extensive frontier; to be the best judge as to what posts should be established or evacuated, augmented or diminished, &c., &c.

Every State has an adjutant general who, under the chief magistrate, looks to the commissions of the militia, besides being responsible for certain returns required by law. So, too, in the general government, since the year 1797, some such staff officer generally has been attached to the War Office, and *since* 1812 his office and his duties are just such as have been described and enumerated at pages 3, 4, and 5.

* * * * * * *

Most respectfully submitted.

R. JONES, *Adjutant General.*

Gen. P. B. PORTER, *Secretary of War.*

JANUARY 24, 1829.

"The government ought precisely to determine the *functions, duties,* and rights of all military men—soldiers, officers, chiefs of corps, GENERALS."—(*Vattel.*)

(A.)

Projét of a general regulation concerning the Adjutant General's department. Respectfully submitted for consideration, December 10, 1829.

DEPARTMENT OF WAR.

The following regulation, having been approved by the President of the United States, shall be incorporated with the General Regulations of the Army, under the head of "Adjutant General's Department, or Military Correspondence," and immediately preceding No. 869, (article 66.)

1. The Adjutant General of the army shall be stationed at the seat of government, and, under direction of the Secretary of War, is charged with the registry of all military commissions.

He shall keep the record of all appointments in the army; all promotions, resignations, deaths, &c., &c.; and whatever else may relate to military commissions.

He shall keep a record of all enlisted men in the land service of the United States, and a minute account of all casualties incident to the rank and file of the army.

He shall announce all regulations to the army which the Secretary of War, with the approbation of the President, may deem to be proper and necessary for the military service.

2. The returns of the militia of the several States and Territories required for the War Department shall be filed in the Adjutant General's office, where will be consolidated the annual general abstract required for the use of Congress; and in this office shall be registered all appointments and commissions made and signed by the President for the militia of the District of Columbia.

3. As long as the general headquarters of the army are fixed at the seat of government the Adjutant General of the army, in addition to the duties above required of him, shall perform such military duties in the staff of the commanding general of the army as may fall under the head "*sedentary*" duties of a chief of staff with an army in campaign.

[See *articles* 44 and 66, *Nos.* 455, 458, &c.]

E.

Copies of papers numbered 1, 2. 3, 4, *and* 5, *being some practical evidences of the official relation between the the Adjutant General and Secretary of War.*

No. 1.

JANUARY 9, 1830.

I wish your opinion on the enclosed papers. Does the law prohibit the enlistment of a minor, he having no parent or guardian?

Is there vacancy of sutler at the point suggested?

J. H. E.

Received January 11, 1830.

Answer immediately.

[See opinion addressed to the Secretary this day, January 11.]

R. JONES.

No. 2.

COL. JONES: Direct the commanding officer at Savannah to this effect: Ascertain if the man be a minor, and if so, to discharge him; or if enlisted when drunk, to discharge him: provided the enlistment has taken place since the general order which was issued on that subject, and to report the fact to the department that the recruiting officer may be arrested for disobedience of orders.

J. H. EATON.

No. 3.

DECEMBER 15, 1829.

The Adjutant General will please enable me to answer the enclosed letter.

J. H. E.

No. 4.

SEPTEMBER 18, 1829.

The Adjutant General is requested to state, early as practicable, if the within application can be granted.

HALF-PAST TWO, *September* 19.

No. 5.

NOVEMBER 12, 1829.

COL. JONES: Omit sending the appointment of Sheppard as sutler. I wish to recall the appointment, and, for the present, to revoke it.

J. H. EATON.

F.

[See document No. 61, 19th Congress, 1st session, House of Representatives, and document No. 41, 2d session, 20th Congress, House of Representatives.]

The judge advocate here declined offering any reply, expressing his willingness to take the opinion of the court without a moment's additional delay.

The court then adjourned till 10 a. m. on the ensuing day.

MARCH 11, 1830.

The court met pursuant to adjournment. All present.

The court then having been duly cleared, and the whole proceedings read over by the judge advocate, do find, upon mature deliberation, Colonel Roger Jones, Adjutant General of the United States army, guilty of the first specification; guilty of the second specification; guilty of the third specification. Under the fourth specification the court find the facts, but attach no criminality to them; guilty of the fifth specification of the first charge; guilty of the first charge.

Not guilty of the first specification; not guilty of the second specification of the second charge—not guilty of the second charge.

Guilty of the specification under the third charge; guilty of the third charge, and do sentence him to be reprimanded in general orders.

The court, in awarding this sentence, are sensible of its apparent inadequacy when contrasted with the offences implied in their various findings; nor would it have been adopted by them but for the conviction they entertain that Colonel Jones labored under a misconception of his official obligations, which, however little warranted by the regulations, the usages, and the interests of service, has still, as they believe, chiefly tended to mislead him.

The court then adjourned *sine die*.

H. ATKINSON, *Brig. Gen. U. S. A., and President of the Court.*
R. L. ARMSTRONG, *Judge Advocate of the Court.*

APPENDIX.

[Copy of paper marked T, referred to at page 3.]

SIR: We beg leave, through you, as the proper channel of communication on such subjects, to invite the attention of the President to our claim as late staff officers, to a *recognition* of the brevet rank which we conceive we hold, under the express provisions of law; in order that we may be borne upon the Army Register in our true character, and be enabled to enjoy the privileges due to us in common with other brevet officers.

To our minds, nothing is clearer than that we are justly and legally entitled to what we claim; and we do not entertain a doubt that every one who shall go into an investigation of the case, free from bias or prejudice, will come to a like conclusion. We could cite the concurring opinions of many disinterested officers, high in rank and distinguished for their intelligence; but it is not necessary to invoke the influence of such opinions, however valuable, in aid of a cause sufficiently strong on its own intrinsic merits.

The legal grounds of the claim are briefly these: By the act of the 3d of March, 1813, entitled "An act for the better organization of the general staff of the army of the United States," (Military Laws, chap. 80, sec. 3,) the staff officers named therein were expressly clothed with *brevet* rank; and by the act of the 24th of April, 1816, entitled "An act for organizing the general staff, and making further provision for the army of the United States," (Military Laws, chap. 98, sec. 9,) it is declared "that the several officers of the staff shall, respectively, receive the pay and emoluments, *and retain all the privileges*, secured to the staff of the army by the act of March 3, 1813."

Under those laws we were appointed on the staff, from the line, and received, with the concurrence of the Senate, regular commissions, conferring the *brevet rank* due to us respectively. That we were *then* possessed of that species of rank, bestowed upon us in constitutional form, without any limitation as to

time, or qualification as to circumstances, is beyond all question; and to arrive at a fair conclusion as to its present validity, we have only to inquire whether there be any subsequent legislation which deprived us of it? We aver that there is no such legislation; and hence, that our brevet rank, like that of all other officers in the army who ever held any, without a solitary exception, remains *unrevoked*. On this point we might content ourselves with holding the negative of the proposition, and demanding affirmative proof; but we will not stop there; and without assuming the task of positively *dis*proving it, we will endeavor to show, by a brief argument and a few illustrations derived from the established practice, that it is not entitled to admission.

The only authority that has ever been *suggested* as opposing the claim is derived from the negative provisions of the act of March 3, 1815, entitled "An act fixing the military peace establishment of the United States," (Military Laws, chap. 95,) and that of March 2, 1821, entitled "An act to reduce and fix the military peace establishment of the United States," (Military Laws, chap. 122.) The staff *officers* not being provided for and continued by those acts, it has been taken by implication that the *brevet rank* held by the incumbents *in the army at large*, where they also, at the same time, held lineal rank to give it effect, was abrogated thereby.

Now, we beg leave to premise that nothing seems to us more unwarrantable than to strip a worthy class of officers of the rank and privileges which the law had conferred upon them in *express terms* by mere implication and an *assumed* affinity between their rank and their staff offices. It was by no means a necessary consequence that our brevet rank in the army at large was abrogated by the mere abolition of the staff officers whose duties we were discharging for the time. It is not in the nature of brevet rank, when once conferred, to be affected by any special changes that may be made in the position of an officer in the different corps of the army. On the contrary, so long as he continues in any corps, that rank, if he holds it, is available under the prescribed restrictions.

Nor has it ever been made an *object* of legislation in any way connected with purposes of *organization*. In the numerous acts that will be found on the statute-book, reducing the army and modifying its organization at different times, no reference whatever is made to *brevet* officers. Congress have never undertaken to reduce and limit their number. They legislate at brevet rank by restricting its operation in regard to pay, but never to revoke or destroy it. 'Tis true, it may be *incidentally* affected; it shares the fate of its possessor. If he be entirely *disbanded*, the brevet is virtually abrogated; but it is well established that, if he be retained in service at all, no matter what change may have been made in his relative position in corps, his brevet rank is preserved untouched.

This is no forced construction of the law got up to suit the occasion; it will be found in perfect accordance with the established practice of the service when assumed distinctions are discarded, and things tried by a common principle.

Passing over many analogous cases which might be cited, we will ask how was it with the present commanding general of the army, under the very act which has been construed as abrogating the brevets of the late staff officers? Prior to the reduction of 1821 he was a brigadier, with the brevet of major general. The former office, so far at least as affected him, was abolished by the law, and he was appointed to a new one, that of colonel of engineers, taking rank from the 1st of June, 1821, (see Register of that date,) when his office as brigadier was abolished. Yet his brevet was not considered abrogated; on the contrary, he was continued on the official Register as a brevet major general, addressed so by all the functionaries of the government, and acknowledged by every one to be such, for all the purposes of rank and command, though restricted in respect to pay.

If there be any difference in principle between this case and our own, it is clearly in favor of the latter. Since instead of receiving *new appointments* when our staff offices were abolished, we merely reverted to our rightful position in the line, which had never been abandoned.

Again, the present Commissary General of Subsistence was, under the act of April 24, 1816, the very law under which most of us hold, appointed quartermaster general of division with the *brevet* rank of colonel in the army. His staff office was *abolished* by the act of April 14, 1818, and he was appointed to a new one never before known in our service, (Commissary General of Subsistence,) with the rank of colonel; yet *his* brevet was not considered *abrogated*. On the contrary, it has been recognized by the government as perfectly valid, and in 1826 was made the basis of a further brevet to the rank of brigadier for ten years' service, computing from the date of his first appointment as quartermaster general of division.

This case is even stronger than the one just stated, for General Gibson was a staff officer like ourselves—came into service under the very same law, and held precisely the same description of rank.

We could go on to multiply examples of officers reduced in grade, translated from one corps to another, and from one arm of service to another, without losing their brevet rank, but it is deemed unnecessary, since they are within the recollection of every one at all acquainted with the history of the service. In selecting the cases which have been cited, it is far from our intention to raise even a shade of doubt as to the validity of the brevets of the officers who have been named. On the contrary, we advocate the very doctrine by which they are sustained, and by which alone they can be sustained. All that we ask for is, that we may have the benefit of the *same* principle which has been applied to others under circumstances, if not precisely similar, certainly not more favorable. It would involve no *new* act on the part of the government, for we have all been submitted to and approved by the Senate as *brevet* officers. Our right is now as perfect in law as it could be made, and nothing is necessary but a simple recognition of it by the government to render it effective—we ask no more.

We beg it to be borne in mind, sir, that this application does not in any way involve the troubled question, so much discussed, as to the *attributes* of brevet rank. Whatever that rank may be, claiming to be legally invested with it, we seek only to be allowed to enjoy it in common with others. This, we humbly conceive, will not be denied to us. We will not anticipate a refusal of our claim, for that would be to impugn the justice of the government in which, when correctly advised of the law and the facts, we have great confidence.

We have never for a moment acquiesced in the decision made some years ago, by which we were withdrawn from the Register as *brevet* officers. On the contrary, we have never ceased to complain of it as an act of great injustice. The remonstrances of most of us of old date will be found upon the files of the appropriate offices, and to those we would beg to refer in connexion with this memorial.

Mr. Secretary Calhoun, deeming our claim a just one, had our names restored to the Army Register in 1823 as brevet officers, but they were left off again in 1826 without consideration, as we believe, and,

as we learn, by order of the late Major General Brown, who, of himself, had no rightful jurisdiction of the subject.

If our rights had been duly acknowledged, an existing anomaly in our rank would have been avoided, which it is now our object to correct. Several of us, having completed ten years of service in our lineal grades, have recently received brevets conferring the same rank that we held many years ago. Now, as we have in our possession commissions of several years' standing conferring rank of the same degree with much older dates, it does seem to us, and we say it with great deference to the opinions of others, that a *second* nomination of us with new dates was altogether erroneous. The Senate, if they had recurred to their journal, might with reason have asked how it could happen? Since they would have found that many years ago they passed affirmatively upon our nominations for the very same rank.

If it be said, in derogation of the brevets thus conferred, that they were in connexion with our *staff offices*, we answer that the distinction is *gratuitous*—the law makes none. And we would further contend that under the act of March 3, 1813, before recited, the *worthiness* of a staff appointment formed another consideration in extension of the act of the 6th of July, 1812, on which brevet rank might be bestowed. That it was equal, if not superior, to two out of the three considerations there specified is apparent, since, besides bare meritorious conduct, which is second in the order of enumeration, it implied special fitness for high and important staff duties. Our case is, therefore, evidently strong, not merely in its legal aspect, but in equity and reason.

In conclusion, we will remark that there are now but few officers who have any interest at stake in this question. The rights of the few, however, should be held as sacred as those of the many; and having already suffered severely by the error or prejudice with which our case has been regarded, we do trust that due consideration will now be given to the subject, and that our just claim will be speedily recognized.

Copy of paper marked Z, referred to at page 3.

Mr. PRESIDENT: On the detail of this court, I find myself in a position, in regard to rank, which I must conceive to be prejudicial to me in some respects.

I was one of a list of captains who were brevetted majors during the past year. On the principles which governed the Executive in his nomination, and the Senate in their confirmation of that list, I was entitled to rank from *August* 15, 1824, but which date, owing to peculiar circumstances, was not appended to my nomination; hence the date of the 12th of December, 1858, which my present commission bears. These circumstances of my case having been submitted to the consideration of the Executive, he has not only admitted the justice of my claim to rank as brevet major from the 15th of August, 1824, but has recently sent my name to the Senate with a view to this alteration and adjustment of my rank. On these grounds I addressed a particular request to the general-in-chief to relieve me from the detail of this court, inasmuch as my position as therein designated must, if I am not relieved or my position changed, involve me in the mortifying predicament of being forced to occupy a station different from that to which I conceive myself to have been entitled with reference to that rank which has not only been admitted by the Executive in my nomination therefor to the Senate, but which I have strong reason to believe I shall be soon in possession of.

The general-in-chief has not complied with my request to be exempted from the court, as will be perceived by the Acting Adjutant General's letter, herewith submitted. I have now no alternative but to submit my case to the consideration of this court, hoping that its peculiarity, and the circumstances on which it rests, may be so regarded that I may not be required to occupy a seat conforming to the detail, but be altogether exempted from sitting on the court as one of its supernumerary members.

R. A. ZANTZINGER, *Brevet Major Second Artillery.*

WASHINGTON, *February* 21, 1830.

ADJUTANT GENERAL'S OFFICE, *Washington, February*, 22, 1830.

SIR: Your communication, requesting to be relieved from the detail of the general court-martial ordered to convene in this city, has been laid before the general-in-chief, who directs me to say to you, in reply, that, inasmuch as you have been already detailed, he cannot interfere. But you are at liberty to state to the court that your name has gone before the Executive to be submitted to the Senate, with a view that the date of your brevet rank may be rectified, and to conform to ten years' service from the date of your brevet as captain.

I have the honor to be, sir, your most obedient servant,

S. COOPER, *Acting Adjutant General.*

Brev. Major R. A. ZANTZINGER, *U. S. Army, Washington.*

Copy of paper, marked H, referred to at page 15.

ORDERS.

DEPARTMENT OF WAR, *May* 28, 1828.

Brevet Major General Alexander Macomb having been appointed, by and with the advice and consent of the Senate, the major general of the army, and having accepted that appointment, he is directed to assume the command of the army, and take the station which was occupied by Major General Brown at the time of his decease, at the seat of government; and all officers and soldiers of the army are specially commanded to obey and respect him accordingly.

By command of the President of the United States.

SAML. L. SOUTHARD, *Acting Secretary of War.*

Copy of the paper, marked K, referred to at page 15.

ORDER No. 24.

HEADQUARTERS OF THE ARMY OF THE U. S., *Washington, May* 29, 1828.

Major General Alexander Macomb, by virtue of his appointment and the orders of the President of the United States, assumes the command of the army.

Aware of the high responsibility which is imposed upon him, and the difficulties attendant on his station, the major general enters on the duties of his office with diffidence, and feels that it will scarcely be possible to fulfil the object of his appointment, unless he be seconded by that enlightened zeal and intelligence which have hitherto characterized the officers of every grade in the army of the United States. He therefore indulges the hope that he will find in the general and other superior officers in command of the troops, as well as in those composing the general staff, a cordial co-operation in maintaining that order, discipline, and economy, throughout the service, without which the military establishment can be neither useful nor creditable to the republic.

First Lieutenant Samuel Cooper, of the fourth regiment of artillery, and First Lieutenant W. M Boyce, of the first regiment of infantry, are hereby appointed aides-de-camp to the major general. They will proceed to headquarters, and report themselves accordingly.

ALEXANDER MACOMB, *Major General Commanding.*

Copy of paper, marked L, referred to at page 15.

ADJUTANT GENERAL'S OFFICE, *Washington, February* 16, 1830.

SIR: It is probable that you may be summoned to appear before the general court-martial ordered for the trial of Adjutant General Jones, as a witness on the part of the accused. I am, therefore, directed by the general-in-chief to notify you of such probability, in order that you may not be absent from your station, should there be a summons for your attendance.

I have the honor to be, very respectfully, sir, your obedient servant,

S. COOPER, *Acting Adjutant General.*

Major R. W. KIRBY, *U. S. Army, Fortress Monroe, Va.*

Copy of paper, marked M, referred to at page 15.

ADJUTANT GENERAL'S OFFICE, *Washington, February* 16, 1830.

SIR: It is probable that you may be summoned to appear before the general court-martial ordered for the trial of Adjutant General Jones, as a witness on the part of the accused. I am, therefore, directed by the general-in-chief to notify you of such probability, in order that you may not be absent from your station, should there be a summons for your attendance.

I have the honor to be, very respectfully, sir, your obedient servant,

S. COOPER, *Acting Adjutant General.*

Col. J. B. WALBACH, *Fortress Monroe, Va.*

Copy of paper, marked N, referred to at page 15.

ADJUTANT GENERAL'S OFFICE, *Washington, February* 16, 1830.

SIR: It is probable that you may be summoned to appear before the general court-martial ordered for the trial of Adjutant General Jones, as a witness on the part of the accused. I am, therefore, directed by the general-in-chief to notify you of such probability, in order that you may be within reach, should there be a summons for your attendance.

I have the honor to be, very respectfully, sir, your obedient servant,

S. COOPER, *Acting Adjutant General.*

Major General WINFIELD SCOTT, *Commanding Eastern Department, New York.*

Copy of a paper, marked P, referred to at page 19.

SURGEON GENERAL'S OFFICE, *January* 18, 1830.

SIR: Dr. Minus reports himself relieved from arrest, and ordered to duty at Fort Moultrie. I have, therefore, to request that, on the arrival of Dr. Macomb, he may be ordered to Oglethorpe barracks, agreeably to the arrangement previously made; also, that Dr. Sullivan, who has been sent to Cantonment Clinch, may accompany the company now there to Baton Rouge, and Dr. McMahon be ordered to repair to Tampa Bay, and report for duty.

Very respectfully, your obedient servant,

JOS. LOVELL, *Surgeon General.*

Col. R. JONES, *Adjutant General.*

Copy of paper, marked Q, referred to at page 20.

WASHINGTON, *January* 16, 1830.

SIR: Being desirous of spending a few days with my friends, and having just returned from an arduous service, I respectfully request permission to remain in the city, on leave of absence, until the 6th of February next.

I have the honor to be, very respectfully, sir, your obedient servant,

S. V. R. RYAN, *Lieut. First Artillery.*

Col. R. JONES, *Adjutant General, Washington, D. C.*

Copies of papers, marked R, referred to at page 22.

ASSISTANT ADJUTANT GENERAL'S OFFICE, E. D., *New York, December* 12, 1829.

SIR: I am directed by Lieutenant Bache, aide-de-camp to General Scott, and Assistant Adjutant General of this department, to inform you that if you can get relieved from duty at West Point, with orders to report at department headquarters, you will be put on duty in this office as assistant.

I am, sir, &c., &c.,

GEORGE R. SULLIVAN, *Lieut. U. S. Army.*

Lieut. J. F. KENNEDY, *First Artillery, West Point.*

WEST POINT, *December* 17, 1829.

SIR: Having received the offer of a situation in the Assistant Adjutant General's office, I hereby apply to be relieved from duty in the Military Academy, and for orders to report at headquarters eastern department.

Respectfully, your most obedient servant,

JNO. F. KENNEDY, *Lieut. Artillery, Ass't Inst. Tactics.*

Col. THAYER, *Sup. Mil. Academy.*

MILITARY ACADEMY, *West Point, December* 18, 1829.

SIR: I have the honor to enclose herewith a communication from Lieut. J. F. Kennedy, requesting to be relieved from duty as an assistant instructor of tactics at this institution, in order that he may accept an appointment in the office of the Assistant Adjutant General, at New York.

Very respectfully, I am your obedient servant,

S. THAYER, *Lieut. Col., Sup. Mil. Academy.*

Brig. Gen. CHARLES GRATIOT, *Inspector of the Military Academy.*

MILITARY ACADEMY, ORDER No. 40.

ENGINEER DEPARTMENT, *Washington, December* 28, 1829.

Brevet Second Lieutenant John F. Kennedy, of the first regiment of artillery, is hereby relieved, at his own request, from duty at the Military Academy. He will report by letter to the Adjutant General, Washington, D. C., for orders.

By order of the Secretary of War.

C. GRATIOT, *Brigadier General.*

WEST POINT, *January* 1, 1830.

SIR: Having been informed that, on being relieved from duty here, I would be put on duty in the Assistant Adjutant General's office, eastern department, I applied for orders to that effect, and this day received one from the Engineer department relieving me from duty at the Military Academy, and directing me to report by letter to the Adjutant General, Washington, for orders. It will therefore be necessary for me to remain here until his orders arrive.

I am, sir, respectfully, your most obedient servant,

JNO. F. KENNEDY, *Lieutenant 1st Artillery.*

Captain BACHE, *Assistant Adjutant General, E. D., New York.*

WEST POINT, *January* 1, 1830.

SIR: By order 40, issued from the Engineer department, I am relieved from duty at the Military Academy, and directed to report to you by letter for orders.

In my application to be relieved from duty here I expressed a desire to be ordered to report at headquarters, eastern department, in order to accept a situation in the Assistant Adjutant General's office.

I am, sir, very respectfully, your most obedient servant,

JNO. F. KENNEDY, *Lieutenant 1st Regiment Artillery.*

R. JONES, Esq., *Adjutant General U. S. Army, Washington, D. C.*

NEW YORK, *February* 27, 1830.

SIR: On the receipt of the enclosed letter, received through the Adjutant General, as will appear from his indorsement, which was on the 7th of January, as appears from mine, the following order was issued:

SPECIAL ORDER, No. 5.

ASSISTANT ADJUTANT GENERAL'S OFFICE, *Eastern Department, New York, January* 8, 1830.

Brevet Second Lieutenant John F. Kennedy, detailed for duty in the Assistant Adjutant General's office, eastern department, will join headquarters without unnecessary delay.

By order of Major General Scott.

RICH'D BACHE, *Acting Assistant Adjutant General.*

Mr. Kennedy joined the headquarters of department and reported for duty, under the above order, on the 9th day of January, 1830. The following special order was received at department headquarters, as appears from its indorsement, on the 19th of January, 1830:

SPECIAL ORDER, No. 7.

ADJUTANT GENERAL'S OFFICE, *Washington, January* 16, 1830.

Brevet Second Lieutenant J. F. Kennedy, of the 1st regiment of artillery, having been relieved from duty at the Military Academy, will report for orders to the commanding general of the eastern department.

By order of Major General Macomb.

R. JONES, *Adjutant General.*

The copies on the foregoing pages are believed to be correct.

I have the honor to be your most obedient servant,

R. BACHE, *Acting Assistant Adjutant General.*

General SCOTT.

Copy of paper marked O, referred to at page 22.

MILITARY ACADEMY, *West Point, January* 12, 1830.

SIR: After the close of the examination which is now in progress the cadets of the second class will be organized into two sections for instruction in natural and experimental philosophy, one of which will be taught by Professor Courtenay, and the other by Assistant Professor Cram. In consequence of that arrangement, the services of Lieutenant Temple, who has been the instructor of the third section, will be no longer required. I have, therefore, the honor to recommend that he be relieved from duty at this institution.

Very respectfully, I am your obedient servant,

S. THAYER, *Lieutenant Colonel, Superintendent.*

Brigadier General CHARLES GRATIOT, *Inspector of the Military Academy.*

JANUARY 12, 1830.

Lieutenant Colonel S. Thayer says that, in consequence of a new arrangement of the second class, the services of Lieutenant Temple, assistant instructor, will no longer be required at the Military Academy, and requests he may be relieved from duty at that institution.

ENGINEER DEPARTMENT, *January* 18, 1830.

Respectfully referred to the Adjutant General for orders to Lieutenant Temple.

C. GRATIOT, *Brigadier.*

HEADQUARTERS OF THE ARMY, *Washington, March* 12, 1830.

SIR: The judge advocate has this moment handed to me the proceedings of the general court-martial, of which Brevet Brigadier General Atkinson is president, assembled in this city for the trial of Colonel Roger Jones, Adjutant General of the army; which proceedings I beg leave to submit to you in order that they may be submitted to the President of the United States for his orders thereon, desiring, from motives of delicacy, that the final action on the case should come from the highest authority.

I have the honor to be, sir, your most obedient servant,

A. MACOMB, *Major General, Commanding the Army.*

Hon. JOHN H. EATON, *Secretary of War.*

WAR DEPARTMENT, *March* 13, 1830.

GENERAL: I have received, and submitted to the consideration of the President, the proceedings of the court-martial in the case of Colonel R. Jones, Adjutant General. The President would willingly gratify the commanding general by relieving him from an examination and action upon this subject, for he is aware it is matter of delicacy for the general to determine.

By the 65th article of war it is provided that no sentence of a court-martial shall be carried into execution until after the whole proceedings shall be laid before the officer ordering the same, or the officer commanding the troops for the time being; neither shall any sentence of a general court-martial which shall, either in time of peace or war, respect a general officer be carried into execution until after the whole proceedings shall have been transmitted to the Secretary of War to be laid before the President of the United States for his confirmation or disapproval or orders in the case.

The President determines that the Adjutant General of the army is not to be considered a general officer, and consequently that the law does not delegate to him any supervision of the case.

The papers are returned.

Very respectfully,

J. H. EATON.

ORDER No. 9.

ADJUTANT GENERAL'S OFFICE, *Washington, March* 13, 1830.

I. At the general court-martial, of which Brevet Brigadier General Atkinson is president, convened at the city of Washington by order No 7, issued from the general headquarters of the army under date of the 12th of February, 1830, Colonel Roger Jones, Adjutant General, was arraigned and tried on the following charges and specifications:

CHARGE I.—"*Disobedience of orders.*"

Specification 1. In this: that he, the said Adjutant General R. Jones, did, at Washington, D. C., and on or about the 16th of January, 1830, officially promulgate Special Order No. 7, under date of January 16, 1830, in violation of express orders to him, Colonel R. Jones, from Major General Alexander Macomb, touching the promulgation of orders special or general in their provisions.

Specification 2. In this: that he, the said Adjutant General R. Jones, did, at Washington, D. C., and on or about the 18th of January, 1830, officially promulgate Special Order No. 8, under date of January 18, 1830, in violation of express orders to him, Colonel R. Jones, from Major General Alexander Macomb, touching the promulgation of orders special or general in their provisions.

Specification 3. In this: that he, the said Adjutant General R. Jones, did, at Washington, D. C., and on or about the 18th of January, 1830, officially promulgate Special Order No. 9, under date of January 18, 1830, in violation of express orders to him, Colonel R. Jones, from Major General Alexander Macomb, touching the promulgation of orders special or general in their provisions.

Specification 4. In this: that he, the said Colonel R. Jones, did, at Washington, D. C., and on or about the 21st of January, 1830, officially promulgate Special Order No. 11, under date of January 21, 1830, in violation of express orders to him, Colonel R. Jones, from Major General Alexander Macomb, touching the promulgation of orders special or general in their provisions.

Specification 5. In this: that he, the said Adjutant General R. Jones, did, at Washington, D. C., and on or about the 1st of January, 1830, publish, or cause to be officially published, the Army Register for the year 1830, without previously informing Major General Alexander Macomb of such publication; this in violation of express orders to him, Colonel R. Jones, from the aforesaid Major General A. Macomb.

CHARGE II.—"*Conduct subversive of good order and military discipline.*"

Specification 1. In this: that he, the said Adjutant General R. Jones, at Washington, D. C., and on or about the 20th December, 1829, while submitting to the Secretary of War, for his election between them, as models for the contemplated Register of 1830, two Army Registers, the one being that for 1828 and the other that for 1829, did conceal from the said Secretary of War the fact that there were substantial differences between the two Registers here mentioned, and that he, Colonel R. Jones, and Major General A. Macomb, were in direct issue upon the point of their respective propriety.

Specification 2. In this: that, at Washington, D. C., and on or about the 23d of January, 1829, he, the said Colonel R. Jones, did confessedly procure the Secretary of War's approval of the form given to the Army Register for 1830, for the purpose of counteracting the particular views entertained upon the subject of the manner and matter of this official document by Major General A. Macomb.

CHARGE III.—"*Disrespect towards his commanding officer.*"

Specification 1. In this: that he, the said Colonel R. Jones, Adjutant General of the United States army, as aforesaid, on being told, in a conversation held between him, Colonel R. Jones, and the commanding general, Alexander Macomb, esq., that his clandestine procurement of the Secretary of War's approval of the form given to the Army Register for 1830 was disrespectful towards himself, the said Major General A. Macomb, and would as such probably require the cognizance of a general court-martial, did reply, in a loud and violent tone of voice, "I defy you, sir, I defy you," or words of similar import; this in the office of the said Colonel R. Jones, and on or about the 23d of January, 1830.

To which the accused pleaded not guilty.

"The court, upon mature deliberation, do find Colonel Roger Jones, Adjutant General of the United States army, guilty of the first specification; guilty of the second specification; guilty of the third specification. Under the fourth specification the court find the facts, but attach no criminality to them. Guilty of the fifth specification of the first charge. Guilty of the first charge.

"Not guilty of the first specification; not guilty of the second specification of the second charge. Not guilty of the second charge.

"Guilty of the specification under the third charge. Guilty of the third charge. And do sentence him to be reprimanded in general orders.

"The court, in awarding this sentence, are sensible of its apparent inadequacy when contrasted with the offences implied in their various findings; nor would it have been adopted by them but for the

conviction they entertain that Colonel Jones labored under a misconception of his official obligations, which, however little warranted by the regulations, the usages, and the interests of service, has still, as they believe, chiefly tended to mislead him."

II. The major general commanding the army confirms the sentence of the court. Colonel Jones is hereby released from arrest, and will resume his functions as Adjutant General.

III. The general court-martial, of which Brevet Brigadier General Atkinson is president, is dissolved.

By order of ALEXANDER MACOMB, major general commanding the army.

S. COOPER, *Acting Adjutant General.*

21ST CONGRESS.] No. 455. [1ST SESSION.

GENERAL REPORT ON AN EXAMINATION AND SURVEY OF VARIOUS SITES FOR THE ESTABLISHMENT OF AN ARMORY ON THE WESTERN WATERS.

COMMUNICATED TO THE SENATE MAY 28, 1830.

WAR DEPARTMENT, *May* 27, 1830.

SIR: I have the honor to submit herewith the report of the engineer appointed by this department in compliance with the resolution of the Senate of the 18th December, 1827, "to examine the following places, viz: the Horseshoe Bend, on Licking river, in the State of Kentucky; the lands adjacent to the canal which the Louisville and Portland Company are now cutting round the falls of the Ohio river, in said State; the site at Zanesville, in Ohio, on the Muskingum river; a site on the Blue river; a site on the Wabash, at or near Eel river; a site at or near Lawrenceburg, in the State of Indiana; a site at Gordon's Iron-works, on White's creek, in the counties of Roane and Rhea, district of East Tennessee; a site at the falls of Emery's river, in the county of Roane and district aforesaid; a site on Cypress and Shoal creeks, in the county of Lauderdale, State of Alabama; a site on Harpeth river, in Davidson county, Tennessee, commonly called the Narrows of Harpeth; at Embree's Iron-works, in the county of Sullivan; and at Alfred Carter's Iron-works, in the county of Carter and district of East Tennessee; and the falls of Chattahoochee, in the State of Georgia; at the falls of Big Beaver river, and at Pittsburg, Pennsylvania, and report the practicability of establishing an armory of the United States at each place, similar to the one at Harper's Ferry and Springfield, and report the fitness of these places, respectively, and their respective and peculiar advantages and disadvantages for such establishment, and that the said report be communicated to Congress at as early a period as practicable."

I have the honor, sir, to be your obedient servant,

J. H. EATON.

JOHN C. CALHOUN, *President of the Senate, U. S.*

GEORGETOWN, D. C., *May* 27, 1830.

SIR: In pursuance of the instructions from the Engineer department, dated February 1, 1828, in which I was assigned to the duty of collecting and reporting the information required by a resolution of the Senate of the United States, passed the 18th of December, 1818, relative to certain positions designated as sites for a national armory on the western waters, I have the honor to make the following report:

This report is not presented at as early a date as might have been expected, probably. Sickness, contracted shortly after the duty was commenced, in the summer of 1828, and continued almost without intermission during the ensuing fall and winter, prevented its completion in time to be laid before the Senate at its last session. The following spring and summer were occupied in the performance of other duties, to which immediate attention was required to be given, and the duties relative to the armory were not resumed until the fall. It was then believed that the report might be completed at an early period during the present session upon a plan more comprehensive and detailed than that upon which it had been commenced. Accordingly, the plans and estimates for most of the sites which had been prepared during the previous fall and winter, with less care perhaps than was proper, but with as much as could be given without defeating the purpose then designed of getting the report ready in time to be submitted during the last session, were laid aside. But the labor attending the execution of the drawings and the preparation of the tables accompanying this report, the latter of which contain the results only of minute investigations and calculations, proved to be greater than had been anticipated, and rendered the earlier completion of the report impracticable, although every exertion was made to accomplish it.

The resolution being the basis of the report, a copy of it is here inserted that it may be conveniently referred to.

"*Resolved*, That the Secretary of War, under the control of the President of the United States, be authorized and requested to appoint one or more officers of the corps of engineers to examine the following places, viz: the Horseshoe Bend, on Licking river, in the State of Kentucky; the lands adjacent to the canal which the Louisville and Portland Canal Company are now cutting round the falls of the Ohio river, in said State; the site at Zanesville, in Ohio, on the Muskingum river; a site on the Blue river; a site on the Wabash, at or near Eel river; a site at or near Lawrenceburg, in the State of Indiana; a site at Gordon's Iron-works, on White's creek, in the counties of Roane and Rhea, district of East Tennessee; a site at the falls of Emery's river, in the county of Roane and district aforesaid; a site on Cypress and Shoal creeks, in the county of Lauderdale, State of Alabama; a site on Harpeth river, in Davidson county, Tennessee, commonly called the Narrows of Harpeth; at Embree's Iron-works, in the county of Sullivan;

and at Alfred Carter's Iron-works, in the county of Carter and district of East Tennessee; and the falls of Chattahoochee, in the State of Georgia; at the falls of Big Beaver river, and at Pittsburg, Pennsylvania, and report the practicability of establishing an armory of the United States at each place similar to the one at Harper's Ferry and Springfield, and report the fitness of these places, respectively, and their respective and peculiar advantages and disadvantages for such establishment, and that the said report be communicated to Congress at as early a period as practicable."

The instructions to the commissioners appointed under the act of the 3d of March, 1823, entitled "An act to establish a national armory on the western waters," formed a part of the instructions which were received from the Engineer department. A copy of the report of the commissioners was also furnished with permission to use any part of the information it contained.

Under this permission, such of the views contained in the report of the commissioners as may be used in aid of the preparation of this report will be repeated, and the greater part of the information afforded by the several statements accompanying that report will be transferred to this report, with such modification of its arrangement as will adapt it to other arrangements with which it will be blended.

Of the views referred to, the following may be very properly introduced in this place:

"The average number of muskets now manufactured at the national armories is about 12,000 stands, each, per annum. That number has, therefore, been taken as the basis of all our arrangements and estimates of the expense at the several sites hereafter mentioned.

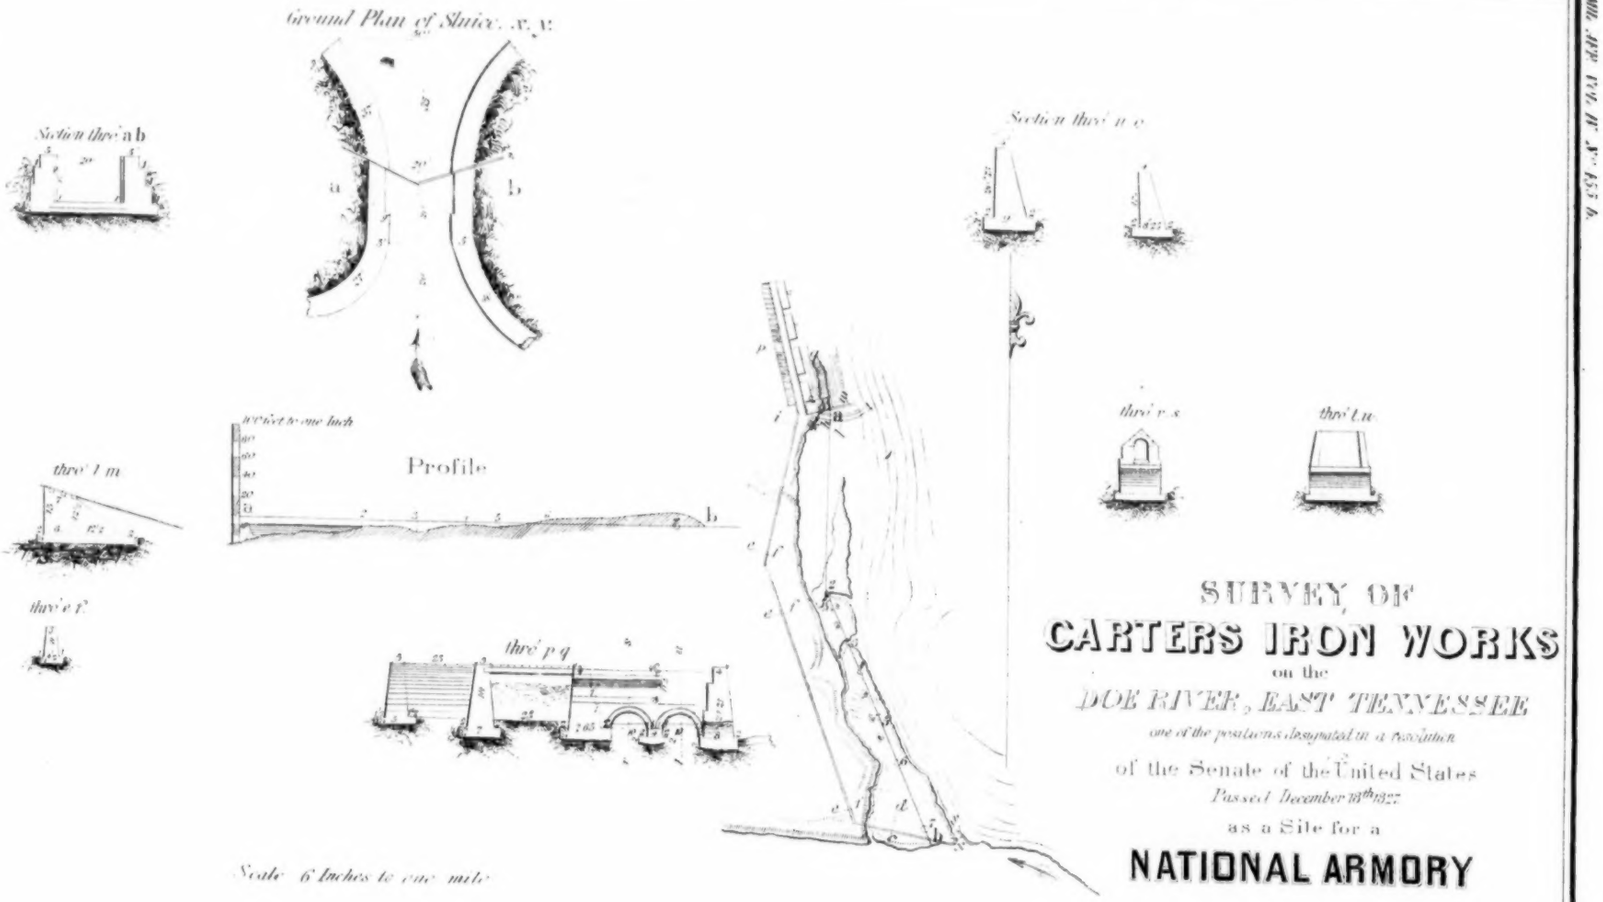
"To aid in forming a more correct idea of the advantages and defects of the several sites that will be described, it may be necessary to state the following particulars explanatory of the requirements that are essential for an armory as regards the extent of the water power, the necessary space for the buildings, and the general accommodation of the establishments. The measure of the water power used at the national armory at Springfield, Massachusetts, has been taken as a standard. It is equal to that which, in the usual estimation of millwrights, is required for operating about 12 pairs of five-feet burr mill-stones, but, after making the necessary deductions, is found to be less than 1,032 cubic feet of water per second, falling from the height of one foot, and acting by its gravity, or nearly double that quantity when acting by percussion.

"The number of buildings that will be required is sixty-one; of which thirty-two are dwellings for workmen, and seven for the officers of the establishment. The aggregate length of the workshops, store-house, and offices is 1,016 feet by 40 feet broad, exclusive of the space between them.

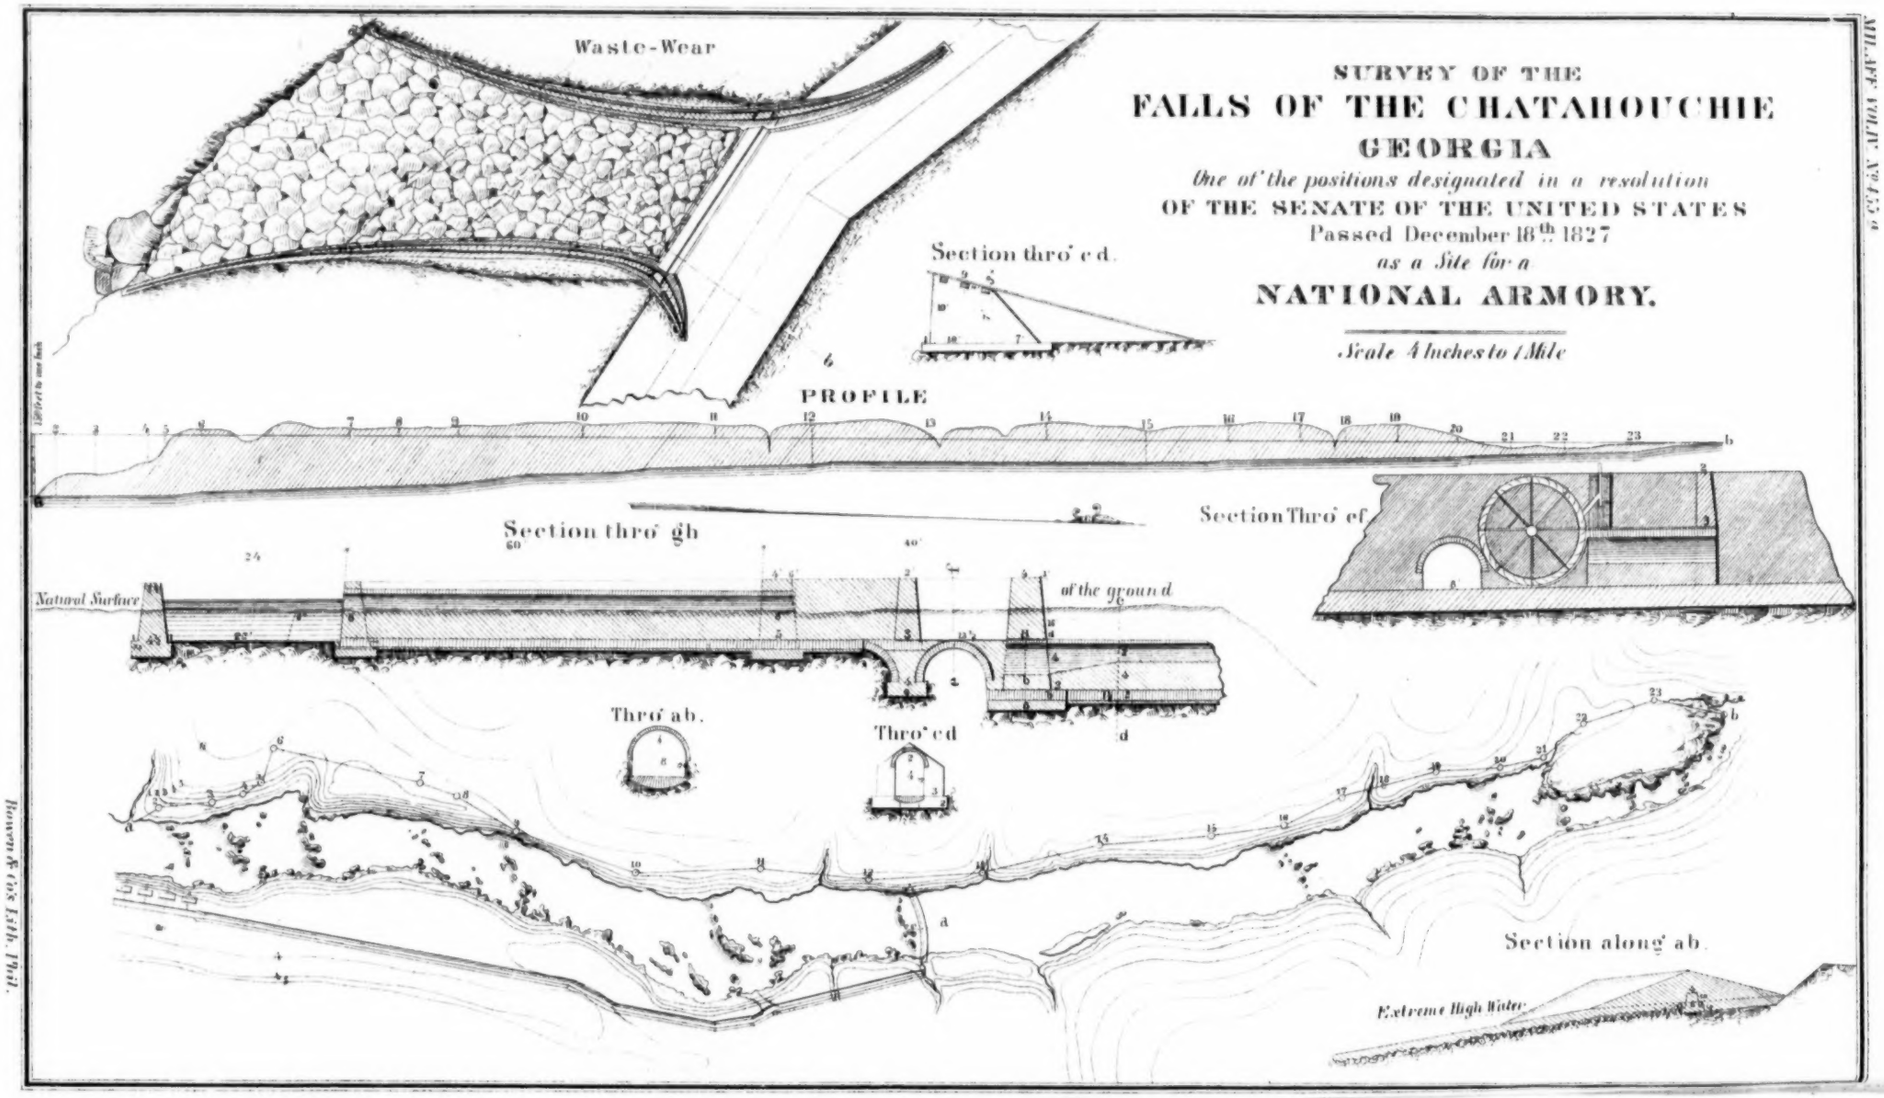
"The number of workmen of different descriptions required to manufacture 12,000 stands of arms annually is estimated at two hundred and fifty."

The resolution did not in express terms require plans and estimates, but it called for information that could not be furnished in a satisfactory manner without their aid. Nor was it doubted that the resolution intended the information to be such and so arranged as would admit of its being used in a comparison of the advantages and disadvantages respectively of the sites designated. Accordingly, the greater part of the information collected will be shown in tables so arranged that its bearing upon the respective sites may be readily seen and compared; and as relative expense is the only standard of comparison that cannot be disputed, the information presented in the tables will be reduced to it.

Such part of the information required as could not be shown in the tables will be found in the drawings exhibiting the topography of the sites and the plans as adapted to it, in brief descriptions of the sites and explanations of the plans which will be given, and in explanation of the prices and of the tables which will also be given.



The drawings, if bound with the report, will require to be folded, and as that would injure them, they will be bound separately. The correspondence which is voluminous may also be detached. It may be proper enough that it should accompany the report as an appendix, although the advantage of connecting it with the report in any way whatever may be considered doubtful.



There will then be three volumes—one containing the drawings, the second containing the report and tables, and the third the correspondence.

The report and tables referring to the sites for which plans and estimates have been prepared will comprise—

1. A description of the sites and explanation of the drawings.
2. The explanation of the prices.
3. The explanation of the tables.
4. A "table of the quantity of water and power employed at Springfield."
5. A list of the various operations in the manufacture of a musket as now carried on at the United States armory, Springfield, Massachusetts.
6. An explanation of the fixtures referred to in sub-estimate A No. 2, and marked A No. 2 *a*.
7. A statement, marked A No. 2 *b*, showing the cost of establishing at Pittsburg a steam power to consist of four steam engines, and referred to in sub-estimate A No. 2.
8. A statement, marked A No. 2 *c*, specifying the machinery, tools, and miscellaneous articles, and referred to in sub-estimate A No. 2.
9. A statement, marked B No. 1 *b*, referred to in estimate B No. 1 as the estimate of annual expenses incidental to the employment of four steam engines at Pittsburg.
10. Estimate, A No. 1, of the expense of establishing a national armory on the western waters at the respective sites.
11. Sub-estimate, A No. 2, referred to in estimate A No. 1 of the cost at the respective sites of buildings, fixtures, machinery, &c
12. Estimate, B No. 1, of the annual expense of materials for carrying on the operations of an armory.
13. Sub-estimate, B No. 1 *a*, referred to in estimate B No. 1, showing the annual expense of transporting to an armory on the western waters certain articles requisite to carry on its operations.
14. Estimate, B No. 2, of the annual expense of the workmanship requisite to carry on the operations of an armory.
15. Estimate, C, of the annual expense of distributing the arms when manufactured to four general depots.
16. Table D, presenting a general view of water power and a consolidation of the estimates A, B, and C.

Two of the sites designated in the resolution—that of Gordon's Iron-works, on White's creek, Tennessee, and that at or near Lawrenceburg, in Indiana—have not been included among the number for which plans and estimates have been prepared.

MILARY VOLY. No 433.

The site at Gordon's Iron-works was ascertained to be unprovided with the requisite water power. It was asserted in the presence of the owner of the site, and without contradiction from him, that in the summer and fall of 1827, during a period of six months, his mill was unemployed, because White's creek did not afford water enough to admit of its being employed; and, although he afterwards objected to the accuracy of this assertion, he admitted that at the time mentioned the operations of his mill had been stopped for the want of water during a period of four months, and further admitted that the failure of the stream was more rapid than was usual in other streams, and was believed to be accelerated by leakage or some other extraordinary cause. He appeared to be confident that at the ordinary stage of the stream, during eight months in the year, it afforded water enough for the purposes of an armory. In proof of this he remarked that his mill in full operation did not use more than one-third of the quantity supplied by the stream when at that stage, a third being lost by the leakage of the dam, and the remaining third passing over the waste weir. This statement furnished the data upon which a computation could be made of the quantity of water afforded by the stream at its ordinary stage during the favorable season of the year. Having ascertained the width of the gates and the height to which they were raised when the maximum effect was to be produced, and also the height of the head of water acting upon them, a calculation was made of the quantity of water that would be used by the mill under those circumstances, and it was found to be one-eighth of the quantity that would be required for an armory. Thus, then, it appeared that during six or eight months in the year, when the stream was in a good stage, it would afford only three-eighths of the quantity of water required for an armory; and that during four or six months of the year, when in a low stage, it could not be used at all for hydraulic purposes.

There was no site in Indiana at or near Lawrenceburg which was suitable for an armory. Laughery creek and White Water river were the only streams in the neighborhood of Lawrenceburg to which the resolution could have referred, and the former was declared to be not only deficient in regard to the water power it might be made to yield, but was otherwise unfit as a site for an armory. At the same time it was declared to be known that the provision for the examination of a site at or near Lawrenceburg was introduced in the resolution to gvie effect to a project which was entertained of drawing to Lawrenceburg from the White Water river, by means of a canal, the water power that would answer for an armory and for other hydraulic purposes. This statement was furnished by gentlemen of high standing and respectability, who also stated, as their impression, that a canal four miles in length would furnish the facilities desired; but in regard to this particular they did not pretend to have accurate information. They were informed that in making the examination it would be necessary to confine it to the specific object for which it was authorized; yet if collateral advantages could be secured in connexion with it, and without prejudice to it, they would be worthy of consideration, and would not be overlooked. Every disposition to facilitate the examination was shown by these gentlemen. Through their assistance horses and guides were procured, and several of them politely accompanied the examining party to afford any other assistance that might be needed. The party having visited several points on the White Water in seeking the point from which it was proposed to convey the water to Lawrencebug, had reached the distance of ten miles from Lawrenceburg, and within half a mile of the point sought, as was stated, (and no doubt accurately stated,) when it was ascertained that it was in the State of Ohio. As the site to be examined was specified in the resolution to be a "site at or near Lawrenceburg, in the State of Indiana," it was needless to proceed in the examination unless with a view to the formation of a site at Lawrenceburg, in fulfilment of the project which has been stated. There being no other site at or near Lawrenceburg, in the State of Indiana, the examination was abandoned.

Had there been authority to make the examination with a view to the formation of a site at Lawrenceburg, it would have led to the establishment conclusively of what probably is not now questioned—that the advantages which had been anticipated from that project had been overrated; and if they had not been, that the expense of giving effect to them would have far exceeded their value. Besides the expense of purchasing the land through which the canal would pass, there would be the expense of purchasing all the mill seats upon the White Water below the point where the canal would be commenced, it being probable that the whole supply of the White Water at its low stages would not be more than sufficient for the purposes of an armory. The expense of constructing the canal, the length being more than ten miles, and the other proportions no greater than would be required for an armory, would upon the lowest estimate exceed $100,000 for the mere excavation, besides the expenses of headgates, embankments, side walls, aqueducts, culverts, &c., which would amount to as much more perhaps, the ground being much broken. The other sites for which plans and estimates have been prepared will be noticed in the order in which they were examined.

Description of the sites and explanation of the drawings.

The Falls of Chattahoochee.—There is very little requiring description at this site. Its water power and the facilities of communicating with it are shown in the tables. The latter would be greatly increased by the completion of the canals which have been projected for the States of Georgia and Alabama. It is said that iron ore may be obtained in abundance about forty miles above the falls and near the river. The drawing requires no explanation.

Carter's Iron-works.—There are two positions in Carter county, East Tennessee, which are known by this title: one of them is on Stony creek, the other at Elizabethtown. At the former, operations are now carried on by Mr. Alfred Carter, but its establishment has been recent compared with that of the other, which was established by the father of the present Mr. Alfred Carter. Both were examined, although there was reason to believe that the latter only was contemplated by the resolution. The former, besides being inconveniently situated, did not afford a sufficient supply of water. The plans and estimates, therefore, have been made in reference to the latter. The level of the site where the works would be placed is very little above the surface of Doe river, from which the water is supplied. The water after being used is discharged into the Watauga river a short distance from the site.

It has been stated that a water power sufficient for an armory is not afforded at this site. This opinion has been repeated by a gentleman of the highest respectability, from whom accurate information was to be expected, as well because of the opportunities he had had of acquiring it as of the interest he is known to take in the prosperity of that section of the country.

When the examination was made the stream was not at its lowest stage. It measured then 235 cubic feet per second, and it was said the quantity afforded at the lowest stage exceeded two-thirds of

that quantity, which would be more than 156 cubic feet per second. It was asserted that the level of the stream at low water was less than one foot below its level at that time. If the difference be assumed at one foot, and allowance be made for the difference of the width at the reduced level, the quantity afforded would be 141 cubic feet per second, supposing the velocity to be the same as it then was, and 130 cubic feet per second, due allowance being made for diminished velocity resulting from the diminution of the depth. Upon this data 130 cubic feet per second was fixed upon as the quantity afforded by the Doe river at low water; and the quantity required for an armory with the head and fall of the site being 105 cubic feet per second, it was considered that there would be a surplus of 25 cubic feet per second instead of a deficiency.

This estimate of the quantity of water afforded at Carter's Iron-works, guarded as it has been by full allowances for the possible inaccuracies of the statements upon which it was partially based, may nevertheless be erroneous. Should that turn out to be the case, and the quantity afforded should not be reduced below 90 feet per second, the works as they are planned will admit of their being used with the head and fall adapted to that supply. The head and fall is thirteen feet nine inches, and the head and fall necessary to produce the requisite power, with a supply of 90 cubic feet per second, would be sixteen feet. This addition to the head and fall, should it be required, might be obtained by means of a dam in Doe river, which would not back the stream more than half a mile; or it might be obtained by placing a wing dam immediately below the sluice, and lowering the foundations of the workshops, and with them the floors of the tail-races.

The water is admitted from the Doe river through a sluice into a pond, where it is detained by the dam and the enclosing walls until it passes through the canal to the works; after being used at the works it is discharged through a ravine into the Watauga river.

The country abounds with iron ore, from which iron of the best quality is manufactured. Steel also of a good quality is said to be manufactured in the neighborhood of Carter's Iron-works.

Embree's Iron-works.—This position is generally known by the title of the Pactolus Iron-works. It is situated on the left bank of the Holston river, about five miles above the boat yard, and consists of a slip of bottom land about 900 feet in length and varying in width between 50 and 150 feet. The Pactolus Works are established at the upper end of this slip, at the foot of a rapid in the river, which commences between 2,600 and 2,700 feet above, at a place called Kingsford. From the works to the head of the rapids, with the exception of about six or seven hundred feet immediately above the works, the space is occupied by a connected chain of narrow islands lying nearly in the centre of the river and parallel to its shores. By means of these islands, which answer the purpose of a river wall, and a dam connecting the space between the lowermost of them and the works, the level of the river at the head of the rapid may be carried with very little diminution to the works.

The natural fall from Kingsford to the centre of the site at the ravine where the culvert is placed is, at low water, 12.85 feet. Deducting for the surface slope, .35 feet, and there would remain as the available head and fall at low water 12.50 feet. The extreme difference between low and high water at Kingsford is 13 feet; and if carried to the ravine, as it might be, would increase the head there at extreme high water to 25.50 feet; but the extreme difference between low and high water at the ravine, which is 19 feet, must be deducted to show the head and fall that may be obtained there at extreme high water, which in that case would be 6.50 feet. This would be sufficient for operating reaction wheels, and consequently the water power of the site may be made permanent. But the expense of executing a plan for obtaining and using such a head and fall at extreme high water would be far greater than would be required for the plan adopted, and the advantage to be derived from it would be of very little value; no more, indeed, than the security it would afford against possible interruption of the works by high water for one day in five years. Upon the plan adopted the works would not be interrupted until the rise should become greater than fifteen feet, and that has rarely happened, the ordinary highest rise being about twelve feet; on one occasion the rise was nineteen feet, and on another occasion eighteen feet.

The plan adopted provides for carrying to the works and using at them a part of the rise at Kingsford, by means of the wall extending along the islands, which is sufficiently high to retain it, and the dam, which extends from the lowermost island to the canal. The culvert was necessary to drain the ravine, which is deep and extensive The slip of bottom land, which has been described, does not afford more space than is required for the canal and workshops, and is too contracted to admit of their establishment in the most advantageous manner. There being no other level ground near the site, it would be necessary to place the storehouses and other buildings upon the slope of the hills, which are generally steep, and therefore not eligible for that purpose.

Iron of the best quality and steel of a good quality may be obtained in abundance at this site.

The Falls of Emery's river.—When the examination of this site was about to be commenced, it was suggested that a gentleman residing in its immediate vicinity, who had devoted much attention to the subject, would be a valuable auxiliary in making the examination, as he could furnish more fully and accurately than any other person the kind of information that would be most useful in the prosecution of that object. This gentleman was present at the examination, and furnished the greater part of the information obtained at that time. The statements made by him were compared with others obtained from persons residing in the neighborhood of the site, and were found generally to be sustained, although in some instances exception was taken to them on the ground of their being too favorable to the site, and particularly as related to the dimensions of the stream at its low stage. It is understood this gentleman has long entertained the opinion that the Falls of Emery was a suitable position for an armory, and his exertions had been chiefly instrumental in bringing about the examination.

It was stated by this gentleman, in substance, that Emery's river was liable in an extraordinary degree to the frequent and rapid changes incident to mountain streams; that when it rose suddenly, which often happened, its rises could be traced in their progress down the stream by the difference between their level and that of the stream immediately below and not yet reached by them, which in some instances amounted to several feet; and that the current produced by them moved with the velocity and force of a torrent. His estimate of the extreme height of the rises of the river at the falls was twenty feet at the head and thirty feet at the foot; and that the difference of level at low water was twelve feet between the head and foot of the falls. He stated that at low water the channel of the river at the head of the falls was contracted within a narrow space between two islands. He supposed its width there was from twenty to twenty-five feet; its depth not exceeding eighteen inches; and the velocity of its current about three feet per second.

Several months after the examination had been made, a communication containing answers to interroga-

tories, respecting the site, which had been propounded, was received through the member of Congress for the district in which the site is located, accompanied by the remark that it had been prepared by two gentlemen of excellent character and considerable science. The statements furnished in this communication respecting the rises of Emery's river, and of the dimensions of its channel at low water, were very different from the statements referring to those particulars which have just been mentioned. In these statements it is admitted that the rises of the river are sudden, although not more so than is usual in mountain streams. It is also admitted that on occasions of sudden rises of the river its volume is suddenly increased, but not to such a degree as to produce a perceivable difference in its level. The average difference between low and high water at the falls is represented to be six feet, and the extreme difference seventeen feet. It is not stated whether these differences referred to the head or foot of the falls. The fact mentioned in the other statement, that at the head of the falls at low water the channel of the river is contracted within a narrow space between two islands, and that its velocity there is at the rate of three feet per second, is confirmed in this statement, but it represents the width at thirty feet and the depth at three feet.

Between the head of the falls, where the dam would be placed, and its foot, where the workshops would be established upon a slip of bottom land, the bank of the river is formed by the side of a steep mountain, which makes it necessary to resort to the use of a river wall for carrying the water to the site. It was also necessary to adopt means which would prevent the drift brought down the current from obstructing the free passage of the water through the head-race formed by the river wall, and it is proposed to effect this object by placing a wing dam obliquely across its entrance, which will serve also to protect the head of the river wall. The height for these walls and for the walls of the workshops which was proper to be fixed upon depended upon the extreme height of the rise of the river above low water. This, by measuring from a mark pointed out at the time the examination was made as the high-water mark, was ascertained to be thirty feet at the foot of the falls. It agreed with the statement which had been previously made, and the plans have been adapted to it.

There is no difference in the statements respecting the velocity of the current at low water. They refer of course to the surface velocity, which at three feet per second would be equal to a mean velocity of 30½ inches per second. Applying this velocity to the areas that would be produced by the width and depth respectively stated, the quantities would be, for the width of 20 feet and depth of 18 inches, 76 feet per second; for the width of 25 feet and depth of 18 inches, 95 feet per second; and for the width of 30 feet and depth of 3 feet, 228 feet per second. This last stated quantity, three times greater than the quantity first stated, has been computed by data given as the results of actual admeasurements. If the admeasurements were made when the stream was at its lowest stage, the dimensions to which they refer must unquestionably be more accurate than those referring to the smaller quantities, which were understood to have been estimated. But this point being unsettled, the difference between the statements may be accounted for by supposing the estimate to have been formed when the stream was at a lower stage than when the admeasurements were made. The dimensions referring to the estimate, small as they are in comparison with those resulting from the admeasurements, were considered to be too great by persons residing in the vicinity of the site, and the same persons considered the estimate respecting the velocity of the current to be also too great. The quantity of water required for an armory with the head and fall that may be obtained at the site would be 80 cubic feet per second. What quantity may be relied on as the quantity afforded by the stream at low water is very doubtful. In the table showing the water power of the sites it has been stated at 95 cubic feet per second, or 15 cubic feet per second more than the quantity required.

Iron ore of the best quality and mineral coal are to be found in inexhaustible quantities in the neighborhood of the site, and may be obtained easily and cheaply.

Cypress and Shoal creeks.—The commissioners appointed under the act of March 3, 1823, examined these streams, and in their report respecting them expressed a decided preference of the site on Cypress creek to any of the sites examined on Shoal creek. After the completion of the examination, survey, and levelling of the site on Cypress creek, the site at Brush run, which in the report of the commissioners was represented as the best of the sites on Shoal creek, was examined. It was very evident that this site could not be put in competition with the site on Cypress creek, either as regarded fitness or cheapness; and as it was considered that the intention of the resolution would be complied with by reporting the most favorable site afforded by the two streams, it was determined to dispense with the surveying and levelling of the site at Brush run, and also the preparation of plans and estimates for it.

Cypress creek empties into the Tennessee below the Muscle shoals and two miles from Florence. The position selected for the site of an armory is at Clopper's Mills, about three miles by land from the Tennessee. The ground is peculiarly favorable to the construction of the canal for the head-race, and the location of the workshops and other buildings. The natural fall between the dam and the workshops is 12. 20 feet, from which deducting for the surface slope .20, and adding the height of the dam, 9 feet, the head and fall at low water would be 21 feet; from this, deducting the difference between low and high water, 10 feet, and there would remain at high water, clear of back water, a head and fall of 11 feet.

To obtain a head and fall of 13 feet at low water the floor of the tail-race will be two feet below high-water mark; and to obtain the same head and fall at high water the top of the weir will be two feet above the top of the dam. As the floors of the tail-races will be two feet below extreme high water mark, and the bottom of the water-wheels will be only six inches above the floor of the tail-races, the water-wheels will be immersed at high-water to the depth of eighteen inches. The water-wheels might be raised two feet, and would then be operated under the same circumstances as at low water; but it would not be necessary to raise them. The effect of an addition of two feet to the head, by its tendency to accelerate the velocity, would counteract the tendency of the immersion of the lower part of the wheel to retard the velocity; as there was a rise in the stream at the time it was examined, it was not measured; but an occasion to ford it having occurred, it furnished a good opportunity of observing its depth and the velocity of its current, and from them and the width, after making a proper allowance for what was stated to be the rise, of forming an estimate, which served to confirm the estimate of the commissioners, that the quantity afforded by it at the low stage was greater than would be required for the purposes of an armory.

The best quality of iron may be conveniently supplied at this site.

Narrows of Harpeth.—This position, also, was among the number examined and reported upon by the commissioners. It is on the Harpeth river, 22 miles from its mouth, on the lower side of the neck of a peninsula formed by a circuit of the river of nearly five miles. This neck consists of a limestone

ridge, varying in height from 60 to upwards of 200 feet above low water, and at the most depressed point less than 100 feet in width at high water. Through this ridge a tunnel was cut some years ago to procure a water power for mills. Its capacity being sufficient to pass the supply of water requisite for an armory, the commissioners included it in the plan they adopted, and reported for this site. The plan was to convey the water from the lower side of the tunnel by a river wall to the nearest point where the ground would admit of the establishment of the workshops and other buildings. The distance was more than 700 yards, and the river wall was required to be of the height of 31 feet above low water to raise it above the freshets sufficiently to admit of its carrying the water to the works at a height that would furnish a head of four feet at high water. A head-gate was proposed to be placed at the upper end of the tunnel.

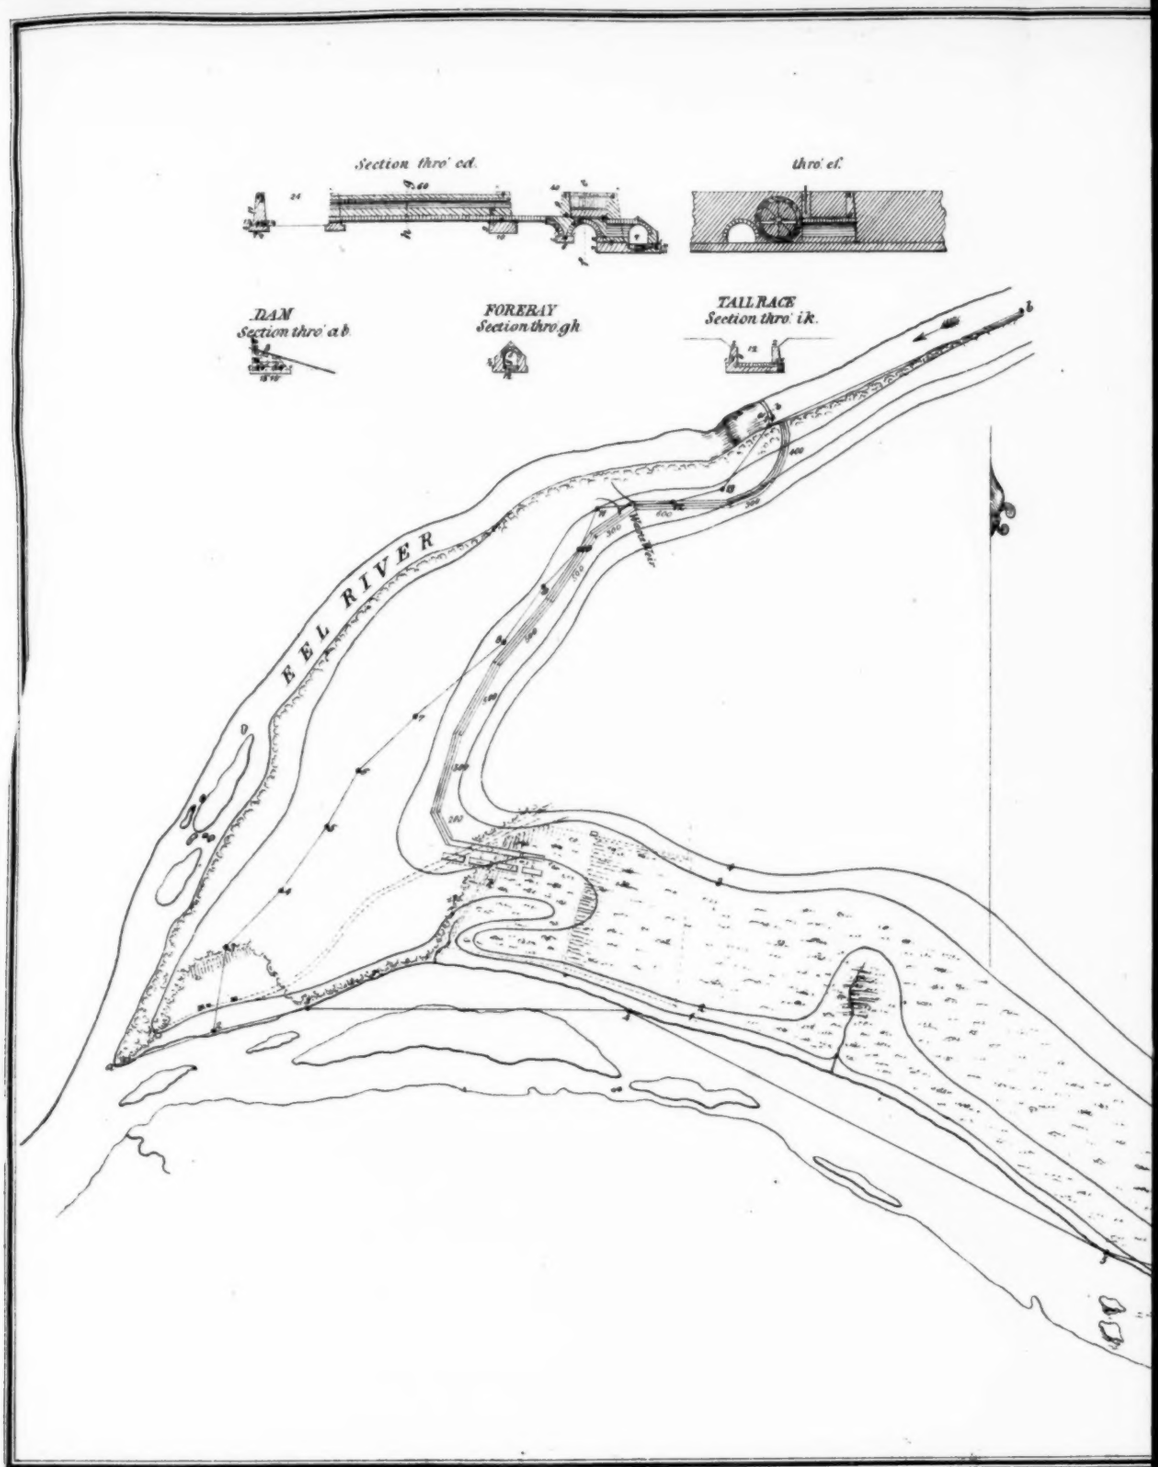
The commissioners suggested another plan, which was to open a new tunnel, to terminate at the position where the works would be placed, but they did not furnish any details for the plan, or any estimate of the expense.

On comparing the plan adopted and reported by the commissioners with that suggested by them, the latter was preferred, and has been adopted. It may be carried into effect at less expense, and is believed to be sufficiently guarded against injury from freshets by the weir proposed to be established at the lower end of the tunnel. This could not be said of the other plan, as the safety of the river wall would depend on the stability of the head-gate; and instances have been known of accidents occurring to head-gates where every precaution had been taken to provide for their safety. Instead of a head-gate, there will be at the upper end of the tunnel an iron grating, which will admit the water freely into the tunnel, and at the same time will exclude the drift.

The length of the existing tunnel is 290 feet. It was excavated without difficulty through limestone so compact that no artificial means were required to support the sides or roof in any part of it; and it is now as perfect in all respects as when it was finished. The length of that part of the proposed tunnel which will be excavated through rock is 860 feet. The estimate has been based upon the presumption that the rock is of the same character as that through which the existing tunnel was excavated.

A person residing at the narrows pointed out a mark showing the height to which the water had risen during an extraordinary freshet which had occurred in the month of December or January of the preceding winter. He had attentively observed the freshet during its progress, and had noticed that it reached the mark pointed out before it began to subside. The mark was over the mouth of the tunnel at the lower end, and, upon being measured, was found to be 25 feet above low water. This agreed with the height of the extreme rise of the river as estimated by the commissioners, and the plans have been adapted to it.

The fall in the river from the upper side of the tunnel to the site, and which would be the head and fall at the works at low water, is 14 feet 6½ inches. The extreme rise, which is supposed to be the same at the upper end as it is at the lower end of the tunnel, being added, (25 feet,) would make the head at the works at high water 39 feet 6½ inches. The surplus of this head, which will not be required for the works at high water, will pass over the weir, and will be 10 feet 6½ inches, which, being deducted, shows the height of the top of the weir above low water to be 29 feet.



The iron manufactured in the neighborhood of the site is considered to be of the best quality.

Mouth of Eel, on the Wabash.—At this position two sites were examined, and for both of them surveys and levellings were made. One of them was on the right bank of the Wabash, above the mouth of Eel river. The other was to take the water from Eel river and use it on the Wabash. The latter was selected without hesitation, and being considered a very eligible site, so far as concerned the procuring and using its water power and carrying into effect whatever related to its establishment, the examination was not extended to another site in the neighborhood. This site, like that selected, lay between the Eel and the Wabash, with this difference, that the workshops would be below the mouth of Eel. This circumstance was in its favor, as it would admit its having a greater fall, and of course a greater power. But from its appearance at a distant view, and from information collected respecting it, there was reason to believe the expense of establishing would be greater, and the convenience would be less. The site on the Wabash first mentioned would have required a dam nearly three times longer and one-fourth higher than the dam for the site selected, and the canal for it would have been twice as long as the canal for the other.

The natural fall of Eel river from the position of the dam to the mouth is 16 feet, but there is a difference of level of two feet between the mouth of Eel river and the position on the Wabash where the tail-races will be discharged, which will diminish the natural fall to 14 feet. Deducting from this for surface slope 3 inches, and adding the height of the dam, 8 feet, would make the head and fall that might be obtained at low water 21 feet 9 inches. The difference between low and extreme high water is 15 feet, which, being deducted, would leave at high water, clear of back water, 6 feet 9 inches. But although the extreme rise of the river has been 15 feet, it seldom exceeds 12 feet. There has been no hesitation, therefore, in making the floor of the tail-races three feet lower than extreme high-water mark. This will give a head and fall at low water of nine feet nine inches. An additional head at high-water of three feet is obtained by raising the top of the weir three feet higher than the top of the dam. If, in connexion with this arrangement, a plan should be adopted for raising the water-wheels so as to keep them clear of back water, even during the extreme rises, they might be operated at high water with the same head and fall as at low water; but it would hardly be necessary, as the effect of an addition to the head of three feet would be sufficient probably to counteract the wading of the wheel in any case that would be likely to occur.

The topography of this site is very favorable for the establishment of an armory, but the resources of the country around it are altogether inadequate to afford the requisite facilities for carrying on its operations advantageously. The settlement of the country, although but recently commenced, has progressed very rapidly, and will probably continue to do so. But the time when there will be surplus labor, and when the encouragement of the arts shall draw skilful artisans to the country, cannot be now foreseen; and yet it must happen before the country will be in a fit state to support an armory advantageously. In the present state of the country the attractions of agricultural pursuits are so alluring that they would operate constantly to abstract the workmen from such an establishment. This would be very embarrassing, as the best mechanics are many months acquiring tolerable expertness in the armory operations, and their improvement is progressive for years.

But the most serious objection to this site is its insecurity. It is near a frontier, from which it may be readily approached, and the population along the avenue of approach is too limited to present any

obstruction to the progress of an enemy. Nay, it is believed the aid that could be drawn to the site within a week would not be sufficient to defend it against an organized force of 1,000 men.

No iron ore or mineral coal has been found in the neighborhood of this site.

Big Blue river.—The commissioners examined this site, but furnished no plans and estimates for it, because of the inadequacy of its water power.

One-half of the power is afforded by the river and the other half by a spring. The supply from the river may be continued without further diminution than usually takes place in streams where the country contiguous to them is opened and cultivated. But the duration of the supply from the spring is very uncertain. The yielding of the rocks, supporting any of the principal subterraneous galleries through which it may at present be discharged, might cause them to fall in and become obstructed by rubbish, and the water in that case might find an outlet in another direction. Something of that kind must have caused the draining of a river not very far distant from the site. The bed of the river, now entirely dry, exhibits conclusive evidence of its having been once occupied by a stream. It was understood the stream had disappeared very suddenly.

The natural fall from the dam to the works, allowing for surface slope, is 13 feet 1 inch; adding the height of the dam, 15 feet, makes the head and fall at low water 28 feet 1 inch. The extreme rise of the river is 16 feet, which deducted leaves 12 feet 1 inch; to this add the difference of level between the top of the dam and the top of the weir, 2 feet, and it will show the head and fall at high water, clear of back water, 14 feet 1 inch. The quantity of water afforded by Big Blue river per second at low water is 18 cubic feet; the quantity of water afforded by Big Fish spring per second at low water is 18 cubic feet—making together 36 cubic feet.

The quantity required for an armory is estimated at 51 cubic feet per second, the dam being 15 feet high.

The embankment was necessary to prevent the water which would be backed up by the dam from overflowing the country.

Falls of Ohio.—At this position two sites were examined, and plans and estimates prepared for them. Site No. 1 has been adopted and introduced in the tables, because it was cheaper than site No. 2, although the position of the latter was considered most convenient, and the site, in all other respects than cheapness, preferable to No. 1.

Both sites will be supplied with the requisite water power from the canal.

Site No. 1 is on the left bank of the canal near the guard-lock. The workshops are directly on the canal, but a little retired, which will increase the width of the canal and form a reservoir of sufficient capacity to supply the water required for an armory, without experiencing a material diminution of its level. The tail-race will be arched and covered with earth, and therefore will present no obstruction to the commercial thoroughfare through which it will pass.

Site No. 2 is on the bank of the river, a little below the canal. The uppermost of the workshops will be 730 feet from the mouth of the canal and 1,300 feet from the point on the canal where the head-race will be commenced. The upper end of the head-race will consist of a tunnel, and the lower end, or that part which will pass along the workshops, will be an open canal. The direction of the tunnel will be across a common thoroughfare, but as it will be covered there will be no interruption. The surface of the rock is three feet below low water at the upper end of the tunnel on the canal. It is supposed to be 7 feet below low water at the lower end of the tunnel and 9 feet at the lower end of the canal and workshops. The workshops are parallel to the river bank and two hundred feet from the brink of it; a part of that space will be required for the road between Shippingsport and Portland; the tail-race, which passes through this space, will be arched and covered over with earth, and therefore will not interfere with the free passage of the road. By having the bridges of masonry the support they will give to the canal walls has admitted of their thickness being reduced to less than would otherwise have been necessary. This site occupies the position of one of the sites reported by the commissioners.

The Horseshoe Bend.—Plans and estimates have been prepared for two sites. One of them, site No. 1, is at the position designated in the resolution, and being the cheapest is included in the tables of comparison; site No. 2 lies below, but contiguous to No. 1. It has a better water power, either as regards its amount or the facility and safety of using it.

The plan for site No. 1 is to establish the dam on the upper side of the bend at the head of Gibson's ripple, immediately below a ravine, and, from the head of this ravine, to carry the canal for the head-race across the neck of the bend to the head of a ravine which empties into the river at the foot of the Rolling ripple on the lower side of the bend; to establish at this point a waste weir by means of which the surplus water might be thrown off into the ravine and continue the canal to the workshops which would be below the mouth of a ravine on the bank of the river and parallel to it. The natural fall between the dam and the works, allowing for surface slope, is 5 feet 6 inches; the height of the dam 12 feet; head and fall at low water 17 feet 6 inches.

The top of the weir is 36 feet above low water, and therefore the works would not be interrupted until the rise should exceed 32 feet. The ordinary highest rise is about 20 feet, but at Flower creek, at the head of the bend, there has been a rise of 41 feet 7 inches above low water. This occurred in 1808. The bend in the river at that point may have obstructed the free passage of the water, and caused it to rise higher there than in its vicinity above or below. Upon the probability that it did not exceed 40 feet at the works, they have been limited to that height. When the site was examined the stream afforded 270 cubic feet per second. Its width then was 215 feet, its average depth 20 inches, and its surface velocity 12 inches per second. There was a rise in the river which was estimated to be from 9 to 12 inches. If 9 inches, the deduction for it would leave 138 cubic feet per second as the supply of the stream; if 12 inches, the deduction for it would leave 100 cubic feet per second. In these two last calculations no deduction for diminished velocity has been made. The quantity required for an armory with the head and fall afforded by the site is 82 cubic feet per second, which would leave a surplus for the smaller quantity equal to 18 cubic feet per second, and for the larger quantity 56 cubic feet per second. Since the examination was made representations have been received from the most respectable sources, declaring that the average depth of the stream at the place where it was measured was never less, at the lowest stage, than 15 or 16 inches. In consequence of these representations, the largest of the quantities resulting from the information obtained at the time the examination was made, viz., 138 cubic feet per second, has been stated in the table as the quantity afforded by the stream at low water.

For site No. 2, the dam will be at the head of the Rolling ripple, and the workshops on the bank of the river, immediately above Willow creek. The tail-races will be extended below the workshops to the foot

of Willow Creek ripple, a distance of more than 800 feet. By this arrangement an addition of two or three feet to the fall will be obtained. The natural fall from the dam to the foot of Willow Creek ripple, allowing for the surface slope, is ..... 8 feet.
The height of dam ..... 12 "
—— "
Head and fall at low water ..... 20 "

The operations at this site, as at the other, may be carried on until the rise should exceed 32 feet.

The quantity of water required at low water would be 73 cubic feet, which would leave a surplus of 65 feet per second.

ZANESVILLE.—Since this site was examined and reported upon by the commissioners, the legislature of Ohio has authorized a slack-water navigation of the Muskingum river, and left it at the option of the company now established at Zanesville to complete that part of it within the jurisdiction of their charter. The Zanesville company, then, must be relied on to furnish the water power, and they agreed to deliver the quantity required at a point about fifty yards above Putnam bridge. The plan of the commissioners was to establish the workshops at Slagoe's run, where, with the natural fall increased by a dam 7 feet high, there would be a head and fall at low water of 16½ feet. The height to which the dam will be raised by the Zanesville company has not been determined on conclusively, although it seems to be understood it will be 9 feet. The natural fall to Putnam bridge is 7 feet, and to where the workshops will be established, a little below the bridge, it is about 7½ feet, which, being added to the height of the dam, would make a head and fall of 16½ feet, or the same as was proposed to be obtained by the plan of the commissioners.

There were several reasons which induced the establishment of the workshops at the site selected a little below Putnam bridge, instead of Slagoe's run. It is uncertain whether the height of the dam at Duncan's falls, ten miles below Zanesville, will be 7 feet or 9¾ feet, and the height last stated would back the water to Putnam bridge, and, of course, would render unavailable the fall of 2½ feet between that point and Slagoe's run. In that case, the extra expense of carrying the water to Slagoe's run would be lost, and the difference in the expense would be considerable, in consequence of the necessity of conveying the water by a tunnel to avoid the inconvenience and interruption of having an open canal in a common thoroughfare.

BIG BEAVER RIVER.—The commissioners, in their report upon this site, have very justly mentioned it in the most favorable terms. Its fitness and peculiar advantages as a site for an armory, whether for establishing or carrying on its operations, and the lowness of the estimates for it, which were based upon the then existing prices, entitled it to the most favorable consideration. Its local advantages are now as they were, but the estimates are widely different. The cause of this difference will be explained in the remarks upon prices.

There was a rise in the river when the level was taken, which may account for the result being six inches less than the previously ascertained result. The difference is unimportant. By the level last taken there was afforded a head and fall, clear of back water and allowing for surface slope, of 17 feet 3 inches.

The plan of the commissioners has been followed in all essential particulars. No alteration has been made of the dam or the canal, but the plan of the workshops will correspond with the plans adopted for the workshops of the other sites.

PITTSBURG.—Steam, as a power for operating machinery, has been sufficiently tried to establish its fitness and safety for that purpose. When employed in stationary engines it is, or with ordinary care may be, free from the risk to which it is liable when the engine is put in motion as in steamboats. In an armory it would be stationary, and therefore would be as fit to be used as any other power. It would answer no purpose to compare its advantages with those of water power, or to inquire into the relative expense of employing them. It is the only permanent power that can be obtained at Pittsburg, and the expense of employing it there at an armory is shown in the estimates. It may be proper, however, to state that the estimates, formed upon the best information that could be obtained, are higher than those reported by the commissioners. The gentlemen who had assisted the commissioners in procuring the information upon which their report and estimate respecting Pittsburg had been based were requested to lend their assistance, in this instance, by reviewing what they had done before, and so altering it as to adapt it to the present time and circumstances. They readily consented to afford the assistance requested, but it is supposed they were afterwards prevented from doing it, as it was not done.

The site selected, being the same as that reported by the commissioners, is on the left bank of the Alleghany river, about a mile from the United States arsenal, and three miles from Pittsburg.

Explanation of prices.

EARTHWORK.—The soil at all of the sites is such as may be easily excavated, being generally sand and loam mixed with each other, or with clay. Under favorable circumstances 15 cubic yards, or even a greater quantity, might be excavated by a laborer in an ordinary day's work; but, taking into view the loss of time occasioned by bad arrangements and other causes, 12½ cubic yards has been assumed as the average quantity that may be excavated in a day's labor.

12½ cubic yards, excavated and thrown into a wheelbarrow, being one day's labor, 100 per cent.

One cubic yard would be eight per cent.

And the cost of the tools required for the excavation would be equivalent to .2 per cent.

Making the cost of the excavation, &c., and the tools, for one cubic yard, 8.2 per cent., and for one cubic foot, .3037 per cent.

The removal of excavated earth and placing it clear of the excavation, including the expense of providing wheelbarrow, plank, and other facilities, is equivalent to the following proportions of a day's labor:

For transporting one cubic yard, on a level plane, to the distance of 120 feet, 8.4 per cent.

For transporting one cubic yard, on a level plane, to the distance of 1 foot, .07 per cent.

For transporting one cubic foot, on a level plane, to the distance of 1 foot, .0026 per cent.

For transporting one cubic yard, on an inclined plane rising one foot in 12, to the distance of 90 feet, and the height of 7½ feet, 8.4.

For transporting one cubic yard to the distance of 12 feet, and the height of 1 foot, 1.12 per cent.

For transporting one cubic foot to the distance of 12 feet, and the height of 1 foot, .0414 per cent.

The excavated earth, removed and placed clear of the excavation, forms a bank on each side of it,

Resolution of the **SENATE** of the United States

passed the 18th of December, 1827.

ITE for a **NATIONAL ARMORY.**

Hort.l Scale 40 perches to 6 1/2 16th of an inch.

Bowen & Co. Lith. Philada

the base of which generally would be about one-half of the surface width of the excavation, and the height about one-half of its depth. Accordingly the earth removed would be transported, on a horizontal plane, to a distance equal to one-half of the surface width of the excavation, and, on an inclined plane, to a height equal to once and a half its depth.

Instead of one-half of the width of the excavation being taken as the distance of horizontal transportation, it will amount to the same thing, and be more convenient, to take the whole width as the distance, and reduce the ratio to one-half, or, for one cubic foot, .0013 per cent.

This arrangement will admit of the rate being blended with that for the excavation of one cubic foot, (.3037,) and the sum of those rates (.305) will be the cost of excavation and horizontal transportation for each foot of the width of the excavation.

In like manner, instead of the rate of .0414 for each foot of the height, equal to once and a half the depth of the excavation, for the vertical transportation, a rate one-half greater than that rate, or .062, applied to the depth of the excavation, would produce the same result. The rate of vertical transportation, per cubic foot, for each foot of the depth of the excavation, is therefore fixed at .062 per cent.

The two rates last stated, applied to the dimensions of earthwork, whether excavations or embankments, will determine the quantity of labor and the cost of tools requisite to execute them, and the price of labor applied to the result will show the cost.

The mean of the expense of excavating and removing the earth to the depth of one foot at the surface and at the bottom of any section will of course determine the average cost for the whole section.

It is ascertained by first multiplying the sum of the surface and bottom widths by .305, for the excavation and horizontal transportation; second, by multiplying the surface width by .062 for the vertical transportation of the surface width, the depth of the excavation being assumed at one foot; and, third, by multiplying the bottom width by .062, and the product by the depth of the excavation, for the vertical transportation of the bottom width. The sum of these several amounts so obtained is multiplied by 27, the number of cubic feet in a cubic yard, and the product is divided by the sum of the surface and bottom widths. The quotient is the average of the quantity of labor requisite for the excavation of a cubic yard at the surface and at the bottom of the section, and, consequently, the average of the whole section.

The surface widths of excavations are determined by the depths and bottom widths. For canals they are equal to three times the depth added to the bottom width, which gives to the sides a slope with a base one-half greater than the depth. For temporary purposes, such as preparing foundations for masonry, they are once and one-third of the depth added to the bottom, the sides having a base equal to two-thirds of the depth.

Masonry.—The cost of the several kinds of masonry is determined by fixing the proportions of materials, workmanship, and contingencies, and applying to the materials and workmanship the prices at which they are respectively rated.

The following table will show the proportions required for a perch of each of the several kinds of masonry of 25 cubic feet:

The several kinds of masonry.	MORTAR.					MATERIALS, WORKMANSHIP, AND CONTINGENCIES.								
						Dressed stone.						Workmanship.		Contingencies.
	Cubic yards of mortar.	Bushels of water lime.	Bushels of common lime.	Allowance for sand, water, tools, &c.	Days of labor.	Cubic feet of rubble stone.	Days of labor for shaping and extra handling.	Days of masons' work for dressing.	Cubic feet of rubble stone.	Bricks, three-eighths of a thousand.	Mortar.	Days of masons' work.	Days of labor for attendance.	Per cent. on materials and workmanship.
				Cents.										
Dressed stone.....	1-6	2 2-3	1⅓	3	21-100	30	1	1	.....	.....	1-3	1-2	1	9½
Rubble stone	1-4	2 1-3	1⅓	4	3-10	.....	.....	.....	25	.....	1-4	1-3	⅓	7½
Plain brick walls....	1-5	3 1-5	2	3	1-4	.....	.....	.....	.....	375	1-5	1-3	⅓	7½
Brick arches.....	1-5	3 1-5	2	3	1-4	....	.....	.....	.....	375	1-5	3-5	⅓	15

Remarks.—Mortar made with common lime will have, for rubble stone, three parts of sand and one of lime; for dressed stone and bricks, two parts of sand and one of lime. When made with water lime it will have, for rubble stone, two parts of sand and one of lime; for dressed stone and brick, one and a half parts of sand and one of lime. The contingencies include mortar-beds, scaffolding, centreing, &c.

By applying the prices of the respective sites to this table, the cost at each site will be—

For—	At the Falls of Chattahoochee.	At Carter's Iron-works.	At Embree's Iron-works.	At the Falls of Emery's river.	At Cypress creek.	At the Narrows of Harpeth.	At the mouth of Eel river, on the Wabash.	At Big Blue river.	At the Falls of the Ohio.	At the Horseshoe Bend.	At Zanesville.	At Big Beaver river.	At Pittsburg.
Dressed stone masonry.....	$4.11	$3.09	$3.09	$3.47	$3.48	$3.48	$3 69	$4.00	$4.50	$4.27	$4.50	$3.93	$4.16
Rubble stone masonry	1.841	1.458	1.458	1.627	1.646	1.646	1.839	1.883	2.222	1.974	2.222	1.93	2.14

For—	At the Falls of Chattahoochee.	At Carter's Iron-works.	At Embree's Iron-works.	At the Falls of Emery's river.	At Cypress creek.	At the Narrows of Harpeth.	At mouth of Eel river, on the Wabash.	At Big Blue river.	At the Falls of Ohio.	At the Horseshoe Bend.	At Zanesville.	At Big Beaver river.	At Pittsburg.
Plain brick masonry	$3.15	$2.29	$2.29	$3.00	$3.02	$3.02	$3.08	$2.72	$2.64	$2.60	$2.56	$2.57	$3.23
Brick arches	3.86	2.80	2.80	3.61	3.63	3.63	3.72	3.37	3.336	3.29	3.21	3.18	3.87

Several minor items of expense connected with the masonry of the dams will not be specified in the estimates, but will be merged in the prices of the masonry of the dams. They consist of temporary dams for excluding the water while the foundations of the dams are preparing and laying, and are estimated at 50 cents for each foot of the length of the dam; of rock excavation for levelling the foundations of the dam, which are estimated at from 50 to 75 cents for each foot of the length of the dam; of dowelling the two upper courses of the dam, including the expense of furnishing the dowels and drilling the holes for them, estimated at 10 cents for each foot of the thickness of the dams at the top, multiplied by their length; and of the wing walls, which are of rubble masonry.

The coverings of dams may also be considered contingents of masonry. They will be presented distinctly in the estimates, because all the dams will not have them; but instead of their various details, the sum of their amounts will be given, with an averaged price adapted to the length of the dam. Their details consist of three grooves, cut in the capstone along the length of the dam, to receive the timbers to which the platform will be secured; the timbers to be fitted into these grooves; the platform of 3-inch plank; the iron bolts to secure the timbers to the dam and the holes to be drilled in the capstones for receiving the bolts. The expense for these details will be: for the grooves, 75 cents a foot, or $2 25 for each foot of the length of the dam; for the timbers, 25 cents; the bolts, 32 cents a foot; and the holes to be drilled for them, 6¼ cents for each foot of the length of the dam; making, together, $2 88¼ for each foot of the length of the dam; for the platform of 3-inch plank, including the expense of laying, 50 cents a square yard.

The two upper courses of one of the dams that will have no covering, and of the wing dam, the river wall, and the waste weirs, will also be dowelled and bolted; and the expense of a temporary dam, and of levelling the foundations, will be included likewise in the estimate for the dam.

The earthwork and masonry are the only parts of the estimate that require explanation of the manner in which the prices are applied to them, except the bridges.

The bridges will be of the plainest kind, and, with one exception, will consist of nothing more than timber, laid four feet apart from centre to centre for string-pieces, and 3-inch plank for the platform, with a common railing. The cost for these will be 80 cents a square yard for the platform, including the string-pieces, and for the railing, 50 cents for each foot of the length of the bridge. At Eel river, a bridge over the canal will be required where it crosses the river road. It will differ from the other bridges in no other respect than in having posts and braces to support it.

The prices of nearly all the materials and of the different kinds of workmanship will be shown in the details of the estimates for buildings, fixtures, &c. Nevertheless, the prices of the materials required for masonry, together with the timber, and of the wages of masons, carpenters, and laborers, will be shown here, as they were understood to be at the respective sites when they were examined, as far as that could be ascertained.

Sites.	Materials.				Wages per day of—		
	Rubble stone.	Bricks, 9–4½–2½.	Lime.	Lumber, board measurement.	Masons.	Carpenters.	Laborers.
	Per perch.	*Per M.*	*Per bushel.*	*Per 1,000 ft*			
Falls of Chattahoochee	$0 55	$5 00	$0 10	$8 00	$1 25	$1 25	$0 55
Carter's Iron-works	45	3 50	8	6 00	87½	87½	45

Pittsburg	75	5 00	15	6 00	1 00	1 00	62½

The estimates for establishing may be said to be founded upon these prices; their whole amount, nearly, being made up by the expense of earthwork, masonry, and carpentry. The prices are widely different, and the estimates are affected in the ratio of that difference, which, between the extremes, would be upwards of 30 per cent. It is important that the prices used in the formation of these estimates should be based upon satisfactory information, that they might be relied on in the event of the actual establishment being made within a reasonable time. Such information has not been obtained in regard to the prices at all of the sites. It has been obtained only for the sites at which, or in the neighborhood of which, the employment of mechanics and hired laborers was extensive and regular; and it may be worthy of remark that at these sites the prices are higher than at the others, and nearly uniform. The sites alluded to are those upon and near the Ohio river. It is understood that, prior to the commencement of the public works which have been for several years and are now extensively carried on in the western part of Pennsylvania and in Ohio and Kentucky, the prices, and particularly for hired labor,

were much lower than at present—as low, indeed, as the lowest of the rates above stated. The augmentation of the prices, it is said, was progressive with the increase of the demand. Whether this fact, which is unquestionable, would justify the inference that a similar result might be expected whenever the demand for mechanics and hired laborers was unusual and greatly exceeded the available means of ready fulfilment, will doubtless be considered by those interested in its decision, and authorized to make it. No discretion being authorized to adapt the prices to the possibility or even the reasonable probability that such an inference would be sustained, the obligation to use in the estimates the existing prices, as far as they could be ascertained, was imperative; and that course has been pursued accordingly. The price of provisions is nearly the same at all the sites, and it may therefore be presumed the price of boarding also would be nearly the same, and would not materially affect the rate of wages. It is very probable there would be a difference in the rates of wages at the several sites proportionate to their relative salubrity.

The risk of encountering diseases which were known to be prevalent would not be incurred by mechanics or laborers for the same wages as could be obtained where there was no such risk. It was intended to provide for this contingency, in the estimate for the workmanship requisite to carry on the operations of an armory annually, by adding a percentage, graduated to the relative salubrity of the sites; and the table containing the estimate was framed accordingly, but that part of it was left blank because satisfactory data upon which to fill it up could not be obtained. This estimate amounts to more than one-half of the aggregate of the several estimates for establishing, carrying on, and distributing, and a small percentage added to it would alter the position in the scale of relative cost of any one of the sites to which it might be applied. Deducting from it the compensation to officers and to engineers and millwrights, the sum remaining of $76.98459 would be the amount to be paid annually for the wages of mechanics and laborers. If an allowance for loss of time by prevalent diseases should be fixed at only three or four days in the year, or 1 per cent. upon that amount, it would be $770, which would be nearly one-half more than the difference between the lowest and the fourth in the scale of relative cost.

Congress having appropriated lands to aid in the construction of a canal around the Muscle shoals, another for connecting the Wabash and Maumee rivers, and a third for connecting the Great Miami and the Maumee, it is presumed these several works will be completed within a short time, and the facilities which, in that event, would be afforded in the transportation of the arms manufactured at a national armory on the western waters have been taken into view in the formation of the estimate for distributing the arms after being manufactured. The improvement of the navigation of the Tennessee river, and the construction of a canal to connect it with the navigation of the Alabama, will no doubt be carried into effect, and within a period probably not very remote. They have not been regarded in forming the estimate for distributing, but it is deemed proper to advert to them as their effect would be very favorable to the estimates for distributing for the sites contiguous to the Tennessee river above the Muscle shoals.

Explanation of the tables.

Explanations have been attached to all the tables requiring them, and have been made as full as was deemed necessary, except in the table containing the estimate for distributing the arms when manufactured to four general depots.

The additional explanation required for this table is to show why it is proper to distribute the arms to general depots, and the reasons for fixing upon the number and positions of those selected; and the proportions to be transported to each, and also the necessity for distinguishing between the periods of peace and war, and the periods favorable and unfavorable to transportation.

It is proper that the arms manufactured at a western armory should be distributed to general depots, because such is the disposition made of the arms manufactured at Harper's Ferry and Springfield, and the western armory is intended to be similar to those establishments.

An erroneous impression is entertained by many that the arms furnished to the States and Territories under the act of 1808, providing for the arming and equipping of the whole body of the militia of the United States, are furnished from the existing national armories. But such is not the case. Those arms are procured by purchase from private armories, and when procured are placed at the disposal of the authorities of the States and Territories in the proportions due to each respectively.

The arms manufactured at the existing national armories are considered to be applicable solely to the use of the troops employed in the service of the United States, including enlisted soldiers, drafted militia, and accepted volunteers; and they are distributed among the United States arsenals or depots in proportions regulated by the probable extent of supplies they may be respectively required to furnish, and are subject to the control of the general government only.

The reasons for preferring the positions selected, and for confining the number to four will be explained together. The number required, and the positions most elegible for them depended upon the nature and extent of the probable exigencies of service to be met and provided for by their establishment.

The Gulf of Mexico, the most accessible, and therefore the most vulnerable, is the frontier on the western waters, for the security of which, more than any other, every part of the western country is most deeply and directly interested.

This remark is more immediately applicable to the outlet of the Mississippi river, and its truth will sustain the selection of Baton Rouge, at the head of the upper delta of that river, as a position for one of the depots; which, likewise, possesses the advantage of being already furnished with the buildings and other conveniencies suitable for such an establishment.

Another depot will be required for the eastern portion of this frontier, because its water communication with the Mississippi river would be liable to interruption during war. The best position for this depot is not the most central. Mobile bay and Pensacola are the most important points, and most likely, therefore, to attract hostility and require defence; of the means to be relied on for defence, the supplies of men and provisions would to a great extent be derived from the fertile and comparatively populous country bordering upon the Tombigbee and Alabama rivers, and those streams would be the channels of their transit. A position on the water-courses emptying into Mobile bay is further recommended by the fact that the facility and cheapness of its communications with the sites to be compared, except one of them, are greater than could be met with at any position more central; Mount Vernon, on the Mobile river near its junction with the Tombigbee and Alabama rivers, was selected because of its being the site of an extensive arsenal lately built or now building.

In addition to these depots for the Gulf of Mexico, one other for the lake frontier, and a fourth for the Mexican, Missouri, and upper Mississippi frontiers were considered sufficient.

A position at Fort Wayne would be peculiarly well adapted for supplying the upper lakes, except Lake Superior. The chief objection to it, its insecurity, would apply to any other position on the lakes. But if the means of maintaining it against an attack should not be at hand, the means of removing the arms to a place of safety, which will be afforded by the Wabash and the Miami and Maumee canals, when they are completed, would defeat the object of the attack if made, and perhaps prevent its being made.

The remaining depot would be at St. Louis, the central position of which would facilitate its communications with the other depots should there be a necessity for it.

Respecting the apportionment to the several depots of the arms manufactured and required to be transported annually, it was thought the best standard by which it could be fixed would be the numbers and position of the troops employed by the United States on the western frontier during peace and during war. It was accordingly attempted to fix it by that standard, and the last annual report of the commanding general of the army was taken as the guide for the numbers and positions during peace. It was intended to take the troops employed on that frontier at the close of the war as the guide for the period of war, and information in regard to their numbers and positions was attempted to be procured, but without success. The muster-rolls, descriptive-rolls, or pay-rolls for the month of January or February, 1815, would have afforded the information desired, but they could not be furnished.

The apportionment adopted was based upon the following reasons. The Gulf of Mexico being more exposed than the lake and western frontier, it was determined it should have 60 per cent. of the whole quantity, which would leave 40 per cent. for the other. In dividing these 60 per cent. between the two depots for the Gulf of Mexico, the greater importance of the outlets of the river Mississippi seemed to claim for it the larger proportion of it. But taking into consideration that the depot at Mount Vernon would be comparatively isolated, while that at Baton Rouge could be readily communicated with from the depot at St. Louis, which would admit of its receiving the whole of the deposit at the latter within ten days, should there be a necessity for it, the larger proportion might more properly, it was thought, be allowed to it, and accordingly 35 per cent. was allowed to Mount Vernon, and 25 per cent. to Baton Rouge.

In dividing the remaining 40 per cent. between Fort Wayne and St. Louis, the former was considered to be entitled to the larger portion on the ground of the probability that it would be required to furnish supplies to a greater extent. This circumstance, in connexion with the fact already stated respecting the facilities of intercommunication with Baton Rouge which St. Louis would have, seemed to settle conclusively that the larger portion should be assigned to Fort Wayne. Accordingly 25 per cent. was allotted to Fort Wayne, and 15 per cent. to St. Louis. In giving a larger portion to the Gulf than to the lake frontier the fact was taken into view that Fort Wayne was within reach of supplies from Springfield through the Erie canal, and from Harper's Ferry through the Miami and Maumee canal.

The weight of the whole quantity to be transported annually was ascertained in this way: A box containing 20 muskets with their appendages, packed and ready for transportation, weighs about 300 lbs., and as 12,000 muskets would require 600 boxes, their weight would be 180,000 pounds.

The necessity for distinguishing between the periods of peace and war was founded on the fact that the depot at Mount Vernon could not be communicated with during war as advantageously as it could be during peace, and consequently, that the expense of transportation to that depot would be greater during war than during peace. The ratio of peace and war as fixed was determined by the number of years of each period since the Declaration of Independence. Fifty-four years have elapsed since that event, and during that time we have had ten years of war with Great Britain, besides the hostilities with the French shortly after the French revolution, and the wars with the Indians. The ratio therefore was fixed at three quarters of peace and one quarter of war.

The distinction between the periods favorable and unfavorable to transportation was made for the following reasons, viz: That, although transportation from the respective sites to the several depots might be carried on more advantageously at periods of the year when water conveyance would be available to the greatest extent than at other periods when it would be interrupted by low stages of the streams or by ice; that nevertheless the exigencies of the service might require that a portion of the transportation, and possibly a large portion of it, should be carried on during the period least favorable to it; and also that the water conveyance which might be resorted to during peace might be exposed to hazards that would preclude a resort to it during war; therefore, that a fair and just estimate of the cost could be made in no other way than that which has been adopted, viz: To assume that the transportation would be uniform and progressive throughout the year, and consequently, that the same quantity would be transported each day whether the season was favorable or unfavorable. That the whole weight to be transported annually to each depot, being divided by the number of days in the year, would show the weight to be transported daily, and the daily weight so ascertained, being computed by one cent a mile per 100 lbs. for land carriage, and $\frac{1}{10}$ of a cent a mile per 100 lbs. for water carriage, would give the daily cost of transportation by land and by water from each of the sites to each of the depots. It was necessary, then, only to apply these estimates of the cost of transportation by land and by water daily to the number of days of transportation by land and by water from the respective sites to the several depots annually, and the annual cost of transportation would in each case be determined.

Respectfully submitted,

J. L. SMITH, *Captain Corps of Engineers.*

Gen. C. GRATIOT, *Chief Engineer, Washington.*

Table of the quantity of water and power employed at Springfield, Massachusetts.

No.	Kind of wheel in use.	Quantity of water which issues on the wheel expressed in cubic feet.	Whole effective head of water, or half the height of the column which issues on the wheel added to the fall after it has issued, and before leaving the wheel, expressed in feet.	Measure of the power, or the whole effective head multiplied into the whole quantity of water.

	Deduct for wheels Nos. 10, 12, 18, 23, and 26, being not indispensable for operations performed by them, and are supernumerary			92.00
				1,290.69

Remarks.

The foregoing table exhibits the quantity and power of the water employed, computing, according to the laws of gravity, from the dimensions of the several apertures at the wheels, and the mean height of the column of water issuing through each, without considering the influence of those causes which are known to operate in practice and vary the results.

The trifling velocity of the spouting water renders the obstructions to its motion from the resistance of the air too inconsiderable to merit particular attention as regards the objects of the present investigation.

But the motion and direction of the particles of water in a reservoir, before and at the time of entering an aperture in one of its sides, occasions a *material* difference between the actual discharge and that computed from the theory of falling bodies. The friction also, where the surfaces of the sides of the aperture are great, compared with its area, adds considerably to this difference.

It has been ascertained, by a variety of accurate experiments, that the volume which flows through an aperture placed in a vertical side of any vessel or reservoir filled with water has its diameter contracted at a short distance from the orifice through which it issued, and that the area of its section, taken at right angles with its jet at the point of greatest contraction, is much less than the area of the aperture through which it issued.

The difference between these two areas and the consequent difference in the quantity of water which actually flows and the quantity which would flow if unimpeded by the cause before mentioned, varies, under different circumstances, from near 200 to 358 parts in a thousand.

This variation is found to be much less affected by the ratio between the perimeter and area of the aperture, or by the distance at which it is placed below the surface of the water in the reservoir, than by its position as it respects the sides and bottom of the reservoir, and by other arrangements which may serve to conduct the water, and secure to it a less interrupted horizontal movement in the direction of, and passage through, the aperture.

Thus an orifice placed in the side of a reservoir actually discharged 920, and in one instance 983 parts, when furnished with a conical or trumpet-shaped conductor, and only about 665 parts without it, by which it appears that the whole amount of obstruction, from friction and resistance of the air, did not exceed, and indeed could not equal the difference, or 80 and 17 parts in one thousand.

The difference in the proportions discharged in those cases where no conductor was employed is chiefly attributed to the nature of the surfaces of the apertures; and to the greater or less ratio between

the area of the aperture and the area of its surfaces. In no two such instances, however, (within those limits which concern the present inquiry,) did this difference exceed 23 parts in 1,000.

It appears, then, that the computed body of water at the national armory at Springfield must exceed the actual amount employed by a quantity not greater than 335, nor less than 200 parts in 1,000. To determine this excess with accuracy for each wheel would require the aid of data not in our possession; and to neglect it altogether might occasion considerable errors in the estimate of the excavations and descent.

If we assume, however, the ratio between the actual and the estimated discharge which may be found to hold in relation to the aperture of the largest dimensions employed at Springfield, and apply that ratio to the reduction of the whole amount deduced for all the apertures, we shall obtain a result somewhat greater than the actual quantity of water employed at that establishment; and yet approximate as near to it as may be done with prudence and safety.

Supposing the estimated discharge from the largest aperture is to the actual discharge as 1,000 : 800, (which corresponds very nearly with the experiments:)

We have 1,000 : 800 :: 335 : 268 for the whole quantity of water, and 1,290 for the power of that quantity.

A list of the various operations in the manufacture of a musket, as now carried on at the United States armory, Springfield, Massachusetts.

Filing barrel, by manual.
Studding barrel, by manual.
Straightening barrel, by manual.
Finishing boring of barrel, by water.
Drilling vents in barrel, by water.
Polishing barrel, by water.
Browning barrel, by manual.
Forging breech pin, by manual.
Milling breech pin, by water.
Cutting screw pin, by manual.
Filing screw pin, by manual.

BAYONET.

Forging bayonet, by manual.
Tempering bayonet, by manual.
Boring bayonet socket, by water.
Turning bayonet socket, by water.
Milling bayonet socket, by water.
Grinding bayonet blades, by water.
Grinding flutes, by water.
Cutting and fitting socket, by manual.
Polishing bayonet, by water.
Browning bayonet, by manual.

RAMROD.

Drawing ramrod, by water.
Rounding ramrod, by water.
Heading ramrod, by manual.
Tempering ramrod, by manual.
Straightening ramrod, by manual.
Grinding ramrod, by water.
Polishing ramrod, by water.
Cutting screw, by manual.

BANDS.

Cutting upper band, by water.
Welding upper band, by manual.
Drilling upper band, by water.
Sighting upper band, by manual.
Filing upper band, by manual.
Grinding upper band, by water.
Polishing upper band, by water.
Browning upper band, by manual.
Forging middle band, by manual.
Trimming middle band, by water.
Filing middle band, by manual.
Grinding middle band, by water.
Rivetting swivel to middle band, by manual.
Polishing middle band, by water.
Browning middle band, by manual.
Cutting lower band, by water.
Welding lower band, by manual.
Filing lower band, by manual.
Grinding lower band, by water.
Polishing lower band, by water.
Browning lower band, by manual.

SWIVELS.

Forging swivels, by manual.
Trimming swivels, by manual.
Punching swivels, by manual.
Filing swivels, by manual.
Turning swivels, by water.
Polishing swivels, by water.
Browning swivels, by manual.

GUARDS.

Forging guard plates, by manual.
Trimming guard plates, by water.
Filing guard plates, by manual.
Drilling guard plates, by water.
Counter-sinking guard plates, by water.
Forging guard bows, by manual.
Milling guard bows, by water.
Filing guard bows, by manual.
Rivetting guard bows, by manual.
Grinding guard, by water.
Polishing guard, by water.
Browning guard, by manual.

TRIGGER.

Forging trigger, by manual.
Trimming trigger, by water.
Filing trigger, by manual.
Polishing trigger, by water.
Hardening trigger, by manual.

SIDE PLATES.

Cutting side plates, by water.
Filing side plates, by manual.
Punching side plates, by water.
Grinding side plates, by water.
Polishing side plates, by water.
Browning side plates, by manual.

BAND SPRINGS.

Forging band springs, by manual.
Milling band springs, by water.
Filing band springs, by manual.
Polishing band springs, by water.
Browning band springs, by manual.

BREECH PLATE.

Forging breech plate, by manual.
Trimming breech plate, by water.
Punching breech plate, by water.
Counter-sinking breech plate, by water.
Filing breech plate, by manual.
Grinding breech plate, by water.
Polishing breech plate, by water.
Browning breech plate, by manual.

SIDE SCREWS.

Forging side screws, by manual.
Turning head screws, by water.
Slitting head screws, by water.
Milling side screws, by water.
Cutting screws, by manual.
Hardening screws, by manual.

TANG PIN.

Forging tang pin, by manual.
Slitting tang pin, by water.
Milling tang pin, by water.
Cutting screw of tang pin, by manual.
Hardening screw of tang pin, by manual.

BREECH PLATE SCREWS.

Forging breech plate screws, by manual.
Slitting breech plate screws, by water.
Milling breech plate screws, by water.
Cutting breech plate screw, by manual.
Hardening breech plate screw, by manual.

GUARD SCREWS.

Forging guard screws, by manual.
Slitting guard screws, by water.
Cutting guard screws, by manual.
Hardening guard screws, by manual.

LOCK PLATE.

Forging lock plate, by manual.
Grinding lock plate, by water.
Drilling lock plate, by water.
Trimming lock plate, by water.
Filing lock plate, by manual.

HAMMER.

Forging hammer, by manual.
Trimming hammer, by water.
Drilling hammer, by water.
Filing hammer, by manual.

BRASS PANS.

Casting pans, by manual.
Boring pans, by water.
Filing pans, by manual.
Fitting pans, by manual.

COCK.

Forging cock, by manual.
Trimming cock, by water.
Drilling cock, by water.
Punching cock, by water.
Filing cock, by manual.

TUMBLER.

Forging tumbler, by manual.
Milling tumbler, by water.
Drilling tumbler, by water.
Filing tumbler, by manual.

BRIDLES.

Forging bridles, by manual.
Drilling bridles, by water.
Milling bridles, by water.
Filing bridles, by manual.

SEERS.

Forging seers, by manual.	Filing seers, by manual.
Drilling seers, by water.	

UPPER JAWS.

Forging upper jaws, by manual.	Drilling upper jaws, by water.
Trimming upper jaws, by water.	Filing upper jaws, by manual.

COCK PIN.

Forging cock pin, by manual.	Drilling cock pin, by water.
Milling cock pin, by water.	Cutting screw for cock pin, by water.
Slitting cock pin, by water.	

LOCK PINS.

Forging set of lock pins, by manual.	Cutting screw for lock pins, by manual.
Slitting set of lock pins, by water.	Polishing lock, by water.
Milling set of lock pins, by water.	Hardening lock, by manual.

MAIN SPRING.

Forging main spring, by manual.	Tempering main spring, by manual.
Drilling main spring, by water.	Filing main spring, by manual.
Turning main spring, by manual.	

HAMMER SPRING.

Forging hammer spring, by manual.	Turning hammer spring, by manual.
Drilling hammer spring, by water.	Tempering hammer spring, by manual.
Filing hammer spring, by manual.	

SEER SPRING.

Forging seer spring, by manual.	Turning seer spring, by manual.
Drilling seer spring, by water.	Tempering seer spring, by manual.
Filing seer spring, by manual.	

STOCKING MUSKET

Turning stock, by water.	Finish stocking musket, by manual.
Boring for barrel, by water.	Finishing musket, by manual.
Setting in the lock, by water.	Drawing iron, by water.
Fitting on the bands, by water.	Drawing steel, by water.
Fitting to the heel plate, by water.	

Statement A, No. 2 a.

[The first of those referred to in sub-estimate A, No. 2, being an explanation of the fixtures.]

Cast iron.—For gudgeons and sockets, for water-wheels, for spur and pinion wheels, rings, slides, husks, &c., and beds for trip hammers, forge, &c.

Wrought iron.—For bolts, nuts, and screws; straps and braces for water-wheels; bolts to secure the sills, and braces and straps to secure the harness for trip-hammers; bolts to secure the grinding, polishing, and drilling frames; for arbors or shafts, for grindstones, drums, and pinion wheels, and cams or tappets for forge and trip-hammers.

Steel.—For facing the cams or tappets, &c., &c.

Oak timber.—For sills, posts, and harness for forge and trip-hammers; sills and frames for grindstones; polishing frames, drilling frames, head and centre blocks, and shafts for water-wheels, and plank for work benches.

Pine boards and plank.—For lining, buckets, &c., for wheels, and for making drums, and apartments, drawers, &c., for keeping the parts of work, and tools of the workmen.

Carpenter and millwright work.—For making the water-wheels, head and centre blocks, and drums; for framing the sills and harness for the hammers; frames for grindstones, polishing and drilling, and making the drawers, apartments, &c

Stone, brick, and lime—For forges or fires, for trip-hammers, forge, or other forges; for chimneys to the above forges and furnaces; for annealing and hardening work, and casting brass.

Fire-brick and clay.—For lining the inside of furnaces.

Masons' labor.—For laying the stone and brick.

The above applies to the sites where water power is used, and relates, also, to Pittsburg, where steam power is used, with the exception of those parts of it required for water-wheels, gates, and head-blocks, which are omitted at that site.

Statement A, No. 2 b, referred to in sub-estimate A, No. 2.—Estimate of the cost of establishing at Pittsburg, as a site for a national armory on the western waters, a steam power sufficient for the manufacture of 12,000 muskets annually, to consist of four steam engines capable of being worked with 100 pounds to the inch.

One steam engine with boiler complete, 15-inch cylinder, of 45-horse power when working with a pressure of 30 pounds to the inch	$4,000 00
The fly-wheel and main shaft, estimated at 6 tons weight, with brass boxes for journals	888 00
Timber and leaver beam	75 00
74.1 perches of bricks and laying at $3.232	239 49
140 perches of masonry laid at $2 14	299 60
	5,502 09
One steam engine with boilers complete, 13-inch cylinder, of 33-horse power when working with a pressure of 30 pounds to the inch, including masonry and furnace, and all other fixtures and appurtenances	4,606 00
Two steam engines with boilers complete, 11-inch cylinders, of 27-horse power when working with a pressure of 30 pounds to the inch, including masonry and furnaces, and all other fixtures and appurtenances, each $4,170	8,340 00
Four wells, digging and walling, average 50 feet each, at $96	384 00
Four pumps for wells, at $40 each	160 00
	18,992 09
Add for contingencies 10 per cent	1,899 21
Total first cost to put the steam power in operation	20,891 30

Statement A, No. 2 c, referred to in sub-estimate A, No. 2.—Machinery, tools, and miscellaneous articles.

No. of machines.	No. of sets of tools.	For what purpose.	Amount.
14	14	Trip-hammers and forge	$1,342 67
7	7	Boring barrels	530 00
20	34	Drilling, milling, slitting, turning, &c	2,308 00
	10	Forging locks	845 00
	8	Forging mounting	711 55
	3	Forging bayonets	225 00
	1	Forging ramrods	20 00
	40	Filing locks	1,213 00
	12	Filing mounting	877 60
	5	Proving, breeching, filing, and sighting barrels	177 50
6	34	Stocking muskets	1,632 16
3	5	Making and repairing machinery and tools	1,877 66
	14	Finishing muskets	219 36
9	9	Grinding	450 00
1	1	Boring bayonets	50 00
	60	Anvils, not included in the above	1,012 50
	153	Vices, not included in the above	780 00
		Carpenters' and millwrights' tools, patterns, &c	250 00
		Miscellaneous articles	1,549 00
			16,071 00

The miscellaneous articles consist of one fire-engine, two hundred fire-buckets, engine hose, twenty-four common buckets, six long ladders, two large scales for weighing iron and steel, one scale for weighing loads of grindstones, &c., six writing desks for offices, twelve chairs for offices, twenty-five account books, inkstands, tables, &c., for offices, six wheelbarrows, one wagon, one set of harness, and two horses.

The machinery and tools, the latter amounting to more than ten thousand in number, are not given in detail, it being deemed unnecessary, though the estimate of cost was made on each machine and tool, separately, at the Springfield prices; to which has been added ten per cent, which, it is believed, will cover the whole expense.

Statement B, No. 1 b, referred to in the estimate B, No. 1.—Estimate of the annual expenses of four steam engines for an armory at Pittsburg.

Working 313 days at 160 bushels per day, equal 50,080 bushels of coal, at 3½ cents per bushel	$1,752 80
Oil, tallow: smiths' work, in repairs, 313 days, at 40 cents per day for each engine, is 160 cents per day	500 80
Packing pistons four times per annum for each engine is 16 times, at 175 cents	28 00
	2,281 60

EXPLANATION.

It was thought to be desirable that the estimates for establishing an armory at the respective sites should be presented together, in a table, that they might be readily compared; but to have shown all the details would have required a table so large as, perhaps, to have defeated that purpose. The plan adopted in this table has been in regard to items of the same kind and referring to the same general object, but having different prices, to blend the quantities and average the prices; and in regard to minor items, to merge their amounts in those of the principal items to which they are contingent, and adapt to the sum of the several amounts a price referring to the quantities of the principal items. This will account for the minuteness of the fractions in some cases. The buildings, fixtures, machinery, &c., could not be embraced by this arrangement. The estimates for them are presented in a sub-estimate, and their aggregate amounts only are shown in the table. A further division being necessary, statements containing the details required, and which could not be conveniently introduced in the sub-estimate, have been prepared and accompany it, with proper references to them.

None of the plans embrace head gates. It was thought they might be dispensed with, as the waste weir would afford adequate protection against freshets, and for regulating the supply of water the gate for each wheel would be sufficient. Should the canal need repairs, and the exclusion of the water be required while they are carried on, it might be effected by means of a temporary dam at a small expense.

The foundations for the workshops at Pittsburg, being the same as those of the other buildings, have been included in the sub-estimate referring to buildings, fixtures, &c. Those for the other sites where water power will be used could not with propriety be separated from the forebays, reservoirs, and wells and tail races, and have therefore been introduced in their appropriate place, in reference to their connexion with them, in this table.

It is proper to be remarked respecting the workshops that the uniformity of their length, as shown in the plans, would not be observed in the construction. The adaptation of the size of each building to the nature and extent of the operations to be carried on in it would require them to be of different lengths. The estimate of the extent of the workshops that would be requisite for the manufacture of twelve hundred muskets annually is five hundred feet for the length and forty feet for the width. The aggregate length and the width of those shown in the plan correspond with these dimensions, and their being represented of uniform length will not affect their cost absolutely or relatively.

In the estimates for the excavation of rock the value of such part of the excavation as could be used for building purposes has been deducted from the whole cost, and an averaged price adapted to the reduction has been made Thus at the Narrows of Harpeth the price has been reduced from $4 to $3.494, at the Falls of Ohio from $2 to $1.342, and at Big Beaver river from $2 to $1.514. The proportion of the deduction was the same at the two sites last stated, but the value for building purposes was less at Beaver than at the other, and the average price, consequently, was greater. The price at both is higher than it is usually estimated at. It is based upon the actual cost of rock excavations of a less expensive kind which have been made at the Louisville and Portland canal. The excavation for the weir at Big Beaver has been included with the rock excavation for the canal.

At all of the sites where water power would be used, except those at Carter's and Embree's iron-works, the plans provide for an interval between the canal and the workshops, to serve as a thoroughfare. Such a provision in the plans for Carter's and Embree's iron-works would have been attended with great expense, and a continuous platform or bridge over the canal where it passes along the works has been substituted for it.

There are two sites at the Falls of Ohio, and also at the Horseshoe Bend, for which separate plans and estimates have been prepared. The estimates for site No. 1 at each place are introduced in this table, being the lowest. The estimate for site No. 2 at the Falls of Ohio amounts to $396,307 16 for the entire cost and $23,778 43 for the annual cost. The estimate for site No. 2 at the Horseshoe Bend amounts to $307,630 for the entire cost, and $18,459 for the annual cost.

A No. 1.—*Estimate of the expense of establishing a national armory on the western waters at the respective sites below stated, including the cost of land for the site, of water privileges, of the requisite buildings, fixtures, and other constructions, and of the machinery, tools, &c.*

REMARKS.

The following data respecting the transportation above stated will serve to show the various modes by which it is proposed to effect it, and also to explain the difference in the expense at the respective sites. For the Falls of Chattahoochee all the articles would be procured from Baltimore, during peace by water, at 1½ cents a pound, and during war by land, at 6 cents a pound; the average of ¾ of peace and ¼ of war being at the rate of 2¼ cents a pound. For all the other sites the articles, except steel, files, wrapping paper, and stationery, would, in like manner, be procured from Baltimore. Steel is made in the vicinity of Carter's and Embree's Iron-works, and also at Pittsburg. It would be transported from the former to the sites on the Tennessee, and from Pittsburg to all the other sites except the Falls of Chattahoochee. Files are also made at Pittsburg, and together with wrappingpaper and stationery would be transported from thence to all the other sites except the Falls of Chattahoochee.

For Carter's and Embree's Iron-works, steel in the vicinity, files, wrapping paper, and stationery from Pittsburg, at 1⅛ cts. a lb., the other articles from Baltimore, *via* N. Orleans, during peace, at 2¼ cts. a lb., and *via* Wheeling, during war, at 4½ cts, average 3 cts.

EXPLANATION.—The facts and assumptions upon which this estimate has been based are set forth and explained in the report, (page —.) They show that 12,000 muskets, with their appendages, packed in boxes for transportation, would weigh about 180,000 pounds; that in the distribution of these 12,000 muskets to the several depots, the proportions of their weight to be transported to each, respectively, would be as follows, namely: To the depot at Mount Vernon 35 per cent., equal to 63,000 annually, or 172.6 pounds daily; to the depots at Baton Rouge and Fort Wayne 25 per cent. each, equal to 45,000 pounds annually, or 123 3 pounds daily; and to the depot at St. Louis 15 per cent, equal to 27,000 pounds annually, or 74 pounds daily. They further show that the cost of transportation is estimated at one cent a mile per 100 pounds for land carriage, and 7.01 of a cent a mile per 100 pounds for water carriage; and, therefore, that the cost of transportation to the several depots daily, being in the ratio of the weight to be transported to them, respectively, would be, for every 100 miles, as follows: to Mount Vernon $1.726 for land carriage, and $0.12082 for water carriage; to Baton Rouge and Fort Wayne $1.233 for land carriage, and $0.08631 for water carriage; and to St. Louis $0.74 for land carriage, and $0.0518 for water carriage. They also explain the distinction of the periods favorable and unfavorable to transportation during peace and during war, and the grounds upon which the ratio of peace and war has been fixed at three-fourths to the former, and one-fourth to the latter.

The transportation from the respective sites to the depot at Mount Vernon may be carried on to the best advantage by the way of the Gulf of Mexico and Mobile bay; but this route, being exposed to interruption from an enemy, cannot be relied on during war, and hence has arisen the necessity of distinguishing between peace and war, and of adapting to that distinction the tabular arrangement of the estimate so far as it relates to that depot.

The other depots being accessible during war by the same routes that would be used during peace, and from all the sites, except that at the Falls of Chattahoochee, the form adopted for exhibiting the estimates for them is more compact than the form adopted for the depot at Mount Vernon, and also admits of an arrangement of the estimate for the site at the Falls of Chattahoochee, adapting it to the periods of peace and war, by exhibiting it in three lines—one for peace, another for war, and a third for the average of peace and war, showing the sum of three-fourths of the cost during the former period, and one-fourth of the cost during the latter period.

Appended to the estimate is a detail of the routes and the distances between the several stages of them, being the data upon which the distances stated in the estimate were ascertained and fixed.

Details of the routes and distances above stated.

TO THE DEPOT AT MOUNT VERNON.

	Distance in miles.	
	By land.	By water.
During peace.		
From the Falls of Chattahoochee—		
By the Chattahoochee and Apalachicola rivers, 350; the Gulf of Mexico, 220; Mobile bay and river, 70; favorable	.....	640
From Carter's Iron-works—		
By the Watauga, Holston and Tennessee rivers, 827; the Ohio, 47; the Mississippi to New Orleans, 977; Lake Pontchartrain, the Gulf of Mexico, and Mobile bay and river, 180; favorable	.....	2,031
By land to the Suck, on the Tennessee, 220; the Tennessee, 452; the Ohio, Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,204; unfavorable	220	1,656
From Embree's Iron-works—		
By the Holston and Tennessee, 797; the Ohio, Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,204; favorable	.....	2,001
By land to the Suck, 210; to the Tennessee, 452; the Ohio, Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,204; unfavorable	210	1,656
From the Falls of Emery's river—		
By the Emery, Clinch, and Tennessee, 582; the Ohio, Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,204; favorable	.....	1,786
By land to the Suck, 90; the Tennessee, 452; the Ohio, Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,204; unfavorable	90	1,656
From Cypress creek—		
By the Tennessee, 275; the Ohio, Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,204; favorable	.....	1,479
From the Narrows of Harpeth—		
By the Harpeth and Cumberland, 150; the Ohio, 70; the Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,157; favorable	.....	1,365
From the mouth of Eel river, on the Wabash—		
By the Wabash, 447; the Ohio, 128; the Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,157; favorable	.....	1,732
By land to Vincennes, 194; the Wabash, 150; the Ohio, 128; the Mississippi, Lake Pontchartrain, Gulf of Mexico, 1,157; unfavorable	194	1,435
From Big Blue river—		
By the Big Blue and Ohio, 325; the Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,157; favorable	.....	1,482
From the Falls of Ohio—		
By the Ohio, 370; the Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,157; favorable	.....	1,527
From the Horseshoe Bend—		
By the Licking, 37; the Ohio, 503; the Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,157; favorable	.....	1,697
By land to the Ohio, 7; the Ohio, 527; the Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,157; unfavorable	7	1,684
From Zanesville—		
By the Muskingum, 69; the Ohio, 779; the Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,157; favorable	.....	2,005
By land to Cincinnati, 156; the Ohio, 503; the Mississippi, Lake Pontchartrain, Gulf of Mexico, 1,157; unfavorable	156	1,660
From Big Beaver river—		
By the Big Beaver and Ohio, 926; the Mississippi, Lake Pontchartrain, Gulf of Mexico, &c, 1,157; favorable	.....	2,083
By land to Cincinnati, 277; the Ohio, 503; the Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,157; unfavorable	277	1,660
From Pittsburg—		
By the Ohio, 952; the Mississippi, Lake Pontchartrain, Gulf of Mexico, &c, 1,157; favorable	.....	2,109
By land to Cincinnati, 282; the Ohio, 503; the Mississippi, Lake Pontchartrain, Gulf of Mexico, &c., 1,157; unfavorable	282	1,660

C.—*Details of the routes and distances, &c.*—Continued.

TO THE DEPOT AT MOUNT VERNON—Continued.

	Distance in miles.	
	By land.	By water.
During war.		
From the Falls of Chattahoochee—		
By land to Montgomery, 90; the Alabama river, 365; favorable	90	365
From Carter's Iron-works—		
By the Watauga, Holston, and Tennessee to Florence, 552; by land to Columbus, on the Tombigbee river, 121; the Tombigbee, 350; favorable	121	902
By land to the Suck, 220; the Tennessee to Florence, 177; by land to Columbus, 121; the Tombigbee, 350; unfavorable	341	527
From Embree's Iron-works—		
By the Holston and Tennessee to Florence, 522; by land to Columbus, 121; the Tombigbee, 350; favorable	121	879
By land to the Suck, 210; the Tennessee to Florence, 177; by land to Columbus, 121; the Tombigbee, 350; unfavorable	331	527
From the Falls of Emery's river—		
By the Emery, Clinch, and Tennessee to Florence, 307; by land to Columbus, 121; the Tombigbee, 350; favorable	121	657
By land to the Suck, 90; the Tennessee to Florence, 177; by land to Columbus, 121; the Tombigbee, 350; unfavorable	211	527
From Cypress creek—		
By land to Columbus, 121; the Tombigbee, 350; favorable	121	350
From the Narrows of Harpeth—		
By the Harpeth, Cumberland, Ohio, and Tennessee to Florence, 436; by land to Columbus, 121; the Tombigbee, 350; favorable	121	786
From the mouth of Eel river, on the Wabash—		
By the Wabash, Ohio, and Tennessee to Florence, 803; by land to Columbus, 121; the Tombigbee, 350; favorable.	121	1,153
By land to Vincennes, 194; the Wabash, Ohio, and Tennessee to Florence, 506; by land to Columbus, 121; the Tombigbee, 350; unfavorable	315	856
From Big Blue river—		
By the Big Blue, Ohio, and Tennessee to Florence, 553; by land to Columbus, 121; the Tombigbee, 350; favorable	121	903
From the Falls of Ohio—		
By the Ohio and Tennessee to Florence, 598; by land to Columbus, 121; the Tombigbee, 350; favorable	121	948
From the Horseshoe Bend—		
By the Licking, Ohio, and Tennessee to Florence, 768; by land to Columbus, 121; the Tombigbee, 350; favorable	121	1,118
By land to the Ohio, 7; the Ohio and Tennessee to Florence, 755; by land to Columbus, 121; the Tombigbee, 350; unfavorable	128	1,105
From Zanesville—		
By the Muskingum, Ohio, and Tennessee to Florence, 1,076; by land to Columbus, 121; the Tombigbee, 350; favorable	121	1,426
By land to Cincinnati, 156; the Ohio and Tennessee to Florence, 731; by land to Columbus, 121; the Tombigbee, 350; unfavorable	277	1,081

EXPLANATION.—The natural fall is the difference of level in the stream at low water between the positions respectively of the dam and the outlet of the tail-race; the head and fall the difference of level between the top of the dam and the floor of the tail-race, where the water would be discharged from the wheel after being used, with a small deduction for the surface slope which the water must have to pass it between those points through the head race with the requisite velocity. The whole of the natural fall is used at all of the sites where reaction wheels would be employed, except at the Falls of Ohio. It could not be used with any other than reaction wheels on account of back water, but it might be used with them at any of the sites for which breast or overshot wheels have been adopted, and would increase their power in the ratio of the proportion not used, but there would likewise be a proportionate increase of the expense of establishing. The power of the site has been computed at the effect of the head and fall at each upon overshot wheels, and it was ascertained that the proportion of 15 per cent. for the head and 85 per cent. for the fall were sufficiently accurate to authorize their adoption for all of the sites; accordingly, the virtual descent has been estimated at 92½ per cent. The reason for adopting overshot wheels as the standard for estimating the power, is that reaction wheels have been recently improved to such a degree that their power, which was formerly rated as not exceeding that of undershot wheels, is now believed by intelligent practical men, who have tested the effect of the improvements, to be equal to that of overshot wheels; and that being the case, that all of the sites are entitled to have their power rated by overshot wheels as the standard, since it is practicable to use reaction wheels where any other description of wheels may be used. At the sites where the operations would be interrupted by ice or by high water, the period of the interruption has been stated at rather less in each case than the average of a series of years was represented to be, it being due to those sites that any allowance for the possible inaccuracy of the estimated interruption should be made in their favor. The column relating to the loss of wages on account of sickness produced by local causes, to which the workmen would be liable at the sites where such causes existed, cannot be filled for the reason stated in the remarks upon prices, but it was deemed proper to keep the subject of it in view on account of the importance of its bearing upon the general estimate of the relative advantages and disadvantages of the respective sites.

The estimates for establishing occupy two columns: one showing the entire cost, the other the reduction of the entire cost viewed as a capital to amounts corresponding with the usual rate of annual interest, which, being considered as the annual cost, are carried out into the general aggregate, with the estimates for carrying on and distributing, which refer to annual cost. These estimates last stated require no explanation. The ratio in the last column is intended to facilitate the comparison of sites in regard to relative cost.

The following are the particulars respecting sites No. 2 at the Falls of Ohio and the Horseshoe Bend:

Sites.	WATER POWER.							Days annually of interruption by ice.	Days annually of interruption by high water.	Days annually of local disease.	ESTIMATES.						
	Natural fall.	Height of dam.	Head and fall.	Cubic feet per second at low water.		Difference.					For establishing.		For carrying on annually.		For distributing annually.	Aggregate.	Ratio.
				Afforded.	Required.	Excess.	Deficiency.				Entire cost.	Annual cost.	Materials.	Workmanship.			
	Feet.	*Feet.*	*Feet.*	*Feet.*	*Feet.*	*Feet.*	*Feet.*										
Falls of Ohio	24		13		111				50		$396,307 16	$23,778 43	$36,955 75	$85,698 50	$1,640 26	$148,072 94	$101 51

Appendix to a report respecting positions examined as sites for a national armory on the western waters, under a resolution of the Senate of the United States passed the 18th of December, 1827.

FALLS OF CHATTAHOOCHEE, COWETA COUNTY, GEORGIA.

COLUMBUS, *Georgia, April* 7, 1828.

GENTLEMEN: In pursuance of the polite offer of the member of your commissioners now in this place to procure and furnish me with any information that may be needed to aid in estimating the capabilities of Columbus as a position for a national armory, I have drawn up a sheet of interrogatories embracing the point upon which I am desirous of being informed, and have the honor of enclosing it, with my request that the answers may be transmitted to me as soon as practicable after they shall be ready

I am, gentlemen, with great respect, your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

Colonel IGNATIUS A. FEW,
General ELIAS BELL,
Dr. EDWIN P. DEGRAFFUDIED,
Colonel PH. H. ALLSTON,
JAMES HALLAM, esq.,
Commissioners appointed by the State of Georgia to lay out the town of Columbus.

Interrogatories.

It is desirable to obtain information on the points stated in the following inquiries, to assist in forming an estimate of the advantages and disadvantages of the falls of the Chattahoochee as a site for a national armory.

Floods or rise of the Chattahoochee.

1. What is the greatest height to which the Chattahoochee has been known to rise above the level of its lowest stage at the following points, viz: below the rapids opposite the town of Columbus, say at the steamboat landing one mile and a half above that point, two miles above that point, and two and a half above that point? In what year did it occur?
2. What has been the least height, and in what year did it occur?
3. What has been the average height during a series of years, including the ten years last past, or as large a portion of that period as the information can be obtained for?
4. How often do the floods occur in the course of the season of the year in which they happen?
5. What are the respective heights to which they rise during each season, estimated from the lowest stage?
6. How long do they remain at those heights, respectively, before they begin to subside?
7. What is the average lowest stage during the season in which the floods occur?
8. In what months do the floods usually commence and terminate?
9. How long do they usually continue during each season?

Obstructions to the navigation of the Chattahoochee.

10. Of what kind are they—whether rocks, sand-bars, snags, or other kinds?
11. What are the extent, situation, and distances from Columbus (above and below it) of the two kinds first mentioned, viz: rock and sand-bars, and in what way do they obstruct the navigation of the Chattahoochee?
12. What are the number and general position of the other kinds?
13. Is it contemplated to improve the navigation by the removal of those obstructions; and if it be, what measures are proposed to be adopted for that purpose, and within what time is it probable the purpose may be effected?
14. If a canal around the falls immediately above Columbus be one of the improvements contemplated, will its extent be such as to admit of water power being supplied by it for working machinery at Columbus?

Navigation of the Chattahoochee.

15. During what portion of the year will it be practicable to navigate the Chattahoochee below Columbus with vessels having the draught of ten feet, four feet, and three feet, respectively?
16. What is the length of the river from Columbus to its junction with the Apalachicola, and the length of the Apalachicola from that point to its mouth?
17. What is the average length of time occupied in the passage of steamboats from the mouth of the Apalachicola to Columbus, and from Columbus to the mouth of the Apalachicola?
18. Is the river navigable above the falls at Columbus? If it be, to what distance, and with what draught during the lowest stages?

Prices.

19. What are the prices, at Columbus, of bar iron, stone coal, charcoal, bricks, (size to be stated,) stone and shell lime, lumber, provisions, (such as pork, beef, flour, corn, &c.,) common labor, brick per thousand, stone per perch of twenty-five cubic feet, carpentry by the customary admeasurement, (to be stated,) smithing by the pound?
20. What is the rate of freight, per barrel and per one hundred pounds, from New York, from New Orleans, and from the mouth of the Apalachicola, to Columbus?

21. Upon what terms could a lot of one hundred acres, situated below the rapids and near them, with a front on the river, be procured as a site for the national armory?

22. Upon what terms could a water privilege, capable of affording a constant supply of one hundred and forty cubic feet per second, be procured from the canal, should a canal be made around the falls immediately above Columbus?

23. At what price could pig iron be delivered at Columbus?

Miscellaneous.

24. Have iron ore and stone coal, or either, been found within a reasonable distance of Columbus? If they have, at what place or places? What would be the means and distance of transportation from each of those places to Columbus? What is the extent of the beds of the iron ore, and its quality?

J. L. SMITH, *Captain Corps of Engineers.*

COLUMBUS, *Georgia, April* 7, 1828.

COLUMBUS, *Georgia, April* 7, 1828.

SIR: Under a resolution of the Senate of the United States passed at the present session I have been instructed to examine certain positions designated in the resolution, and to report the advantages and disadvantages of each as a site for a national armory similar to those now established at Harper's Ferry and Springfield.

The falls of the Chattahoochee at this place being one of the designated positions, I have examined them, but the time I could bestow upon the examination has been necessarily limited to a few days, and has not been sufficient to enable me to procure individually all the information requisite to the accomplishment of the object in view.

The commissioners appointed by the State of Georgia to lay out this town have politely offered to lend their aid in procuring and furnishing to me the residue of the information which I desire to obtain, and it is proposed to be effected by their answers to a series of interrogatories which I have left with them.

I take the liberty of enclosing to you herewith a copy of those interrogatories and of my letter with which they were transmitted to the commissioners, and of requesting any assistance your official station may enable you to afford towards the furtherance of the object of them.

I have the honor to be, sir, very respectfully, your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

JOHN FORSYTH, *Governor, &c. Milledgeville.*

A copy of the interrogatories was left also with Colonel Crowel, Indian agent at Fort Mitchell.

No communication has been received in answer to the interrogatories above stated.

CARTER'S IRON WORKS, CARTER COUNTY, EAST TENNESSEE.

ELIZABETHTOWN, *Carter county, East Tennessee, April* 24, 1828.

Interrogatories designed to ascertain the fitness, as sites for a national armory, of Mr. Alfred Carter's iron works, on Doe river, and on Stony creek, Carter county, East Tennessee.

1st. How much (in feet and inches) is the lowest stage below and the highest stage above the present level of each of those streams?

2d. How many months in the year are they at or above their present level?

3d. What are the prices at each of these sites of—1st, refined bar iron; 2d, stone coal; 3d, charcoal; 4th, bricks per thousand, (size to be stated;) 5th, stone, per perch of 25 cubic feet; 6th, lime, per bushel; 7th, lumber, per 1,000 feet, (the mode of admeasurement to be stated;) 8th, pork and beef, per pound; 9th, flour and corn, per barrel; 10th, whiskey, per gallon. Of wages per day—11th, of brick and stone masons; 12th, of carpenters; 13th, of blacksmiths; 14th, of laborers. Of *the rates*—15th, of laying bricks per 1,000 and stone per perch, exclusive of materials; 16th, of carpenters' work by the customary admeasurement; 17th, of blacksmith work by the pound?

4th. What would be the expense of transportation per 100 pounds (18th) to and from Florence, Alabama; 19th, Hamburg, on the Savannah river; 20th, Columbia, on the Congaree; 21st, Cheraw, on the Pedee?

5th. Is steel manufactured in this neighborhood? If it be, of what quality, and the price of each per 100 pounds?

6th. At what price, per ton, could grindstones be furnished at each of the sites?

7th. What would be the price, per acre, of a tract of land to contain from 500 to 600 acres at each of the sites, and to include both banks of the stream in the immediate vicinity of the water privileges?

NOTE.—The prices to be stated in reference to wholesale purchase and specie payment.

8th. What is the distance from each of these sites to the nearest point on the Holston to which keel boats may be navigated in the most favorable stage of water; for what length of time in each year does such navigation continue, and at what season or seasons of the year?

9th. How many establishments for manufacturing iron are there in Carter county; to whom do they belong, and what are their distances, respectively, from the sites at Stony creek and Doe river? How much iron is manufactured at them annually?

10th. Where situated is the bed of stone coal said to have been discovered by Mr. Reaves; what is the distance from it to each of the sites; what is its extent and the quality of the coal it furnishes?

J. L. SMITH, *Captain Corps of Engineers.*

ALFRED CARTER, Esq., *Elizabethtown, Carter county, East Tennessee.*

ELIZABETHTOWN, *East Tennessee, April* 24, 1828.

SIR: I request the favor of you to furnish me at your convenience with answers to the foregoing interrogatories.

Very respectfully, your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

ALFRED CARTER, Esq., *Elizabethtown, Carter county, East Tennessee.*

No answer has been received.

EMBREE'S IRON WORKS, SULLIVAN COUNTY, EAST TENNESSEE.

PACTOLUS IRON WORKS, *Sullivan county, East Tennessee, April* 25, 1828.

SIR: The following interrogatories are those which I spoke of to you this morning, and which you were so polite as to say you would furnish answers to.

J. L. SMITH, *Captain Corps of Engineers.*

ELIJAH EMBREE, Esq., *Pactolus Iron Works, Sullivan county, East Tennessee.*

Interrogatories designed to ascertain the fitness, as a site for a national armory, of the position on the Holston river, in Sullivan county, East Tennessee, occupied by the Pactolus Iron Works, belonging to Elijah Embree, esq.

1st. How much (in feet and inches) is the average lowest stage below and the average highest stage above the present level of the Holston, at King's ford, opposite to the saw-mill and nail factory, and at the ravine, a little above Pactolus Ferry?

2d. How much has been the lowest stage ever known below and the highest stage ever above the present level of the Holston at the places above mentioned? In what year did they occur?

3d. How often in each year, for the last nine years, has the Holston been higher than six feet above its present level; and how long, on an average, when it has been higher than six feet above that level, has it remained so at each time; or, in other words, how many days in each year has it been higher than six feet above its present level?

4th. What are the prices at the Pactolus Iron Works of—1st, refined iron; 2d, stone coal; 3d, charcoal; 4th, bricks per 1,000, (size to be stated;) 5th, stone per perch, of 25 cubic feet; 6th, lime per bushel; 7th, lumber per 1,000 feet, (the mode of admeasurement to be stated;) 8th, pork and beef per pound; 9th, flour and corn per barrel; 10th, whiskey per gallon; 11th, grindstones per ton. Of wages per day—12th, of brick and stone masons; 13th, carpenters; 14th, blacksmiths; 15th, of laborers. Of the rates—16th, of laying bricks per 1,000 and stone per perch, exclusive of materials; 17th, of carpenters' work by the customary admeasurement; 18th, of blacksmith work by the pound. Of transportation per 100 pounds—19th, to and from Florence, Alabama; 20th, Hamburg, on the Savannah river; 21st, Columbia, on the Congaree; 22d, Cheraw, on the Pedee?

5th. Is steel manufactured in this neighborhood? If it be, of what qualities, and the price of each per 100 pounds?

6th. What would be the price of the Pactolus Iron Works, with all its water privileges, extending from about a quarter of a mile above King's ford to a short distance below the Pactolus ferry, and embracing the islands at King's ford, and all others between them and the ferry, together with as much land on the left bank of the Holston, within the boundaries specified, as would, with the land contained in the islands, make 500 or 600 acres?

NOTE.—The prices to be stated in reference to wholesale purchase and specie payment.

7th. What is the distance from the Pactolus Iron Works to the nearest point on the Holston to which keel-boats may be navigated in the most favorable stage of water? For what length of time in each year does such navigation continue, and at what season or seasons of the year?

8th. How many establishments for manufacturing iron are there in the counties of Sullivan, Carter, and Washington, East Tennessee; to whom do they belong, and what are their distances, respectively, from the Pactolus Iron Works; how much iron is manufactured at them annually?

J. L. SMITH, *Captain Corps of Engineers.*

PACTOLUS IRON WORKS, *Sullivan county, East Tennessee, April* 25, 1828.

PACTOLUS, *July* 16, 1828.

DEAR SIR: In obedience to your request and my promise I proceed now to answer the several interrogatories proposed by you when at this place the 25th of April last, and, for the sake of brevity, have answered the questions by numbers without taking down the several interrogatories. This, if I remember correctly, was your advice.

1st. The average lowest stage of the river at the mouth of the ravine is about one foot, and at King's ford, opposite the saw-mill, about eight inches; and the average highest stage at the mouth of the ravine is about one foot, and at King's ford about six inches.

2d. The lowest stage of the river ever known at the mouth of the ravine is about 20 inches, and at King's ford about 12 inches; and the highest stage of the river ever known at the mouth of the ravine was about 19 feet, and at King's ford 13 feet. This happened, I think, in the spring of 1821.

3d. The Holston river, at Pactolus, in the last nine years, has not been higher than six feet more than four times in any one year, and in some years not any higher. With two exceptions in the last nine years it has never remained more than two days above six feet at the same fresh.

4th. The price of refined iron at Pactolus is four and a half cents per pound, and the price of bloomed iron is three cents. 2d. Stone coal can be delivered at Pactolus at twenty-five cents per bushel, and there is a flattering prospect of getting it in abundance a few miles above Pactolus, so that the expense of

delivery will not exceed ten cents per bushel. 3d. The price of charcoal, delivered, will not exceed two dollars and seventy-five cents per hundred bushels, of five pecks to the bushel. 4th. Bricks, per thousand, (size, nine inches long, 4½ by 3½,) is three dollars. 5th. Stone, per perch of 25 cubic feet, twenty-five cents. 6th. Lime, per bushel, three cents at most. 7th .Lumber, per thousand feet, seven dollars and fifty cents, for one and one-fourth inches thick, measuring one side and one edge when quartered; other lumber will be in price according to the quantity of timber it contains by the same rule of admeasurement. 8th. Pork and beef two dollars to two dollars and fifty cents per hundred. 9th. Flour two to three dollars per barrel; corn one dollar per barrel. 10th. Whiskey twenty to twenty-five cents per gallon. 11th. Grindstones twelve dollars and a half per ton. 12th. Wages per day: brick and stone masons, seventy-five cents; 13th, carpenters' work, seventy-five cents; 14th, blacksmiths' work, the same; ordinary laborers, twenty five cents; 16th, laying brick, one dollar to one dollar and twenty-five cents per thousand; laying stone, thirty-three and one-third cents per perch; 17th, ceiling per square, of one hundred superficial feet, one dollar and twenty-five cents; framing per square, sixty-two and a half cents; weather boarding per square, fifty cents; shingling, one dollar per square; flooring in the best manner, one dollar and fifty cents per square; window sash per light, six and a fourth cents. 18th. Blacksmiths' work, two and a half cents per pound. 19th. Transportation per hundred pounds to Florence, Alabama, by land, three dollars; the same from Florence to Pactolus; to Florence by water, forty cents per 100 pounds. To Florence by water impracticable by reason of the Muscle shoals preventing up-stream navigation. 20th. To Hamburg, on the Savannah river, two and a half cents per pound; from Hamburg, the same price. 21st. To Columbia, in South Carolina, two and a half cents; the same returning. 22d. Cheraw, on the Pedee, two and a half cents; the same returning.

5th. Steel is manufactured in the neighborhood; the quality said to be superior at twelve and a half cents per pound, delivered.

6th. The price of Pactolus Iron Works, with all the land, islands, appurtenances, minerals, privileges, waters, &c., as stated in the interrogatory, twenty thousand dollars.

7th. Keel-boats can ascend the Holston to Pactolus, carrying fifteen tons burden, in the flush season of water. Several carrying considerable loads have ascended the river several miles above this place. The Holston is navigable for keel-boats from three to five months in each year. The season most favorable for navigation generally occurs between the months of October and July.

8th. There are three establishments in Sullivan county for manufacturing iron, to wit: Embree's, at Pactolus, draws from Anchong's, per year, 100 tons; James King's, 18 miles from Pactolus, makes of refined iron 60 tons; Robert Borough, 14 miles, bloomed, 20 tons.

In Carter county there are fifteen establishments for making iron, all in successful operation, and several others now building. The owners' names and distances from Pactolus, and quantity of iron annually made at each establishment, according to the best information I have obtained, is about as follows, to wit: Alfred M. Carter, 30 miles, two forges, refined, 200 tons; Gall & O'Brien, 25 miles, one forge, bloomed, 80 tons; Wm. & Brien O'Brien, 28 miles, one forge, bloomed, 25 tons; Cleamager, 32 miles, one forge, bloomed, 40 tons; John Nane, 26 miles, one forge, bloomed, 40 tons; Waggoner, 46 miles, one forge, bloomed, 50 tons; Moosely, 44 miles, one forge, bloomed, 50 tons; Cooper, 46 miles, one forge, bloomed, 35 tons; Dugger, 40 miles, one forge, bloomed, 25 tons; Snodgrass, 52 miles, one forge, bloomed, 25 tons; Carter & Greer, 58 miles, one forge, bloomed, 100 tons; Ward, 46 miles, one forge, bloomed, 60 tons; Blevus, 58 miles, one forge, bloomed, 50 tons; Kings, 50 miles, one forge, bloomed, 50 tons; Washington County (Embree) Refined Iron, 25 miles, 250 tons; total, 1,260 tons.

ELIJAH EMBREE.

Captain SMITH, *Corps of U. S. Engineers, &c.*

FALLS OF EMERY'S RIVER, ROANE COUNTY, TENNESSEE.

Interrogatories designed to ascertain the fitness as a site for a national armory of a position on Emery's river, in the county of Roane, Tennessee, where the river breaks through Walden's ridge, commonly known by the title of the Falls of Emery's river.

1st. How much (in feet and inches) is the average lowest stage below, and the average highest stage above, the present level of Emery's river at the falls above designated?

2d. How much has been the lowest stage ever known below, and the highest stage ever known above, the present level of Emery's river at the falls aforesaid?

3d. Does the river rise gradually or suddenly; and, if the latter, what is the greatest height to which it has been known to rise at the falls in one day?

4th. It has been stated that the river sometimes rises suddenly above the falls in an extraordinary degree; that its volume, when so augmented, passes the falls with the velocity of a torrent; and that on its approach to the falls a difference may be distinctly perceived between its level and that of the river immediately below it, equal, in some instances, to at least ten feet. How far is this statement correct; and, if correct, do such torrents occur ever during low stages of the river?

5th. How many days in each year (according to the best information that can be procured) does the river remain at its lowest stage; and how many days in each year does it remain at each foot, respectively, of elevation above the lowest stage—that is to say, at and below one foot of elevation, at and below two feet of elevation, and so on to the elevation of the greatest rise?

6th. How often in each year do the rises in the river occur?

7th. When does the low stage of the river commence, and what is the greatest length of time of its continuance without intermission?

8th. The river at the falls is said to be, during the lowest stage, confined exclusively to a narrow space between two islands. What is the length of that space and its average width and depth? What length of time is the current of the river occupied in passing through it—that is to say, through the distance to be stated as its length? which may be ascertained by throwing a block of wood into the current a little above the upper limit of the space referred to, and observing, by means of a watch having second hands, how long it takes to float from the upper limit of the space to the lower, the trials being repeated five or six times, and the several periods of time occupied in the transit of the float at each trial noted and added together, and the aggregate being divided by the number of trials, the average length of time occupied by each trial would be determined.

9th. The following admeasurements are requested to be made at a point about fifty yards above the ruins of the old mill, at the point which has been designated as the falls, and at a point about one hundred yards below the falls, viz: The width of the bed of the river at the bottom of its banks; the width of the plain on the right or western bank to the river, from the top of the bank to the foot of the first rise of the mountain; the perpendicular height from low-water mark to the level of the plain.

10th. What are the prices, in Roane county, of—1st, refined bar iron; 2d, stone coal; 3d, charcoal; 4th, bricks per 1,000, (size to be stated;) 5th, stone per perch of 25 cubic feet; 6th, lime per bushel; 7th, lumber per 1,000 feet, (the mode of admeasurement to be stated;) 8th, pork and beef per pound; 9th, flour and corn per barrel; 10th, whiskey per gallon; 11th, grindstones per ton. *Of wages, per day*—12th, of brick and stone masons; 13th, of carpenters; 14th, of blacksmiths; 15th, of laborers. *Of the rates*—16th, of laying bricks per 1,000 and stone per perch, exclusive of materials; 17th, of carpenters' work by the customary admeasurements; 18th, of blacksmiths' work by the pound. *Of transportation, per 100 pounds*—19th, to and from Florence, Alabama, or Nashville; 20th, to and from New Orleans; 21st, to and from New York, Philadelphia, or Baltimore.

11th. Is steel manufactured in this neighborhood? If it be, of what qualities and prices per 100 pounds?

12th. What would be the price of a tract of land at the falls of Emery's river, to extend ¾ of a mile above and the same distance below the falls, with the average width of a half mile on each side of the river?

NOTE.—The prices to be stated in reference to wholesale purchase and specie payment.

13th. How near to the falls of Emery's river may boats be navigated from Clinch river? How long in each year, and during what season or seasons is such navigation practicable; and how long and at what seasons is the Tennessee navigable from the Clinch to Florence?

14th. What is the quantity of iron annually made in the county of Roane, and the counties immediately adjoining it?

ROANE COUNTY, *Tennessee, May* 4, 1828.

GENTLEMEN: The interest you appear to take in the object of my visit to this part of the country, and the readiness you have already evinced to assist in accomplishing it, induces me to ask your further assistance by procuring and furnishing the information which may be afforded by answers to the foregoing interrogatories.

I am, gentlemen, very respectfully, your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

Colonel MAC. CAMPBELL, General JNO. BROWN, Doctor JORDAN, Colonel SMITH, Mr. CENTER, *Kingston, Roane county, Tennessee.*

Answers to certain interrogatories propounded by Captain J. L. Smith, of the corps of engineers, who surveyed the falls of Emery's river to ascertain its fitness as a site for a national armory.

1st. The average lowest stage of the river below the level, at the time of making the aforesaid survey, is about three feet; the average highest about three feet above.

2d. The lowest stage ever known below the level, at the time of making the survey, is about five feet, and the highest ever known above about twelve feet.

3d. The river, in its ordinary rise, cannot be said to rise either very suddenly or very gradually, but something more sudden than common streams, owing to the mountainous country through which it passes. The greatest height to which it has been known to rise in twenty-four hours does not exceed ten feet, and that at a very uncommon flood.

4th. The river does sometimes, after sudden and great rains, rise suddenly, and, in a level country it might be said, in an extraordinary degree, and on those occasions its volume does descend with great velocity; but the perceivable difference spoken of above and below the falls is doubtless too great; nothing of the kind, more than is common in the streams of the western mountains, is known to us.

5th. There is but one considerable rise in the river in each year—about the breaking up of winter, say about March, April, or May. Other inconsiderable rises occur occasionally, but not at any particular periods of the year.

6th. The river remains at its lowest stage from fifty to sixty days in the year; it then rises from two to five feet, and fluctuates between the two given stages through the winter until the spring, when the great rise generally occurs; it then falls, after a period of from seven to fifteen days, and continues fluctuating, as above stated, until the lowest stage occurs.

7th. The average commencement of lowest stage of water is from the 20th of July to the 1st of August, and the average rise from the 20th September to the 1st October.

8th. The river at the falls in low water does pass through between two small islands or sand bars. The length of this pass is about ninety feet, and the average width thirty feet; average depth about three feet, and the current descends through this passage of ninety feet in about twenty seconds.

9th. The width of the river's head at the ruins of the old mill is about 270 feet; the width of the plain on the western bank to the first rise of the mountain about 65 feet level; then commences rising gradually, and continues about 300 feet to the base of the main mountain. About 50 yards above the old mill the river is near the same width; the plain on the bank near the same, until it commences rising; the ascent is then greater, and the base of the mountain is about 50 feet nearer the river. The point which Mr. Center says he designated as the falls is about a quarter of a mile below the old mill, the same where the river passes between the islands or sand bars. The width of the river's bed here is about the same as at the ruins of the old mill; but the western bank is low, and overflowed by the high water, say from 30 to 40 feet; from thence the ascent is gradual, say about six degrees, and continues about 30 or 40 poles to the mountain, which at that place is not very steep.

10th. Price of refined iron, $125 per ton; stone coal, 2 cents per bushel; charcoal, 3 cents per bushel; brick, $5 per 1,000, 9 inches long, 4¼ wide, 2¾ thick; rock plenty for the cost of quarrying; lime per bushel, 8 to 10 cents; lumber per 1,000 feet, inch plank, $5; 2 inch do., $10; scantling, $8 to $10; hewed timber, $20, (superficial measure;) shingles, $3 per 1,000; pork per 100 pounds, $2; beef per 100 pounds, $1 50; flour

per barrel, $4 50 to $5; corn per barrel, fall and winter, 50 cents, summer, $1; whiskey per gallon, delivered in casks, 15 to 20 cents; grindstones, immense quantities of rock in this country, no sale by quantity; per single one, 16¾ cents per inch, measuring the diameter of its circle. Wages, per day, of brick and stone masons, $1; carpenters, $1; blacksmiths, $1; laborers, 25 cents—per year about $60. Rates of laying brick per 1,000, $1 50; stone per perch, exclusive of materials, 50 cents; carpenters' work, framing, 75 cents per square; flooring, average price, $3 per square; shingling, $1 25; weatherboarding, 75 cents to $1 50; ceiling, $2; all the other prices are in the proportion of the above. Blacksmiths' work per pound, 7 to 9 cents for ordinary work; but the most customary charges for mechanical and other utensils is by the piece. Transportation—water carriage from Kingston to Florence, Alabama, about $5 per ton; to New Orleans, $8; ascending the waters, not established, except from New Orleans to Nashville, about 75 cents per 100 pounds. Land carriage to and from Nashville, $1 50 to $2 per 100 pounds; to and from Baltimore, $6 per 100 pounds. Transportation from Philadelphia and New York is by way of Baltimore, and the price can be better ascertained elsewhere than here.

11th. No steel manufactured in this neighborhood.

12th. A tract of land extending three-fourths of a mile above and below the falls of the river could be had by entering at one cent per acre, being vacant or unappropriated land, except one or two small tracts which are appropriated by individuals, and may perhaps cost from $200 to $300.

13th. Boats may ascend Emery's river to the falls during winter and spring, in summer within about one mile; and the river is capable of improvements without great labor or expense, so as to be navigable by keel-boats and other small crafts at all seasons of the year as high up as the falls. The Tennessee river is navigable for all kinds of crafts, with the exception of the Muscle shoals and Suck; the first is an obstruction to steamboats. One only has ascended; the latter is only a partial obstruction, being dangerous only in very low water.

14th. In the county of Roane, and those immediately adjoining, there is manufactured annually from half a million to 800,000 pounds of iron.

REMARKS.—There is an inexhaustible bank or mine of stone coal about one mile above the ruins of the old mill, near the margin of the river. A dam of 10 to 12 feet will cause the water to flow back, so as to render a passage up and down from the immediate mine, with boats, safe and easy. About six miles up the river is another mine of the same kind, which could also be freighted down if ever it should become necessary.

There are vast quarries of grindstones in the mountain very convenient to the falls, that no expense need be incurred in procuring sufficient quantities for any purpose, except the quarrying and cutting out; also whetstones of every description, and oil stones of the first quality.

There are in the county of Roane at least seven first-rate sites for iron-works unimproved, and as many in Rhea county, which adjoins Roane immediately on the southwest, besides many others in the adjoining counties.

Roane and the adjoining counties abound with exhaustless mines of iron ore of a quality equal, if not superior, to any known in the United States.

KINGSTON, *Roane County, Tennessee, December* 6, 1828.

SIR: Although the undersigned had not the pleasure of an acquaintance with you and your colleagues when in this country surveying the falls of Emery's river, yet your letter and the accompanying interrogatories have fallen into our hands; and in obedience to your request, supposing the information to be desirable no matter from what persons it came, we have used every exertion and resorted to every means for acquiring correct information on the subject, and herewith send you the best answers to your interrogatories our means of information will enable us to give, together with such other information as we thought, from the nature of the subject under consideration, would be desirable and useful. And we think we may safely say the whole is substantially correct.

One of us has been long engaged in the study and practice of the mechanic arts in several of its most important branches, and for a number of years extensively concerned in the manufacture of iron; and consequently the attention has been directed particularly to water-works of various descriptions. If the result of our exertions should have a tendency to throw light on the subject, it is all the reward we either expect or desire, except the improvement of our country.

If you desire anything more on the subject, and time will permit, by addressing a line to us at this place you can have anything ascertained within the reach of our exertions and means of acquiring knowledge on the subject.

All which is respectfully submitted.

JOHN W. M. BREAZEALE.
JAMES P. HAYNES.

Captain J. L. SMITH, *of the United States Engineers.*

WASHINGTON CITY, *March* 14, 1829.

GENTLEMEN: I have received this day your communication dated the 6th of December last, and the answers furnished with it to interrogatories propounded by me in May last to several gentlemen of Roane county, Tennessee, for the purpose of ascertaining the fitness as a site for a national armory of a position on Emery's river that was examined by me at that time.

I am obliged for the trouble you have taken to furnish the information contained in those answers, and for your polite offer to furnish any additional information that may be desired.

I perceive that some of the statements in these answers differ from the statements made to me verbally by Mr. Center and others. With regard to the state of the stream at its lowest stage, for instance, Mr. Center mentioned the width to be about 20 feet, but not to exceed 25 feet; the average depth not exceeding 18 inches, and the velocity corresponding with that stated by you. From other persons professing to be well informed upon the subject, I learned that the average width, depth, and velocity of the stream at low water were, according to their belief, less in each case than had been stated to me by Mr. Center. I understood also from Mr. Center and others that the difference between

low and high water was 20 feet, and that the river did rise suddenly, and on such occasions moved with the velocity of a torrent.

The differences here mentioned between your statement and those of others may be compatible with the strict accuracy of both, if it be taken into view that they may refer to observations made at different periods, as was doubtless the case.

The plan and estimate for Emery's river were completed in October last, but it is not too late to alter them, should it be deemed necessary, after comparing the data upon which they were founded with your statements, and giving due consideration to both.

I am, gentlemen, very respectfully,

J. L. SMITH, *Captain Corps of Engineers.*

JOHN W. M. BREAZEALE and JAMES P. HAYNES, Esqs., *Kingston, Tennessee.*

CYPRESS CREEK, LAUDERDALE COUNTY, ALABAMA.

[The correspondence respecting this site has been copied from the report of the commissioners.]

FLORENCE, *Alabama, May* 12, 1828.

SIR: Under the orders of the War Department, founded upon a resolution which passed the Senate of the United States during the present session, I have just examined Shoal and Cypress creeks to ascertain their advantages and disadvantages as sites for a national armory.

The assistance afforded by you to the commissioners who, with a view to the same object, made a similar examination five years ago, induced me to call upon you before I proceeded to the examination. I regret that I did not meet with you, and that I will be compelled to leave here without seeing you. I shall, however, have to regret only the pleasure a personal interview with you would have afforded me, if you will take the trouble to look over the interrogatories submitted to you by the commissioners above alluded to, and your answers to them, (copies of which are herewith enclosed,) and if any alteration of your answers be necessary, to make them and send them to me.

Mr. Sanoner was so polite as to accompany Lieutenant Whistler and myself to Cypress creek yesterday and assist us in taking the level from the dam at Clopper's Mill to the ford about three-quarters of a mile below it; the bottom of the sill of the old dam at Clopper's Mill was assumed as the level of the water at that point, and a notch cut in a small tree on the upper side of the road leading to the ford before mentioned, designated the level of the water at that point. If the depression of Cypress creek at its lowest state below the point just mentioned, viz: the bottom of the sill and the notch in the tree, and its elevation above the notch in the tree at its highest stage could be obtained, such information would be very desirable, and I would be greatly obliged to you to furnish it.

I would thank you also to inform me at what price the sight at Clopper's Mill, with its water privileges, could be purchased at this time, and also the price per acre at which land could be purchased on the south bank of Shoal creek, between the Iron shoals and Brush creek, at a quarter of a mile above and below those points and a half mile in width, together with the number of acres within those boundaries, if any, which may not belong to the United States, and which it might be necessary to purchase.

I would likewise beg the favor of you to inform me at what price stone coal could be furnished at Shoal and Cypress creeks, from the Cumberland mountain, in the counties of Roane and Rhea.

I request that all prices may be stated in reference to wholesale purchase and specie payment.

Should it be convenient to you to comply with the request here made, I beg of you to apprise me of it by a letter addressed to me at Louisville, Kentucky. But should it meet your convenience to comply with them, I would ask the favor of you to address any communication on the subject to me at Washington city, which place I expect to reach by the end of August or early in September next.

I am, &c.,

J. L. SMITH, *Captain Corps of Engineers.*

General JNO. COFFEE, *Florence, Alabama.*

P. S.—I was obliged to leave Florence in the stage that brought me to this place before I had completed the above communication, and to postpone its completion until my arrival here.

Respectfully,

J. L. SMITH.

1st. The computed distance by water from Florence to the Ohio river, and from Florence to Knoxville.

2d. The number, position, extent, and nature of the obstructions to the navigation of the Tennessee from the Ohio to Knoxville.

3d. The greatest and least duration of steamboat navigation, and of keel-boats drawing thirty inches, that is known to have occurred in any one season on the Tennessee river, viz:

1. From the Ohio to Waterloo.
2. From the Ohio to Florence.
3. From the Ohio to Knoxville.

4th. The average duration of the same description of navigation to the same points on the Tennessee.

5th. The shortest distance in a direct line from Florence and from the nearest point of the Tennessee to navigable water of the Tombeckbee.

6th. The distance to which Bear creek is navigable for boats drawing thirty inches of water, and for what length of time and period of the year.

7th. The distance on a direct line from the highest point of navigation on Bear creek to the nearest navigable water of the Tombeckbee.

8th. The distance by water and on a direct line from the same point of navigation on the Tombeckbee to constant navigation on that stream.

9th. The extreme height to which the Tennessee rises at the mouth of Cypress and Shoal creeks.

10th. The average and extreme rise of the Cypress and Shoal creeks at points above the influence of the Tennessee river, or at periods when the Tennessee is at its lowest stage.

11th. The distance that Shoal and Cypress creeks are navigable with boats drawing thirty inches, the ordinary duration of such navigation, and the period of the year in which they occur.

12th. The length of time and period of year during which boats drawing thirty inches can ascend and descend from the mouth of Shoal creek to Florence.

Prices of bar iron, bricks, lime, lumber, provisions, common labor, mechanics' labor, viz: bricklayers, masons, carpenters, smiths, &c.

The commissioners employed in ascertaining a suitable site for an armory will be greatly obliged to General Coffee for any information on the subject referred to in the above memoranda which he may furnish them with. Any communication from the general will reach them at Louisville, Kentucky.

FLORENCE, *Alabama, July* 15, 1823.

FLORENCE, *August* 25, 1823.

GENTLEMEN: Pursuant to your request, I herewith enclose to your address the plats of surveys made on Cypress and Shoal creeks (waters of Tennessee river) agreeably to your instructions. Mr. Sanoner, the surveyor and draughtsman, has taken great care to make the work correct, and I have no doubt but it is very accurate. The three surveys are laid down on separate sheets to lessen the bulk of paper, but for your better information I also send you a sketch laid down on a smaller scale connecting the whole together, and showing how they connect with the waters of Mobile. This I have thought necessary, as there is no correct map of Alabama ever yet made. I also send you answers to the questions proposed, which is done from the best information I could obtain from those informed on the several subjects, and which I believe to be tolerably correct. The prices of labor and provisions are nominal, as they daily fluctuate. I will here remark that both of those items will annually fall for several years, from the circumstance of the country every day filling up with the laboring class of men; and as the farmers open and extend, a greater supply of provisions will be made, which will consequently lessen the value or price of the article. In addition to the questions asked, I have given you a connexion of this place with the waters of Mobile at several important points, which I have thought would be satisfactory to you.

The accounts of the surveyor for his own services and expenses, together with those for the pay and expense of chainmen, axemen, flag-bearers, &c., is also enclosed, amounting in the whole to $140, which sum I have paid to Mr. Sanoner, and you will receive his receipt for the same annexed to his account, the amount thereof you will please to remit to me at this place. The press of other business has somewhat retarded the completion of this, but I hope it will come to hand in time.

With great respect, your obedient servant,

JOHN COFFEE.

Colonels MCREE and LEE, and Captain TALCOTT,
Commissioners employed in ascertaining a suitable site for an armory on the western waters.

Carpenters' bill of prices at Florence, Alabama.

For frame buildings, (common,) per square, $1 75; sheeting and shingling, $2 50; cornice, plain, 62½ cents per foot; sash, per light, 12½ cents; framing for brick building, first story, $1 25; second story, $1 50; third story, $1 75, &c.; principal framing, per square, $5; shingling hips and valleys, 25 cents per foot; window-frames, solid, per foot, running measure, 12½ cents; common doors, per panel, $1; flooring, (oak,) per square, $6; pine or poplar, $4 50.

JAMES MARLIN.
E. K. HALLWALL.

ZANESVILLE, *Ohio, November* 23, 1823.

DEAR SIR: Your letter, which we had the honor to receive from you at Pittsburg, accompanying the surveys, &c., from Florence, you state (if I recollect right) that our inquiries concerning the price of labor cannot be ascertained, owing to its great fluctuation, as it is next to impossible for us to form anything like a tolerable estimate of the probable cost of erecting buildings, &c., in the neighborhood of that place without some knowledge of the value of labor to be employed in their construction, I am compelled once more to trouble you with the subject. The *probable* price of labor any time hence can only be inferred. The present price is all in any case that can be correctly known, and is all that is material for us to know. We shall feel ourselves greatly indebted if you will have the goodness to ascertain the cost of carpentry, masonry, &c., of the court-house recently put up in Florence, or the price paid for carpenters, bricklayers, masons, &c., employed on that building, which I presume is the largest undertaking of the kind yet accomplished in that vicinity, and therefore offers the fairest criterion by which to estimate the present prices of labor.

I have the honor to be, &c.,

WM. MCREE.

General COFFEE.

FLORENCE, *December* 18, 1823.

GENTLEMEN: In answer to your several letters concerning the navigation of Tennessee river, I give you the following account:

The produce of East Tennessee, the western part of Virginia, North Carolina, and Georgia, and the eastern part of North Alabama, all descend the Tennessee river to market, and pass over the Muscle

shoals in large flat boats from fifty to eighty feet long, and from fifteen to eighteen feet wide, drawing from two feet to two feet six inches water; these boats commence running through the Muscle shoals at the rise of water in the fall, or early part of winter in each year, most generally about the last of December, and continue to run until May, and sometimes June.

The Muscle shoals have been ascended with small keel-boats from Campbell's Ferry to Marathon, carrying from ten to twenty tons burden. There is a boat at this time at Marathon that has plied the last year on that part of the river with some success, but she is navigated by an experienced and very skilful man, Isaac Brownlow.

It is believed that batteaus, such as ascend James river and Savannah river, could be navigated with success in the Muscle shoals, but no attempt has been made with them. At all seasons of the year boats could ascend that draw only eighteen inches of water, as they could follow the channel and current with more certainty than boats descending could do on account of the velocity of their movements.

The prices of labor and articles to be procured here, as formerly given to you, were all stated in the currency of the country, which is about 25 per cent. below par with specie. Since the receipt of your last I have procured a bill of prices of house carpenters' work from two of our best carpenters here, which is also set down in the currency of our country, and is estimated at the price when the mechanic furnishes his own boarding, which bill I enclose for your information.

Your colonel, McRee, asks the price of work done on our court-house as a specimen of the prices of the place. The contract for the court-house was what we call a lumping contract. The undertakers, when the house is completed, are to receive $5,700, $2,500 of which is to be paid in money of our country, and the balance, say $3,200, in land two miles from Florence, at the price of $20 dollars per acre; they were furnished with the imported materials, all overhead ceiling to be of plank in both stories, but they were not to paint or plaster the house; the house is fifty feet by forty, two very tall stories. I think the wall is about thirty-five feet high, and is very thick and strong; a very tall and respectable steeple, with all the necessary finishing in the court-rooms, and the different rooms in the upper story for juries, &c.

Mr. Sanoner has made some additional sketches of the sites on Cypress and Shoal creeks, in answer to your inquiries concerning them, which is herewith enclosed. He also encloses you duplicate receipts in form, for the services and expenses of his surveying, &c.

I have the honor to be, &c.,

JOHN COFFEE.

Messrs. McRee, Lee, and Talcott.

Answers to the questions proposed by the commissioners employed in ascertaining a suitable site for an armory agreeably to the best information that I have been enabled to procure from the best-informed persons here, which is believed to be as nearly correct as may be.

1st. 275 miles to the Ohio; 400 miles to Knoxville, *supposed.*

2d. From the Ohio to Waterloo no obstruction, 245 miles; a mile above Waterloo is Colbert's shoal, where there are twenty-two inches of water at lowest stage ever known, the only impediments are loose rock and gravel. Above this shoal the navigation to Florence is good at all seasons, at which point commences the Muscle shoals, six miles to Campbell's Ferry, three of which are shoaly, seven inches at lowest water, solid rock bottom, but may be navigated the winter and spring seasons with small steamboats and keels, the current very strong. At Campbell's Ferry commence the great Muscle shoals, twenty miles to Marathon or Milton's bluff, which is the head of the shoals; from thence to Dittoo landing (opposite Huntsville) fifty miles of navigation, good at all seasons; from thence to Knoxville and the boat yard, one hundred miles above. The river is navigated down with flats and keel-boats during the winter and spring seasons, but no information on the subject of ascending.

3d. At all seasons of the year the river is navigable from the Ohio to Waterloo for steam or keel-boats; keel-boats can run to Florence all the year, and steamboats at least six months.

4th. Answered in the above.

5th. From the mouth of Bear creek, on Tennessee river, to Cotton Gin port, on Tombeckbee on a direct line, sixty-nine miles; good ground for a road *through Chickasaw land.*

6th. Not known, never having been navigated.

7th. The navigation of Bear creek is not known from the mouth of Bear creek to Cotton Gin port, (as is answered in the 5th question,) will give all the information I am in possession of.

8th. From Cotton Gin port to Columbus by water, *supposed* sixty miles; by land in a direct line, thirty-four miles, from which point the navigation is considered constant.

9th. At the mouth of Cypress creek the Tennessee rises at the highest water seventeen feet, and at the mouth of Shoal creek the highest rise is four feet.

10th. The extreme rise of Cypress creek at highest water is ten feet; and of Shoal creek, one mile above its mouth, eight feet; at Brush run, ten feet; and at the military road, twelve feet.

11th. Cypress creek is navigable to the Fish trap in the winter and spring; down six months in the year for boats drawing thirty inches of water. Shoal creek is never navigable, nor can boats get to its mouth on account of the Muscle shoals.

12th. Answered by the above obstructions.

Note.—From Florence to Columbus, on Tombeckbee, which place is sixty miles below the Cotton Gin, is 121 miles by the military road. From Florence to Tuscaloosa, *i. e.*, falls of the Black Warrior, on a *direct line,* 108 miles; by the State road now in use, 135 miles. The navigation of Black Warrior from Tuscaloosa to Mobile is good at all seasons for keel-boats, and for steamboats six months in the year. The navigation of the Tombeckbee from the Cotton Gin to Columbus is only good for keel or small steamboats about six months in the year; from Columbus to Mobile navigation is good at all seasons for keel-boats, and six months for steamboats.

Prices.—Bar iron (best quality) from New Orleans, per ton, $130.

Brick—making, laying, and furnishing, all materials per thousand, in currency, which is about twenty-five per cent. below par, $8

Lime, limestone, and fuel, plenty; no fixed price.

Lumber, ¾-inch boards, per hundred, 75 cents.

Lumber, 1-inch boards, per hundred, $1.

Lumber, 1¼-inch boards, per hundred, $1 25.

Lumber, 1½-inch boards, per hundred, $1 50.
Lumber, 1¾-inch boards, per hundred, $1 75.
Lumber, 2-inch boards, per hundred, $2.
Lumber, shingles, cypress, per thousand, $3 50.
Lumber, shingles, chestnut, per thousand, $3.

Provisions.—Corn, per bushel, December 1, 30 cents.
Flour, (uncertain,) from $5 to $10 per barrel.
Pork, per hundred, $3; beef, per hundred, $3.
Vegetables of all kinds plenty, raised in the county.

Labor.—Common farming hand, per month, $10; per year, $100.
House carpenter, journeyman, per month, $20 to $30.
Blacksmith, per month, $20.

JOHN COFFEE.

FLORENCE, *December* 19, 1823.

SIR: According to your request I have endeavored to draw some sketches of the different sections of milldams and mill sites, but not being able to represent elevation of plans or plats, this being my first attempt, you will be so kind as to look over its awkward drawings and landscapes.

I cannot send you a satisfactory copy of my field-notes; the manner in which I kept them would not be easily understood by you, therefore I concluded not sending them, as they would be of no use to you.

The mill-races are designated to run with the surface of the ground, intersecting the water level above the dam, therefore all the necessary cutting that will be required is the depth of the canal or race.

The chains used in surveying on Cypress and Shoal creeks were of two poles, and in the maps returned to you the chains are of four poles, which is practiced in the surveyor's office in making public returns.

The letters A, B, &c., on the maps of Shoal creek were intended only to show that from A to B were so many feet of rise, from B to C so much, &c., which I neglected to explain on the map.

I have the honor to be, &c,

F. SANONER.

Colonel MCREE.

A list of lands that have been forfeited in the vicinity of sites Nos. 1 *and* 2, *on Cypress.*

Township No. 3 of range No. 11 west:
Section No. 4, all forfeited.
Section No. 5, northeast, southwest, and northwest quarters.
Section No. 6, all forfeited.
Section No. 7, northeast, southwest, and east half of northwest quarters.
Section No. 8, east half of southeast quarter and northwest quarter.
Section No. 9, southwest and northwest quarters.

Township No. 2 of range No. 12 west:
Section No. 21, west half of northwest quarter.
Section No. 22, all forfeited.
Section No. 23, southeast quarter.
Section No. 24, northeast and southeast quarters.
Section No. 25, northeast, southeast, and southwest quarters.
Section No. 26, northeast quarter.
Section No. 27, northeast and southeast quarters.
Section No. 28, west half of southeast and west half of southwest quarters.
Section No. 34, southeast and southwest quarters.
Section No. 35, southeast and southwest quarters.

A list of lands that have been forfeited in the vicinity of site No. 3, *on Shoal creek.*

Township No. 2 of range No. 10 west:
Section No. 3, east half of northwest quarter.
Section No. 6, northeast, southeast, and northwest quarters.
Section No. 8, west half of northeast quarter.
Section No. 9, west half of northeast and east half of northwest quarters.
Section No. 11, southwest quarter.
Section No. 14, east half of southwest quarter.
Section No. 15, northeast quarter.
Section No. 17, northeast and northwest quarters.
Section No. 18, northeast, west half of southeast, southwest, and northwest quarters.
Section No. 19, west half of northeast quarter.
Section No. 20, northwest quarter.
Section No. 21, northwest quarter.
Section No. 22, west half of northeast quarter and northwest quarter.
Section No. 23, east half of northwest quarter.
Section No. 24, northwest quarter.
Section No. 25, northeast and southwest quarters.
Section No. 27, all forfeited.
Section No. 29, southeast quarter.
Section No. 34, all forfeited.
Section No. 35, all forfeited.

In addition to the above lists, much of the adjacent lands have never been sold. It is believed that the government could purchase from individuals any lands that it may be desirable to have, at a fair valuation.

NARROWS OF HARPETH, TENNESSEE.

NASHVILLE, *May* 16, 1828.

SIR: During the present session of Congress a resolution has been passed in the Senate, in which it is directed that positions therein designated should be examined, and the advantages and disadvantages of each as sites for a national armory, similar to those at Harper's Ferry and Springfield, should be ascertained and reported.

In pursuance of instructions from the War Department founded upon this resolution, I have examined five of the positions alluded to, which are situated in this State, viz: first, Carter's Iron-works, Carter county; second, Embree's Iron-works, Sullivan county; third, the falls of Emery's river, Roane county; fourth, Gordon's Iron-works, White creek, between Roane and Rhea counties; fifth, Narrows of Harpeth.

At some of these positions were left interrogatories designed to procure, through the answers to them, information that could not be obtained immediately.

The Narrows of Harpeth having been examined five years ago with a view to the object of the present examination, and very full information upon the points to which any interrogatories now made would refer having been afforded by the correspondence that took place between your predecessor and the commissioners who made the examination at that time, of which correspondence copies are now in my possession, I deem it unnecessary to make any new interrogatories concerning that position; but I would ask the favor of you to look over the correspondence referred to, and if any alterations may be made of the information it was intended to furnish, to make them known to me. It is not improbable an interval of five years may have produced some alteration of the prices stated in the correspondence. It is stated in the correspondence alluded to that Mr. Bell, the owner of the position at the Narrows of Harpeth, was then "digging in the vicinity of the 'Narrows' for stone coal, with a confident expectation that he would succeed in procuring it in great abundance." I would be glad to know whether Mr. Bell's attempt to procure stone coal was successful, and if it were, whether it could be procured in sufficient quantities, and at what price it could be delivered at the "Narrows." If the attempt was unsuccessful, I request to be informed the lowest price at which stone coal procured from the Cumberland mountains, or elsewhere, could be delivered at the "Narrows."

It is requested that prices may be stated in reference to wholesale purchase and specie payment.

It is also requested that any communication with which I may be favored on the subject above mentioned may be directed to me at Washington city, at which place I expect to arrive in the course of the month of August next.

I am, with respect, your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

His Excellency SAMUEL HOUSTON, *Governor &c., &c., Nashville, Tennessee.*

(To the above communication no answer was received.)

Copies of the correspondence accompanying the report of the commissioners as referred to in the foregoing letter.

The following answers are made to the queries of the commissioners appointed to perform the duties required by the "act to establish a national armory on the western waters" by the undersigned, it being the best information with which he can furnish them from his personal acquaintance with the subject and the best knowledge that he could obtain from the most judicious and experienced persons in the neighborhood of the Harpeth Narrows and river; all of which is most respectfully submitted, viz:

1. What is the extreme height to which the Harpeth river has ever been known to rise above its extreme low-water mark? In what year did it occur? By what means is it ascertained or estimated? When, and at what points on the Harpeth, was it so ascertained or estimated?

Answer. In February, 1797, when the bottom land was thickly covered with cane, the water in the river Harpeth was certainly higher than it has ever been since. I saw it myself, when at its extreme height, at a point about fourteen miles by land and twenty-four miles by water above the Narrows. At that time there were no inhabitants on the river below the point above stated, and only about four or five families recently settled there. There are not any remaining marks to enable me or any other person within my knowledge to ascertain its extreme height. My opinion is that it was thirty-three feet above low-water mark.

2. What was the height of the rise which removed the mill-house of Mr. Newsome?

Answer. The rise that removed Mr. Newsome's mill was twenty-nine and a half feet above low-water mark; it was the same height at Demosse's mill, a few miles above Newsome's, and twenty-nine feet three inches at a point one mile and two hundred poles below the outlet of Colonel Bell's tunnel, it being the nearest place that I could find any mark. The extreme height of that freshet was on the 24th or 25th of December, 1808.

3. How far is the mill of Mr. Newsome situated above the junction of the Turnbull fork with the Harpeth?

Answer. By a connected plat of the tracts of land on the river Harpeth, from Mr. Newsome's mill to the junction of Turnbull's creek, I find the meanders of said river to be nine miles, and from said junction to the gateway of Colonel Bell's tunnel, on the upper side, six miles.

4. What is the distance from the junction of the two streams to the upper side of Harpeth Narrows, at the gateway of Colonel Bell's tunnel?

Answer. The third and fourth queries answered in that immediately preceding.

5. Does the Harpeth, at the Narrows, rise more or less in extreme freshets than above its junction with the Turnbull? And if so, by how much?

Answer. In the year 1808, at Newsome's mill, above the mouth of Turnbull's creek, the water rose twenty-nine and a half feet. The same freshet, at a point one mile and two hundred poles below the outlet of Mr. Bell's tunnel, was twenty-nine feet three inches. The last winter's freshets, at Newsome's mill it

rose eighteen feet, when the same freshet was eighteen feet five inches at a point about eighty poles below the Narrows; those having been the highest and most general rises of the river since the neighborhood of the Narrows was settled.

6. What is the least height to which Harpeth has been known to rise in any one season above the low-water mark?

Answer. The least height to which the Harpeth has been known to rise in any one season is a query I can find no person to answer. Mr. Newsome says that he believes about eight feet.

7. What is the average elevation of water during an average winter and spring season?

Answer. The average elevation of water during an average winter and spring season, below the Narrows, is three feet.

8. What is the average of the *extreme rises* of that river in the course of 15, 20, or 25 years, or of any given period within your knowledge?

Answer. The average of extreme rises of the Harpeth, from the year 1797 until the present time, is 17 feet.

9. By how much less than the present quantity have you ever known the whole body of water to be diminished in the Harpeth at the Narrows?

Answer. As I do not know the stage of the water when the commissioners were here, I cannot answer the query, though I feel confident that there is a sufficiency of water at all times for the use of an armory.

10. During how many days of the last winter and spring has the Harpeth continued on a level with or higher than the bottom at and adjoining the outlet of the tunnel?

Answer. Mr. Baxter, who lives nearest to that place, says seven days in three freshets, viz: three days at one freshet, and two days at each of the others.

11. Has it been ever known to yourself or any other person to continue at those elevations in any former year for a longer period than it did the last season?

Answer. It has not.

12. What are the obstructions to the navigation of the Harpeth from its junction with the Cumberland to the Narrows?

Answer. There are no obstructions to the navigation but the want of water.

13. During what portion of the year can a boat drawing three feet of water navigate the Harpeth, in its present condition, from the Narrows to the Cumberland, taking the average of any given number of seasons?

Answer. I am informed by the most experienced persons in navigating the river that the average portion is about sixty days.

14. What is the shortest period in any one season within your knowledge during which a boat drawing three feet could have navigated from the Narrows to the Cumberland?

Answer. About thirty days.

15. What is the longest period in any one year within your knowledge during which the same navigation was afforded?

Answer. About one hundred and twenty days.

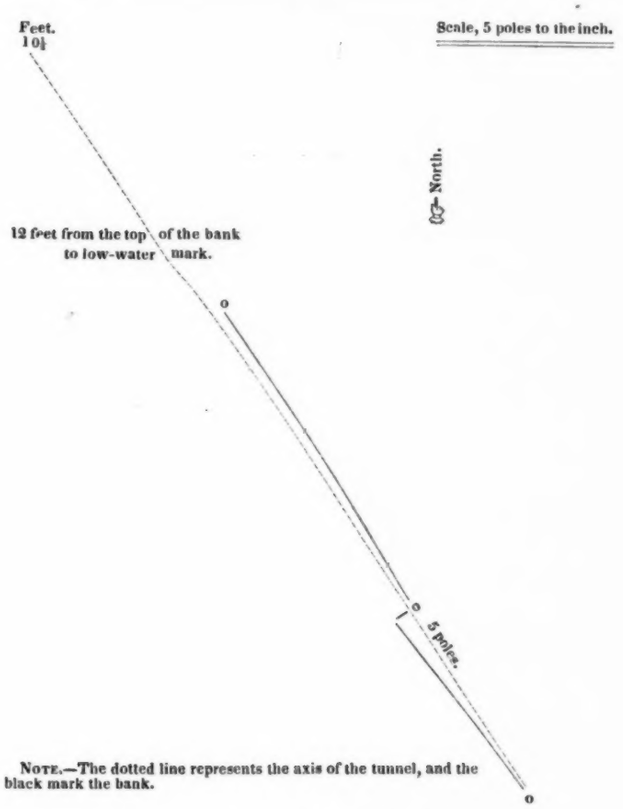
16. Is the descent of the Harpeth greater or less per mile below the Narrows than above, for three miles, and how much?

Answer. The ascent of Harpeth, from the gateway of Colonel Bell's tunnel up, is 36 inches in the first mile, 37½ in the second mile, and 38 inches in the third mile. The descent from a point nearest the outlet of said tunnel is 41 inches on the first mile, 22 inches on the second, and 34½ on the third mile.

17. What is the elevation above low-water mark of the high bottom on which is situated the farm of Mr. Dosier, a little below the draw and gateway to the tunnel of Colonel Bell?

Answer. The elevation is 21 feet.

18. Have the waters of the Harpeth been ever known to pass round the dwelling-house of Mr. Allen, at the Narrows? If so, it is desirable to know the elevation of the highest spot of ground between the two ravines above and below his house over which the water must have passed.



Answer. It is not known that the water ever did pass round Mr. Allen's house. From the best information I can obtain, I am told that it actually did not.

19. It is also desirable to obtain the meanders of the Harpeth river from the Narrows to the Cumberland, including the Narrows.

Answer. I have carefully meandered the Harpeth from the Narrows to the Cumberland river, and a correct plan thereof is herewith enclosed.

20. Mr. Davis is further requested to ascertain by admeasurement the exact elevation of the bottom land above extreme low water by a series of levels, to be taken, as nearly as may be, on the prolongation of the axes of the tunnel from its outlet to where it shall intersect with the Harpeth.

Answer. The course from the outlet of the tunnel to the nearest part of Harpeth is N. 48°, W. 21½ poles, to the river bank, and 5½ poles further to low-water mark. The prolongation of the axes of the tunnel on the above course is at 5 poles from its outlet, 9 feet 1½ inch above the water in a lagoon; at 21 poles it strikes the bank, and at 26 poles is at a point on the sand bar immediately over low-water mark, 11 feet 6 inches. The river bank is 21½ poles from the outlet of the tunnel, and is six inches higher than its centre, from which the ground descends regularly to the bank of the lagoon—six poles from its outlet is 5 feet 3 inches above low-water mark and 6 feet 3 inches below the centre of the tunnel.

NOTE.—The dotted line represents the axis of the tunnel, and the black mark the bank.

The following are the answers to a second series of queries of the commissioners appointed to ascertain the most suitable site for a national armory on the western waters, by John Davis.

Question. What is the difference of level of the extreme low-water mark at the entrance of Colonel Bell's tunnel and the bottom of the tunnel at its outlet, by levelling across the ridge which separates these two points?

Also, to run a horizontal line from the bottom of the tunnel at its outlet to the nearest part of the Harpeth river opposite to it, measuring at every half chain the elevation of the said horizontal line above the bottom land between the outlet of the tunnel and the river, so as to furnish the elements for constructing a profile of the ground along the said line; the elevation of the point in the river at the end of said line above the outlet of the lagoon or bayou, and the distance between these two points, should also be ascertained and stated. Measure the length of a line from the mouth of the tunnel to the mouth of the ravine above Allen's house; the elevation of the bottom on which his house is situated, and a survey of it extending 500 yards below, and back to the foot of the hills. Send also a copy of Col. Bell's plat of the Narrows of Harpeth, to be requested of Governor Carroll.

Answer. The difference of level at low-water mark at the entrance of Colonel Bell's tunnel and the bottom of said tunnel at its outlet is 10 feet 2½ inches.

A horizontal line extending from the mouth of said tunnel on a course north 48° west, at the end of 1 pole or 16½ feet, the descent of the ground below said horizontal line is 6½ inches; at the end of 2 poles, 8½ inches; 3 poles, 3 feet 8½ inches; 4 poles, 5 feet 7½ inches, to the water in the lagoon or bayou; at the end of 6 poles, on the bank of it, 2 feet 8 inches; 7 poles, 2 feet 11½ inches; 8 poles, 2 feet 5½ inches; 9 poles, 1 foot 9 inches; 10 poles, 1 foot 9 inches; 11 poles, 1 foot 4 inches; 12 poles, 8 inches; 13 poles, 2 inches; 14 poles, 3 inches; below the surface, 15 poles, 6 inches; 16 poles, 10 inches; 17 poles, 1 foot 7½ inches; 18 poles, 2 feet 1 inch; 19 poles, 2 feet 8 inches; 20 poles, 3 feet 1 inch; 21 poles, 3 feet 1 inch, to the bank of Harpeth at letter A, the level from the bottom of said tunnel being 3 feet 1 inch below the top of said bank, and 5 feet 3 inches above the water in the river; which is, by my former level at this place, 3 feet 3 inches above low-water mark, and the descent of the water from this point to the mouth of the lagoon, 4½ inches. The course from the above point to the mouth of the lagoon is north 71° east; the distance, 27 poles.

I began at a point north 48° west, 4 poles distant from the outlet of the tunnel, and ran down the lagoon north 31° east, 25 poles to the point where it runs into the river, in a common stage of water, in all 57 poles; then north 16° east, 68 poles, to the mouth of the ravine above Mr. Allen's house, at which place I began the survey of the bottom land, and run north 25° east, passing over the ravine below Allen's house, between where it sinks and its outlet into the low bottom, at 34 poles; in all 38 poles; then north 5° east, with the break of the high bank, 53 poles; then east 60 poles, to Allen's fence; then with it south 8° west, 18 poles, to the foot of the hill; then with the hill south 36° west, 46 poles; then south 6° west, 20 poles; then south 77° west, 52 poles, to the beginning, and containing 25½ acres, as represented by the dotted lines in the plat.

The ground on which Mr. Allen's house is situated is 45 feet above low-water mark, and by levelling both above and below, I find that to be about the average height of the level land contained in the above survey.

NOTE.—The fall from the entrance of said tunnel, at low-water mark, to the water on the lower side is 18 feet 8½ inches. All the land represented in the annexed plat (except 120 acres in the name of Jeremiah Baxter, and 50 acres in the name of Thomas Allen) is Montgomery Bell's, which, including the island,

makes his part by estimation 330½ acres. The sand bar on the lower side opposite the tunnel is colored with sienna. The dark green triangle represents the ground between the lagoon and the river bank. The two lagoons are colored with sky blue.

JOHN DAVIS.

NASHVILLE, *December* 30, 1823.

STATE OF TENNESSEE, *Davidson County:*

The undersigned is well acquainted with Jeremiah Baxter, esq., of Davidson county, and with Thomas Allen, two of the persons who have signed the within answers and interrogatories. I have known Mr. Baxter for many years, and know his general character. He is universally believed to be a man of truth and good character, and his word or statement on this subject is entitled to as much credit as that of any other person. He is a man of sense and observation, and I would believe what he says, and that he is not likely to be mistaken in this matter. He has lived for many years on Harpeth river, and probably knows the facts stated as well as any other man. Mr. Allen is also esteemed and believed by me to be a man of truth, and his statement entitled to credit. The other persons I am not acquainted with.

JAMES TRUMBULL.
EPHRAIM H. FOSTER.

NOVEMBER 11, 1823.

We whose names are undersigned, in answer to the several questions herein proposed respecting the rises of water and navigation of the Harpeth river, have resided immediately on the bank of said river, near the Narrows and in its immediate vicinity, from eleven to thirteen years, and have particularly observed and noted the occurrences which form the basis of our answers during that time:

Question. What is the extreme height to which the Harpeth has ever been known to rise above its extreme low-water mark? It what year did it occur? By what means is it ascertained or estimated? When and at what point on the Harpeth was it so ascertained or estimated?

Answer. In the year 1823 it rose 16 feet by actual measurement, (the greatest rise in 13 years,) immediately at the Narrows. By actual measurement at a certain bank about one mile above the Narrows or tunnel outlet, where Messrs. Woodward and Baxter say the water never covered, it was but 16½ feet high, and the bank was then uncovered from 6 to 12 inches.

Question. What was the height of the rise of the Narrows in 1803?

Answer. This is a query that we cannot answer.

Question. Does the Harpeth at the Narrows rise more or less in extreme freshets than above its junction with Turnbull; and if so, how much?

Answer. It does not rise as much at the Narrows as above Turnbull, owing to the increased width of the bed of the river as well as to an increased current.

Question. What is the least height to which the Harpeth has been known to rise in any one season above low-water mark?

Answer. About three feet.

Question. What is the average rise of water during average winter and spring freshets?

Answer. About twelve feet.

Question. What is the average extreme rise of the river in the course of twenty years, or any given period within your knowledge?

Answer. About fourteen feet for thirteen years.

Question. During how many days of the last winter and spring has the Harpeth continued on a level with, or higher than, the bottom at and adjoining the outlet of the tunnel?

Answer. Mr. Baxter, who lives nearest to that place, says seven days in three freshets; *i. e.*, three days at one freshet, and two days at each of the others.

Question. What are the obstructions to the navigation of the Harpeth from its junction with the Cumberland to the Narrows?

Answer. Nothing but the want of water.

Question. What is the shortest period in any one season within your knowledge during which a boat drawing three feet water could have navigated from the Narrows to the Cumberland?

Answer. In the year 1820, it being unusually dry, it was about twenty days.

Question. What is the longest period in any one year within your knowledge during which the same navigation was afforded?

Answer. From 80 to 100 days.

Question. What is the height of the opposite bank from the tunnel, and of what kind of earth is it composed?

Answer. The height of the opposite bank is unknown to us; it is a stiff clay, said to be 21 feet.

Question. What is the width of the river from the extreme point of the peninsula to the opposite bank, and of what is the bottom composed?

Answer. The extreme width we have not ascertained; the bottom is rock.

Question. What is the quantity and quality of rock immediately at the Narrows suitable for building; also as to timber immediately in the vicinity?

Answer. An inexhaustible quantity of limestone. The timber is oak, poplar, ash, hickory, and chestnut, all very convenient.

JER. BAXTER.
WM. WILLIAMS.
R. D. POCK.
BENJ. WOODWARD.
THOS. ALLEN.

CHARLOTTE, *January* 1, 1824.

DEAR SIR: Having been solicited by Montgomery Bell, esq., and Mr. Thomas Jarrell, to attend at the Narrows of Harpeth for the purpose of assisting and ascertaining the extreme height of water in the river at that place, I accordingly attended at the place on Monday last with Mr. Jarrell and Jeremiah Baxter, esq., resident at that place, where being shown by Mr. Baxter a mark on a large sycamore tree standing on the edge or bank of the river, which mark he stated was made by a Mr. Jonathan Johnston (who was Mr. B.'s predecessor) as the high-water mark and extreme height of the freshets which fell in the winter of 1808, and the highest freshet ever known by any settler on that river; and Mr. Baxter affirmed to us that during his residence at that place for the last thirteen years, he has never known the river to rise so high as Mr. Johnston's mark by 18 or 24 inches. Mr. Jarrell and myself, with assistance of Mr. B., proceeded to level and measure, with as much accuracy as we were capable, and found that from the low-water mark up to Mr. Johnston's mark, by actual measurement, to be *twenty-one feet, and no more!* This point is the same (as Mr. B. informed us) that John Davis, esq., tried the height of the water of the said river; but Mr. B. seemed to regret that he had not shown the same mark (as made by Johnston) to Esquire Davis, which he said had left his memory until Esquire Davis had gone; all of which I have good reasons to believe, knowing Mr. Baxter to be a man who stands fair in society. All of which is respectfully submitted for your consideration, and am, sir, with deference, yours, &c.,

MOLTON DICKSON.

WM. CARROLL, ESQ., *Governor of Tennessee.*

N. B.—I will take the liberty of suggesting that all Harpeth bottoms in 1808, or most of them, were full of large standing cane, which, of course, occupying many solid feet of the now open space marking the margin of the river, was a cause of confining the water more immediately in the channel, and which of course would be the means of its rising something higher than it ever will or ever has since the cane has become extinct. M. D.

Mr. Davis performed his first set of levellings, &c., at the Narrows, (at which time he measured the height of the water mark,) previous to September 11.—(See his returns of the survey at the Narrows, marked H No. —.)

NOTE.—The measurement of Mr. Dickson is founded on the information of Mr. Baxter, who showed to him a water mark left by the freshet of 1808. To the query "What was the height of the rise at the Narrows in 1808?" Mr. Baxter and others gave a written answer in November preceding, stating "this is a query we cannot answer." The circumstance is noticed, not to show any contradiction in the testimony of Mr. Baxter, but the uncertain nature of his information, and on which it would appear he did not himself place entire reliance at the time he gave the answer cited above, and which was more than a month after Mr. Davis measured the water mark below the tunnel.—(See Doc. H No. —.)

CHARLOTTE, *January* 1, 1824.

SIR: I received by the hands of Montgomery Bell, esq., your note of 20th ultimo, requesting me to assist Mr. Davis in the level and admeasurement of the rise of water of Harpeth at the Narrows. In pursuance of your request, I notified Mr. Davis and requested his attendance at the Narrows on Thursday, 25th ultimo, but he failed to attend. Supposing it necessary to give you the earliest information on the subject, I requested Molton Dickson, esq., to go down with me, which he condescended to do. The result of our inquiries we conceive entirely satisfactory.

Mr. Jeremiah Baxter, an old and respectable inhabitant immediately at the Narrows, showed us a mark on a tree made by a Mr. Johnston, who lived on the same farm whereon Mr. Baxter now lives in the year 1808, at the highest time of the Harpeth, of the great freshet of that year, which was the greatest freshet known to the oldest inhabitants in that section of country. Any rise of the Harpeth since that period is said to fall far short of that celebrated freshet. Taking this mark as our data, (the correctness of which we have no doubt of,) by the strictest measurement we find the river Harpeth to have risen at that great freshet 21 feet above low-water mark. The admeasurement we made at a point about 400 yards below the mouth of the tunnel of the lower side. From the best information I could obtain by inquiry of the most respectable inhabitants in the immediate neighborhood of the Narrows, I believe about twelve feet may be said to be the average rise of Harpeth for ten years past.

Very respectfully, yours, &c.,

THOS. JARRELL.

HON. WM. CARROLL.

Question. What are the ordinary wholesale prices in the Nashville market of building materials, viz: stone, bricks, lime, and lumber, also of best bar iron, charcoal, stone coal, beef, pork, flour, and salt?

Answer. Common stonework, the builders finding every material, is usually done at —— a perch; what is called rangework, —— a perch. Bricks generally sell at $5 a thousand. It is customary for bricklayers in this State to find everything, and charge for brickwork complete $10 a thousand, our currency; any quantity of lime could be made at the "*Narrows of Harpeth*" with very little expense. The price of lumber would depend so much on the description which might be required that it is difficult to say what it would cost, though it is confidently asserted that it would be furnished at the Narrows as low as at any other place in the western country. Bar iron would be furnished at $140 a ton of 2,240 pounds. Charcoal could be made at about three cents a bushel. Mr. Bell is now digging in the vicinity of the Narrows for stone coal, with a confident hope that he will succeed in procuring it in great abundance; in that event it will cost but little; if he fails, any quantity can be procured about one hundred and fifty miles up the Cumberland. I presume it could not be taken to the Narrows for less than twenty or twenty-five cents a bushel. Beef and pork have averaged about three cents a pound for the last ten years. Flour from $5 to $8 a barrel, and salt about $1 25 a bushel of fifty pounds, with a prospect of its not being higher at any future period in this country.

Question. What is the price of common labor, also of mechanics, viz: bricklayers, masons, carpenters, and blacksmiths?

Answer. Common laborers can be had at from $90 to $100 per year. Mechanics of the best kind:* bricklayers at $35 a month; masons at $35 a month; carpenters, $35 a month; blacksmiths, $35 a month.

Question. What is the probable quantity and value of the land to be purchased on the Harpeth so as to secure the entire and exclusive water privilege of that stream at the Narrows, including the site of Colonel Bell?

Answer. Colonel Bell owns three hundred and sixty-five acres of land, including the Narrows, two hundred acres of which is first quality bottom land; this tract, as he informs me, secures the exclusive water privilege of Harpeth. The land, including the excavation through the Narrows, cost Mr. Bell about $15,000, which sum he would be willing to take for the site as it now stands.

NASHVILLE, *December* 29, 1823.

The foregoing statement is made from my own knowledge, and from the best information I could procure on points where I had the least doubt of the accuracy of my own judgment.

WM. CARROLL.

Description of the Narrows of Harpeth, by Mr. Bell.

There is sixteen feet natural fall obtained by the excavation of the tunnel through the peninsula at the Narrows; and the river at that place being bottomed on a sound, smooth rock, and the bank opposite the tunnel on the opposite side being composed of stiff, resistible clay, with an elevation of twenty-one feet, the bank will admit of a dam being built fourteen feet high, with perfect safety; that, added to sixteen feet natural fall, will make a head and fall of thirty feet, giving your water-wheels an elevation of six feet above low water; let the water-wheels be pitchback and twenty-two feet diameter—they will operate to advantage when the water rises six feet on the wheels, which will be an elevation from low-water mark of twelve feet, which is about the general rise of Harpeth—and machinery would be seldom, if ever, impeded by freshets, and if ever, would not exceed a day or two in the year. An artificial elevation of six feet for the foundation of the armory would be necessary in order to rise above the rises of Harpeth. The peninsula being composed of rock, and from two to three hundred feet high, would afford sufficient rock to build the dam, the reservoir at the delivery of the tunnel, as well as rock to raise the foundations of the contemplated establishment, and no doubt a sufficiency to erect the necessary buildings. The tunnel is ninety-six yards in length, fifteen feet wide, and six feet high There is not a site on the western waters that combines as much power and safety as the Narrows of Harpeth. The situation of the dwelling-house is very elevated and healthy, with a never-failing spring of good water attached to it; about two hundred acres of superior bottom land in the tract containing the site; the frames and head-gates are very secure, and completely placed in the entrance of the tunnel; the land around the Narrows is well timbered, suitable for building and coal wood; there is a great prospect of stone coal in the neighborhood of the Narrows, but no efforts have been made as yet to procure it; stone coal on Cumberland river is easily obtained, it lying in large bodies immediately on the margin of the river; the country around the Narrows abounds with iron ore of unequalled quality, and several furnaces and forges are in successful operation. In fact, the site possesses every natural and desirable requisite.

A great advantage in building a dam at the Narrows of Harpeth would result from raising the head-gates of the tunnel and drawing the water from the bed of the river, so as to have a dry rock upon which to commence the foundation of the dam.

M. BELL.

NASHVILLE, *December* 31, 1823.

DEAR SIR: Under cover you will receive all the information required to be given to the commissioners in relation to a site for an armory at the *Narrows of Harpeth.* I must request the favor of you to lay the papers before the Secretary of War, and to give such information additional as your own knowledge may authorize. The commissioners will no doubt make their report in a short time, from which you will be able to learn whether there is any probability of the selection of the Narrows. As it is a subject upon which Tennessee feels a deep interest, I shall be very happy to hear what you believe the probable chances are.

It is proper that it should be clearly understood that on the upper side of the Narrows at the entrance of the tunnel the left bank of the Harpeth is very high, so as to authorize a dam, if necessary, of from 15 to 20 feet. With this advantage a reservoir could be built, from which the water could be carried in an aqueduct to Allen's ground, which has never been overflowed.

If it should be required that Harpeth be made navigable from the Narrows to the mouth before the location of the armory, I think I may take it upon myself to say that the legislature, aided by spirited individuals in this and many of the adjoining counties, would effect that purpose.

It is stated by Montgomery Bell that Mr. Davis is mistaken in his report as to the extreme height to which Harpeth has risen at the *Narrows.* With a view of knowing how that is, I shall cause it to be measured again by Mr. Davis and another gentleman, and should an error be found in the first measurement it shall be corrected. It may not be amiss to state that the distance by land from the *Narrows* to Cumberland is from six to eight miles, over a country, as I am informed, where an excellent road could be made.

I enclose you a small specimen of the stone coal found in the neighborhood of the *Narrows,* where Mr. Bell is now digging. He has a very confident expectation that he will procure it in great quantities.

With great respect, &c.,

WM. CARROLL.

HON. ANDREW JACKSON.

* There is scarcely any difference in the wages given to journeymen carpenters, blacksmiths, masons, and bricklayers. The wages vary from $30 to $40 a month, according to the character of the workmen.

NASHVILLE, *January* 14, 1824.

SIR: I enclose you the report of Thomas Jarrell and Molton Dickson, esquires, of the extreme height to which the Harpeth rose at the *Narrows* in the year 1808 according to their measurement. Their report is supported by the united testimony of the most respectable citizens who have resided in the neighborhood for many years, and therefore I cannot but believe that it is correct. The data upon which Mr. Davis relied was very unsafe. A man (who, if I am correctly informed, did not live there at the time) showed him a broken limb on a bending tree, to which he said the waters rose during the great freshet of 1808. Now, you know that in a lapse of fifteen years great changes might take place in the height of a leaning tree, which would not be so probable with a large, straight sycamore—the data which governed Jarrell and Dickson.

Mr. Davis will make another admeasurement in a few days, which will be forwarded.

Most respectfully, &c.,

WM. CARROLL.

Mr. GEORGE TALCOTT, *Pittsburg.*

NASHVILLE, *September* 12, 1823.

GENTLEMEN: Enclosed you will receive the report of Mr. Davis in answer to the queries you left with him. In a few days a duplicate, with an answer to the interrogatories left with me, will be forwarded to the Secretary of War.

Mr. Davis, with three other persons, was a considerable time engaged in procuring accurate information, and he believes the account herewith enclosed will not more than compensate him for his labor. The amount you will please forward him at this place.

I am, gentlemen, most respectfully, &c.,

WM. CARROLL.

Colonel WM. MCKEE, Colonel B. LEE, and Major GEO. TALCOTT.

LEXINGTON, *November* 24, 1823.

SIR: I enclose you from Nashville a drawing of the river Harpeth from Newsome's Mills to the mouth, with some observations of my own respecting the site at the Narrows of Harpeth; also the extreme high rises of water in Harpeth at the Narrows; the average high water and the extreme low water for the winter and spring season, taken from actual measurement of a bank that has never been overflowed since the settlements on Harpeth, at the Narrows. The correctness of the statements may be fully relied on. I entertain no doubt, sir, you will say, after viewing all the sites in the west, that the site at the Narrows of Harpeth combines more power and safety than any site on the western waters, as well as more conveniences and natural advantages, viz: that of being surrounded with iron ore of a superior quality; the fertility of the country above it on the Harpeth as well as below it on the Cumberland river; the convenience and great abundance of the best materials for building; in fact, the site embraces every natural and desirable advantage for an establishment of that kind. I cannot avoid observing to you the incorrectness of John Davis's report, forwarded by Governor Carroll, as will appear by the statements of Baxter, Allen, and others. His statements were altogether imaginary and incorrect, whether from ignorance or design is with himself; but to speak more favorably of him, he was grossly mistaken in his statements of the rises of water in Harpeth at the Narrows. The extreme rises are not* one-half that Davis stated them to be His measurement and fall of water may be correct; but I know his account of the rises of water in Harpeth to be incorrect, and no credit ought to be given him. I have not learned what resolutions the State legislature have entered into in case the armory should be located at the Narrows, but expect they will donate 100,000 acres of most convenient land for its benefit, and agree to make Harpeth navigable for boats drawing four feet water at all seasons.

I am, sir, very respectfully, &c.,

M. BELL.

Colonel WM. MCKEE, *&c.*

NASHVILLE, *April* 9, 1823.

SIR: Observing that Congress has passed a law for the establishment of a national armory in the western country, I take the liberty of calling your attention to a site about twenty miles from this place, at what is called the *Narrows of Harpeth*, which combines more advantages than any situation of which I have a knowledge west of the mountains.

Harpeth river, by a circuit of nine miles, forms a peninsula with an isthmus only 300 feet wide. The isthmus, or *Narrows*, for 200 feet is a high bluff of solid limestone, through which a passage has been perforated 20 feet wide and 6 feet high by a Mr. Bell, of this State, with a view of erecting iron-works. The fall in the 200 feet is ascertained to be 15 feet 9 inches, to which, if necessary, can be added several feet by a head dam; 200,000 acres of land adjoining the site is vacant and well timbered, and iron ore in the vicinity is inexhaustible. Harpeth from this point is navigable nine months in the year, and with a small expense its navigation could be made certain at all times; and it empties into Cumberland river below what is called the Harpeth shoals, from which point to where that river empties into the Ohio there are no formidable obstructions to its navigation.

I shall as soon as convenient procure a drawing of the site, and forward it to you. In the meantime should an engineer be appointed to examine the different situations in the western country, it will afford me pleasure to learn that his instructions embrace an examination of the site at the Narrows of Harpeth.

I have the honor to be, &c.,

WM. CARROLL.

Hon. J. C. CALHOUN, *Secretary of War.*

* If so, Messrs Baxter, Allen, and others are mistaken as well as poor Davis, although not quite so grossly perhaps.

Question. What are the obstructions to the navigation of Cumberland from its mouth to Nashville?

Answer. In low water there are four obstructions in the Cumberland, from its mouth to Nashville, to common keel-boat navigation. The first and most difficult is what is called *Harpeth shoals*, which consist in small mounds of gravel and little stones resembling sweet-potato hills. The bed of the river, underneath the mounds, solid rock. The next difficult place is *Davis's ripple*. This is a shoal about two hundred yards long, occasioned by large quantities of loose rock on a body of solid limestone. The next obstruction is at Dover island, produced by the waters being divided into several channels; but it is believed that a great portion of the water could be thrown into one channel without difficulty or much expense. The only remaining obstacle is at "Line island." Here the river is divided into a number of channels by sundry small islands; most of the water, it is thought, could be directed to one point without difficulty.

Question. What is the extreme annual duration of steam and keel-boat navigation? What is the shortest known period in any one year? And what is the average duration of such navigation, with its usual periods of commencement and termination?

Answer. Steamboats of any size generally commence running about the 10th of December, and are rarely without sufficient water before the first of June; after which time small boats, not drawing more than three feet water, usually run until the first of August. The lowest water we have ever seen at the points before referred to was about fifteen inches. Such extreme low water continues about six or seven weeks, and is in the months of October and November. It frequently happens that keel-boat navigation continues throughout the year.

Question. Is Cumberland river ever obstructed by ice?

Answer. Not within the recollection of the oldest inhabitant of Tennessee.

Question. What is the ordinary price of transportation to and from New Orleans, St. Louis, and Louisville?

Answer. From New Orleans to Nashville, at present, $1 50; to New Orleans, from 95 to 62½ cents; to and from St. Louis to Louisville, 75 cents. The undersigned have been in the habit of navigating Cumberland river for many years on board of keel-boats, barges, and steamboats; and they do hereby certify that the foregoing statements are accurate and just, according to the observations they have made; and they believe that their opportunities of judging correctly have been as good as any other persons that have been on the river. They further certify that they have navigated the Ohio for many years, and have no hesitation in saying that it is more difficult from the falls to Pittsburg than Cumberland is from its mouth to Nashville.

THOMAS P. MINOR.
JOSEPH SMITH.

NASHVILLE, *December* 22, 1823.

Captains Minor and Smith, who signed the foregoing statement, are men of the strictest veracity, and have been for many years in the constant habit of navigating Cumberland river.

WILLIAM CARROLL.

MOUTH OF EEL RIVER, ON THE WABASH, INDIANA.

WABASH, NEAR THE MOUTH OF EEL RIVER, *May* 30, 1828.

SIR: The following are the interrogatories which were mentioned to you. They embrace the points of information requisite to fulfil the object of my visits to this place, which, on account of the shortness of my stay here, could not be procured by me personally, and which you were so polite as to consent to furnish, by answers to the interrogatories; I request the favor of you to transmit the answers to me, at the city of Washington, and, if practicable, in time to arrive there by course of the ensuing month of August.

I am, sir, very respectfully, your obedient servant,

J. L. SMITH.

JOHN TIPTON, *Wabash, near the mouth of Eel River, Indiana.*

Interrogatories designed to ascertain the advantages and disadvantages as a site for a national armory of a position on the Wabash, near the mouth of Eel river.

1st. How much (in feet and inches) is the average highest stage above, and the average lowest stage below, the bench-marks which have been made at the junction of the Wabash and Eel rivers, at the falls of Eel river, and at the head and foot of the first rapids of the Wabash above the mouth of Eel?

2d. How much has been the extreme highest stage ever known above, and the extreme lowest stage ever known below, the bench-marks just mentioned, and the other places also just mentioned?

3d. Do the Wabash and Eel rise gradually or suddenly; and if the latter, what is the greatest height to which they have been known to rise at the head of the first rapid of the Wabash, above the mouth of Eel, and at the falls of the Eel, respectively, within twenty-four hours?

4th. How many days in each year, according to the best information that can be obtained, do the Wabash and Eel remain at their highest and lowest stages; and how many days in each year do they remain at each foot, respectively, of elevation above the lowest stage; that is to say, at and below one foot of elevation, at and below two feet of elevation, and so on to the elevation of the greatest rise?

5th. How often in each year do the rises in those rivers occur?

6th. When does the low stage of the river commence, and what is the greatest length of time of its continuance without intermission?

7th. What is the quantity of water afforded by Eel river at the lowest stage, which may be ascertained in the following manner, viz: at any point on the river where its width and the velocity of its

current are tolerably uniform, measure on the bank a line of the length of three hundred feet. At a short distance above the upper end of this line, throw a block of wood into the river as near the middle of the stream as practicable. By a watch furnished with a second hand, observe the time at which the block of wood or float passes the upper end of the line, and then proceed to the lower end of the line, and observe the time at which the float passes it; note down the length of time the float was occupied in passing from the upper to the lower end of the line; repeat this experiment four or five times, and note down at each trial the length of time the float was occupied in passing from the upper to the lower end of the line; make this same experiment four or five times with a float thrown into the river at a point as nearly as practicable half-way between the middle of the stream and the shore, and note down as the result of each trial the length of time the float was occupied in passing from the upper to the lower end of the line; add together the results of the several trials, as well those made with the float in the middle of the stream as those made half-way between the middle of the stream and the shore, and divide the total by the number of trials made: the quotient will be the average surface velocity of the stream. To ascertain the average width of the stream, measure it at each end of the line and at 100 feet distance from each end, and towards the centre of the line: these admeasurements added together and divided by four will give the average width. To ascertain the average depth, note down the depth at each 10 or 15 feet, while measuring the width at the several places above stated; add together the depth or soundings so taken and noted, and divide the total by the whole number taken and noted: the quotient will be the average depth.

8th. What is the width of Eel river, during its lowest stage, at the falls where a × was made on the rock as a bench-mark, and at the rock where the levelling was terminated? What is the distance from the shore on each side of the river to the foot of the hills at the points just designated, viz: the bench-mark and the rock?

9th. What is the width of the Wabash from the western shore to the island at the head of the rapids, and from the said island to the eastern shore? What are its several depths at every 15 feet of the width just mentioned? What is the distance from each shore to where the ground rises higher than the level of the banks?

10th. During what portion of the year may the Wabash be navigated as high as Eel river by steamboats, and in what months; and during what period of the year, and in what months, by keel-boats drawing three feet?

11th. Are there any obstructions in the Wabash which impede its navigation, and which, being removed, would allow the navigation to be continued for a longer period in each year than at present? If there be, where are they situated, and what is their nature and extent?

12th. What is the distance, by the course of the river, from Eel river to Vincennes, and thence to the mouth of the Wabash?

13th. What is the usual length of the passage of steamboats from the mouth of the Wabash to Vincennes, and thence to Eel river? In what time may the passage be performed?

14th. What are the prices at Eel river at this time, if they are fixed, or what will they probably be in the course of the year, when they may become fixed, of, 1st, refined bar iron; 2d, stone coal; 3d, charcoal; 4th, bricks per 1,000, (size to be stated;) 5th, stone per perch of 25 cubic feet; 6th, lime per bushel; 7th, lumber per 1,000 feet, (the mode of admeasurement to be stated;) 8th, pork and beef per pound; 9th, flour and corn per barrel; 10th, whiskey per gallon; 11th, grindstones per ton; of *wages per day*, 12th, for brick and stone masons; 13th, of carpenters; 14th, of blacksmiths; 15th, of laborers; of *the rates*, 16th, of cornice brick per 1,000, and stone per perch, exclusive of materials; 17th, of carpenters' work by the customary admeasurement, (to be stated;) 18th, of blacksmiths' work by the pound; of *transportation per 100 pounds*, 19th, from Pittsburg, from Louisville, and from New Orleans, to Vincennes, and from Vincennes to Eel river?

15th. At what price per acre would it be practicable to procure such part of the Chicot reservation as would be cut off by a race carried from the falls of Eel river to the Wabash above or below the mouth of Eel river, along the slope of the hills that rise a short distance from the banks of the Eel and the west bank of the Wabash?

NOTE.—The price above mentioned to be stated in reference to wholesale purchase and specie payment.

EEL RIVER, ON THE WABASH, *September* 27, 1828.

DEAR SIR: I will now proceed to answer the interrogatories that you submitted to me when here last May, respecting the contemplated site for a national armory at the falls of Eel river; and, in order to avoid repetition or mistake, will first set down each interrogatory and then the answers following it:

1st. The highest stage above the bench-mark at this junction of the river is twelve feet; the lowest two feet eleven inches.

2d. The answer to the first interrogatory is an answer to this also.

3d. Both rivers rise gradually. The greatest rise at the head of the rapid of the Wabash is believed to be about nine feet and the falls of Eel about seven feet.

4th. Not more than three days at their highest stages and about two months at the lowest.

5th. To this I cannot give a definite answer. The rivers generally rise in February, and continue at or above your bench-mark (what we term a boatable stage) until June.

6th. The low stage commences in June and continues until about the 20th of September.

7th. By an estimate made by Colonel A. Moore, of the United States civil engineers, on the 26th of June, 1827, it was found to discharge 20,784 cubic feet per minute; by an estimate made on the 22d of last month, and at the lowest stage ever known, owing to an uncommon drought, I found it to discharge 16,164 cubic feet per minute.

8th. The width of the river is 176 feet from the shore to the foot of the hill; on the south side it is 396 feet; north side, 132 feet.

9th. From the mainland, northwest shore, to the island is 297 feet; from the island to the southeast shore is 198 feet. On examining the river at the lowest stage, I did not deem it necessary to take the soundings, the river being deep and having little or no current. Had the soundings been taken, they would lead you to an erroneous estimate, as by them the Wabash would be estimated to discharge twice the quantity of water that it actually does. I feel confident that the estimate given

above of Eel river is as correct as is usually obtained, and that there is but little difference in the quantity of water of these two rivers at low stages. Distance to high ground on northwest side, 50 feet; southeast side, 198 feet.

10th. There has never been business to require a steamboat to come to Eel river. I am of opinion that a steamboat could navigate the river to this place for three months—say February, March, April; keel-boats until some time in June.

11th. The obstruction to the continuance of boat navigation to this place is owing to a change in the construction of the channel of the Wabash about twelve miles below this place. The Wabash from its mouth to that point is of gentle current, sandy bottom, and very safe navigation, except, however, the flat rock near Harmony, and the rock near Deer creek, eight miles above Tippecanoe. At the mouth of Rock creek, twelve miles below this place, the river assumes a very different appearance, the bottom and shores being principally of rock. The river is wider here, and current double its usual velocity, and continues to deserve this description from Rock creek, twelve miles below, to Pipe creek, ten miles above Eel river. This same rock precludes the rapids in the Wabash two miles above the mouth of Eel river, and the falls of Eel one mile above its junction with the Wabash. Gentlemen whose judgment can be relied upon have said that a small sum properly applied would improve the river, and make it navigable to this point by slack-water navigation at all times, while boats can navigate the lower part of the Wabash.

12th. From this place to Vincennes is estimated, by the river, at 297 miles; thence to the mouth of the Wabash, 150.

13th. But few boats have as yet navigated the Wabash to or above Vincennes. The river not being sufficiently known, the masters and pilots are cautious, and of course no definite answer can be given. I have made one passage up from Vincennes to Lafayette. While running we made about six miles per hour.

14th. The prices at this place are not fixed either for labor, provisions, or transportation, with sufficient certainty to enable me to give satisfactory answers. Bar iron, which at Pittsburg cost $125 per ton, has been delivered here at $146; flour at $4 per barrel; pork at one and a half cents per pound; bacon at three cents per pound. Stone coal is furnished in great abundance below this on the Wabash. Beef, pork, and breadstuffs are cheap, and abundant to supply every demand. We have lime and freestone, clay for bricks, and timber, in great abundance, all of which can be obtained here at very low prices.

15th. The proprietor has authorized me to say that land suitable in situation and sufficient in quantity can be had, whereon all the necessary buildings may be erected for the armory, free of any charge upon the government.

Your most obedient servant,

JOHN TIPTON.

Captain SMITH.

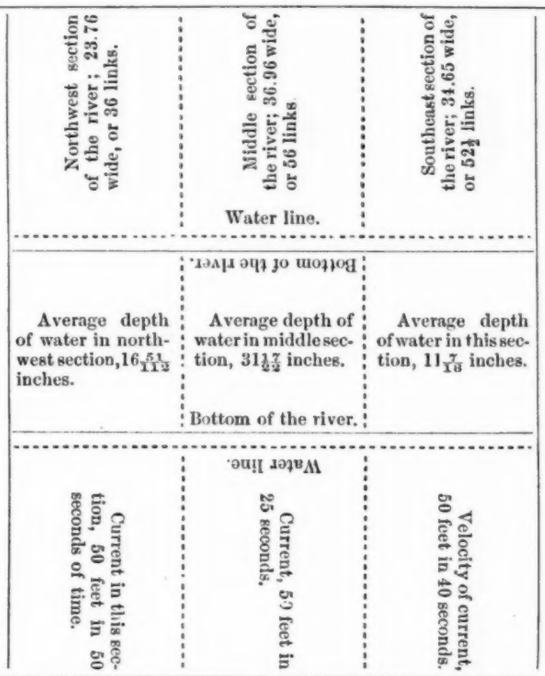
WASHINGTON CITY, *November* 3, 1828.

DEAR SIR: I have the pleasure of acknowledging the receipt of your favor of the 27th of September last, containing answers to my interrogatories respecting positions on the Wabash and Eel rivers, near the mouth of the latter, which were examined as sites for a national armory. I am obliged by the trouble you have taken to furnish me with the information afforded by those answers. They are all satisfactory, except the seventh, which affording the result desired without the data upon which it has been determined, will preclude me from stating that result in my report as having been ascertained or tested by me. No degree of confidence in the accuracy of the result which I might individually entertain would justify me in stating it otherwise. I think, however, if you will take the trouble on the receipt hereof to send me the data adverted to, they would arrive here in time to be included in my report, which will not probably go before Congress earlier than the last of next month or the beginning of January.

I remain, dear sir, with respect and esteem, your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

General JOHN TIPTON, *Logansport, mouth of Eel, on the Wabash, Indiana.*



EEL RIVER, *September* 2, 1829.

DEAR SIR: With this I have the honor to enclose to you the notes by which an estimate of the water discharged by Eel river may be made.

With great respect, your obedient servant,

JOHN TIPTON.

Estimate of discharge of water in Eel river at the falls near the mouth of the same, made August 22, 1828.

In making the estimation, from the form of the bottom of the river and the current, it was found convenient to divide that portion of the river where the estimation was made into three sections, as in the subjoined diagram; the velocity of the current ascertained in each section from repeated experiments, and the average depth of water in each from levels taken both on the upper and lower cross-section lines across the river at distances of about three feet.

		Cubic feet discharged per second.
Southeast section	50 feet × 11 7/16 inches × 34.65 feet =	41.103.5.625
Middle section	2 feet × 31 17/28 inches × 36 96 feet =	195.718.7.232
Northwest section	1 foot × 16 51/112 inches × 23 76 feet =	32.581.6.128
		269.403.8.985

269.403.8.985 feet × 60 = 16,164 feet of water discharged per minute.

Depth of water on each section cross-line of the within diagram.

Lower line of—			Upper line of—

NOTE.—The correspondence respecting this site has been copied from the report of the commissioners.

BIG BLUE RIVER, HARRISON COUNTY, INDIANA.

LEAVENWORTH, *October* 1, 1823.

GENTLEMEN: The two sites on Big Blue river have been surveyed according to directions. I was with A. Ralston, esq., every day until he completed the survey. He used a spirit-level and adjusted it every morning, and found no variation during the time we used it. I believe the survey correctly taken, as we placed the instruments between the posts and took back and forward sites. When the work was plotted I examined it, and found the old survey by the United States and the one by Mr. Ralston did not agree. We then took the instruments and went on to the ground again to ascertain the variations, and found the old survey, by actual measurement, incorrect—some quarters larger and some smaller than they ought to be. Mr. Ralston then plotted the work anew, and I believe it is now nearly correct, as I think the meandering and winding correct; but in drawing the sectional lines the spring on the site I showed you is thrown on the lower quarter, which is not the fact. The spring is actually on the same quarter with the site, and the line passes about ten rods below it. On the plot the distance from C to D is stated at 325 poles and 7 feet 6 inches fall; but the seven and a half feet fall terminates at the lower ripples between C and D, about fifty rods below D. I proposed to Mr. Bayless to make the alteration on the plot, but he objected, as Mr. Ralston was not present and had gone to Indianapolis, and Mr. Bayless was going to Louisville and wished to forward the plots. I think the upper part of the plot of Messrs.

Wilson and Bayless's site does not place the river exactly on the same ground it actually runs on, but it is in as near as it could be done without surveying all the quarter sections over anew, which we thought perhaps not necessary to give you all the information you required as to the river. Mr. Ralston said you observed in conversation with him perhaps it would be well to level Blue river down to the Ohio; but as you gave him no instructions, nor gave us any, we did not do it; but if you desire it, we will do it any time hereafter. As to the other part of our instructions, we have not as yet had opportunity to confer together so as to make report, but will do it shortly, or I will make report alone. Mr. Ralston has made out his bill of expenses for completing the work. We made no contract with him, but sent for him to come and make the survey, and showed him our instructions. You can allow him his bill, or such part as you think right and reasonable. I have not seen the amount charged; but if it is as report says, I think it a high charge—more than would be reasonable for the work done.

I remain yours, &c.,

SETH M. LEAVENWORTH.

Messrs. McRee, Talcott & Lee.

Leavenworth, *October* 26, 1823.

Gentlemen: I now hasten to finish my report for the reasons heretofore stated:

Prices of provisions generally.—Pork, per cwt., $1 50 *a* $2; beef, per cwt., $1 50 *a* $2; flour, per barrel, $3 50 *a* $4; wheat, per bushel, 37½ *a* 50 cents; corn, on the Ohio, 20 *a* 25 cents; fourteen miles in the country, 10 *a* 15 cents; oats, per bushel, 16 *a* 20 cents; potatoes, per bushel, 25 *a* 33 cents; hay, per ton, $6 *a* $8; butter, per pound, 6¼ *a* 12½ cents; chickens, per dozen, 50 *a* 75 cents. All other kinds of produce in proportion.

Building materials.—Plank, soft wood, ½ inch, per 100 feet, 50 cents; plank, soft wood, ¾ inch, per 100 feet, 63 cents; plank, soft wood, 1 inch, per 100 feet, 75 cents; plank, soft wood, 1¼ inch, per 100 feet, 88 cents; plank, soft wood, 2 inch, per 100 feet, $1 25; scantling, soft wood, 3 by 4 inches, per 100 feet, $1; scantling, soft wood, 3 by 10 inches, per 100 feet, $1 50. All other kinds in proportion. Hard wood one-third higher than the above, which are the mill prices.

Brick, per thousand, $2 50 *a* $3; lime, per bushel, 4 *a* 6 cents. The brick and lime to be made on the site, and the undertakers to be allowed a yard, wood, stone, and any convenience they can get on the site.

Common laborers, per month, $3; mechanics, per month, $12 *a* $18; plasterers, per month, $12 *a* $18; blacksmiths, per month, $12 *a* $16; carpenters, $12 *a* $16. Master mechanics or superintendents, say, one-fourth or one-third higher. The mechanics of this country are not quite so good generally as those in the east. Boarding is not included in the above prices.

Freight from New Orleans to this town per cwt., from 75 cents to $1; from this town to New Orleans per cwt., from 37½ *a* 50 cents. From Pittsburg to this town I am not well informed about the prices, but as Captain Talcott resides at Pittsburg, he can there get the price more correct than I can. I would remark that it ought to be the same as to the Falls, except when boats cannot pass, and then a little higher.

Stone coal.

I have seen two men who have been at the stratum, on Anderson, when loading boats from the coal bank. They say the stratum is five or six feet thick. I think this information may be relied upon. Coal has been discovered in many places in this neighborhood since you left, but not in quantities greater than you saw. One place the coal is washed out of the bed of a creek, I think two hundred feet below the place you saw, but the water was eight or nine feet deep over the place when I saw it. I intend to have further search made; if I discover coal in quantity, I will write you. If you think it is probable the armory will be located on Big Blue river, it would, perhaps, be well to direct the register of the land office in Jeffersonville to sell no more of the United States land near the site, as there are a number of quarter sections near, well timbered, which government ought to retain as a reserve for fire wood, timber, &c., which would immediately be entered if the location was certain, and government would have either to buy the wood or the land at a high price. Why Messrs. Wilson and Bayless are not ready to report I know not. I do not know but they have reported on their site. If the armory is located on Big Blue river, I wish you or some agent of the government to call on me, and go with me and examine both sites again, and then they will be better able to select than you are now. My reasons I do not wish to state without an actual location is to be made.

With great esteem, I am, &c.,

SETH M. LEAVENWORTH.

Messrs. McRee, Talcott & Lee.

Leavenworth, *October* 26, 1823.

Gentlemen: We have had the two sites on Big Blue river surveyed, according to direction, by Alexander Ralston, esq., a scientific man. We attended during the whole survey, and saw it taken, and believe it to be correct; but when the new survey was compared with the old United States survey, they did not agree. We then took the instruments and went over the ground again to ascertain the variations. On measuring the quarter sections, found some too large and some too small, in consequence of which we had to make a new plot. Perhaps the river now is not at every point laid down exactly on the ground it runs on, but it is as near as it would be without surveying all the quarters anew, which we thought was not necessary for your purpose. A spirit-level was used and adjusted every day, and no variations found during the time the work was progressing. We hope, on examination, it will meet your approbation. Mr. Ralston observed you mentioned to him perhaps it would be well to level down to the Ohio river; but as you gave him no instructions, we did not do it, but will if you request it to be done.

From the statements of those who have been acquainted with Big Blue river, and lived on it for eight or ten years, we think there can be no doubt but the lower site is above back water generally, at Dagg's ripple, one mile and a half below the lower site, as the river runs back water the longest period two weeks. Some years it does not come there; some years comes and goes the same day. About nine years since it was up to the lower site, but not since. There is about six feet fall from the lower site to Dagg's ripple, and ten including that at Rothrock's, three miles below, back water two weeks; at Willey's saw-mill, five miles below, back water, say, three months; at Sharp's, seven miles below, back water from five to six months; at Brown's boat-yard, nine miles below, back water six or seven months; at Lyons, ten miles below, back water during the whole year, and one mile from there to the Ohio river, making, as the river runs with the meanders, eleven miles from the lower site down to the Ohio river. A good road can be made from either site to where back water comes from three to six months in the year, and the distance not be more than two or three miles, and extended down the river so as to meet the back water at any stage, as you can see by examining the map in the land office. Take down on the left hand from the lower site, and come to the river again below the great bend, to the right, where it bends back again to the right. Since you were here we have examined the ground, and know it to be good for a road. Six quarter sections will be embraced by the lower site; five of the quarters belong to individuals, the other to government. The probable cost to government will be seven or eight thousand dollars, according as the owners now estimate their land. Although it is high, and not really worth more than half the money, yet the individuals seem to be disposed to anticipate, in part, the benefits of the armory. One of the above quarters, belonging to Messrs. Wilson and Bayless, I have put down in the estimate at $1,000. I have repeatedly called on Messrs. Wilson and Bayless to join in a report, but they are not ready. I have called on them for an estimate of their lands, but they are not ready. For fear they would not be ready in time, I have made out the above report and estimate, except their quarter. I know the land can be got at the estimate, and perhaps much less; but what they will do I cannot say. I will furnish my report in next letter.

I am yours, &c.,

SETH M. LEAVENWORTH.

Messrs. McRee, Talcott & Lee.

Indianapolis, *November* 21, 1823.

Sir: By last mail I received your favor of the 30th ultimo. The duplicate receipts are herewith returned receipted.

The survey and meanders of the river are forty perches to an inch; the sections are agreeable to the instructions furnished me, noted at every half chain or two perches. The perpendiculars, showing the height of the surface of the ground above low water mark, are forty feet to an inch.

The breadth of the stream at Lybert's site measured eight perches from the water edge to water edge on the opposite side; the bottom irregular, solid rock, and deepens gradually from both sides to twelve or fourteen inches.

The breadth of the streams at the upper site Wilson and Bayless measured ten perches, and may with propriety be considered the general breadth of the river; the bottom apparently solid, smooth rock; depth of water from ten to fourteen inches. The banks are here more abrupt than at the lower site.

The original surveys are badly made. The sections on the east side of the range line are greatly too large; those on the west are irregular.

Post notes or paper of the branch bank in bills would answer (perhaps) my purpose better than a check. The risk on common paper will be greater. I am willing to hazard it.

I am extremely sorry for the omissions noted in your letter, and hope the above remarks will remedy the evil.

With great respect, &c.,

A. RALSTON.

Corydon, *December* 12, 1823.

Gentlemen: Agreeably to your instructions I proceeded, in conjunction with Mr. Leavenworth, to have Blue river surveyed; procured a spirit-level, and employed A. Ralston, esq., of Indianapolis, to perform the work. From the high standing of Mr. Ralston as a scientific and skilful engineer, and the great particularity made use of while performing the work, I have no hesitation in believing that the levelling is strictly correct as represented on the plots. In consequence of the variation of the quarter sections of land binding on the range line, (as some of those do,) the river at some points may not be laid down exactly where it ran. I believe, however, it is correctly represented at either site, and the only incorrectness (if any) is in representing it above the upper site, while I am inclined to the opinion it is thrown too far west.

With regard to the inquiry respecting the following of the Ohio river up Blue river, I state upon the authority of persons who have been acquainted with it a number of years, that the back water has but once since the settlement of the country been known to be up to the lower site, which was in 1815, and then the current was checked on the head of the ripple at the lower site.

At Dagg's, one mile and a half below, back water flows generally from one to two weeks in each year; at Rothrock, three miles below, back water flows about three or four weeks in each year; at Sharp's, seven miles below, back water flows three to four months in each year; at Willey's, five miles below, back water flows about three months in each year; at Brown's, nine miles below, back water flows about six months in each year, and at Lyons, ten miles below, back water during the year, and from thence to the Ohio river one mile, making a distance, by estimation, of eleven miles from the lower, and thirteen miles from the upper site as the river runs. The ground will admit of a good road on a direct course from either site, to which the back water flows from three to six months, and may be extended down the bank of Blue river to meet the back water at almost every stage.

From the upper site to the Ohio river is about five miles and a quarter, and from the lower about four miles and a half. Good road can be had from either to that point.

This country abounds in all the necessary articles of provisions, building materials, &c., and can be had at present at the following rates, to wit: Beef, $1 50 to $2 per 100 pounds; pork, $1 50 to $2 per 100 pounds; flour, $3 50 to $4 per barrel; wheat, 50 cents per bushel; corn, 12½ to 15 cents per bushel; oats, 12½ to 15 cents per bushel; potatoes, 25 to 30 cents per bushel; butter, 6¼ to 10 cents per pound; chickens, 50 to 75 cents per dozen; turnips, 8 to 10 cents per bushel; hay, $6 to $8 per ton; lumber, half inch to two inch plank of soft wood, average price $7 75 per 1,000 feet; hard wood, 33⅓ per cent. additional. Those are the prices at the mills on Blue river, from which it can be delivered at any point on Blue river below at a small advance. Brick made at either site, $2 to $3 per 1,000, with the privilege of using the necessary materials that can be obtained on the ground. Limestone abundant at either site, and can be burnt for three to four cents per bushel. Common laborers, $8 per month; bricklayers, stone masons, plasterers, blacksmiths, and carpenters, $12 to $15 per month; principal workmen or superintendents, 25 to 33⅓ per cent. higher. Freight from New Orleans, 75 cents to $1 per cwt.

I will remark that there is a great abundance of grindstone rock, of various qualities and thickness, on one of the quarter sections of land attached to the upper sites.

The spring at the lower site, at the time the survey was made, was about six inches above the level of the water on Blue river, and at that time would not afford sufficient water for family use; there is none other on that quarter section that I have heard of. With regard to the prices asked for the different quarter sections of land, embraced by the two sites, I am not at present able to make any definite statement respecting all of them. I, however, state so far as I have ascertained.

For the quarter sections upon which the lower site is situated, to wit: the SW. quarter section No. 26, township 3, S. of R. 2 E., $3,000; for one-half of the next, which belongs to John Snider, (quarter section above,) embracing Blue river, $800; the next quarter section above belongs to government; the next quarter section above belongs to John Pitman, for which he asks $900; the next above belongs to Wilson & Bayless; the next above to John Tipton; and all above, as far as the water would back by a 12-foot dam built at the upper site, belongs to Wilson & Bayless, who own nine quarter sections adjoining, lying on both sides of Blue river, at and above the upper site. Owing to the death of Mr. Wilson, sr., which occurred shortly after your visit to this country, and who was owner of an undivided portion of the lands in the name of Wilson & Bayless, I am not able to state any precise price for the whole or any part of them that might be wanted by the government. I am, however, at liberty to state, that for John Tipton's quarter section, and the whole or any part of the lands belonging to Wilson & Bayless, no more than a fair price would be asked, which price would be fixed upon after ascertaining what portion of the property the government would require, and the manner they would wish it divided. In short, if the government should find the property to answer their purposes, the representatives of Mr. Wilson, (deceased,) together with myself, will treat with any person on the part of government for the sale of it, on such terms as I presume will be satisfactory. I should regret exceedingly if any of the above statements should not agree with those made you by Mr. Levenworth. It was understood between Mr. Levenworth and myself that we were to unite in this communication, and have waited thus long for that purpose, and did not, until two days since, know that Mr. Levenworth had violated the agreement between us, and addressed you himself some time since.

I am, very respectfully, &c.,

A. BAYLESS.

Messrs. Lee, Talcott & McRee.

FALLS OF OHIO, LOUISVILLE, JEFFERSON COUNTY, KENTUCKY.

Louisville, *July* 5, 1828.

Gentlemen: I ask the favor of you to furnish me, as soon as may be convenient, with answers to the following interrogatories, and direct them to me at Washington city.

Your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

Interrogatories designed to procure information requisite to determine the advantages and disadvantages of Louisville or its vicinity as a site for a national armory, which are submitted to the president and directors of the Louisville and Portland Canal Company.

1. What would be the charge of the canal company for a water privilege amounting to 150 cubic feet per second?

2. What would be the expense of purchasing a site for the works below the locks, either commencing at the locks or below the warehouse, (but in the latter case with the privilege of drawing through the intermediate ground the water derived from the privilege that may be purchased from the canal,) to extend 600 yards along the river shore and back to the rise in the ground, if it be equal to 700 yards average from the shore, and if not, as much beyond the rise as will make the depth of the lot equal to that distance?

3. What are the results of the observations made by Mr. Berthoud at Shippingport, and some gentlemen at Louisville, to determine the ratio of the simultaneous rise of the river below and above the falls?

It would be desirable to receive this information as much as possible in detail.

Louisville, *July* 21, 1828.

Sir: In answering your inquiries contained in your communication of the 5th instant, I have consulted the members of the board of president and directors of the Louisville and Portland Canal Company,

as to the terms on which the water power can be furnished, and can only give for answer what was given to the War Department on a former application, namely, that the requisite quantity of water will be supplied at an annual rent of 3,000 dollars, or a perpetual lease for 50,000 dollars purchase money.

As to the second query, the company do not own the land adjacent to the canal suitable for the establishment, but the required quantity can be obtained on reasonable terms, it mostly belonging to the honorable Mr. Rowan, who is desirous of selling it; a very small expense will secure it from inundation. The water can be taken down the bank to any given distance and no difficulty exists as to its passing through the lots next to the canal, provided they should not be included in the purchase. The foundation for building on the bank is solid limestone rock the whole distance

The results of the daily tables that have been kept above and below the falls are as follows: when there is 4 feet of water in the canal the fall is 24 feet, and the highest water ever known giving 40 feet in the canal the fall is 1 foot 4 inches, viz:

4 feet gives fall	24	18 feet gives fall	7.4
5 feet gives fall	21	19 feet gives fall	6.10
6 feet gives fall	18	20 feet gives fall	6.4
7 feet gives fall	16 6	21 feet gives fall	6
8 feet gives fall	15	22 feet gives fall	5.8
9 feet gives fall	14	23 feet gives fall	5.4
10 feet gives fall	13.6	24 feet gives fall	4.10
11 feet gives fall	13	25 feet gives fall	4.6
12 feet gives fall	12	26 feet gives fall	4.4
13 feet gives fall	11	27 feet gives fall	4
14 feet gives fall	10	28 feet gives fall	3.10
15 feet gives fall	9.4	29 feet gives fall	3.8
16 feet gives fall	8.6	30 feet gives fall	3.6
17 feet gives fall	7.10	31 feet gives fall	3.4

The rises of water are by no means uniform but vary almost every season, and it does not attain its maximum height oftener than once in ten years.

An annual rise which reduces the fall to 6 feet may be calculated on; it sometimes attains a greater altitude, but high water so as to reduce the falls below 6 feet will not average ten days in the average of each year for the last twelve years.

A safe estimate may be made on 18 feet fall for eight months in each year; 12 feet for two months, and from 8 to 6 for the remaining two months.

Thence to 40 feet is a diminution of 1.2-10 inch in each foot of rise up to 40, when the fall is 1 foot 4 inches.

Any other information you may require as to the localities of this site, within my power to give, you may at all times command, and your inquiries shall be promptly answered.

Most respectfully, your obedient servant,

SIMEON S. GOODWIN, *Secretary Louisville and Portland Canal Company.*

Captain J. L. SMITH.

WASHINGTON CITY, *August* 8, 1828.

SIR: On my arrival at this place I had the pleasure of receiving your communication of the 21st ultimo, containing answers to the interrogatories I had addressed to the president and directors of the Louisville and Portland Canal Company, with a view to procure information that might assist me in ascertaining the advantages and disadvantages, as a site for a national armory, of the most eligible position that might be found in the vicinity of the canal.

I am obliged by the trouble you have taken to comply with my request, and by your offer to afford any further information desired that it may be in your power to furnish.

I should be glad to avail myself of your offer to procure some information respecting the price of the land, as it will not be in my power to form an estimate without having such information. If the prices fixed by the owners cannot be procured, your own opinion as to the value would approximate to it sufficiently near to answer my purpose.

I am already in possession of a list of prices at Louisville of materials, workmanship, &c., and that circumstance prevented me from including in the interrogatories left by me any request for information respecting those prices. It has occurred to me, however, that such information might be procured with great accuracy from the engineers and master workmen employed by the canal company, and without much trouble or inconvenience to the company or to them. If so, I would beg the favor of answers to the following interrogatories: What are the prices at Louisville of, 1st, refined bar iron; 2d, stone coal; 3d, charcoal; 4th, bricks, per 1,000, (size to be stated;) 5th, building stone, per perch of 25 cubic feet; 6th, lime, per bushel; 7th, water cement, per bushel; 8th, lumber, per 1,000 feet, (the mode of admeasurement to be stated;) 9th, bacon, pork, and beef, per pound; 10th, flour, per barrel, corn, per bushel; 11th, salt, per bushel; 12th, whiskey, per gallon; 13th, grindstones, per ton? *Of wages, per day*—14th, of brick and stone masons; 15th, of carpenters; 16th, of blacksmiths; 17th, of laborers. Of the rates—18th, of laying brick per 1,000 and stone per perch, exclusive of materials; 19th, of carpenters' work by the customary admeasurement, (to be stated;) 20th, of blacksmiths' work by the pound? *Of transportation, per* 100 *pounds:* to and from New Orleans and Pittsburg, and from Baltimore, Philadelphia, or New York?

Your most obedient servant,

J. L. SMITH, *Captain Corps Engineers.*

SIMEON S. GOODWIN, Esq., *Secretary Louisville and Portland Canal Company, Louisville, Ky.*

LOUISVILLE, KY., *August* 27, 1828.

SIR: Yours of the 8th instant is received, and, as requested, I have endeavored to gain the necessary information to enable me to answer your inquiries, if not entirely satisfactory, yet as much so as the nature of the subjects would permit.

The only land suitable for the establishment, in the immediate vicinity of the canal, is chiefly owned by Mr. Rowan, and I think can be had for about $100 per acre; some intervening lots have been sold out and some small improvements made on them, and a large stone and brick warehouse, built in a permanent manner, can be had at the cost, well calculated and arranged for water operations, and probably as well situated as any that could be erected for a part of the establishment; but if not within the views of the government to purchase the water could be conducted below it at small expense, and a site obtained for about $100 per acre.

In answering your interrogatories as to materials, labor, and workmanship, I have made inquiries among those employed on the canal and others, and give the results of such information, taking into view the magnitude of the contracts to be made.

1st. The best refined iron, made in Kentucky or Pennsylvania, can be furnished here at $110 per ton of 2,240 pounds.

2d. Stone coal can at all times be had here at 7 to 8 cents per bushel.

3d. Charcoal is sold by the boat load at 4 cents per bushel.

4th. Bricks 9 inches long, 4 wide, and 2½ thick, are sold at $3 per 1,000; but can be made on any of the lands near where they may be required to be used at less.

5th. Good building limestone can be furnished at 75 to 87½ cents per perch of 25 feet.

6th. Superior roach lime by the quantity is furnished at 12½ cents per heaped bushel.

7th. Water cement, equal to any yet discovered, can be furnished, ground, at 25 cents per bushel.

8th. White pine lumber, one inch boards, are sold at $7 50 to $9 per 1,000; if two inches they measure double. Sawed or hewed timber is sold at about 3 cents the cubic foot; scantling at 6 cents the running foot.

9th. Bacon, 3 cents; pork, 2 cents, and beef 2 cents per pound.

10th. Flour, superfine, $3 50 per barrel of 196 pounds; corn is sold on the ear at 12½ cents per what makes a bushel shelled.

11th. Salt is abundant at 50 cents per bushel.

12th. Whiskey can be purchased during some part of every summer at 17 cents per gallon.

13th. Grindstones are sold here by the inch at about 4 cents; but as the Ohio abounds in grindstones of the first quality they can be furnished in any quantity at a fair price for the labor in procuring, say $25 to $35 per ton.

14th. Good brick and stone masons work for about $1 25 per day.

15th Carpenters are now getting $1 12½ per day.

16th. Blacksmiths, $1 per day.

17th. Laborers, 50 to 62½ cents per day.

18th. Bricks are laid when the materials are all furnished at $2 per 1,000, and stone per perch at 50 cents.

19th. The carpenters here have a book of prices for their work, made in 1810, from which they now discount 50 per cent., which serves as a guide to contracts when no other method is agreed on.

20th. When iron is worked by the pound for building purposes the average is about 6¼ cents per pound.

Of transportation per 100 pounds, hence to New Orleans, 30 cents; from New Orleans, 40 cents; to and from Pittsburg, 25 cents each way per steamboats. Time occupied: 6 days to New Orleans, 10 days from New Orleans; 5 days to Pittsburg, and 3 days from Pittsburg; from New York, Philadelphia, or New York *via* New Orleans, $1 per 100 pounds may be taken as fair average, and the time about 30 days.

Any further information in my power to furnish you may freely call on me for.

Most respectfully, your obedient servant,

SIMEON S. GOODWIN.

Captain J. L. SMITH, *Engineer Corps, Washington City.*

Horseshoe Bend, Pendleton county, Kentucky.

CINCINNATI, *July* 12, 1828.

DEAR SIR: I take the liberty of transmitting to you the following interrogatories in consequence of you having politely consented to furnish me answers to them, and in any other way that lay in your power to facilitate the accomplishment of the object of them.

J. L. SMITH, *Captain Corps of Engineers.*

General JAMES TAYLOR, *Newport, Kentucky.*

Interrogatories designed to ascertain the advantages and disadvantages, as a site for a national armory, of a position on Licking river, in Kentucky, known by the title or designation of the Horseshoe Bend.

1st. What is the depth of the Licking river on the upper side of the neck of the Horseshoe Bend at the extreme lowest stage of water, and what is its depth at that place at the extreme highest stage of water that has ever been known?

2d. Does the Licking rise gradually or suddenly? And if the latter, what is the greatest height to which it has been known to rise at the place above stated within 24 hours?

3d. How often in each year do the rises of the Licking occur?

4th. When does the low stage of the river commence, and what is the greatest length of time of its continuance without intermission?

5th. How many days in each year (according to the best information that can be obtained) does the

Licking remain at its highest and lowest stages at the place above mentioned, and how many days in each year does it remain at each foot, respectively, of elevation above the lower stage—that is to say, at and below one foot of elevation, at and below two feet of elevation, and so on to the elevation of the greatest rise?

6th. During what portion of the year and in what months may the Licking be navigated to the lower side of the Horseshoe Bend by steamboats and by keel-boats drawing three feet?

7th. Are there any obstructions in the Licking which impede its navigation from its mouth to the lower side of the Horseshoe Bend, and which being removed would allow the navigation to be continued for a longer period in each year than at present? If there be, where are they situated, and what is their nature and extent?

8th. What is the distance by the course of the river from the lower side of the Horseshoe Bend to the mouth of the Licking?

9th. What are the prices at the Horseshoe Bend on Licking at this time of, 1st, refined bar iron; 2d, stone coal; 3d, charcoal; 4th, bricks, per 1,000, (size to be stated); 5th, stone, per perch of 25 cubic feet; 6th, lime, per bushel; 7th, lumber, per 1,000 feet, (the mode of admeasurement to be stated;) 8th, pork and beef, per pound; 9th, flour and corn, per barrel; 10th, whiskey, per gallon; 11th, grindstones, per ton. *Of wages per day,* 12th, of brick and stone masons; 13th, of carpenters; 14th, of blacksmiths; 15th, of laborers. *Of the rates,* 16th, of laying brick per 1,000 and stone per perch, exclusive of materials; 17th, of carpenters' work by the customary admeasurement, (to be stated;) 18th, blacksmiths' work by the pound.

Of transportation per 100 pounds from New Orleans, from Louisville, from Cincinnati, and from Pittsburg?

10th. At what price per acre would it be practicable to purchase a tract of land extending from the upper side or neck of the Horseshoe Bend, and including both shores, then across the neck to the bottom of the rolling ripple, of the width of 400 yards, and 400 yards below the rolling ripple of the width of 200 yards from the bank of the river?

NOTE.—The prices above-mentioned to be stated in reference to wholesale purchase and specie payment.

11th. It is understood there are manufactories of iron in the neighborhood of the Horseshoe Bend. If there be, how many are there; where are they situated; at what distances are they from the Horseshoe Bend, and what are the facilities of communication between them and the Horseshoe Bend?

12th. It is also understood stone coal has been found in the vicinity of the Horseshoe Bend. If such be the case, where has it been found; at what distance from the Horseshoe Bend, and in what quantities may it be procured?

NEWPORT, *September* 30, 1828.

DEAR SIR: In consequence of indisposition I have not been able before this time to obtain the information you desired in your interrogatories in relation to the site for a national armory at the Horseshoe Bend.

In regard to the rise and fall of Licking, I have not as yet been able to get the correct information, but Mr. Tibbatts is up at this time in the neighborhood of the Horseshoe Bend, and will get an accurate statement of the rise and fall of the river as you wish, which will be forwarded to you.

I have not answered the interrogatories positively as to the quantity of coal in the neighborhood of the Horseshoe Bend, but I have no doubt that coal can be had there in quantities. This information will also be forwarded on as soon as it is received.

Yours, respectfully, JAMES TAYLOR.

Captain J. L. SMITH.

Answers to interrogatories of Captain J. L. Smith in relation to the establishment of a national armory on Licking.

1st. Two and a half feet deep by 12 feet wide on a fall of 2 feet descent. It is the opinion of a good judge as well as myself that the average is from 30 to 35 feet; and the highest is perhaps 10 feet in the 24 hours in extreme heavy rains, but it rises generally gradually.

3d. The rises vary; they gradually occur from, say, the middle of February to the last of May, and from two to four in the course of that period.

4th and 5th. At the highest stage it seldom remains more than from two to three days, at its lowest stage from a month to six weeks. For the balance of the year it is thought the rise and fall would generally vary from 6 feet down to the lowest stage of water. For the last 24 years Licking has never been known to afford less water than the answer to the first question.

6th. From the first of February to the last of May, and frequently after that period for a short time, but there are some steamboats now running on the Ohio and Kenhaway drawing only about 2 feet water.

7th. There are about from 8 to 10 ripples between the mouth of Licking and the Horseshoe Bend; about four of these would require the rock to be quarried out wide enough to make a channel, which is easily done with the crowbar and sledge, as the rock lies in strata of from 3 to 9 inches thick. The longest of these four ripples will not exceed 150 yards, except one which is somewhat longer; the others are from 20 to 50 yards in extent and would only require the removal of the loose stone and gravel to make a good passage for boats drawing from 2 to 3 feet water during the lowest stage of the water.

8th. Forty miles.

9th. 1st, bar iron refined at Cincinnati, $1 25 per ton; 2d, stone coals from 7 to 9 cents per bushel; 3d, charcoal, $5 per 100 bushels; 4th, brick, per 1,000, 2¼ thick, 4½ wide, and 9 inches long, $3; 5th, stone, per perch, 25 cubic feet, 50 cents; 6th, lime, from 8 to 10 cents per bushel; 7th, timber, per 1,000 feet, measured side and edge, at $4; 8th, pork, per pound, from 1½ to 2½ cents; beef, 2½ cents; 9th, flour, from $3 to $3 50 per barrel; corn, 5 bushels per barrel, say, from 75 cents to $1; 10th, whiskey, from 18 to 20 cents; 11th, grindstones, not sold here by the ton, but by the foot across the eyes, at $1; 12th, of wages per day, of brick and stone masons, $1 25 per day, they find themselves; 13th, wages of carpenters, per day, $1 25; 14th, blacksmith, per day, $1 25; 15th, laborers, per day, 75 cents; 16th, laying brick, per 1,000, $1 75; laying stone, per perch, exclusive of materials, 40 cents; 17th, carpenters' work by the customary admeasurement, framing per square, that is, 10 feet square, 62½ cents. Floors of joists, 9 inches deep and 16 inches apart, per square, and so in proportion for larger joists; 18th, blacksmiths' work, per pound, in common is just the price of the iron, but in heavy work half price.

Transportation per 100 pounds from New Orleans, 70 cents; from Louisville, 15 cents; from Pittsburg, $4 per ton; all to Cincinnati and from thence to Horseshoe Bend, from 3 to 5 cents per 100 pounds.

11th. As to the iron-works, there are two sets of iron-works; one on Slade creek, a branch of Licking, say eight or ten miles from the mouth of Slade. The iron can be transported down Licking from these works; the distance by land cannot exceed from the Slade works fifty miles, and from the Beaver sixty miles. There are also three sets of works on and near Little Sandy, putting into the Ohio about 120 miles from Cincinnati. There are several iron-works in the State of Ohio, on Bush creek, from fifteen to twenty miles from Maysville, and also on Paint creek. There is one which is only five or six miles from the Scioto, on which a canal is now digging.

WASHINGTON CITY, *November* 3, 1828.

DEAR SIR: Your favors of the 12th and 30th of September last arrived here while I was in Masschusetts, and, being forwarded to me, were received when I was in expectation of leaving there in a few days on my return to this place. Their receipt would have been acknowledged, but the promise in the latter of additional information to be furnished as soon as it should be obtained by Colonel Tibbatts, who was stated to be then engaged in seeking it, led me to defer the acknowledgment until my arrival, that the additional information alluded to, if then received, might be included with it; besides, I did not like the idea of taxing you with postage, which would be avoided by communicating with you from this place.

I apprehend the information with which you were furnished respecting the quantity of water afforded by the Licking river during its low stage cannot be accurate. A volume of water of twelve feet width, two and a half feet depth, and two feet fall, which is stated as the equivalent of the quantity afforded by the Licking at its low stage, would be equal to 342 cubic feet per second. Now, the quantity afforded by that stream, at the time I examined it, as ascertained by determining its width and average depth and velocity, would amount to only 269 cubic feet per second, although the stream was said then to be by some twelve inches, and by others eleven, ten, and nine inches, respectively, above its lowest stage. It was in consequence of the difference in the statements respecting the average depth during the lowest stage that I was desirous of ascertaining it through the first interrogatory. My own opinion, formed upon the information obtained from the persons I met with at the Horseshoe Bend and others, is, that the average depth at the lowest stage does not exceed eight inches. If this opinion be erroneous, I shall be glad to have it corrected, if it can be done upon authority that, in your opinion, may be safely relied on.

Your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

General JAMES TAYLOR, *Newport, Kentucky.*

NEWPORT, *Kentucky, October* 25, 1828.

DEAR SIR: When I fowarded to you the document answers to your queries some time since, I informed you that Colonel Tibbatts was good enough to go up to the Horseshoe Bend for the purpose of obtaining such information as could not be obtained except in that immediate vicinity. You will find his report to me enclosed, which embraces all the points named in your inquiries .

This report is more to be relied on, in my opinion, than the former one, particularly as to rise and fall of Licking, for the former one was principally founded on observations near the mouth of that river, where its rise and fall is more influenced by the Ohio.

I have read over with attention Colonel Tibbatts's report, and think it may be relied on as containing as correct information as can be obtained, except by actual observation made by actual measurement, with a view to answer to your queries; but, except as to the rise of Licking, I think you will not find much discrepancy in the two reports.

The bonds for the land named in your queries will be found enclosed, and the government could not ask it on better terms.

With great respect, I am, dear sir, your obedient servant,

JAMES TAYLOR.

Captain J. L. SMITH, *Corps of Engineers.*

NEWPORT, *October* 25, 1828.

MY DEAR SIR: In compliance with your request made of me some time since, I proceeded to the neighborhood of the Horseshoe Bend, upon the Licking river, with a view of obtaining the information necessary the more accurately to respond to certain interrogatories transmitted to you under date of July 12, 1828, by Captain Smith, of the engineer corps, and "designed to ascertain the advantages and disadvantages as a site for a national armory of a position on Licking river, in Kentucky, known by the title or designation of the Horseshoe Bend." The result of my inquiries will be found in the following answers, which are numbered respectively to correspond with the numbers of the "interrogatories:"

1st. On the 25th of September, the day I was at the Horseshoe Bend, the river was measured at the point where the measurement was made by Captain Smith in July, and was found to be at an average depth of eighteen inches; it has never been known to be more than one or two inches lower at that point; this season has been unusually dry, and the river uncommonly low; the extreme highest stage of the water that has ever been known to the persons who have resided in the neighborhood near thirty years has been thirty feet, which rise took place about twenty-one years ago; twice since then it has risen to the height of twenty-three feet; the usual spring fresh is about twenty feet; the common freshes, from four to five a year, are about from ten to fifteen feet.

2d. The rise is usually gradual; the river sometimes rises suddenly. When the rise is sudden it is not great; eight feet in twenty-four hours has on one occasion (about twenty years ago) been particularly

marked as extraordinary; on this occasion it was a day and night rising, and fell to its original depth in about the same time; the sudden rises, to speak in a common way, are at about four feet and five feet in twenty-four hours.

3d. There are during the year usually three, sometimes four, and somtimes five rises in the river, of from 10 to 12 and 15 feet. These rises take place along in the latter part of the winter and early in the spring. What is commonly called the spring fresh in general rises to 20 feet.

4th. About the middle of July the little swells or rises of two or three feet begin to stop, when the river gradually lessens in depth until about the middle of September, when the river is at its lowest, at which stage it usually continues until the latter end of October, when the small swells or rises of two or three feet begin again. The lowest stage is from the middle of September to the latter end of October, but during this time there are usually two or three swells of from four to eight inches.

5th. The Licking remains at the rises named in the answer to the third interrogatory, at from 30 to 48 hours. It remains at its lowest stage, with a variation of from four to eight inches, about six weeks, during the months of September and October. Observation has not been so particular as to enable me to give a precise answer to the latter part of this interrogatory. The nearest I can come to it is, to say that, from the beginning of November to the middle of July, it is about half the time over five feet deep, about one-fourth of the time over three feet deep, and one-fourth over two feet, when the swells begin to cease; when it comes under two feet, and gradually falls to its lowest.

6th. The Licking river may be navigated, by boats drawing three feet water, to the lowest side of the Bend, in the months of January, February, March, April, May, a part of June, and sometimes a few days in the beginning of July, the last half of November, and in December.

7th. The navigation of the Licking, from its mouth to the lower side of the Horseshoe Bend, is impeded, during the low stage of water, by from eight to ten ripples. There are no other obstructions. These impediments could be removed, so as to allow the navigation to be continued for a longer period of time, by any mode which would confine the water to one channel, and prevent it from spreading itself over the ripples. Various modes are suggested for this purpose—one by cutting a channel; another by erecting slopes from each bank, which shall gradually approach each other until they form a channel. There are two modes that would allow the navigation to be continued for a much longer period, but *locks and dams* would remove all obstructions. One of these ripples is supposed to exceed 150 yards in length; three others to be about that length; the remainder vary from 20 to 50 yards.

8th. The distance, by the course of the river, from the lower side of the Horseshoe Bend to the mouth of the Licking is stated by the surveyors to be 40 miles.

9th. There cannot be said to be any fixed prices at the Horseshoe Bend of the articles, &c., referred to in this interrogatory, nor any certain data or criteria to use in answering the query, unless by reference to the prices at the city of Cincinnati, in the State of Ohio, and the towns of Covington and Newport, in Kentucky, there being at this time no established market at the Bend or in the neighborhood. The prices at the Bend would undoubtedly be regulated by the prices at those places. The prices at those place are: 1. Bar iron, refined, $125 per ton. 2. Stone coal, from seven to nine cents per bushel. 3. Charcoal, five cents per bushel. 4. Brick, 9 inches long, 2¼ thick, 4½ wide, $3 per thousand. 5. Stone, 50 cents per perch of 25 cubic feet. 6. Lime, from eight to ten cents per bushel. 7. Timber, per 1,000 feet, measured side and edge, $40; but this article would be much lower at the Bend, where the timber is abundant, and the cost nothing in the stock. The cost there would be estimated by the wages of the laborer in cutting, hewing, and hauling. Any quantity of timber standing can be had for nothing. 8. Pork, 1½ to 2½ cents per pound; beef, 2 to 2½. 9. Flour, from $3 to $3 50 per barrel. 10. Corn, 75 cents to $1 per barrel of five bushels. 11. Grindstones, $1 per foot in diameter, (not sold by the ton.) 12. Wages, per day, of brick and stone masons, $1 25. 13. Carpenters, same. 14. Blacksmiths, same. 15. Laborers, 50 to 75 cents. In all these cases, at the above prices, they find their own food and lodging. 16. Rates of laying bricks, per 1, 000, $1 75; and stone, per perch, from 37½ to 40 cents, exclusive of materials. 17. Carpenters' work, by the customary admeasurement, without descending to particulars: framing of floors of joist varies between 62½ cents and $1 12½ per square, according to the depth of joist and their distance apart; for shingling joint shingles, the price varies between $1 25 and $2 per square, according as the courses vary between seven inches and four inches; framing of rafters, between 50 cents and 75 cents per square, as they vary between three feet apart and 18 inches apart; cellar window frames, of pine or poplar, eight feet, lineal, or under, $1; of locust or other hard wood, $1 50; larger frames, according to the hardness of the wood, from 11 cents to 16 cents per foot, lineal; window frames, of rough scantling, three by four inches square, 2½ per lineal foot; weatherboarding, rough, 50 cents per square; jointed, 75 cents; sprung, 87½ cents, 8-inch courses; sash, between 5½ cents and 9½ cents per light, as they vary between 7 by 9 and 12 by 18; floors, rough, 43¾ cents per square; rough and jointed, 62½ cents; jointed and grooved, $1; straight joints, $1 12½ per square; doors, rough, with ledges, 25 cents; jointed, 31¼ cents; grooved, 62½ cents. The above enumeration of prices of carpenters' work may be deemed sufficient, and will afford ample data from which to ascertain the prices in most cases. A complete enumeration would be extending this article too far. All these matters are under strict regulation by the by-laws of the "Master Carpenters' and Joiners' Society, of Cincinnati." 18. Blacksmiths' work, by the pound, is ordinarily the price of the material by the pound, but about half price where the work is heavy. *Transportation*, per 100 pounds, from New Orleans to Cincinnati, 70 cents; from Louisville to Cincinnati, 15 cents; from Pittsburg to Cincinnati, $4 per ton; from Cincinnati to the Horseshoe Bend, say from three to five cents.

10th. I enclose you the bonds of the proprietors of the land, by which you will perceive that the United States can have the land at the nominal consideration of one dollar, (the lands are marked A.) It was not exactly understood from the query how much land would be required on the north side of the river; but supposing, from the tenor of the question, that 200 by 400 yards would be sufficient, I obtained the bond of the proprietors for that amount. If more should be required, it can be obtained upon the same consideration to any reasonable extent.

11th. There are no manufactories of iron immediately in the neighborhood of the Horseshoe Bend, though there are several at no great distance—one on Licking, about 10 miles above the mouth of Slate creek; another on Slate creek, near its mouth, from which there can be either land or water carriage, the distance by land between 50 and 60 miles; three establishments in Green county, Kentucky, on and near Little Sandy; one on Paint creek, near the Scioto; and several on Bush creek, in the State of Ohio. From these the Ohio and Licking rivers would be the channel of transportation to the Horseshoe Bend.

12th. Stone coal, in the region of country around the Horseshoe Bend, not being as yet an object of

traffic, from the abundance of woodland on and contiguous to the Licking river, no great search has been made for it; but I am informed by men of respectability and intelligence in that neighborhood that sufficient quantities have been found at the mouths and in the beds of Flower creek, Hanes's creek, and the little branches contiguous to the Bend, to evidence the existence of beds of considerable extent of stone coal, of the best quality, within three or five miles of the Bend, as the creeks are short. Coal has also been found in the Licking hills, near the river, about ten miles below the Bend.

I close this communication by remarking that the information and facts contained in the above answers were obtained from gentlemen of respectability well acquainted with the subject-matter, and that full reliance may be safely placed in the correctness of all the substantial items of the information given by them to me, from the known characters and standing of the gentlemen giving it.

This communication would have been made earlier, but it has been prevented by long and continued absence from home.

I am, very respectfully, &c., &c.,

J. W. TIBBATTS.

General JAMES TAYLOR.

WASHINGTON CITY, *November* 6, 1828.

DEAR SIR: I have the pleasure of acknowledging the receipt of your favor of the 25th ultimo, and its enclosures—a letter to you from Colonel Tibbatts, containing full and very satisfactory answers to my interrogatories respecting the Horseshoe Bend, and the obligations accompanying his statement, from the owners of the land, to furnish, free of expense to the government, the quantity that may be requisite for the site of the national armory, should it be located at the Horseshoe Bend.

The facts stated by Colonel Tibbatts, that the average depth of the Licking, at the place where it was sounded by me, was ascertained by soundings taken while he was there on the 25th of September last to be 18 inches; that, in consequence of the dryness of the season, the river was thought to be then at a very low stage, and that it had never been known to be more than one or two inches lower, present conclusions differing very naturally from those I had formed upon the information I obtained from the persons residing at and in the immediate vicinity of the Horseshoe Bend, who assisted me in executing the survey which was made of that position in July last. One of these persons, whose name is not distinctly recollected, but is believed to be Fields, resident at the place where the survey, &c., were commenced, and where the soundings were made. He, as I understood him to say, employed himself frequently in fishing, and was often called upon to accommodate his neighbors by ferrying them across the river. He, therefore, it would seem, had better opportunities than any other person of becoming informed on the state of the river at all seasons. This person informed me the depth of the river at the lowest stage was *about* one foot, which would make the average depth nine inches, and which, with a reasonable allowance for his own doubts of its being equal even to that, to be inferred from his using the word "about" in reference to it, would justify the reduction of the average depth eight inches. Information from other persons confirmed the accuracy of this statement, while that received from some persons made the average depth greater than eight inches, but in no instance exceeding the depth of eleven inches.

By the foregoing will be perceived the grounds upon which I had formed conclusions materially differing from those presented in the statement of Colonel Tibbatts. Of the accuracy of his statements, so far as it relates to the soundings taken in his presence, I have not the slightest doubt, and I shall present them in my report as they have been furnished by him. I shall also present the other statement. They may not be deemed incompatible with each other, and I think they ought not to be; so far as the former goes to establish the average depth on a particular day, it must be relied on. The opinion, however, respecting the difference between that depth and the depth at the lowest stage being altogether conjectural, may be controverted without discrediting the authority upon which it was furnished. Of the latter the same may also be said, but perhaps it may be claimed in favor of it that it has resulted from observations frequently made at all seasons during a series of years.

With great respect, &c.,

J. L. SMITH, *Captain Corps of Engineers.*

General JAMES TAYLOR, *Newport, Kentucky.*

NEWPORT, *November* 21, 1828.

MY DEAR SIR: Your letter of the 6th instant to General James Taylor was handed to me by him for perusal on its reception last night. I have read it with the interest and attention which the great importance of the subject to which it relates is calculated to excite in one who has at heart the prosperity of this section of the country, and an equal desire of the correct and proper application of the energies and resources of that government which is common to all of us. I have read with much pleasure the friendly expressions which you were so kind as to use in relation to myself personally, which I assure you are no less reciprocated on my part. I feel gratified that you should be pleased with the paper, which was drawn by me so hastily, and under the disadvantageous circumstances under which I labored from a want of more time, which would have enabled me to have given more full and complete details. There is one subject to which you particularly refer in your letter to General Taylor, which is the cause of this communication from me. However deeply I may feel interested in the location of the contemplated armory in this section of the country, yet a desire that everything shall be fairly understood, a sense of right, and a feeling of candor, compel me to put you right in a matter upon which you seem to have been misled, probably from the hurried and awkward manner in which the document referred to was written by me. I cannot suffer knowingly an error, of which I may be the cause, to pass unnoticed upon a point so important, even though that error might possibly be an advantage to the point in which this section of the country is deeply interested; much less can I permit your kind feelings towards myself to give a statement contained in that document a fictitious dignity to which it is not entitled.

You seem to understand, from the answers to your interrogatories, that the soundings made on the

25th of September were taken *in my presence*. I have not the document before me at this time, but if the interpretation you put upon it is legitimately deducible from the terms therein used, I must ascribe it to my awkwardness of expression. I did not intend so to state, nor so to be understood; with this explanation, and another examination of the document, my meaning will be correctly understood. The soundings taken on that day were not made in *my presence*. It may be necessary, therefore, for me to explain to you how, by whom, and under what circumstances they were taken, which explanation I made at large, inasmuch as it will put the whole matter in its proper light, and will, I flatter myself, do away much of the difficulty under which you seem to be placed on this particular and important point. On the 24th of September I passed through the neighborhood of the Horseshoe Bend, on my way to the forks of the Licking river. I notified the people that I should be there on the next day, had them informed of my business, and desired that all of the old respectable and intelligent inhabitants of the neighborhood should meet me on the 25th at a designated point, in order that I might obtain fully the information you desired. Mr. Kirby, the man whose name you do not distinctly recollect, and which you are under the impression was "Fields," together with Mr. Willett and another gentleman whose name I do not now recollect, were desired to take the soundings, and report to me at the meeting. I was with you when Kirby stated upon your inquiry that the lowest stage was "about a foot," and was satisfied afterwards that he was under a mistake, from inquiries that I made, and from a fact which will appear presently, and which will render the mistake at once obvious. We accordingly met on the 25th at the point designated by me. The company was composed of men upon whose age, long residence at the point, experience, and honesty, I know I could rely for the correctness of the information I desired. I then reminded them of the importance of my obtaining the most correct information upon the subject, and of the necessity of the utmost candor being used by them in giving it. Messrs. Kirby, Willett, &c., then reported the average depth, as just then accurately and particularly measured by them, and as stated by me in my response to your interrogatory. I then inquired of the whole company how much lower they had ever known it, and the general response of the whole company was, as I have stated also in my answers to your interrogatory, in which Mr. Kirby fully assented. I then reminded him, Kirby, and informed the company of Kirby's statement to you when you made the inquiries of him in July; they agreed, which agreement was fully assented to by Kirby, that his reply was a mistaken one and made without reflection, of which he was satisfied upon more mature reflection and examination, which mistake is reduced to more positive certainty by the fact that the water at a foot deep when you measured it would be *under the level of the ripple* below that point, and *the ripple left absolutely dry*—an occurrence never known by the oldest inhabitant in the neighborhood.

Bonds to convey land to the United States for the site of a national armory at the Horseshoe Bend.

Whereas an examination has been made of the Horseshoe Bend, on the Licking river, in the county of Pendleton and State of Kentucky, under the authority of the United States of America, with a view of ascertaining the practicability of establishing a national armory at that point; and whereas, among other questions proposed by Captain Smith, the engineer who made the examination, "designed to ascertain the advantages and disadvantages as a site for a national armory" at that point, in a letter addressed to General James Taylor, of Campbell county, dated July 12, 1828, interrogatory number ten is to the following purport, to wit: "At what price, per acre, would it be practicable to purchase a tract of land extending from the upper side or neck of the Horseshoe Bend, and including both shores; then across the neck to the bottom of the rolling ripple, of the width of 400 yards, and 400 yards below the rolling ripple, of the width of 200 yards from the bank of the river?"

Now, know all men by these presents that we, the undersigned, James Kirby and Horatio Willett, of the county of Pendleton and State of Kentucky, for divers good and valid causes and considerations us hereunto moving, and for the further consideration of one dollar to us in hand paid by John W. Tibbatts, the receipt whereof is hereby acknowledged, do bind ourselves, our heirs, executors, and administrators, firmly by these presents, to make or cause to be made unto the United States of America a good and sufficient deed of absolute conveyance to the United States of America, or to whomsoever the name shall be authorized to be made by law for all that tract or parcel of land contained within the Horseshoe Bend aforesaid, and described in the above-named interrogatory number 10, extending from the upper side or neck of the said Horseshoe Bend, across the neck to the bottom of the rolling ripple, of the width of 400 yards, and below the rolling ripple, of the length of 400 yards, and of the width of 200 yards from the bank of the river, whenever the said deed of conveyance shall be demanded, after the government of the United States of America shall, by law, have authorized the location of the contemplated national armory at that point, which said deed of conveyance will be made for the further consideration of one dollar to be paid when demanded, after the sealing and delivery of the said deed of conveyance.

In testimony whereof, we have hereunto set our hands and seals this 26th day of September, in the year one thousand eight hundred and twenty-eight.

JAMES KIRBY. [L. S.]
HORATIO WILLETT. [L. S.]

Attest:
JOHN W. TIBBATTS.
ROBERT S. DICKENS.

In addition to the above obligation of James Kirby and Horatio Willett, proprietors of the land within the neck of the Horseshoe Bend, we, Drummond Wheeler, John Ellis, and Henry Ellis, of the county of Pendleton and State of Kentucky, for the same causes and considerations in the above bond named, and for the purpose of furthering and effectuating the same object, being the proprietors of the land on the opposite or north side of the Licking river, do bind ourselves, our heirs, executors, and administrators, to make or cause to be made to the United States of America a just and sufficient deed of absolute conveyance to the United States of America, or to whomsoever the same shall be authorized to be made by law for a tract of land on the northern shore of the Licking river, opposite the upper side or neck of the Horseshoe Bend, 400 yards long and 200 yards wide, as the same may be selected and chosen as most suitable to effectuate the objects contemplated in the establishment of a national armory at the said Horseshoe Bend, whenever the said deed of conveyance shall be demanded, after the government of the United States of America shall, by law, have authorized the location of the contemplated national armory at that point,

which said deed of conveyance will be made for the further consideration of one dollar to be paid when demanded, after the sealing and delivery of the said deed of conveyance.

In testimony whereof, we have hereunto set our hands and seals this 26th day of September, in the year 1828.

Attest:
JOHN W. TIBBATTS.
JOHN FRYER.

DRUMMOND WHEELER. [L. S.]
JOHN ELLIS. [L. S.]
HENRY ELLIS. [L. S.]

I have given you the full detail of facts in hopes that it may enable you to come to a correct conclusion upon the point in question. I am sorry that any difficulty should have existed upon a point so important. I feel no doubt, from the known integrity of the individuals through whom I was enabled to obtain the information contained in the document written by me, and from the perfect spirit of fairness and candor with which they responded to my inquiries, and the particular manner in which those inquiries were made by me, that as full confidence may be placed in the facts detailed as can be placed in any human testimony short of actual experiment.

I am, with sentiments of the greatest esteem, your obedient servant,

J. W. TIBBATTS.

Captain J. L. SMITH, *Corps of Engineers.*

FORTRESS MONROE, *Old Point Comfort, December* 12, 1828.

MY DEAR SIR: Your favor of the 21st ultimo was sent to me at this place from Washington. My misapprehension of the meaning of a part of your communication to General Taylor of the 25th of October last, of which you advise me, was certainly not caused by any want of clearness in the expression of that meaning, the phraseology of which I conceive to be unexceptionable. It arose altogether from its being stated that the soundings were taken on the day you were at the Horseshoe Bend, which led to the inference that you were present while they were taken, and of course had an opportunity of judging of their accuracy. Mr. Kirby's recollections respecting the depth of the Licking at its low stage would have great weight with me if they were uniform, inasmuch as his opportunities of observing the stream when in that state have been such as to enable him to judge of it with much accuracy. But they have been so different at different times that I am disposed to think his memory cannot be very good. The average depth of the Licking, as ascertained by the soundings taken on the 25th of September, is stated at 18 inches, and it is also stated that the rise then was not more than one or two inches above its extreme low stage. The average depth as ascertained by the soundings taken by me in July was 20 inches, and the elevation of the river above the lowest stage was represented to be then, by some, 12 inches, and by others less than nine inches. These results are very different, and one or the other must be wrong, but which, I will not pretend to say. Both will be mentioned in my report.

Your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

Colonel JOHN W. TIBBATTS, *Newport, Kentucky.*

ZANESVILLE, MUSKINGUM COUNTY, OHIO.

Interrogatories designed to ascertain the advantages and disadvantages of a position at Zanesville, Ohio, as a site for a national armory.

1st. Will the Zanesville Canal and Manufacturing Company avail itself of the privilege left to its option by the act of the legislature of the State of Ohio, passed on the 11th of February last, entitled "An act to incorporate the Muskingum Navigation Company," to complete the improvements of the Muskingum river, contemplated by the act, to be made in the vicinity of Zanesville; and if the company will avail itself of that privilege, when will the improvement referred to be probably completed?

2d. It is understood the canal company, in effecting the improvement adverted to, proposes to raise the existing dam, which is situated above the mouth of Licking creek, to the height of nine feet, and to take the water from above the said dam and carry it by a canal along the left bank of the river to within about 600 feet of Slagoe's run, and there discharge it into the river by locks. Has the intention of the company on this point been correctly stated above? If it has not been, it is requested it may be stated correctly.

3d. Should the company pursue the mode of improvement mentioned as being understood to be intended by them, the fall from the rock near Slagoe's run will be about 18 feet at the lowest stage of the river; and it is understood that, after all purposes of navigation shall have been subserved, there will remain, even at the lowest stage of the river, a large surplus of water, which the company intends to cede or hire as water privileges for mills and machinery. If the intention of the company has been correctly understood, it is requested that there may be obtained from it a statement of the rate at which it would sell a water privilege for the use of a national armory. Should Zanesville be selected as the site for that contemplated to be built on the western waters, and the rate at which they would hire such a privilege for that purpose, supposing the quantity of water required for it to be 170 cubic feet per second at the lowest stage, and progressively greater as the river should rise and the head become diminished?

4th. At what price could the land requisite for the site be procured, supposing the site to include the space within the following boundaries, viz: commencing on the bank of the river opposite to the corner of Marietta and 6th streets, and proceeding along Marietta street to 7th street; thence along 7th, first to the northwest corner of lot No. 14; thence east to lot No. 7; thence south to the corner of lot No. 8; thence east to the northeast corner of said lot; thence south to the southeast corner of lot No. 9; thence west until it intersects Slagoe's run; thence along Slagoe's run to the river; thence up the river to the point of commencing; it being understood that the road now along the bank of the river occupied for the purpose of the armory shall be opened at some other point east that may be convenient, and it

being also understood that Marietta road, if interrupted by the closing of Marietta street, should be opened along Slagoe's run, so that it may communicate with the road to be substituted for the river road?

5th. What are the prices, at Zanesville, of—1st, refined bar iron; 2d, stone coal; 3d, charcoal; 4th, brick per 1,000, (size to be stated;) 5th, stone per perch of 25 cubic feet; 6th, lime per bushel; 7th, lumber per 1,000 feet, (the mode of admeasurement to be stated;) 8th, pork and beef per pound; 9th, flour and corn per barrel; 10th, salt per bushel; 11th, whiskey per gallon; 12th, grindstones per ton; *of wages, per day*—13th, of brick and stone masons; 14th, of carpenters; 15th, of blacksmiths; 16th, of laborers; *of the rate*—17th, of laying brick per 1,000, and stone per perch, exclusively of materials; 18th, of carpenters' work by the customary mode of measurement, (to be stated;) 19th, of blacksmiths' work by the pound; of transportation, per 100 pounds, from New Orleans, from Louisville, from Cincinnati, from Pittsburg to Marietta and Zanesville, and from the former to the latter?

ZANESVILLE, *July* 17, 1828.

SIR: The foregoing interrogatories are those which were mentioned to you, which you were so polite and obliging as to say you would furnish answers I beg the favor of you to furnish answers as early as may be convenient, and to direct them to me at Washington city. I beg of you also to accept the assurance of perfect respect and esteem of, sir,

Your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

ROBERT FULTON, Esq., *Zanesville.*

ZANESVILLE, *August* 21, 1828.

SIR: I have been instructed by the Zanesville Canal and Manufacturing Company to make the subjoined reply to the first three interrogatories contained in your note to me of the 17th of July last, connected with the proposed establishment of an armory on the western waters:

Answers 1 *and* 2. These two interrogatories relate solely to the act of the legislature of Ohio, passed at their last session, entitled "An act to incorporate the Muskingum Navigation Company," and to the probability of the Zanesville Canal and Manufacturing Company availing themselves of the provisions of that act. To them I am instructed to reply that the act in question is of a crude and undigested character, bearing evident marks of haste in its draught and passage.

Our company do not deem its present provisions beneficial to them, and would hesitate before accepting them. By a former act of the legislature our company was required to erect and keep in repair a *free lock* to admit the passage of boats around their dam; this has been done at considerable expense, and there is nothing in the act of last winter which would exonerate the company from this burden, even if they made all the improvements by the last act contemplated. This is a decisive objection to the law in its present shape, though it is highly probable that the legislature would annul it, and introduce the desired provision. Much difficulty is also anticipated in the establishment of a steamboat canal through the town of Zanesville, from its intersection with the streets, particularly Main street, near the upper bridge; the travel by that street and across the bridge is constant. A bridge across the canal of a sufficient height to admit the passage of steamboats, at all stages of the water, would be of difficult if not impossible construction; and a *draw* would be attended with constant inconvenience. These are some of the reasons which have influenced the canal company to decline, at present, answering the first and second interrogatories.

Answer 3. Aside from the contemplated improvement of the navigation of the Muskingum river, I am instructed to reply to your third interrogatory by the following proposition: The company will contract to deliver to the United States forever 170 cubic feet of water per second at a point (A) nearly opposite to Richmond & Bostwick's foundery, being a little above the lower bridge, and will convey to the United States the land owned by them between Slagoe's run and Northup's warehouse, and will purchase and convey to the United States a strip of land of sufficient width to admit the passage of the canal from this point, where the company contract to deliver the water to the point B, where the United States wish to use it, say 500 feet above the mouth of Slagoe's run, for the sum of sixty thousand dollars—that is, the company will deliver the water at A, and the expense of conveying it from A to B is to be borne by the United States, except that the land between A and B sufficient for the passage of the canal will be purchased and paid for by the company and conveyed to the United States.

NOTE.—The company expect to raise the dam and widen the canal as if they were to avail themselves of the act above referred to.

Answer 4. (See the interrogatory answered in letter of Seth Adams, esq., September 3, 1828.)

Answer 5. Refined bar iron, $120 per ton; stone coal, 3 cents per bushel; charcoal, 3 cents per bushel; bricks, $3 per 1,000, delivered, moulded 9 inches long, 4½ wide, and 2¼ thick; stone in the rough, 87 cents to $1 per perch; lime, 8 to 10 cents per bushel; lumber, $10 per 1,000 feet, reduced to board measure; pork, $1 75 to $2 per cwt.; flour, $2 25 to $2 50 per barrel; corn, 16 to 19 cents per bushel; salt, 30 to 31¼ cents per bushel; whiskey, 16 to 19 cents per gallon. Grindstones: I had some difficulty in ascertaining the price of this article by the ton, the usual mode of selling them being by the inch; the manufacturers say they can be made and delivered at $14 to $16 per ton. Wages per day: common laborers, 62½ cents; *brick* and *stone* masons, $1 to $1 25; carpenters and blacksmiths, same; laying brick per 1,000, $1 75; laying stone per perch, 50 cents, exclusive of materials; carpenters' work by admeasurement; blacksmiths' work by the pound—common rough iron, 10 to 12 cents.

Transportation.—New Orleans to Zanesville, $1 25 per cwt.; Louisville and Cincinnati to Marietta, 31¼ to 37½ cents; Zanesville, 60 to 70 cents; Pittsburg to Marietta, 12 to 16 cents; Marietta to Zanesville, 25 cents; Pittsburg to Zanesville, 33 to 37½ cents; Zanesville to Cincinnati and Louisville, $5 per ton; Zanesville to Cincinnati and New Orleans, $7 50 per ton.

ROBERT FULTON,

Secretary of the Zanesville Canal and Manufacturing Company.

Captain J. L. SMITH, *United States Corps of Engineers.*

ZANESVILLE, *September* 3, 1828.

DEAR SIR: Herewith you have a plat of the lands mentioned in your letter to Mr. Robert Fulton.

I have called on all the proprietors, viz: those who reside in the town, and from them obtained the prices at which they will sell, which sums I have affixed to their names, and to the others I have placed an estimated value. You will notice that the prices now asked is, in most of them, much above that demanded a few years since.

D. Harvey's estate will soon be sold by order of court, in order to settle the estate; and also Mrs. Harvey's lot, No. 9, on Marietta street.

Mr. W. Silliman's 20 acres takes in part of 7, all 8, and, I believe, a small piece of No. 9.

Mr. John Dillon's lot extends south of Slagoe's run, at the southeast corner, and then follows the run to its mouth.

Mr. Mervin's estate was sold to a Mr. Henry Northup, who having paid a part, it is thought (by his son, Thomas Northup) it will revert to Mr. Mervin's estate again. It may be purchased, I have no doubt, for less than the $1,300. Henry Northup's lot and brick house, perhaps, may be purchased for less than the price asked. *It must be sold soon.* Should it be thought necessary to take bonds to convey to the United States the property, I will attend to it; but many of them are unwilling to deprive themselves of power to sell in the mean time should opportunity offer. If I can be of any service to you or the government, you or they may command the services of your humble servant,

SETH ADAMS.

John Bowman's 10-acre lot includes lots No. 11, 12, 13, and 14; also one house on Seventh street	$3,000 00
William Lander's house and lot, No. 10, on Seventh street	600 00
John C. Stockton's house and lot, No. 9, on Seventh street, estimated	600 00
Henry Ford's brick house and ¼ lot, No. 8, on Seventh street, valued	750 00
John Ford's house and ¼ lot, No. 8, on Seventh street	200 00
Thomas Flood's house and ¼ lot, No. 7, on Seventh street	800 00
Simon Wright's house and ¼ lot, No. 7, on Seventh street	200 00
David Harvey's estate includes 6 lots on Seventh street, with lots 1 and 2 on Marietta street, and the ground back, say in all about 8½ acres, estimated at	8,500 00
Spencer Manley's 2 houses and lot, No. 3, on Marietta street	1,000 00
G. Wincoop's lot, on Marietta street	150 00
Simon Moore's house and ¼ lot, No. 5, on Marietta street	220 00
Peter Morgan's ¼ lot, No. 5, on Marietta street, $80; unknown lot, No. 6, estimated $100	180 00
Wm. Cunningham's lot, No. 7, on Marietta street	200 00
C. G. Wilson's lot, No. 8, on Marietta street	100 00
Mrs. Harvey's house and lot, No. 9, on Marietta street, estimated	150 00
Rufus Richardson's 2 houses and lot, No. 10, on Marietta street, valued	850 00
Wm. Lander's house and lot, No. 11, on Marietta street	300 00
Evan Davis, who lives in Baltimore, lot No. 12, 2 houses, estimated	400 00
Henry Northup's house and lot, No. 13, on Marietta street	300 00
C. G. Wilson's 2 houses and lots, Nos. 14 and 15, on Marietta street	400 00
Richard Adams's house and lot, No. 16, on Marietta street	130 00
D. Spangler's lot, No. 18, on Marietta street	80 00
Peter McCane's house and lot, No. 17, on Marietta street	350 00
Richard Adams's hill lot, about 9 acres, $1,000; John Thomas's lot, say 4½ acres, $1,500	2,500 00
John Dillon's lot, say 7½ acres, $3,500; Ellis Silliman's 2 10-acre lots, $1,650	5,150 00
Mrs. Mervin's house and right of dower	650 00
Henry Northup's lot and brick house	1,500 00
Mervin's estate, about 5½ acres sold Henry Northup for	1,300 00
	30,560 00

WASHINGTON CITY, *November* 15, 1828.

DEAR SIR: I find it necessary to be possessed of some additional information relative to the site at Zanesville before I can proceed satisfactorily in the formation of a plan and estimate for it, and I would be much obliged if you would furnish it to me. I wish to know what will be the height of the new dam proposed to be built at Zanesville, positively, and of that proposed to be built at Duncan's falls, probably; I say probably in regard to the latter, because in the estimates of the engineers, referring to the improvements of the navigation of the Muskingum, two plans are suggested respecting it, one fixing the height at 9.78 feet, and the other at 7 feet. It would appear by those estimates that the dam now at Zanesville is embraced in the plan of improvement, and that the fall from the top of the dam to the head of Duncan's falls is computed at 20.78 feet. This does not differ materially from the computation of the commissioners, Colonel McRee, &c., and which was 5½ feet for the height of the dam, 7 feet fall to Putnam bridge, 2½ feet fall to Slagoe's run, and 5 feet fall to Duncan's falls, making together 20 feet. If the latter computation be accurate, and the fall in the river, between Slagoe's run and Duncan's falls, be only 5 feet, a dam at Duncan's falls, of the height of 9.78 feet, would reduce the fall calculated upon for the armory. For, if the dam at Zanesville should be raised to the height of 9 feet, which is the greatest height I believe that has been thought of or that could with safty be adopted, the fall it would give at Slagoe's run would be only 14½ feet. I should suppose, to raise the dam at Zanesville as high as 9 feet, would injure greatly the water privileges on the river above; but I presume the company at Zanesville are authorized by their charter to raise it to that height; the quantity of water requisite for the armory, with a fall of 14½ feet, would be 195 cubic feet per second. The quantity stated in the interrogatories of 170 cubic feet per second was predicated upon the fall being 17 feet or more.

I have not been able to find in any of the plans in my possession the point (A) referred to in your third answer to my interrogatories, as the point at which the company would undertake to deliver the

water for the use of the armory, nor have I been able to discover the position of Richmond & Bostwick's foundery. I would thank you to let me know the distance between the point (A) and the lower or Putnam bridge.

Dear sir, your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

ROBERT FULTON, Esq., *Zanesville, Ohio.*

ZANESVILLE, *December* 23, 1828.

DEAR SIR: Your favor of the 15th ultimo was duly received, and I acknowledge myself indebted to you an apology for so long delaying my answer, which, at the time I received it, I intended doing promptly; and in order to save time and writing, I shall for the present dispense with the apology, and proceed to give you such information on the subject of your inquiries as may be in my possession.

You wish to know what will be the height of the new dam proposed to be built at Zanesville, positively, and of that proposed to be built at Duncan's falls, probably; I cannot at present answer those questions positively. The canal company at Zanesville, by their present charter, is limited in the height of their dam to 6½ feet, and they have resolved not to avail themselves of the law for improving the navigation of the Muskingum river in its present shape. That law gives them no privileges they are not already in possession of, yet I think I am warranted in saying that the canal company will, in completing their improvements, conform in every particular (excepting the steamboat lock) to the plan recommended by the engineers. Steamboat navigation, from the contemplated lock at the lower bridge, and through the town under *bridges* and mills into the company's dam, is considered by many of doubtful utility, as the distance between those two points is so short that the cargo could be transported from one point to the other in keel-boats or carts without retarding or adding much to the expense of the voyage. The height of the contemplated dam at Zanesville, in order to secure slack navigation to Jackson's Salt-works, seven miles above, must be built about 9 feet, and the canal company will have no objection to a compliance with that part of the project recommended by the canal commissioners for improving the navigation of the Muskingum river, from Zanesville to the town of Dresden. As to the probable height of the contemplated dam at Duncan's falls, I think in no case can it exceed 7 feet. The contract is made for 6½ feet, but a greater height than 7 feet would destroy the Putnam mills, and do other individual damage, besides that done to the canal company at Zanesville, who claim all the advantages of the water fall from the dam to Slagoe's run. The navigation company must adopt some more economical plan than that will be, should they raise their dam at this point 9.78 feet high. As to the point (A) which you have not been able to find in any of the plans in your possession, I ought to have been more particular, as it was intended to designate the point at which the company proposes to deliver the water at for the use of the armory. The point (A) is about 45 yards above the lower bridge and immediately opposite to Richmond and Bostwick's foundery, and probably will be a few yards above the head of the contemplated lock, and will be about 295 or 300 yards to the point for using the water for the armory; but as you have the plats and surveys of the site, you can ascertain the distance between these two points with more accuracy than I can describe it to you.

It is found that a great saving of water can be made on a new plan suggested by Mr. Goshon, the millwright, who was engaged in building a new mill when you visited Zanesville; he has applied 87 inches to one wheel to run a stone 4½ feet, which produces the same effect under 6 feet head which 200 inches is doing under the same head in Mr. Reeve's mill, and he says he is confident that still less water can be made to do the same work.

I know of nothing more that would be of any service to you in making out your report; but any aid that I can give at this or any other time, you may command my services, and I promise to attend to it with more punctuality than in the present instance.

With respect, I remain, dear sir, your obedient servant,

ROBERT FULTON.

J. L. SMITH, Esq.

WASHINGTON CITY, *January* 2, 1829.

MY DEAR SIR: I have just had the pleasure of receiving your favor of the 23d ultimo.

You have been very good to furnish, as far as practicable, the information requested by me respecting Zanesville and Duncan's falls as sites for a national armory, and I am much obliged to you for it.

I am obliged also by your polite offer to furnish any additional information I may desire in regard to those positions. I believe I have been, and through your favor, put in possession of all the information concerning them that can be obtained at present. If anything should occur to vary the character of that information, a possible circumstance, although you think it not probable, I would be further obliged if you would advise me of it.

I am glad to hear that further improvements have been made upon the reaction wheel, and would be particularly gratified to receive any information in relation to further results satisfactorily ascertained from experiments, especially if they have been made under different heads of water, and with stones of different diameters.

I am sorry you should have thought it necessary to make any remarks concerning the short delay of your answer to my last communication. No inconvenience has resulted from it; but if there had been, intentional neglect would not have been attributed to you.

With renewed assurance of respect and esteem, I remain, dear sir, your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

ROBERT FULTON, *Zanesville, Ohio.*

BIG BEAVER RIVER.

[The correspondence respecting this site has been copied from the report of the commissioners.]

Interrogatories designed to ascertain the advantages and disadvantages of a position on Walnut run, Big Beaver river, Pennsylvania, as a site for a national armory.

1. What is the number of water-wheels worked by water drawn from Pugh's dam on the Big Beaver river that are in use at this time, and what are the dimensions of the respective apertures through which the water is discharged upon them?

2. Under what head does the water pass through each aperture?

3. Can all the wheels referred to be worked at the same time during the lowest stage of the river? If not, be pleased to state which of them can be.

4. Is there any loss of water at the lower stage by running over the dam and leakage? If there be, how much in each case.

5. What are the prices at Brighton of refined bar iron per ton; 2d, stone coal per bushel; 3d, charcoal per bushel; 4th, brick per 1,000, (size to be stated;) 5th, building stone per perch of 25 cubic feet; 6th, lime per bushel; 7th, water lime per bushel; 8th, lumber per 1,000, (the mode of admeasurement to be stated;) 9th, pork and beef per barrel; 10th, flour and corn per barrel; 11th, whiskey per gallon; 12th, salt per bushel; *rate of wages per day*, 13th, of brick and stone masons; 14th, carpenters; 15th, blacksmiths; 16th, laborers; 17th, rates of laying brick per 1,000 and stone per perch; 18th, of carpentry by the customary mode of admeasurement; 19th, blacksmith work by the pound; 20th, rates of transportation per 100 pounds between Brighton and New Orleans, Louisville, Cincinnati, Wheeling, and Pittsburg?

6. Could purchases be made of water privileges on both sides of the river, from the head of the falls opposite to Dr. Adams's to a quarter of a mile below Walnut run, without purchasing more land than would be requisite for the purpose of an armory, viz: 10 acres on the right bank of the river, where the dam would be lodged, as much as would be necessary to convey the water from the dam to Walnut run, and a tract for the site, embracing both sides of Walnut run and extending to a quarter of a mile above and below its mouth and along the bank of the river, so as to include about 100 acres? If such purchases could be made, at what cost? If not, what would be the smallest quantities of land on both sides of the river which it might be necessary to purchase in order to secure the water privilege and the privileges of establishing the dam, as has been stated, and at what rate can they be purchased? The quantity of water required for the canal for conveying the water from the dam to the site may be included in the following boundaries: commencing about 200 yards above the head of the falls and extending along the bank of the river down to the tract of 100 acres described as the site, with the width of 100 yards at the upper, gradually increased to 300 yards at the lower point mentioned.

BEAVERTOWN, *Pennsylvania, July*, 1828.

GENTLEMEN: I have understood the commissioners who several years ago examined Brighton as a site for a national armory had, with your consent, addressed to you interrogatories, through which they proposed to furnish themselves with such information as they had not collected during their visit. It has also been intimated to me that I might confidently rely on your cheerful compliance with a request of the same nature, should I need further information respecting the object of a similar examination recently made by me. I have therefore ventured to address to you the foregoing interrogatories, and to request of you, at as early a day as may suit your convenience, to furnish answers to them and transmit them to me at Washington city.

J. L. SMITH, *Captain Corps of Engineers.*

D. TOWNSEND, EVAN PUGH, JOHN PUGH, BENJAMIN TOWNSEND, *Brighton, Pennsylvania.*

"No answer was received."

The following interrogatories and answers were copied from the report of the commissioners, &c.

1. What was the population in 1810 and 1820 of the following counties of Pennsylvania and Ohio, viz: 1st, of all those counties adjacent to the boundary line between the two States, from the Ohio river to Lake Erie, whose seats of justice do not exceed 50 miles from the nearest point of the said boundary line, measured on the most direct road to it?

Answer. This will embrace the following counties of the two States, the population of which is given in the tabular view below:

Pennsylvania counties.	Population, 1810.	Population, 1820.	Ohio counties.	Population, 1810.	Populati'n, 1820.
Alleghany	25, 317	34, 921	Jefferson	17, 260	.....
Beaver	12, 168	15, 246	Columbiana	10, 878	23, 033
Butler	7, 346	10, 193	Trumbull	8, 761	15, 556
Mercer	8, 277	11, 681	Ashtabula	Not org'd.	7, 382
Crawford	6, 178	9, 397	Granger	2, 917	7, 791
Venango	Not org'd.	4, 915	Portage	Not org'd.	10, 095
Erie	3, 758	8, 553			
	63, 044	94, 906		39, 726	.....

2. Of so much of the district included in a circle of 80 miles diameter, the centre of which is Beavertown, as is not embraced in the above-described counties of the two States?

Answer. A circle of 80 miles, the centre of Beaver, will embrace parts of the following counties, viz: in Pennsylvania, a part of Armstrong, part of Westmoreland, and near one-half of Washington; part of Brooke and Ohio counties in Virginia, and part of Harrison in the State of Ohio; the population of which cannot be ascertained or a correct estimate formed without the census by townships, which we have not.

3. Of so much of the district included in a circle of 80 miles diameter, the centre of which is Cleveland, on Lake Erie, as is not included in the aforesaid described counties?

Answer. A circle of 80 miles, the centre of Cleveland, will embrace the following counties in Ohio, and parts of counties, viz: Cuyahoga, with a population in 1820 of 6,328; Huron, with a population of 6,675; and parts of Medina and of Wayne counties, the population of which cannot be ascertained for the reasons above stated.

4. What was the number of militia of the described counties, &c., in the years 1810 and 1820, and at any later period, if known?

Answer. We have no data by which we could ascertain the number of militia of those counties embraced in the State of Ohio; nor can we at present ascertain the military strength of those in Pennsylvania, but expect to be able to do so by an official statement from the adjutant general's office, which has been sent for.

5. What is the distance, by the nearest wagon route, of the seats of justice of the before-mentioned counties—1st, from the town of Beaver; 2d, from Cleveland, on Lake Erie; 3d, from the nearest point of the dividing line between the two States?

Answer. From Beaver to Pittsburg, 28* miles; from Cleveland to Pittsburg, 135 miles; from State line to Pittsburg, 40 miles; from Beaver to Butler, 28* miles; from Cleveland to Butler, 106 miles; from State line to Butler, 38 miles; from Beaver to Mercer, 38 miles; from Cleveland to Mercer, 75 miles; from State line to Mercer, 15 miles; from Beaver to Meadville, 70 miles; from Cleveland to Meadville, 85 miles; from State line to Meadville, 24 miles; from Beaver to Franklin, 65 miles; from Cleveland to Franklin, 95 miles; from State line to Franklin, 35 miles; from Beaver to Erie, 111 miles; from Cleveland to Erie, 85 miles; from State line to Erie, 25 miles; from Beaver to Steubenville, 36 miles; from Cleveland to Steubenville, 90 miles; from State line to Steubenville, 25 miles; from Beaver to New Lisbon, 26 miles; from Cleveland to New Lisbon, 62 miles; from State line to New Lisbon, 12 miles; from Beaver to Jefferson, 80 miles; from Cleveland to Jefferson, 45 miles; from State line to Jefferson, 12 miles; from Beaver to Chardon, 75 miles; from Cleveland to Chardon, 24 miles; from State line to Chardon, 35 miles; from Beaver to Ravenna, 60 miles; from Cleveland to Ravenna, 30 miles; from State line to Ravenna, 38 miles; from Beaver to Warren, 49 miles; from Cleveland to Warren, 75 miles; from State line to Warren, 25 miles.

Those marked * are the distances by the nearest wagon road; the others are the distances by map in a direct line.

6. What is the distance from Beavertown to Cleveland, or to the nearest point on Lake Erie, measured on the shortest wagon route?

Answer. The distance from Beaver to Cleveland is 105 miles; but the nearest point on Lake Erie is New Market, or Painesville, the distance to which is 90 miles.

7. What are the number and length of the roads communicating from Beavertown to Cleveland, and also to the lake shore the distance of 20 miles east and west of Cleveland?

Answer. There are two principal roads, viz: by New Lisbon, &c., and by Canfield, &c. Their length is about equal, to wit, 105 miles. There may be other roads diverging from these main roads leading to the lake shore east and west of Cleveland within 20 miles, but if so they are unknown to us.

8. What is their general character as winter and summer roads? What streams do they cross? Are there bridges over the streams? If not, are they fordable; and in what months or portions of the year?

Answer. Their character as winter and summer roads is not good. These roads cross the following streams, viz: Little Beaver creek, Mahoning creek, Cuyahoga river, and several of the tributaries of the Cuyahoga, (the names not known,) and Tinker's creek. These streams are all bridged, except Tinker's creek, which is fordable the greatest part of the year.

9. Do any portions of these roads pass through swamps or marshes? If so, for what distance and what points?

Answer. Yes; after you leave the State line, one-half of the distance from that to Cleveland passes through swamps or marshy ground. There are but few towns or townships through which these roads pass that are exempt from those swamps or marshy ground.

10. What are the longest and shortest periods which the Beaver creek has been known to remain closed by ice in one season? What is the ordinary period of its remaining closed or frozen over?

Answer. The longest period, about ten weeks; the shortest period, about three weeks; the ordinary period, about seven weeks.

11. Has the Beaver ever been known to continue open during one entire season?

Answer. Yes.

12. What year?

Answer. In 1803 and 1814.

13. What is the usual earliest and latest time of closing and breaking up of its ice?

Answer. Usual time of closing, between 25th December and 1st of January; earliest time of closing, latter part of November; latest time of closing, month of February. Usual time of breaking up, latter part of February; earliest time of breaking, first part of February; latest time of breaking, last of March.

14 How long has the Beaver been known to continue at or over the following elevations, respectively, viz: 1, 2, 3, 4, 5, 10, 15, 20, 25, and 30 feet above its lowest water mark in one year?

15. What has been the *shortest* known duration of the Beaver at or over these elevations in any one year, say at a point 100 yards above the Middle falls or at Pugh's mills?

Answer. The two preceding interrogatories cannot be answered but in general terms, no person in the neighborhood having kept a register. The lowest water is generally in the months of August and September, and continues from three to six weeks. In the latter part of September and first part of October the rains increase the elevation from two to three feet above low-water mark. It continues at that elevation generally throughout the winter, sometimes increased by the swells occasioned by the rains and thawing, at other times decreased by the freezing. Its greatest elevation at a point 100 yards above the Middle falls has never exceeded from nine to ten feet, except once, when it attained an elevation of eleven feet above low-water mark, but subsided in a few hours to a less elevation. The greatest elevation of the Beaver is at the time of the breaking up of its ice. There are freshets in the summer and fall, when the

elevation will be from five to eight feet, varying between those points. At Pugh's mills the elevation has been from 20 to 23 feet above the lowest water mark, occasioned by the water of the Ohio backing. It subsides in a day or two generally to an elevation that admits their machinery to be put in operation. During the spring months the Beaver is generally from four to five feet above low water; sometimes over.

16. What is the earliest, latest, and ordinary commencement of the *spring* and *fall* navigation of the Beaver, from Pugh's mills to the Ohio, for the following description of craft, respectively, viz: 1st, steamboats; 2d, keel-boats of 40 tons and upwards; 3d, keels of 15 to 20 tons; loaded?

Answer. The spring navigation commences in March; about the first of March may be considered the earliest, the middle of March the ordinary, and the last of March the latest. The spring navigation terminates, at its earliest period, about the first of May; the latest, about the last of June; the ordinary period, about the last of May. The fall navigation: the earliest commencement is about the first of October; the latest, about the middle of November; the ordinary, about the middle of October; and terminates, the earliest, about the last of November; the latest, the last of December; the ordinary, about the middle of December. The Beaver may be considered navigable for steamboats about three months in the year—two in the spring and one in the fall; for keels of 40 tons, four months in the year—three in the spring, one in the fall; and for keels of 15 to 20 tons, the whole year, except a few weeks during extreme low water or when obstructed by ice.

17. Does the Beaver break up its ice before or after the Ohio, Alleghany, and Monongahela, or simultaneously with all or either of them?

Answer. It breaks up a day or two after the Ohio and Monongahela, and about the same time with the Alleghany.

18. Does the greatest spring rise of the Beaver occur, in general, before or after or simultaneously with that of the Ohio?

Answer. The same rains in the spring cause the Ohio and the Beaver to rise, but the Beaver generally has attained its greatest elevation and is subsiding before the Ohio rises.

19. Has the greatest rise of the Beaver ever occurred at the same time with a high rise of the Ohio?

Answer. Much about the same time—Beaver attaining its greatest elevation a day or two the soonest, in consequence of the difference in distance of their respective tributaries There are times when the Beaver rises and the Ohio does not, in consequence of the rains being confined to its tributaries alone. The Ohio sometimes rises when the Beaver does not, from the rains being limited to the tributaries of the Ohio alone.

20. What is the earliest, latest, and ordinary period of the Ohio river closing with ice, and of its opening in the spring by the breaking of the ice?

Answer. Earliest time of closing, latter part of December; latest time of closing, in February; ordinary time of closing, in January. Earliest time of opening, first week in January; latest time of opening, latter part of February; ordinary time of opening, first part of February.

21. What is the greatest and least space of time the Ohio has ever been known to continue closed with ice in one season?

Answer. Greatest space of time, four weeks; least space of time, three to four days.

22. Has the Ohio ever been known to continue open from this place down to Louisville during any one season?

Answer. Yes.

23. What year?

Answer. From circumstances we are enabled to say that it was open in the years 1814 and 1822. There are a majority of years that it is open.

24. What is the greatest and least duration in any one year of steamboat navigation from the point to Louisville?

Answer. The greatest duration, six months; the least, three months.

25. What is the ordinary duration of such navigation?

Answer. Between four and five months.

26. What is the earliest, latest, and ordinary period of *commencement* and *termination* of the spring and *fall* navigation of the Ohio river from Beaver to Louisville for steamboats, keel-boats of forty tons and twenty tons, respectively?

Answer. The spring navigation of the Ohio for steamboats commences: the earliest, month of February; latest, middle of March; ordinary, first of March; and terminates: earliest, in May; latest, in July; ordinary, in June. The fall navigation of the Ohio for steamboats commences: earliest, about the first of October; latest, middle of November; ordinary, middle of October, and terminates: earliest, first of December; latest, last of December; ordinary, middle of December. The spring navigation of the Ohio for keel-boats of forty tons commences: the earliest, in February; the latest, middle of March; and ordinary, the first of March; and terminates: the earliest, about the middle of June; the latest, last of July; and ordinary, about the first of July. The fall navigation of the Ohio for keel-boats of forty tons commences: the earliest, in October; latest, in November; and ordinary, in December; and terminates: the earliest, first of December; latest, last December; and usually, the middle of December. Keel-boats of twenty tons may navigate the Ohio at all times in the year except when obstructed by ice.

27. What is the longest known continuance of the Ohio near the mouth of Beaver during any one year, at or over the elevations of 10, 12, 15, 20, 25, 30, 35, 40, and 50 feet; also what is its shortest known continuance at those elevations, respectively; also its ordinary continuance at or over them?

Answer. The greatest elevation of the Ohio near Beaver has never exceeded 36 feet; the longest continuance at that elevation never exceeds 24 hours; the shortest, a few hours; the ordinary, about 12 hours: The elevation has never been so great as 36 feet, except twice, and for a very short time; the lowest water of the Ohio is in the months of August and September, and continues from two to three weeks in September and October. The elevation is increased to from five to seven feet, and continues at that throughout the winter, sometimes increased by the rains and thawing, and decreased by the freezing. In the spring the elevation is from 10 to 15 and 20 feet, varying between those elevations.

28. To what depth has it ever been known to freeze at Beaver?

Answer. About 12 inches.

29. What is the length of time it takes the Beaver to free itself from drift and running ice after it begins to break up or breaks up?

Answer. About 24 hours; when the break is a general one it breaks from the mouth of the Conequ-

nesing, a distance of 12 miles above the mouth of the Beaver. The other tributaries break a few hours afterwards. It never has exceeded 48 hours.

30. How long is the Ohio obstructed from the same cause in the fall and spring?

Answer. From one to three days; it has never exceeded three days.

31. What are the ordinary prices of building materials of every kind?

Answer. Stone, by the perch, delivered at Beaver falls, from 37½ to 50 cents; bricks, per 1,000, $3 to $4; lime, per bushel, (unslaked,) 10 to 12½ cents; sand, for the hauling; lumber, by the square foot, from 3 to 4 cents; scantling, (white oak,) reduced, per 1,000, $8; boards, (white oak,) per 1,000, $8; walnut plank, per 1,000, reduced, $8 to $10; scantling, (pine,) per 1,000, $3 to $4; boards, (pine,) per 1,000, $3 to $4; shingles, (oak,) per 1,000, $4; shingles, (pine,) per 1,000, $1 50; iron, per ton, $100 to $125; castings, per ton, $60 to 70; nails, 8-penny and 10-penny, per pound, 6 to 10 cents; nails, 4-penny and 6-penny, 10 to 12½ cents; glass, 8 by 10, per 100 feet, $4 to $5; oil, per gallon, 45 to 50 cents.

32. What is the ordinary price of provisions of every kind?

Answer. Wheat, from 50 to 62½ cents per bushel; flour, $3 to $3 50 per barrel; rye, 25 to 37½ cents per bushel; rye flour, $2 to $2 50 per barrel; corn, 25 to 37½ cents per bushel; buckwheat, 25 to 37½ cents per bushel; buckwheat flour, $1 to $1 50 per cwt.; oats, 15 to 20 cents per bushel; hay, $6 to $8 per ton; beef, $2 to $3 per cwt.; pork, $2 50 to $3 per cwt.; bacon, 6 to 8 cents per pound; butter, 6 to 10 cents per pound; cheese, 5 to 8 cents per pound. Vegetables: potatoes, 25 to 37½ cents per bushel; turnips, 18¾ to 12½ cents per bushel; cabbage, $2 50 to $3 per 100; onions, 50 to 62½ cents per bushel; beets, 50 to 62½ per bushel. Fruit: apples, green, 18¾ to 25 cents per bushel; apples, dry, 50 to 75 cents per bushel; peaches, green, 25 to 50 cents per bushel; peaches, dry, 75 cents to $1 25 per bushel.

33. What is the ordinary price of labor of every description?

Answer. Stone masonry, by the perch, common, at 25 cents; rangework, 50 to 60 cents; attenders can be had at from $6 to $10 per month when found; at $10 to $14 when they find themselves. Brick masons, per 1,000, $1, or $1 per day. Plasterers, per square yard, 6 to 10 cents, when found. Millwrights by the piece, viz: for building mill-wheels, per foot, from $1 50 to $2 50, according to the description of wheels; shafts are extra, and per foot $1; forebays, $1 per foot; and millwrights may be had by the day for $1 to $1 50. Carpenters from 75 cents to $1 per day; when they work by the piece they are governed by the Pittsburg book of prices, deducting about 50 per cent. Blacksmiths can be had from $10 to $20 per month when found; from $14 to 24 when they find themselves—best of workmen. Common laborers from $6 to $10 per month when found, and from $10 to $14 when they find themselves.

34. What are the number, nature, and position of the obstructions to the summer navigation of the Ohio between the mouth of Beaver and Pittsburg, and between Beaver and Marietta?

Answer. No obstruction but the current for keel-boats of 15 to 20 tons.

35. What is the ordinary price of freight in steam and keel-boats from the mouth of Beaver to and from Pittsburg and Louisville?

Answer. From Beaver to Pittsburg, $2 per ton; from Pittsburg to Beaver, $1 50 per ton; from Beaver to Louisville, $5 per ton; from Louisville to Beaver, $8 to $10 per ton.

Interrogatory. What is the *rate* of increase in the price of freight in keel-boats during the lowest stage of water?

Answer. In 1822 there was no increase; previous to that time the rate of increase was about one-third.

Interrogatory. What size keel-boats are employed in those stages, and what portion of their admeasured burden do they actually carry at those times? Also the depth of water which they draw.

Answer. The size of the boats employed are those which carry from 15 to 20 tons; at those stages a 15-ton boat will carry 10 tons; a 25-ton boat about 18 tons, and will draw about 16 inches of water.

Interrogatory. What is the number of days usually employed in a trip to Louisville by a *loaded keel*—1st, at any ordinary stage of water; 2d, when the Ohio is so low that the boat carries but a part of her tonnage?

Answer. At an ordinary stage of water it takes from seven to eight days, and when the Ohio is so low that the boat carries but part of her tonnage it takes from 12 to 15 days. In addition to the foregoing answers we would beg leave to state that the facility of procuring materials for an establishment of the kind contemplated equals any portion of the country with which we are acquainted. Stone coal can be furnished in any quantity at from four to five cents per bushel at Beaver falls. There is found in the hills west of Brighton, and within a distance of three-quarters of a mile, three different strata of coal: the first about 18 inches in depth, the second about two feet, and the third three feet. At the mouth of Brady's run, near Sharon, and about two miles from Brighton, there has recently been discovered a strata or vein of coal which measures four feet and eight inches, and we are informed that four miles northwest of Brighton, the strata of coal is near five feet in thickness; we have no hesitation in saying that stone coal can be furnished in any quantity at the price above quoted.

Charcoal can be delivered at $3 50 to $4 50 per 100 bushels—any quantity. Cordwood, $1 per cord. Grindstones can be had at 3 cents per inch, ready made. The quarries are extensive, the quality excellent, and are exported to other portions of the country in considerable quantities. Walnut timber is to be found in great abundance on the lands bordering the Beaver and Ohio rivers, and can at all times be procured at the prices before quoted. We would further state, in answer to the inquiry, at what price can the lands and water privileges in the neighborhood of the falls be purchased? that we have not been able to ascertain the exact price at which the property could be purchased; but we are enabled to state that the principal holders of property will be willing, in case of a disagreement as to price, to submit it to the decision of an arbitration of three persons to be mutually chosen.

All which is respectfully submitted.

Colonels McKee and Lee, and Captain Talcott, *Commissioners for locating a site for the armory.*

On examination there appears to be a difference of but 15 inches less in the apertures, according to our measurement, than that of Malin, which was in consequence of the gates not being drawn so much, and the measurement of the heads was to the bottom of the aperture; and possibly the water in the race was some higher than when measured by Malin, which occasioned the difference. There were no other wheels than the saw-mill stopped in the fall of 1822 in consequence of low water; the others were in daily operation. The aperture of the saw-mill was measured to the top, and the oil-mill at the middle; the spill in the bank of race is, say two or three inches higher than the dam.

D. TOWNSEND.
EVAN PUGH.
JOHN PUGH.

Questions relative to the water power at Big Beaver Falls.

Question. At what time was there the least quantity of water in Beaver river since the erection of Pugh's mills, and how long did it continue at that low stage?

Answer. In the summer of 1822; and the water continued at a low stage ten days or two weeks, to the best of our recollection.

Question. How many wheels were in use at that time, and what are the dimensions of the apertures through which the water issued on those wheels?

Answer. Eight wheels: one aperture 4 feet 6 inches by 3¼ inches, 4 feet 2 inches head; one 3 feet 6 inches by 4 inches, 3½ feet head; two 11 inches by 9¼ inches each, and one 11 inches by 3 inches, under 7 feet head; two 11 inches by 11 inches, and one 11 inches by 1½ inch, under 6 feet head. All in use in 1822 except the first, which was stopped occasionally.

Question. What portion of those wheels was stopped during the lowest stage of water?

Answer. One at times—the saw-mill wheel—aperture 4 feet 6 inches by 3¼ inches, and 4 feet 2 inches head.

Question. What was the condition of the dam at that period, and how much water escaped through the leaks?

Answer. The dam, in part, was in good repair, though it did not extend more than two-thirds over the stream, the other part being a temporary one, by throwing up stones, and we suppose it leaked two-thirds of water in the creek.

Question. In what years has the dam been repaired, and was it in that year when the Beaver was at its lowest stage since the erection of the mills?

Answer. It has been repaired nearly every year since 1805, and, not to exceed ten or twelve days' work, gravelling it yearly, and the cost in building, did not exceed $150.

Question. How long did it take to make the repairs from the first interruption of the mills until they recommenced operating in that year, or in the driest season in which the dam has been repaired?

Answer. The mills were not stopped during the time of repairing the dam.

Question. Was the Beaver lower at the commencement of the repairs than after they were finished?

Answer. It was lower after the repairs were done.

Question. If it was lower, by how much?

Answer. Not recollected.

Question. And if it was not so low after completing the repairs as when they were begun, by how much?

Answer. Not recollected.

Question. When the dam is in repair, does any water escape over the spill in the driest season?

Answer. Our dam is nearly all the same height, and the spill is in the bank of the race, and higher than the dam, though the water frequently runs over it at lowest stage.

Question. How much time per annum is there usually spent in repairing the dam during the low stages of water.

Answer. Answered above.

Question. What portion of the water in dry seasons has usually leaked through the dam when it was considered in good repair.

Answer. We suppose that seven-eighths of the water leaked through and ran over our dam in common dry seasons.

D. TOWNSEND.
EVAN PUGH.
JOHN PUGH.
BENJ. TOWNSEND.

NOTE.—Messrs. Townsend and Pugh state, in answer to the 2d query proposed to them, that eight wheels were in use in the year 1822, only one of which (the saw-mill) was stopped during the driest part of that season.

The dimensions of the gates of these wheels are very different from those obtained by the measurements of Mr. Malin. It is desirable to have the reason of this difference explained, as well as the difference in the height of their respective heads of water, stating whether this difference is owing to any alteration in the wheels and apertures, and if so, the nature and extent of such alterations.

It is also stated that the saw-mill was stopped "at times." Were any of the others *stopped* at times, either in part or altogether? And how many and which of those wheels were in *constant daily operation during* the lowest stage of water in 1822?

It is likewise stated that the spill in the bank of the race is higher than in the dam. Query. By how much? Were the heights of the different heads of water to each wheel measured from the top or bottom of its aperture, viz: does the height of the head stated in each case include the height of the aperture or not?

There is one or two small spills or places where the water runs over the bank of the raceway below the principal spill, and along that part of the canal where the late experiments were made. How much did the water in the canal sink below the top of those small spills or wastes during the lowest stages in 1822?

	Number.	Width of each gate, in inches.	Height of each gate, in inches.	Area of each gate, in inches.	Elevation of water over each aperture.
Apertures of gates at Pugh's mills, taken as they were drawn, when the velocity was measured in the canal the head of water over the gates sunk 7¾ inches below its level when the gates were all shut	1	11	11¾	129½	51
	2	11	2	22	60¾
	3	11	11½	123¾	51½
	4	11	9½	101½	53½
Cotton factory	1	11	9½	101½	80¾
	2	11	3	33	87
				510½	

Head sank at the cotton factory only 7½ inches. The reason of the difference is owing to the forebay being much narrower in proportion to the number of gates drawn at the upper mill. The column containing the elevation of water over each aperture gives it as taken when the water had sunk to its lowest, after the gates had been drawn about two hours. The descent of each chute from the apertures is about 9 inches in 5 feet.

The saw-mill and two gates at the oil-mill were not drawn, but Townsend and Pugh all agree in stating them to have run a considerable portion of the time. The water was at its lowest in 1822—the nature of their business not requiring them to run constantly. As soon as the weather moderates I will take the dimensions of the last-mentioned gates; also examine some leakage at the oil-mill forebay.

Respectfully,

JOSH. MALIN.

N. B.—Some alterations have been made in the gates at the mill since 1822, which was calculated to take less water; and Messrs. Pugh state that it answers their expectations, and they believe the quantity now used is not so great as before the alterations.

J. M.

Distances and number of stations.

Fifth experiment	33	33½	35	36	42	45	38	18½	281½	Near left bank, rolling and turning.
Sixth experiment	37	32	34	34½	37½	36	36½	19½	267	
Seventh experiment	24	34	36	35	36	34	34	17	260	
Eighth experiment	32	35	36	.....	.....	.....	.....	.....	.....	Float lost.
Ninth experiment	33	33	37	33	36	37	34	17	260½	With a rough piece of wood; a piece of ice passed over same space in 254 seconds.

* Near the spill is an eddy.

The water varied in height during the first five experiments. The gates were then arranged in an exact manner, and after an interval of half an hour the water sank at 9 to 7 inches, when the residue of experiments were made.

The water at the end of experiments was sunk 5¾ inches at station 1, and 7½ inches at station 9, below the highest mark.

Mr. Malin was at Pugh's mills on Wednesday evening, and made arrangements to have the high-water mark made, and those gates drawn which were operating in 1822, the driest season we ever experienced there. The canal being covered with ice on Thursday morning, all the wheels were put in motion indiscriminately. Mr. Pugh stated that the canal had very nearly the same supply at this time as in 1822. The late freshet has washed *gravel and sand* into the head of the canal and head-gates, which prevented the passage of water into the canal. The spill above the head-gates allowed a free escape to the water, and several spills below the head-gates were discharging freely when the saw-mill gate was closed. While the saw-mill was operating, but little water escaped over the lower spill.

The wind blew fresh up the canal during most of the first five experiments. It subsided in a great measure while the last were going over. Finding great irregularity during the first five trials, I desisted, and on examination it was found to proceed from the operations of the saw-mill, alternately running and stopping.

Pugh admitted that the saw-mill was stopped entirely in 1822, and said he had directed that when the saw-mill was running this morning one of the other gates should be shut. Mr. Malin then proceeded to fix the gates at specific heights. The saw-mill was stopped entirely, and after an interval of near half an hour we recommenced the experiments. When all was finished, Mr. Pugh stated that an alteration had been made in the gate since 1822. They now had three gates at the mill, when they then had but two. He thought that the three used less water; that the alteration was made to save water.

Mr. Malin was directed to measure the apertures of the gates on Friday morning, fixing them at the same height as he had placed them on Thursday, and measure the head, after it had been reduced to the marks made on that day, and also ascertain, if practicable, the nature and extent of the alterations in the gate since 1822.

PITTSBURG, ALLEGHANY COUNTY, PENNSYLVANIA.

[The correspondence respecting this site has been copied from the report of the commissioners.]

We, the undersigned merchants of Pittsburg, certify that the following are the cost and facilities of transportation to and from Pittsburg, and the price of iron and castings at the same place, viz: the transportation of bar iron by land from Huntington, $20 to $25 per ton, and by water, $15 to $20. In the winter and spring bar iron can be purchased for $100 per ton of 2,240 pounds, and castings at all seasons for $50.

Established freight of steamboats last season, say from February to July: Cincinnati, 45 cents per 100; Nashville, $1; Louisville, 50 cents; St. Louis, $1 to $1 25; Shawneetown, 75 cents; New Orleans, 75 cents to $1. Said freights were for dry-goods and groceries. Heavy goods (say cast metal) could be had for about one-half to one-third less freight. Freight to Waterford, within 13 miles of Erie, in the spring season, 50 cents per 100 pounds. There being a number of steamboats owned here, the competition will be great, and can be had at all times when the river is navigable on the most moderate terms; and for any *post* on the western waters, in low water, there is constantly an abundant supply of good keels on reasonable terms.

		ALLEN & GRANT.

OCTOBER 25, 1823.

PITTSBURG, *October* 25, 1823.

SIR: At your request, I have made a statement of some facts within my knowledge of steam works. The steam engine and boiler in my paper-mill have been in use eleven years, during which time the factory has done full work, without the loss of any time, making in value about $275,000 worth of paper, and the power of the engine would run three pairs of 5-feet burrs. The expense of fuel is about $300 a year, running twelve hours in the day, and the expense of repairs about $50 a year. The engine and boiler, I think, may be equally good for ten years to come.

I could now procure a similar engine and boiler, all complete, with appendages and fly-wheel, for $1,500. When I was about erecting this factory I had a predilection for water power, and travelled through Ohio and Kentucky in search of a situation combining the advantages I wished; but not being able to satisfy myself, I adopted steam power, and from the experience I have had, I do say, without hesitation, that it is, generally speaking, entitled to the preference.

Respectfully,

J. PATTERSON.

WILLIAM WILKINS, Esq.

PITTSBURG, *October* 27, 1823.

GENTLEMEN: I received your circular, and humbly beg leave to submit the following facts: Mr. Rollins's mill and nail factory is propelled by a Columbian steam-engine of 70-horse power, which, with ease, is capable of performing the following work all at the same time, viz: rolling and slitting heavy

bar iron into small nails; rolling heavy bar iron into hoops, or rolling heavy slab to boiler iron; working a pump that brings water from the Alleghany river, to supply the engine and for other purposes, a distance of 400 yards, and raising it 26 feet above the level of the river; driving eleven machines for cutting nails, five large grindstones, and three pairs of shears for cutting iron. During the last three years I made between 800 and 900 tons of cut nails, and rolled from 1,300 to 1,400 tons of iron into different shapes for various purposes. I employ five hands in the mill, seven men and three boys in the factory, one blacksmith, one clerk, and from three to six hands making wrought nails. My coal for the same time has cost me 3½ cents per bushel, delivered into the coal house—half money, half goods, which I consider equal to 3¼ cents cash. The collier is bound to keep me in plenty of coal at all times The average quantity is 105 bushels per working day, which is used for the engines, two furnaces for heating iron, smith and nail shop, (3 fires,) and fuel for 11 families. I think the engine requires about 75 bushels. My knowledge of those things is entirely practical. I am no theorist, and therefore not capable of making close mathematical calculations; but I am decidedly of opinion that steam power, when fuel is at three times the price that it is here, is preferable to water power for any establishment of a permanent nature, and much more to be depended upon. For the last two years my works have not been stopped for repairs or any other cause more than about twenty working days. The boiler should be cleaned four times a year, which requires one day's detention at each cleaning. You can learn from the engineer what the different engines will cost—Watt & Bolton's, as well as the Columbian. I presume that the former will require less fuel than the latter, but will cost more. I am, however, under the impression that a given power can be created by steam, and maintained (in this vicinity) for a length of years, at less expense than a dam could be built and kept in repair on any stream that I have a knowledge of. You are aware of the facilities afforded in this manufacturing city for obtaining mechanics and artificers of all kinds, and of the facility of providing all materials wanted for an armory, and also of the facilities afforded by the local situation of Pittsburg for the distribution of its stores, &c.

In haste, yours, &c.,

RICHARD BOWEN.

COMMISSIONERS *appointed to procure information with regard to the establishment of a national armory.*

Answer 1. I am, and apply it to grind grain.

Answer 2. It is a 20-horse power; drives three pairs of 5-foot millstones, and frequently considerably more, such as machines for boring and turning of iron.

Answer 3. $1,500.

Answer 4. So trifling that no account has been kept of them separately.

Answer 5. $360 to $390.

Answer 6. Not one cent.

Answer 7. It varies from 10 to 15 years or more.

Answer 8. About 12 days in the year, including stoppage for packing. I have never yet seen a water power to which I would not prefer steam.

GEORGE EVANS.

PITTSBURG, *October* 28, 1823.

The pressing avocations in which the undersigned is engaged will not permit him to give a detailed or satisfactory answer to the respectable and able committee appointed by this city on the subject of a site for a national armory. He can offer such reflections as occur at the moment on the 11th and 12th questions. The number, variety, and extent of the manufactures of Pittsburg, as well as their decline, have been well ascertained and reported upon about three years ago by a committee appointed by the city for that purpose.

The excess of imports beyond our exports, for some years after the war, produced a total prostration of our manufactures and manufactories. The ruin of this class was quickly followed by distress and difficulty among the agriculturists and mechanics, and gradually to all classes of society. The bank notes of the interior were found not to answer the purposes of commerce; hence the rapid flight of the precious metals and the depreciation of bank notes. The importance and necessity of home manufactures to supply the comforts and necessaries of life became more apparent as the means of purchasing foreign goods were drained and exhausted; hence, for the last three years, our home manufactures and domestic industry, particularly in this city, have gradually and steadily increased. These remarks are adduced to show that the late increase of manufactures is of a permanent and growing character. Few places in the United States possess the same advantages as Pittsburg for the location of extensive manufactories of iron, wool, and cotton. The materials for these grand staples are on the spot, or within the reach of water conveyance, without being exposed to the vicissitudes of war. New iron-works are now building, and from the success of that which has been in operation for some time, and the combination of skill and experience employed in the manufacture of iron, we may safely conclude that bar, slit, and rolled iron can be supplied, of an excellent quality, and equal to the consumption and demand. It is the opinion of many that such improvements can and will be made in that article in this place as to preclude the necessity of resorting to the Juniata Works; at all events, the quantity of iron made here will always have a tendency to keep down the price of Juniata iron at least as low as it can be bought in any of the Atlantic cities. The same remark applies to all kinds of castings, either for machinery or munitions of war, all of which can be supplied cheaper at Pittsburg than at any other point on the western waters. During the war the raising of sheep and growth of wool progressed rapidly, as well as the manufacture of that important branch.

The undersigned manufactured for the United States army one thousand suits of woollen clothing, complete, from the raw materials, in upwards of ten months, during the war. Although this manufactory has been suspended, and many valuable merino sheep have been destroyed, yet the growth of wool and increase of sheep and woollen manufactories have been very considerable these last three years. As soon as Congress shall afford the same protection to woollens that has been extended to coarse cottons, there is

no doubt but skillful manufacturers may engage in the business as successful competitors to the Yorkshire and Lancashire factories in woollen goods. The climate, situation, and soil of the country, in this vicinity, is peculiarly favorable to raising wool, and there is now a surplus, at a very low rate, waiting for the skill and capital of enterprising men, who might soon be able to supply all our wants in the woollen line, and have an increasing surplus for exportation and exchange for the cotton of the south. The new works which have been erected in this vicinity for the manufacture of cotton, and others in the neighboring town, afford a sufficient evidence of the stability and increase of the cotton business. The raw materials always within reach of steamboat navigation, uninterrupted by war, (as is the case on the seaboard;) the price, on an average, full as low; fuel, labor, and provisions less; who can doubt that the manufacture will be extended at Pittsburg, in a short period, to supply every demand? It is evident, then, that besides the facilities of transportation to all the regions in the west and north which no other place possesses on the western waters, Pittsburg affords the means of supplying all the military stores and clothing for an army on the spot, as well as the materials for the manufacture of arms and forming a military depot. The improvement in the steam engine will probably render it unnecessary to incur the expense and hazard attending the erection and repair of water works for the use of a national armory. In fine, the situation, the abundance of materials and manufactories, the number of skillful and industrious mechanics, the low rate of fuel, provisions, and labor, lead irresistibly to the conclusion that, for a site for a national armory and military depot, Pittsburg stands unrivalled on the western waters.

GEORGE COCHRAN, of Rd.

NOVEMBER 4, 1823.

SIR: I annex answers to the questions proposed by the committee:

1st. My engine is employed to work a six-rate paper mill.
2d. Computed at 28-horse power, and would drive at least four pairs of millstones.
3d. About $2,000.
4th. About $75.
5th. About 100 bushels of coal per day, running 24 hours, which cost about $1,050.
6th. Nothing, if I have a good engine and good water.
7th. Fifteen to twenty years.
8th. Ten days annually. My engine has uniformly been in operation 300 days in the year.

I am your obedient servant,

J. H. LAMBDER,
For HENRY HOLDSHIP.

Hon. W. WILKINS.

PITTSBURG, *November* 4, 1823.

SIR: In answer to the foregoing questions, we state—

1st. That we are the owners of a steam engine applied to the manufacture of paper.
2d. It is an 18-horse power, capable of driving three pairs of 5-foot burrs.
3d. Such an engine could now be procured in this place for about $1,200.
4th. Our annual cost of repairs, confined to the steam engine and boiler alone, is about $50.
5th. Our annual expense of fuel, running 12 hours in the day, is about $300.
6th. We would not give five dollars a year for insurance against bursting the boiler.
7th. Our engine has been in constant run for eleven years, and we think it may last as many more.
8th. We have so managed it about any little repairs as to lose no time since we have been in operation.

Respectfully, &c.,

J. PATTERSON & CO.

WM. WILKINS, Esq.

Dimensions of steamboat Pennsylvania.—Length, 109 feet; beam, 18½ feet; hold, 6 feet, ship-carpenter's measure. The Pennsylvania is registered at Louisville 130 tons. Cost of the engine, $3,500; cost of boat, $3,500; extras and furniture, $2,000. Total, $9,000.

Dimensions of steamboat Eclipse.—Length of keel, 117 feet; beam, 18½ feet; hold, 7 feet, ship-carpenter's measure. Cost of engine, $3,600; boat, $3,600; furniture and extras, $2,000. Total, $9,200.

The Pennsylvania was built in 1822. The Eclipse was built in 1823.

JESSE HART,
For J. & A. HART.

PITTSBURG, *December* 19, 1823.

The steamboat "The Pittsburg" cost at this place $9,000, by contract, of which the engine cost $4,000. She is 105 feet keel, and 20 feet beam, and 6 feet hold.

The steamboat Pittsburg and St. Louis Packet cost $13,000, of which her engine cost $3,500. She is 105 feet keel, 20 feet beam, and 6 feet hold; her tonnage is 140 or 150 tons; 100 tons burden after engine and fuel are aboard.

"The Phœnix" cost between $11,000 and $12,000, of which her engine cost $3,500. She is 110 feet keel, 20 feet beam, and 7 feet hold.

WILLIAM WILKINS.

Mr. ———'s engine.—Cylinder, 14½ inches diameter, 27 inches stroke, 35 strokes in a minute; boiler, 19 feet long, 30 inches diameter; with boiler 11 feet, and 30 inches diameter, produce some effect with flues through them. Effect: carries three pairs of 5-feet millstones and turning apparatus equal to one pair of millstones. The steam used when all are going is equal to 100 pounds to the inch.

GENTLEMEN: I can vouch for the correctness of the following statements respecting the engine and operations of the Phœnix factory of Adams, Allen & Co:

The engine is of 40-horse power, or greater at pleasure, and will turn, at the usual heat, five pairs of mill-stones, of four and a half or five feet diameter. The cylinder is 15 inches in diameter, and piston of 4 feet stroke. The power above-mentioned, as usual, is calculated upon a pressure of steam of 40 pounds to the square inch. The boiler will bear, if required, 200 pounds pressure to the square inch with entire safety, and therefore the engine may be used to perform much heavier work than is above stated. Her cost about one year since, including a force pump and iron water pump to the depth of a 30-feet well, (from which the water is supplied regularly for the boilers,) main shaft, condenser, and transportation and erection in full operation, was $2,400. If any variation in price would now be found it would be a reduction, as castings have been reduced in price. She consumes fifty bushels of coal per day, delivered at three cents per bushel. This supply also effects the heating of the factory in winter.

We are delayed to clean boilers six quarter days in each year, at which time all the necessary repairs of a good engine may be effected. We have not been delayed or interrupted at any other time during the last year, and with proper attention and observation never will be. Whatever becomes defective may be observed, and the necessary repairs so prepared as to attach them in a short time, the fastenings and fixtures being generally by screws and nuts. We regard the uninterrupted operations of our work as an advantage over any water mill in the western country—equivalent to from ten to fifteen per cent. profit; so decided an advantage, indeed, that if the Allegany river, with sufficient head, was turned along our front doors, we would not exchange our steam power for the water; and of this opinion is every practical engineer among us.

At the pressure of forty pounds to the square inch upon ⅜-inch Juniata boiler iron, we affirm there is no danger whatever of bursting the boiler, and would not think an insurance against their explosion worth the scrivener's charge for the policy. The only consequence, indeed, of bursting, would be the extinguishment of the fire and the delay of the engine for a few hours; but the burning of the boiler plates can always be observed long enough before danger is to be apprehended, and any injury completely obviated by anticipation.

The expense of the repairs during the last year has not been five dollars, and I am confident that twenty dollars per annum for the next ten years would be a liberal estimate. Of this, however, and the duration of the engine, those of more experience and time in this business will better satisfy you. This engine is constructed for the operation of 300 spindles, the carding and other necessary preparation machines, turning and polishing lathes, fluting engines, grindstones, &c., &c., for preparing and building cotton machinery; twenty-four power looms, and will undoubtedly have extra power.

The main factory, three stories high, 35 feet by 120 feet, is heated by the escape steam, driven into iron pipes and plates, and the pipes being erected there is no further expense for the warmth of the factory. This mode of heating removes almost every cause of alarm from fire and motives for insurance; no accident could happen from that source if we work only in daylight.

JAMES S. CROFT,
For ADAMS, ALLEN & CO.

PITTSBURG, *December* 13, 1823.

In answer to the annexed interrogatories we will remark, in order, as follows:

1. That the price of flour has varied within the last three years from $1 50 to $4 50 per barrel; that its value here depends in a great measure upon its value on the seaboard. The price we may say generally to be from $3 to $3 25 less than at Philadelphia or Baltimore, as that amount should be estimated for transportation and charges In 1822 we had several hundred barrels delivered at $2 25 and $2 50, (fine and superfine,) under contract the preceding fall. Since that time little has been sold for less than $3, and in particular times of drought it has been for a few days as high as $4 50, owing to the want of water at the country mills.

2. Purchase of corn can be effected in ordinary seasons at a fair price, varying from 20 to 25 cents; in others not so favorable, from 25 to 30 cents.

3. Bacon of a good quality has varied in price from the last three years from 3½ to 6 cents. In 1820 we believe it was not below 6 cents; in 1821 from 4 to 6 cents; in 1822 from 3½ to 5 cents, it was purchased at 4½ and 5 cents; but as the season advanced and holders became alarmed, large quantities were forwarded to the seaboard; a scarcity was created at home, and the price rose to 6 cents, which it pretty generally held throughout the season. Supplies to any reasonable amount can be had in each year, if attended to in proper season, at a price varying from 4 to 5 cents.

4. Fresh beef of a prime quality can be procured in our market in the fall season at a price from 2½ to 3 cents per pound, and a good quality of inferior fed from 2 to 2¼ cents. Few markets, probably, in the United States afford a finer beef market, either in regard to price or quality. Choice pieces of prime beef are always to be had at our butchers' stalls for 5 cents.

5th. Large purchases of pork were made, during the last and preceding year, at from 2¼ to 2½ cents per pound, and, we believe, some smaller quantities of prime quality brought last year as high as three cents. This year we have not heard of any large purchases, making the price of that now brought into market vary from two and a half to three cents.

6th. As regards the price of pickled pork, we are not prepared to answer, as very little pork is salted with us for sale in the brine.

7th. Of beef there is still less pickled than of pork, but the price of each may be estimated from that of the articles when fresh.

8th. Of cord wood but small quantities are ever brought to this place, coal being so much cheaper and so generally used for all purposes of fuel. It brings $1 25 to $1 50 per cord on the beach, commonly a mixture of hickory, oak, maple, and dry beach; but large quantities, we have no doubt, could be contracted for at one dollar per cord, and probably less.

11th. Contracts for 8 by 10 window glass, of a good quality, can be made at four dollars per box of 100 feet. The retail price by the single box is from $4 12½ to $4 25.

In regard to the remaining interrogatories we give a reference to Mr. John K. McNickle, whose answers will be found below.

J. W. BIDDLE & CO.

The prices of nails, 4d, eight cents; 8d and 10d, and upwards, six cents per pound; wrought nails, 10 cents to 12 cents per pound; charcoal, four cents per bushel; pit coal, three cents per bushel; iron castings, for machinery, three cents per pound; refined Juniata iron, per ton, $100 to $110.

J. K. McNICKLE.

SIR: In answer to yours of the 17th instant, we reply that a steam engine, to drive four pair of five-feet stones, will cost as follows:

The engine, or such a one as at the cotton factory, on this plan	$2,500 00
The fly-wheel and main shaft, if weighing five tons, extra	500 00
Cast iron being used for the journals to run on; if brass be used, additional	55 00
The timber will cost you about	50 00
Brick-work	200 00
The foundation generally	75 00
	3,380 00

The house, if one be required, should be about 20 feet by 30 feet, two stories high; carpenters can best estimate it. An engine set up with power to drive three pair of five-feet stones will be as follows:

Engine	$2,000 00
Fly-wheel and shaft, if weighing four tons, and put up, and cast-iron boxes used	420 00
If brass, extra	50 00
Timber, about	45 00
Brick-work	175 00
Foundation generally	65 00
House 17 by 30 feet, two stories	2,755 00

Your questions, in detail, it would be almost impossible to answer with any degree of correctness or benefit to you. We could only do it by a laborious set of calculations, having never kept an account of the precise weight of the parts as detailed in yours of the 17th, but we will annex a few general prices per pound.

NOTE, in pencil.—Messrs. Evans & Stackhouse state that, by adding one-fifth to the expense, the engine will be made sufficiently powerful, working 30 pounds to the inch.

Captain G. TALCOTT.

PITTSBURG, *December* 27, 1823.

GENTLEMEN: Below you will find an answer to your request of the 24th December. If it is in our power to give any further information you may command it. Your recapitulation calls for steam engines to equal the following water powers, together with the dimensions and cost of each.

Water power.—124 cubic feet per second, issuing under an eight-foot head, is = nine pair five-feet millstones, or four boilers 20 feet long, 30 inches diameter, 20-inch cylinder, five feet stroke; cost, $4,000.

120 cubic feet per second, and eight feet head = eight pair five-feet stones; or steam engine four boilers, 18 feet, 30 inches diameter, cylinder 19 feet, five strokes; cost, $3, 600.

75 cubic feet per second, and 10 feet head = 6. 6 pair five-feet stones; or a steam engine of three boilers, 20 feet diameter, cylinder 17 inches, five-feet stroke; cost, 3,000.

60 cubic feet per second, and eight feet head = 4. 3 pair five-feet stones; or a steam engine of three boilers, 16 feet, 30 inches diameter, cylinder 14 inches, five-feet stroke; cost, 2, 500.

These engines are rated at an average load of 30 pounds to the inch, and are therefore capable of much greater exertion with perfect safety.

Yours, respectfully,

MARK STACKHOUSE.
GEORGE EVANS.

PITTSBURG, *May* 18, 1824.

SIR: Agreeably to your request I now furnish you with a description of my lands near Pittsburg, together with the terms upon which I would convey the same to the United States, in the event of its being selected as a site for the western armory.

I presume it is not unknown to you that I have already handed in proposals for the transfer of Brighton's iron works at the middle falls of Big Beaver, and that it is generally believed the commissioners will report in favor of that situation. Should, however, a preference be given to steam power, Pittsburg, it is well known, presents advantages unequalled in the western country; and, provided the general government should think proper to establish the armory in the vicinity of Pittsburg, many excellent sites can be obtained; but none, I believe, combining so many requisites as the lands I am about to

offer. I own about 300 acres of high, dry, rich bottom land, on the south side of the Monongahela river, adjoining Birmingham, and less than one mile from the city. Back, and adjoining on the south, I have about 500 acres of what is called coal hill, and first-rate upland. On the river there are first and second bottoms or benches, affording the most pleasing sites for building. The coal hill also rises in benches or table-land, presenting a great variety of elevated buildings thereon, with extensive views of the city and surrounding country. The upland, not under improvements, is covered with the most valuable timber. It also abounds with limestone, first-rate building stone, together with one continuous stratum of stone coal under the surface of almost every acre of it. It is also supplied with many permanent springs, several of which can be led to the river, from the face of the coal hill. The low land produces building sand and brick clay in great abundance. The ague and fever, as well as other local diseases, are unknown among the inhabitants.

When everything is taken into consideration, I presume the land I offer is worth one hundred dollars per acre. If considered otherwise, I shall be willing to submit the valuation to competent persons chosen by the government and myself.

Very respectfully, your obedient servant,

O. ORMSBY.

HENRY BALDWIN, Esq.

PITTSBURG, *April* 10, 1824.

The first steam engine was erected in Pittsburg in 1809. It was made in Philadelphia, and brought over the mountains by Mr. Oliver Evans and others, and put up to drive a flour mill. It has since been replaced by another, upon an improved construction. They were called 20-horse power, worked by strong steam. The next was brought over from Philadelphia in the winter of 1810–'11, and was put up to drive a manufactory for drawing of wire, and was kept in operation until the close of the late war, and has since been abandoned as unprofitable. It was called 6-horse power, worked by strong steam. In 1812 a sufficient foundry for making of castings, and a manufactory for making of steam engines of any required size and power, was started by Messrs. Evans, Stackhouse and Rogers, and continues in operation upon an extensive scale. There are now in operation, in this place and its immediate vicinity, twelve steam engines, exclusive of three that have been abandoned; all upon the principle of strong steam except one of those abandoned, which was called an improved plan of the Bolton & Watt engines, but was so imperfect as to ruin the owners, and at last sold for old iron. There are now in operation 3 steam engines of 80-horse power each, = 240, for driving of forges and rolling mills; 1 steam engine of 40-horse power, = 40, for driving of forges and rolling mills; 4 steam engines of 20-horse power, = 80, for grinding of grain; 2 steam engines of 20-horse power, = 40, for paper mills; 1 steam engine of 60-horse power, = 60, for cotton factory; 1 steam engine of 20-horse power, = 20, for cotton and woollen factory, and other machinery—all made in this place. Two others are going into operation for iron works and other machinery this summer, one of which is now nearly completed.

The above engines are all rated below their real power from 5 to 10 per cent. Every part of the engine is made in this place; the wrought iron part from bar iron, and plates for the boiler, procured from the forges on the Juniata; the castings from pig metal made at the blast furnaces in the adjoining counties; the brass work from copper and zinc imported, which is about 1½ per cent. on the cost of the engine. The files and steel which are used in the construction of an engine are also imported, and amount to about one-half of one per cent. of the cost of an engine.

One of the engines for driving a rolling-mill was erected in 1812, and cost thirteen thousand dollars. In 1821 they had to procure a new set of boilers; the old ones were destroyed by an explosion, which is believed took place through the neglect of the person who had the care of the engine, in not keeping her boilers supplied with water.

The engine that drives one of the paper mills was erected in 1812, and has been continued in operation ever since, without any material repairs except the brass work, valves, &c., which repairs were about 3 or 4 per cent. on its original cost.

The two steam engines last under my care and superintendence were estimated at 80-horse power each, but in reality was considerably more when the steam was raised to sixty pounds on each circular inch of the piston. The different parts were made sufficiently strong to bear that pressure. The cylinders are 20 inches diameter each, with length of stroke 5 feet, moving with a velocity of 220 feet per minute, or thereabouts; four cylinder boilers of wrought iron to each engine, $\frac{3}{16}$ of an inch in thickness, 20 feet in length, and 30 inches diameter. They were made and put up in the years of 1817 and 1818, and cost eleven thousand dollars each. I had the care of them until June, 1821, when I sold my interest to the present proprietors. During that time there was no stoppage by accident so as to cause any material loss or delay in the operations of the machinery except one. The severe frost bursted one of the supply pipes, and it took one day to repair it, which would not have taken place had the engine house been tightly closed and the pipes lapped round with some non-conducting substance, which the cylinder and pipes of all engines ought to be.

Both the engines and every part of them were made at this place. The cylinders required packing once in about three months, and required about one hour, and could be done as well in the night as day; took two hands during that time, and cost in hemp, tallow, and oil, about one dollar and seventy-five cents for each cylinder. The boilers were also cleaned and examined once in three months, which required about eight hours' labor, two hands, and was done at such times as prevented any delay in the operations of the machinery. These engines did not take more, on an average, than 32 bushels of stone coal in 12 hours each for constant work. At first we had to pay $2 per day for attendance for each engine; after the two first years we had them attended to for $1 50 each. Now good hands can be had for one dollar per day each. The entire cost of each engine, including fly-wheels, engine-house, incidental expenses, &c., was some little over $13,000, exclusive of any part beyond the fly-wheel and shaft. The same can now be made in as perfect a manner for one-third of that sum.

The annual stoppages or delays for each engine did not exceed two days, and the daily expense for each engine was, as near as I can state:

For wages, $2 per day; coal, 32 bushels, at 7 cents, = $2 24	$4 24
Oil or grease, 10 cents; smiths' work, 20 cents; incidental, 10 cents	40
	4 64

The daily expense at this time for an engine of 80-horse power would be:

Wages for attendance, $1 per day; coal, 32 bushels, at 3 cents, = 96 cents	$1 96
Oil, 8 cents; smiths' work, 10 cents; incidental, 10 cents	28
	2 24

Including the packing of cylinder.

The above is sufficient to defray any expense that may occur for the first five years, with a careful engineer. After that it might cost, say, double—not more—during the next five years, or until new boilers would be required, which would probably be twelve to fifteen years with good water. When the old boilers are to be replaced by new ones it may be done in two days, by having everything belonging to them in a proper state of readiness. The brass and other small moving parts that may wear out in five to seven years can conveniently be replaced without any loss of time. The more costly parts, such as cylinder and piston parallel motion, will last fifty years, perhaps longer. I would remark that when an engine is kept in operation night and day, Sundays and all, there would be, perhaps, seven to eight days in the course of the year required for repairs. It requires about four and a half cords of good oak wood to be equal to thirty-two bushels of good stone coal for a steam engine working with strong steam. There is not so much difference when low steam is used.

Cost of a steam engine of 80*-horse power, in the year* 1815.

Four boilers, weight 7,800 pounds, at 45 cents per pound	$3,510 00
One cylinder, weight 2,100 pounds, at 25 cents per pound	525 00
Piston and rod, weight 312 pounds, at 33 cents per pound	102 96
Wrought iron work, such as parallel motion, coupling and pitman, iron and working gears, weight 2,150 pounds, at 25 cents per pound	537 50
Screw-bolts and nuts, weight 475 pounds, at 25 cents per pound	118 75
Side pipes and feed pipes, weight 1,800 pounds, at 8 cents per pound	144 00
Castings for boiler, grates and bars, &c., weight 4,800 pounds, at 7 cents per pound	366 00
Cylinder bottom and lid, and seat and crank, weight 2,700 pounds, at 8 cents per pound	216 00
Castings for lever beam, weight 1,100 pounds, at 8 cents per pound	88 00
Castings and wheels for working gear, weight 550 pounds, at 8 cents per pound	44 00
Castings for cold water pump and force pump, weight 4,600 pounds, at 8 cents per pound	368 00
Drilling, chipping, and filing up castings, two hands, 75 days each, at $1 50 per day	225 00
Lever beam and pitman	150 00
Seventy M. brick, at $8 per M., = $560. Laying brick per M., $2 50, = $175	735 00
Making patterns for castings	750 00
Valves and valve seats, weight 420 pounds, at 75 cents per pound	315 00
Brasses for moving part, weight 85 pounds, at $1 per pound	85 00
Cost of engine house	1,250 00
Timber for putting engine on and securing the same	200 00
Putting up engine, two hands, 35 days, at $2 per day each	150 00
Fly-wheel and shaft, weight 23,000 pounds, at 7 cents per pound	1,110 00
Putting up or hanging fly-wheel	120 00
Masons' work, 300 perches of stone work, stone and mortar included, at $1 50 per perch	450 00
Incidental expenses	350 00
Superintendence	1,500 00
	13,680 21

Cost of a steam engine of 80*-horse power in the year* 1824, *at Pittsburg.*

Four boilers, weight 7,800 pounds, at 12½ cents per pound	$975 00
Cylinder, weight 2,100 pounds, at 8 cents per pound	168 00
Piston and rod, weight 312 pounds, at 18 cents per pound	336 96
Wrought iron work, such as parallel motion, coupling and pitman, iron and working gears, weight 2,150 pounds, at 12½ cents per pound	268 75
Side pipes and feed pipes, 1,800 pounds, at 4 cents per pound	72 00
Screw-bolts and nuts, weight 475 pounds, at 12½ cents per pound	59 37½
Castings for boiler, weight 4,800 pounds, at 3 cents per pound	144 00
Cylinder bottom, lid, seats, and crank, weight 2,700 pounds, at 4 cents per pound	108 00
Castings for lever beam, weight 1,100 pounds, at 4 cents per pound	44 00
Castings and wheels for working gear, weight 550 pounds, at 4 cents per pound	22 00
Castings for cold water pump and force pump, weight 4,600 pounds, at 4 cents per pound	184 00
Drilling, chipping, and filing of castings, 2 hands, 75 days, at 75 cents per day	112 00
Lever beam and pitman	40 00
Seventy M. brick, at $3 per M	210 00
Laying of brick	70 00
Making patterns for castings	200 00
Valves and valve seats, weight 420 pounds, at 20 cents per pound	84 00
Brasses for moving parts, weight 85 pounds, at 35 cents per pound	29 75
Cost of engine house, of frame	350 00

Timber for putting up engine on	$60 00
Putting up engine, two hands, 35 days, at $1 per day	70 00
Fly-wheel, weight 2,300 pounds, at 3 cents per pound	690 00
Masonry, 300 perches, at 62½ cents per perch	187 50
Incidental expenses	200 00
Superintendence	1,000 00
	5,685 83½

The price paid at the cotton mills for an able engineer is $33 per month, say $400 per year. I have stated the price of superintendence at the sum I should be asking myself by the year for such business; but it would not require more than three months to put up an engine of that description, and three engines of the size might be put up in six months without any additional expense of superintendence.

I have been engaged in the building and superintending of steam engines constantly about nine years, and previous to the year 1821. I also assisted in building the large steam engine to supply the city of Philadelphia with water, in the years of 1802,-'03,-'04, &c., and was in that employ most of the time until the spring of 1806; and taking the experience I have had altogether, I am of opinion that one-half cent per day for every horse power of the engine is sufficient to keep it in order forever, working with strong steam. I am also of the opinion it would require three times that sum to keep in constant repair a steam engine upon Bolton & Watts's plan; the moving parts being more than double, the capacity of the cylinder and boilers being also much greater, and a greater quantity of materials are used in the construction. There is also a much greater liability to get out of order. After an engine has been abandoned the castings generally are worth as much as pig metal, and the wrought iron works as much as bar iron, except the boilers. They are not worth more than three cents per pound to work up as scrap iron. The brass will last about five years; the boilers about twelve years; the cylinders, piston, and rod, I think, fifty years. The most of the wrought iron work does not wear, there being no friction on it. Fly-wheel shaft, twenty years; it weighs 6,000 pounds. Fly-wheel, no wearing part belonging to it. Beam timber and other wooden fixtures about twelve years. The boiler fire-places will probably require three dollars of an annual expense in repairs. The steam and other pipes do not wear, and will probably last a century.

Respectfully, your obedient servant,

JOSHUA MALIN.

Colonel WILLIAM MCREE.

The prices of building materials.

1. Rough stone for foundation, per perch?
Answer. Rough stone for foundation, per perch, 75 cents.
2. Cut stone, per superficial foot, such as?
Answer. Cut stone, per superficial foot, 50 cents, plain work.
3. Steps, caps and sills, coping, &c.?
Answer. Such as steps, caps and sills, coping, &c.
4. Bricks per M., and the size?
Answer. Bricks, 8½ x 4¼ inches, and 2⅜ thick, $5 per M.
5. Lime, per bushel?
Answer. Lime, per bushel, 15 cents.
6. Pine boards, per M. feet?
Answer. Pine boards, at the river, from $4 to $6 per M. Price depending on the quality. Hauling and piling, $1 per M.
7. Pine timber?
Answer. Pine timber, at the river, from $2 to $5 per hundred feet. Price depending on the quality. Hauling the same, 75 cents per hundred.
8. Scantling and plank?
Answer. Joists, rafters, and studding, average price $1 per hundred; 2-inch plank, from $5 to $10 per M. Hauling and piling, $1 per M.
9. Oak timber?
Answer. Oak timber same price as pine.
10. Shingles, per M.?
Answer. Joint shingles, per M., $1, at river.
What are the wages of mechanics and laborers?
11. Stone masons?
Answer. Stone masons' wages, per day, 75 cents to $1
12. Bricklaying?
Answer. Bricklaying, per day, $1 to $1 50.
13. Carpenters?
Answer. Carpenters, per day, 75 cents to $1.
14. Blacksmiths?
Answer. Blacksmiths, per month, $18.
15. Common laborers?
Answer. Laborers, per day, 50 cents.
What are the usual prices of contract work, viz:
16. Bricklaying, per M.?
Answer. Bricklaying, from $1 to $2 per M.
17. Stone work, per perch?
Answer. Stone work, in foundation, &c., 50 cents per perch.
18. Plastering, per square yard?

Answer. Plastering, one coat on brick, 5 cents per yard; over laths, 8 cents per yard; twice on brick, 6 cents per yard; twice over laths, 9 cents per yard; 3 times on brick, 7 cents per yard; 3 times over laths, 10 cents per yard.

19. Painting, per square yard?

Answer. Painting, from 20 cents to 50 cents per yard, depending on the colors.

20. Glazing?

Answer. Glazing, from 4 cents to 8 cents, glass 8 x 10 to 12 x 18.

I will obligate myself to furnish the materials above named at the prices affixed.

HENRY HOLDSHIP, *Builder, &c.*
JAMES COLLART, *Stone-cutter.*
WILLIAM GRAHAM, *Carpenter.*
JOHN SAMPSON.

PITTSBURG, *December* 15, 1823.

GENTLEMEN: In reply to your circular, I make the following observations: I have for sixteen years been a practical mechanic in the use and construction of steam-engines; I am also well acquainted with the nature and use of water power.

For the great establishment in contemplation I should have no hesitation in the choice of a power. I greatly prefer steam. By adopting it as a power, you can fix your site where you please, and thus avoid all unnecessary agencies and cost of carriage. You have every advantage in the selection of workmen and material. Taking into view the cost of attending the operation of the two powers, steam appears to have the advantage. The repairs of a good steam engine will not amount to more, if it equal, the cost of keeping up a dam, race, and water-wheels. It is a power which you can at all times keep up, being entirely free from the inconveniences of drought and frost, and from the danger and interruptions occasioned by freshets, carrying away dams, &c.

In an iron establishment such as is contemplated the fuel of an engine need scarcely be set down as an item of expense, as the same fire which drives the engine may be applied to heat the iron and warm the building, &c., when necessary. The cost of a steam engine of sufficient power for as great an armory as may be contemplated would be about $4,000; or, to be more definite, its power would be sufficient to drive 12 run of 5-feet millstones. Such an engine would consume about 100 bushels of coal in twenty-four hours, and grind 60 bushels of wheat per hour. It would require 79 cubic feet of water per second, issuing under an 18-foot head, and fall equal this power. This is a great water power, and in average situations I would not for $6,000 undertake the dam, race, and water-wheels; but an engine as stated could be had for $4,000,though it is very low. Its fuel would be about $4 per day, or twenty-four hours. It would take a contract to supply and find fuel for the engine for at least 10 per cent. less than to keep a dam, race, and water-wheels.

In calculating the power of the engine, I have only taken an average of 38 pounds to the square inch, although I have long used more than double that amount with perfect safety. The more I think on the subject the more confirmed is my preference for steam. The average price of labor in Pittsburg is less than at other places, the mechanic equal to any in the United States. The wages of the best mechanics in iron average from 87½ cents to $1 25 per day; laborers, 50 cents per day. Timber is much lower here than at any other place on the western waters, and the quality as good. Of bar iron we have every variety of quality, average price from $100 to $115 per ton. Having used Russian, English, and Swedish irons, I am able to compare them with the Juniata, which I believe to be much superior. Of pig metal there is every variety of quality, the best of which I believe to be equal to that of any other place. Prices from $25 to $35 per ton. Coal can be had for 3¼ cents per bushel, and its quality is far superior to the Virginia coal carried to Philadelphia and Baltimore. Castings, 3½ cents per pound; charcoal, 6 cents per bushel; inch pine boards from $4 to $5 per thousand feet on the water, and other timber in proportion.

The iron establishments of Pittsburg are very extensive, and well calculated to aid a military depot in case of emergency.

Yours, respectfully,

GEORGE EVANS.

JAMES ROSS, &c., &c.,
Committee to meet Commissioners on the subject of a National Armory.

You are respectfully requested to furnish to William Wilkins answers to the following questions as soon as convenient:

1st. Are you the owner of a steam engine, and to what purpose do you apply it?

2d. What is the power computed as a horse power, or as capable of driving a certain number of mills?

3d. What would be the cost at present in Pittsburg of such an engine?

4th. What is your annual cost of repairs?

5th. What is your annual expense for fuel?

6th. What is the risk, or, in other words, what premium would you give to have your boiler insured against bursting?

7th. What is the durability of a steam engine?

8th. What is your annual loss of time occasioned by the interruption of your engine?

Yours, &c.,

THE COMMITTEE.

Answers.

1st. We own two engines at the rolling-mill, and apply them in the various modes of manufacturing iron from the pig. One engine is employed for the following purposes:

1. To make a blast for a refinery and for refining and melting pig iron; the density of the blast is 2½ pounds to the inch.

2. To drive a forge-hammer of the weight of 5,200 pounds.

3. To keep in operation eight nail machines, one brad-cutter, and one machine for cutting and heading

at one operation spikes from 4 to 7 inches long; two large grindstones for grinding sad-irons and tools. The surplus power of the engine is sufficient to keep in operation double the above-mentioned machinery. The blast cylinder is 3 feet diameter, 4½ feet stroke, and discharges seventy times in a minute.

The other engine is employed for the following purposes: for rolling bloom averaging 20 inches in length and 3½ inches diameter, weighing 60 pounds, into flat, bar, square, and round iron of all dimensions. A bloom of 60 pounds is rolled into flat, square, or round bars of 20 to 25 feet in sixty seconds; sheet, boiler, and nail iron are also rolled by the engine, also a pair of slitters for nail rods; three pair of shears for cutting and trimming sheet and boiler iron and nail iron, and lathe for turning heavy rolls and other articles of cast iron. This engine has surplus power for another pair of rolls, which are now ready to put up.

2d. The cylinder of 20 inches diameter, stroke 5 feet, cylindrical boiler 30 inches diameter, 20 feet long, each average pressure of the steam to each inch of the piston 38 pounds, rating agreeably to this pressure, it would be an engine of 75-horse power, but rating the power of the engine by the pressure at which most engines are usually marked, it would exceed 100-horse power; 38 pounds to the inch is a very moderate pressure. Such an engine will safely and easily drive 12 pair of millstones 5 feet diameter without straining or forcing. The cost of such an engine at present may be estimated at $4,000.

3d. The cost of such an engine at present may be estimated at $4,000.

4th. The engine, in the heaviest work, (rolling,) has been in operation five years, and the whole expense of repairs for this period has not exceeded $50, and, with the exception of the boiler, is as good as new. The other engine has been in operation four years, and the repair has not exceeded $20. The engine to which the large hammer is attached is kept in operation day and night. The other engine works only twelve hours to the day.

5th. The consumption of coal for the supply of one of these engines for twelve hours is 50 bushels, for which we pay, delivered at the works, 3 cents per bushel by contract. The supply of coal is abundant and uninterrupted.

6th. I would pay no premium for insurance against bursting the boiler, considering there is no risk when there is ordinary care and diligence.

7th. The question cannot be definitively answered. A good boiler will last from twelve to fifteen years, the other parts of the engine much longer, depending on the labor performed.

8th. The average loss of time by defects or giving way of the machinery or repair has not been with either of our engines five days in the year, and I have no hesitation in giving my decided opinion that, at the present price of fuel and steam engines, steam power is cheaper, safer, more uniform, and altogether more economical than water power. I have had experience in both.

The foregoing are my answers to the questions put to me by the committee.

Respectfully,

J. K. McNICKLE, *Agent of the Union Rolling-mill Company.*

PITTSBURG, *December* 17, 1823.

Transportation.

1*st interrogatory.* What is the ordinary duration of the period in which steamboats navigate the Ohio from Pittsburg, taking the average of several years?

Answer. Steamboats run from five to six months each year.

2*d interrogatory.* During what portion of the year is the navigation confined to keel-boats?

Answer. In general during the months of July, August, September, and October freight is sent by keel-boats, but during the present season boats were running in January, and also nearly all through July.

3*d interrogatory.* What obstructions to the navigation are experienced from ice and drought?

Answer. The only obstruction is by ice for about two months in the year, say January and February; keels run at the lowest stage of the river.

4*th interrogatory.* What are the prices of transportation in steamboats from Pittsburg to the following places and back, viz: to and from New Orleans; to and from St. Louis, Missouri; to and from Florence, Alabama; to and from Nashville, Tennessee; to and from Louisville, Kentucky; to and from Cincinnati, Ohio; to and from Wheeling, Virginia?

Answer. Freight by steamboats to New Orleans, 75 cents per 100 pounds, back $1 per 100 pounds; to and from St. Louis, $1 per 100 pounds; to and from Nashville, $1 per 100 pounds; to and from Florence, $1 per 100 pounds; to and from Louisville, 50 cents per 100 pounds; to and from Cincinnati, 45 to 50 cents per 100 pounds; to and from Wheeling, 10 to 15 cents per 100 pounds. Few or no keel-boats trade now with New Orleans, and return freight is all brought by steamboats. Some flatboats carry down flour at $1 per barrel. As for castings, such as cannon, &c., they could be sent in high water from 50 to 62½ cents per 100 pounds to New Orleans, or probably to any of the other places mentioned. Freight in keel-boats, at the very lowest stage of the river, might be calculated 25 per cent. higher.

5*th interrogatory.* What is the cost of transportation by wagons to and from Philadelphia, to and from Baltimore, and to and from Erie, Pennsylvania?

Answer. Carriage by wagons to and from Philadelphia and Baltimore fluctuates considerably. The present price to Philadelphia is $1 per 100 pounds, and from that here $2 per 100 pounds; to Baltimore $1 per 100 pounds, and from that here $1 50 per 100 pounds. Last summer it was as high as $4 from Philadelphia, and $3 50 from Baltimore, and to Philadelphia and Baltimore $1 50 per 100 pounds; to and from Erie, $1 25 to $1 50 per 100 pounds.

The foregoing are considered as fair statements.

ALLEN & GRANT.
ADAMS & HUTCHINSON.

PITTSBURG, *December* 13, 1823.

When was the first steam engine put in operation in Pittsburg?

How many engines have since been erected in Pittsburg and its immediate vicinity? How many are now in operation? What is their power, and original cost of each engine, and cost of its erection, or of such of them as you may be enabled to speak of with certainty?

When were such engines or engine made? If any one or more, or any of the component parts, were made abroad, state their original price, weight, cost of transportation, and the reason why they could not be made or procured here.

How many and which of those engines have been removed, abandoned, worn out, destroyed, or rendered useless, and at what period?

1. What are the dimensions and power of the steam engines employed in the establishment now or last under your superintendence?

2. What was the first cost of the engine, the separate cost of its component parts, and their weights, respectively?

3. When and where was it made?

4. What was the cost, including all incidental expenses attending its erection and fitting it for operating machinery?

5. What was the entire cost of the engine, including all charges and disbursements whatsoever, when ready for operating machinery?

6. When was it first put in operation?

7. How many times since, and how long each time, has it been stopped for the purpose of cleaning, making alterations, ordinary repairs, or in consequence of any accident happening to the engine, furnace, gearing, &c., or from apprehension of any such accidents? What was the whole expense attendant on such repairs, alterations, or additions as were found necessary?

8. What part or parts of the engine, its fixtures, or appurtenances, have worn out by use, the cost of their removal or repairs, and the detention, if any?

9. What has been the annual average whole amount of delays or stoppages since its erection by any occasional interruptions proceeding from the engine, and not embraced in the preceding inquiries, such as inspecting the boilers, packing, &c., and the expense, if any?

What is the daily or annual expense of the engine when in constant operation, viz:

1. For engineers, their pay, &c.?

2. Assistance, &c., if any?

3. Fuel, quantity per diem?

4. Miscellaneous expenditures, including every and all other annual disbursements which may be considered incidental to the constant operations of the engine?

What is the present price of similar engines, and of its several component parts, and the weights, respectively? What portion of it could be manufactured at Pittsburg to greater or equal advantage than abroad?

What would be the *whole* expense attending its purchase and erection, and fitting it completely for operating machinery?

What would be the whole cost and delay attending the removal of an old engine and erection of a new one in its place?

What would be the whole cost and delay of removing any one of the worn out or broken component parts and replacing it with new? And what would be the value of such worn out parts, whether as old iron or otherwise?

What, in your opinion, is the fair average duration of such an engine doing constant work for twelve hours a day, from its first erection to its abandonment as useless? And the fair average duration of each of its component parts?

What would be the value of the old, worn out engine?

How long have you owned or superintended the operation of a steam engine?

What is the salary of a competent engineer?

We shall be thankful for any other information which your experience may enable you to furnish in relation to the operation, &c., of steam enginery which may have been omitted in the foregoing inquiries.

☞ 2½ cords to 100 bushels of coal.
25 cents per load for the cutting.
$1 per cord for the wood delivered.

PITTSBURG, *July* 27, 1828.

GENTLEMEN: Mr. Baldwin, a member of your body, having assured me you would be as ready now to afford the assistance requisite to enable me to ascertain the advantages and disadvantages of this place as a site for a national armory as you had been five years ago in affording it to the commissioners who then made a similar examination for the same purpose, I take the liberty of asking you to look over your answers to the interrogatories which were submitted to you by the commissioners alluded to, and if any alteration or modification of them shall appear to be necessary to adapt them to the existing state of things, that you will make them, and do me the favor to communicate them to me at the city of Washington.

I am, gentlemen, &c.,

J. L. SMITH, *Captain Corps of Engineers.*

JAMES ROSS, HENRY BALDWIN, WILLIAM WILKINS, Esqrs., *Pittsburg.*

PITTSBURG, *July* 30, 1828.

SIR: We have the pleasure to acknowledge the receipt of your note addressed to us under date of the 27th instant, requesting us to afford the assistance requisite to enable you to ascertain the advantages and disadvantages of this place as a site for a national armory, and to look over our answers to the

interrogatories submitted to us by the commissioners engaged a few years since in the examination on this subject.

We regret that we have no copy in our possession of the interrogatories alluded to, nor of the information communicated to the board of commissioners. We are therefore obliged to beg of you to do us the favor to cause a copy to be made and transmitted to us of the interrogatories and answers. This may produce a little delay, but the possession of this paper will enable us to reply with more precision and satisfaction in relation to the important and interesting object of your inquiry.

We are, sir, very respectfully, your obedient and humble servants,

JAMES ROSS.
HENRY BALDWIN.
WILLIAM WILKINS.

Captain J. L. SMITH, *Corps of Engineers.*

WASHINGTON CITY, *August* 7, 1828.

GENTLEMEN: I had the pleasure, on my arrival here yesterday, of receiving your communication of the 30th ultimo.

I have delayed to comply with your wishes as expressed in it only until I could ascertain, by a comparison with the original report, if the copies which I had in possession while at Pittsburg were complete.

I find they are so, and lose no time in forwarding them to you herewith, and at the same time of requesting they may be returned to me when you may have no further occasion for the use of them.

I am, gentlemen, with perfect respect, your obedient servant,

J. L. SMITH, *Captain Corps of Engineers.*

J. ROSS, H. BALDWIN, and WILLIAM WILKINS, Esqrs., *Pittsburg.*

21ST CONGRESS.] No. 456. [1ST SESSION.

ON THE CLAIM OF AN OFFICER OF THE QUARTERMASTER GENERAL'S DEPARTMENT OF THE ARMY FOR EXTRA ALLOWANCES FOR MILITARY DISBURSEMENTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 29, 1830.

Mr. MCINTIRE, from the Committee of Claims, to whom was referred the petition of Thomas F. Hunt, reported:

That the petitioner, being an officer in the line of the army on the 1st of April, 1818, commenced discharging the duties of the Quartermaster's department at New Orleans, and on the 16th of June following he was regularly appointed an officer of that department, and discharged the duties thereof until February, 1826. Having failed to settle his accounts, he was relieved from his duties in the Quartermaster's department, as he says, at his own request. On settlement of his accounts at the proper department many of his claims were disallowed, and a balance was finally found against him of $5,142 93 in September, 1827. He alleges that thereupon he solicited a suit against him, that his accounts might be settled by a jury, and a suit was commenced against him in November, 1827, in the district court of Louisiana, which terminated by a verdict in his favor at the following May term of said court; and the jury certified a balance due him from the United States of $10,340 83. His accounts were accordingly balanced at the department, and he now asks to be paid the balance which the jury certified was, in their opinion, due to him. As his accounts were balanced at the department by passing to his credit the sum before found against him, without applying it to any specific charges made by the petitioner, it has left open his whole claim against the United States, and disallowed by the accounting officers. The United States claimed of him $5,142 93, and he filed in set-off disallowed charges to the amount of $16,275 82. The committee has not deemed it necessary to go into a rigid examination of the justice of every item charged in his set-off, because if he does not establish the justice of disallowed items beyond the sum of $5,142 93, he is not entitled to relief.

The first charge made by the petitioner and disallowed by the accounting officers which the committee will notice is the sum of $1,307 14, as commissions of two and a half per cent. for disbursements in the Quartermaster's department, but, as he alleges, not within the range of his duties at his station at New Orleans. There is another similar charge subsequently made of $2,338 18, both amounting to $3,645 32, which the committee will consider at the same time. These disbursements were of various kinds: partly were the mere transmission of funds through him to quartermasters at more remote or neighboring posts; some of them were in discharge of contracts made by his predecessor on that station and left unpaid; and part in discharge of contracts made by quartermasters at other posts, such as for transportation of stores or troops from other posts to those at or near New Orleans, and paid by him where the goods, &c., were delivered, and perhaps some under some other circumstances. To ascertain whether these disbursements were made under circumstances entitling the petitioner to this extra allowance claimed by him, inquiry was made of the Quartermaster General whether services of this character were considered as the ordinary duty of an officer situated as was the petitioner or not; and his answer, dated April 16, 1830, is referred to, and made a part of this report, by which it appears it was no more than the ordinary duty of an officer situated as was the petitioner, and for which he is entitled to no extra compensation. The committee is well satisfied the petitioner is not entitled to this charge, nor any part of it.

The next claim the committee will notice arises under the following circumstances: Certain claims against the United States, called war claims, existed at New Orleans or Baton Rouge, and the subject became a matter of correspondence. The petitioner was directed to receive them and send them to the accounting officers at Washington for settlement, which he did, and, when adjusted, he was furnished with funds and requested to pay them; and for this service he was allowed a commission of two and a half per cent. He charged a per diem compensation, the difference between which and the allowed percentage, up to June 1, 1821, was $985 36, at which time the new organization took effect, and by his new appointment and promotion he received $20 per month additional pay to his pay in the line. In one of his certificates he specially notices this fact, and says he makes no such per diem charge after this period; but on his final settlement he makes an additional charge of the same character of $3,356 12 for daily services in collecting and paying these claims subsequent to June 1, 1821, above the percentage allowed when his whole disbursement, during this period for these old claims, amounted to $2,235 50 only. This claim, therefore, of per diem charge exceeds the commissions received in the whole $4,341 48.

The committee forbear to remark on the extravagance of the latter portion of this claim, and its inconsistency with his declarations when he made that part of it which accrued previous to June 1, 1821. It does not appear what time the collection and payment of these claims employed the petitioner. Indeed, there is no proof on the subject. The committee would remark that, in these cases of extra compensation for extra services, where there is neither law nor regulation to guide, the heads of the departments and the chief of the bureau, under whose direction such services are performed, are better judges of what is a fair compensation than a jury or a committee of Congress can be. The committee, therefore, cannot see any reason for allowing the petitioner any further compensation for these services than he has received.

The next subject of claim is for double rations as senior officer of his department at New Orleans and Baton Rouge—$2,041; namely, at New Orleans from August 1, 1818, to January 31, 1826, $1,644 60, and at Baton Rouge from March 24, 1822, to February 14, 1824, $396 40, being, in fact, not double rations for the latter period merely, but, as it is covered by the other charge, it amounts to quadruple instead of double rations. The pay and rations of officers of the army are fixed by law and regulations. With the wisdom and equal operation of the law and regulations the committee at present have nothing to do. It is sufficient that such existed and were understood by the accounting officers, and by them acted upon. It has been a subject of complaint that these regulations as to double rations have been too far extended or too liberally construed. The committee can see no reason for extending the allowances under these regulations further than the several officers of the department and accounting officers have; and they have decided, and decided correctly as far as the committee can perceive, that the petitioner's case is not embraced by these regulations to give him his claim to double rations, much less to quadruple. The committee would here remark that the petitioner has another portion of his claim in connexion with duties at Baton Rouge, which, from the course adopted in this investigation, will not be necessary to particularize: hence, it will not be necessary to be particular as to the manner in which this charge of double rations at that post arises. The petitioner claims another sum of $433 75 for extra services in the quartermaster's and ordnance service in 1816, two years before the residue of his claim accrued, or he was in the Quartermaster's department under his appointment, and which claim was not made as far as can be discovered in his various accounts rendered, till after he was relieved from duties in his staff office; and no proof is adduced of having performed such service under circumstances to entitle him to extra pay. The committee can see no reason to allow that claim.

The last charge which the committee will notice is the sum of $1,352 91 for interest on the several sums by him claimed, from the time they were rejected to the time of service of process upon him, considering their rejection as equivalent to non-acceptance of a bill of exchange by a drawee when in funds. It is unnecessary to notice this charge any further, if the committee be correct in its foregoing conclusions, because in such case there would have been nothing due to the petitioner on which to raise this charge of interest, unless he makes it on those rejected, which constituted the balance for which he was sued, and which by the verdict of the jury has been adjusted. The committee believe it to be unnecessary to go into that question, or to investigate the other portions of the petitioner's claim, as those would not, if all just, amount to the balance which has been cancelled by that verdict. So far as is above investigated, the account would stand as follows:

Charge for per diem on paying war claims	$4, 341 48
Percentage on disbursements in Quartermaster's department	3, 645 32
Extra rations	2, 041 00
Extra for services in 1816	433 75
Interest	1, 352 91
Total	11, 814 46
Whole amount claimed	16, 275 82
Deduct above	11, 814 46
	4, 461 36
Less than balance claimed of him by	681 57
For which he is credited	5, 142 93

Of the residue of his claim, $759 84 is for extra per diem allowance in superintending the erection of barracks at Baton Rouge; $2, 703 82 for extra, as military storekeeper at New Orleans, for a time specified after the new organization in 1821; $231 84 for transportation of baggage, decided at the department as not chargeable under the regulations; and $51 88, a percentage for disbursements in the Ordnance and Medical departments; all amounting to the sum of $3, 747 37 for extra services while receiving pay of his rank in the line and additional pay in the staff, with all such other extra allowances as the accounting officers and Secretary of War considered competent and within the laws and regulations. The above amount added to the items considered by the committee will make the sum of $15,561 83, claimed by the

petitioner for extra services, including interest, transportation of baggage, over the amount deemed by the Secretary of War and accounting officers (and some of which have even been submitted to the Attorney General) as equitable, lawful, and just.

The committee therefore recommend the adoption of the following resolution:

Resolved, That Thomas F. Hunt is not entitled to the relief he asks.

QUARTERMASTER GENERAL'S OFFICE, *Washington City, April* 16, 1830.

SIR: I have just received your letter dated yesterday, and have the honor to reply to your several inquiries as follows:

1. It is the practice to require the officers of the Quartermaster's department at certain stations, such as Pensacola, New Orleans, St. Louis, Detroit, Bangor, &c., to receive and distribute the funds required for the service of the department at the posts depending upon those positions respectively. This is one of the duties which renders it necessary that there should be an officer constantly at each of those posts, whether troops be stationed there or not. The duty is not extra, but properly appertains to the office of quartermaster, and no extra compensation is allowed or due for the performance of it.

2. It is the duty of a quartermaster to pay all outstanding debts contracted by his predecessors, provided they be properly vouched, and there be an appropriation to pay them. This is not an extra, but an appropriate duty for which extra compensation is not allowed nor due.

3. There are no permanent geographical limits assigned to particular posts to which the duties of quartermasters are confined. It is the duty of those officers to perform service at such post or posts as the Secretary of War or the Quartermaster General may direct; and there is no geographical line beyond which the performance of any duty appertaining to the department could be considered extra duty, or as entitling an officer to extra pay. A particular service, however, performed by Captain Hunt may be considered an exception. In addition to the laborious and responsible duties he was required to perform at New Orleans, he was required to superintend the erection of extensive works at Baton Rouge, about a hundred and twenty miles from New Orleans. I was authorized by the Secretary of War to inform the officer superintending that work that he should be allowed the same extra compensation allowed to the officer of the Ordnance department performing similar duty at that post. Paper marked A will show what that officer received. If Captain Hunt has not already received those allowances, he has as fair a claim as a positive understanding or contract can give him.

4. When officers of the Quartermaster's department are required in the performance of their duties to travel from one post to another, the regulations secure to them, as well as to other officers, the usual travelling allowances.

I am, sir, respectfully, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

Hon. R. MCINTIRE, *House of Representatives, Washington City.*

A.

DEPARTMENT OF WAR, *February* 27, 1818.

Until it is otherwise directed, lieutenants of the corps of ordnance shall be allowed for superintending and for disbursing moneys in the construction of arsenals one dollar a day; captains and all other officers one dollar and fifty cents a day during the time such disbursements are making.

J. C. CALHOUN.

Modification of the above order, made by the Secretary of War July, 1822.

Provided the allowance claimed shall in no instance exceed 2½ per cent. on the amount disbursed.

WM. LEE, Esq., *Second Auditor.*

Per diem as commissioners to be settled annually.—(See Secretary of War's indorsement on Major Talcott's letter of April 20, 1827.)

SECOND AUDITOR'S OFFICE, *April* 16, 1830.

While superintending and disbursing money in constructing the arsenal at Baton Rouge, Captain Richardson received a per diem of $1 50 and double rations.

21ST CONGRESS.] **No. 457.** [1ST SESSION.

STATEMENT OF THE AMOUNT EXPENDED UPON THE ARMY PROPER FROM 1821 TO 1829.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 29, 1830.

DEPARTMENT OF WAR, *May* 29, 1830.

SIR: Immediately on the receipt of the resolution of the House of Representatives of the 29th of April, 1830, directing the Secretary of War to report to that house "the amount annually expended upon the army proper from the 3d of March, 1821, to the present time;" and that he "further report the causes

which have occasioned an increase in the amount annually expended upon the army proper since the year 1825," I referred it to the Second Comptroller of the Treasury for a statement of the expenditures required, and as soon as it was received directed the Quartermaster General, Paymaster General, Surgeon General, and Adjutant General, in whose departments alone any increase of expenditure since 1825 had taken place, to report the "causes which have occasioned the increase;" whose reports, together with the statement of the Second Comptroller, are herewith transmitted in answer to the above resolution.

By comparing the reports of the Quartermaster General, Paymaster General, and the Surgeon General with the statement of the Second Comptroller, it will be seen that a small difference exists between the amounts drawn from the Treasury, as set forth in the latter, and the actual expenditures as contained in the former.

From the Quartermaster General's statement it appears that the expenditures from January 1, 1825, to January 1, 1830, have exceeded the amount drawn from the treasury, which is to be accounted for by the sales of damaged public property and rents of public buildings, the amounts for which are received by the officers and expended on account of the Quartermaster's department, without the Comptroller keeping any account thereof.

Very respectfully,

J. H. EATON.

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives.*

QUARTERMASTER GENERAL'S OFFICE, *Washington City, May* 26, 1830.

SIR: I have received your note dated the 21st instant, communicating a resolution of the House of Representatives of the 29th ultimo, requiring a report of the causes which have occasioned an increase in the amount annually expended upon the army proper since the year 1825, and I have the honor to submit a statement, marked A, of the disbursements for the service of the Quartermaster's department, under the various heads of expenditure, during the years enumerated, ascertained from accounts actually examined in this office and sent to the treasury; and, in compliance with your order and the terms of the resolution, I proceed to state the causes of the increase of expenditure as far as they are known to me.

1*st. Fuel, forage, and stationery.*

From 1825 to 1829 the expense on account of fuel had increased upwards of $9,000, forage upwards of $9,000, and stationery upwards of $2,000. The increase on account of fuel is principally owing to the increased number of supernumerary second lieutenants; at the close of 1825 there were twenty-three, and of 1829, sixty-five, (see paper marked B;) a small additional allowance to certain classes of staff and other officers below the rank of major; and the necessity of supplying fuel by purchase at several posts where the troops formerly provided themselves. The increase in forage is in consequence of the necessity of supporting an increased number of horses, oxen, &c., at the several outposts where works are in progress, the support of horses for expresses, and the allowance made by an act of 1826 of forage to assistant quartermasters. The increase in the expenditure for stationery is in consequence of a small additional allowance to the commanding officers of posts consisting of one company or part of a company; the stationery and printing for paymaster's, formerly paid from another fund, being now paid from the appropriation for the Quartermaster's department; and the books, stationery, printing, &c., required in connexion with the accountability for army clothing.

2*d. Transportation of officers, of army subsistence, and of ordnance.*

The causes of the increase of *transportation of officers* are the increased number of supernumerary second lieutenants; the increased number of officers on detached service connected with the internal improvements and entirely unconnected with the army, some of whom, in the service of the Engineer department or of a private company, have travelled in Europe at the public expense.

The increase in the expense of the transportation of subsistence is in consequence of the establishment of the posts at Houlton, Maine; Fort Winnebago, Michigan; Calcasieu, Louisiana; the posts in the Creek and Cherokee country, and the necessity of transporting from St. Louis the entire supply for the garrison at Cantonement Leavenworth, in consequence of no contract having been made for that post; that expense was likewise greatly increased in 1828 by the failure of subsistence contractors, and in 1829 by the movements made by the troops to protect the Santa Fé trade.

The increased expense for the transportation of ordnance is principally owing to the large quantities of lead received for the rent of the western lead mines, which is transported, on the requisition of the Ordnance department, to the various arsenals throughout the Union.

3*d. Rents and repairs.*

The increased expense for rents is owing to the greater number of officers on detached service at points where public quarters cannot be furnished to them, and to separating the field officers of artillery from the stations of the troops, and also to the sale of the public storehouses at New Orleans.

The expense for repairs is increased by the necessity to provide for the supernumerary officers, and also by the necessity of making extensive repairs at several of the posts, in consequence of the barracks and quarters having become so much dilapidated as to be almost untenantable.

4th. The per diem to officers on topographical duty was formerly paid, and, I think, properly, from the appropriations for the objects on which they were respectively employed; but in June, 1828, the Secretary of War directed that it should be paid from the appropriation for the Quartermaster's department. It is a charge foreign to any military operation, and one, I think, with which the army proper ought not to be taxed. The per diem to officers not of the staff superintending working parties was added at the same time; it causes an increase in the expenditure of the department.

All the other objects of expenditure embraced in statement A are of so contingent a nature, and depend so entirely upon circumstances which are every day varying, that it would be impossible to assign any general cause for either the increase or diminution of expenditure on account of them.

Most of the objects of expenditure by the department are not within the control of its officers; they

are consequently accountable only for the faithful application of the funds and property intrusted to them, and the prompt discharge of the duties required of them.

Until the accounts for the first quarter of the present year be examined, it will be impossible to say what the amount expended on account of the department has been. The statement of the Comptroller refers, probably, to the amount drawn from the treasury, part of which was for the service of the present quarter.

I have the honor to be, sir, your obedient servant,

THOMAS S. JESUP, *Quartermaster General.*

Hon. JOHN H. EATON, *Secretary of War.*

A.

Statement of expenditures in the Quartermaster's department in the years 1825, 1826, 1827, 1828, *and* 1829.

	1825.	1826.	1827.	1828.	1829.	Excess of expenditure in 1829 over 1825.
For fuel	$42,863 21	$51,694 87	$53,485 26	$55,197 79	$52,240 78	$9,377 57

R. JONES, *Adjutant General.*

ADJUTANT GENERAL'S OFFICE, *Washington, May* 25, 1830.

PAYMASTER GENERAL'S OFFICE, *Washington, May* 28, 1830.

SIR: I have the honor to report the causes of the actual increase in the expenditures of the Pay department each year since the year 1825, as follows:

Increase of 1826.

On account of supernumerary brevet second lieutenants	$14,345 00
Do. rank and file	4,050 00
Do. brevet compensation	1,266 26
Do. double rations	556 60
By act of May 18, 1826, increasing the Quartermaster's department	6,022 86
Amount of increase	26,234 72

Increase of 1827.

On account of supernumerary brevet second lieutenants		7,550 00
Do. brevet compensation		3,242 59
Do. double rations		1,248 20
By act of May 18, 1826, increasing Quartermaster's department, being the difference between the amount for the entire year and that included in the statement for 1826		3,661 14
By act of March 2, 1827, giving $10 per month to commandants of companies, and one additional ration to captains and subalterns		38,077 08
		53,779 01
Deduct decrease in rank and file		3,915 00
Amount of increase		49,864 01

1828.

Decrease in supernumerary brevet second lieutenants		8,305 00
Do. rank and file		8,685 00
Increase in brevet compensation	$1,597 53	16,990 00
Do. double rations	1,065 00	
Increase by act of March 2, 1827, being the difference between the amount for the entire year and that included in the statement for 1827	7,565 92	
		10,228 45
Amount of decrease in 1828		6,761 55

Increase in 1829.

On account of supernumerary brevet second lieutenants	18,120 00
Do. rank and file	29,655 00
Do. brevet compensation	2,000 00
Do. double rations	1,750 00
By act of March 2, 1829, increasing subsistence department	1,794 00
	53,319 00
Total amount of increase from 1825 to 1830	122,656 18

This statement differs from the apparent increase in the report of the Second Comptroller, which arises from greater amounts being drawn from the treasury in some years than in others for the payment of arrearages of previous years, and in consequence of transfers, repayments in the settlement of accounts, and settlements with individuals by the Second Auditor, of which the Pay department has no information.

In the Second Comptroller's statement the difference between the expenditures of 1825 and 1829, on account of pay, subsistence, and forage, is	$176,389 45
The actual increase stated above is	122,656 18
Making a difference between our statements of	53,733 27

arising principally from larger advances on account of arrearages in 1829 than properly belonged to that year, as shown in my report to you of the 3d of April last, and estimated at $51,000.

It was my intention to have given a more detailed statement, and shown the particular expenditures of the Pay department for the period stated, and the amount drawn from the treasury in each year on account of arrearages, which is, in part, completed; but the time allowed since the receipt of your order on Saturday last has not been sufficient.

Respectfully, your obedient servant,

N. TOWSON, *Paymaster General.*

HON. J. H. EATON, *Secretary of War.*

SURGEON GENERAL'S OFFICE, *May* 24, 1830.

SIR: In reply to the resolution of the House of Representatives of the 29th ultimo, "that the Secretary of War do further report to this House the causes which have occasioned an increase in the amount annually expended upon the army proper since the year 1825," I have to state that, with the exception of the extra expense for the employment of private physicians during the past year, (1829,) as reported to the department on the 27th of March last, there has been no increase, but a trifling diminution of the current expenses of the medical department of the army for the several years subsequent to 1825. The excess on that account during 1829 over the average of the four previous years was $2,712; and, with this exception, the current expenses of the several years were as follows, viz:

1825		$23, 303 00
1826		22, 488 00
1827		22, 821 00
1828		23, 189 00
1829	$25, 636 00	
Extra to private physicians	2, 712 00	
		22, 924 00

In consequence of the impracticability of transporting the supplies to several of the posts on the western and northwestern frontier at the usual period, after the passage of the annual appropriation bills, an extra appropriation was asked for and made in 1827, in order that the supplies for these posts might thereafter be put up in the fall of each year preceding that for which they were required; and the extra expense in that year (1827) on this account was $3,074: making the whole expense for the year $25,895.

The causes, therefore, of the increase in the expenses of the medical department during the years 1827 and 1829 above those in 1825 were the advance made in the former year for the purpose above stated, and the necessity of the employment of a greater number of private physicians in 1829.

It is estimated that the current expense of the present year will not exceed the average of the past five years, unless it be in consequence of the payments made to private physicians.

Very respectfully, your obedient servant,

JAMES LOVELL, *Surgeon General.*

Hon. J. H. EATON, *Secretary of War.*

HEADQUARTERS OF THE ARMY, *Washington, May* 25, 1830.

SIR: In compliance with your directions, I have the honor to report the causes which have occasioned an increase of the annual amount of expenditures upon "the army proper" since the year 1825, as far as regards the recruiting service.

The expenses of the recruiting service, as shown by the statement of the Second Comptroller, have been, for the years 1825, 1826, 1827, 1828, and 1829, as here below stated; and the number of men recruited within those five years, as reported by the Adjutant General, is as set opposite to the years, respectively, in which they were enlisted. The whole amount disbursed on account of the recruiting service, it will be seen by the table herewith, amounts to $156,678 17 for the five years, and the total number of men enlisted for the same period 9,413, which give an average of $16 64 per man. This average is made up of $12 bounty, $2 premium, and the residue of quarters, fuel, postage, and other incidental expenses.

Years.	Number of men enlisted.	Expense, as per statement of the Second Comptroller.
1825	1, 731	$30, 567 02
1826	1, 277	27, 214 44
1827	1, 345	26, 073 89
1828	2, 100	32, 811 84
1829	2, 960	40, 010 98
Total	9, 413	156, 678 17

21st Congress.] No. 458. [2d Session.

ANNUAL REPORT OF THE SECRETARY OF WAR SHOWING THE OPERATIONS OF THAT DEPARTMENT IN 1830.

COMMUNICATED TO CONGRESS WITH THE PRESIDENT'S MESSAGE DECEMBER 7, 1830.

War Department, *December* 1, 1830.

Sir: I have the honor to make known to you the operations of this department during the present year, and to offer such suggestions as appear to me necessary to be presented. The army, at the different positions it has occupied along our western and southern frontiers, has been engaged in preserving quiet in those quarters, and has fully succeeded. Fears were entertained of a serious rupture with some of our northwestern tribes of Indians; but the presence of a military force, and the exercise of a proper discretion on the part of those to whom the trust of reconciling them was confided, has had the effect to prevent it, and peace has been the consequence. Similar apprehensions have recently been entertained of the Indians who reside on our southwestern boundary, and precautionary steps have been taken to prevent any act of hostility. The vigilance, intelligence, and discretion of our officers induce a belief that by their exertions, these distant tribes can be retained at peace with each other. Occasional interruptions have arisen from marauding parties who range through the forest, and at points distant from our posts commit depredations; these acts in turn produce retaliation. It is important to prohibit these aggressions if possible, though no other plan can be suggested than what has already heretofore been presented, viz: an authority to employ a detachment of mounted troops. These ranging through the country at irregular periods, would do much more towards preserving peace with our Indian tribes, and quiet along our borders, than could be effected through any augmentation of our posts.

I regret to say that desertions from the army are not of less frequent occurrence than heretofore. The number for the present year will exceed one thousand. Various efforts have been made, and many theories suggested, to arrest an evil so injurious to the operations and character of an army. None have succeeded! The benevolent intention of the act of Congress of last winter, which took from the offence the penalty of death, and in obedience to the spirit of which all past offences of the kind were by you directed to be forgiven, has had no restraining, no salutary effect. I am not an advocate for the severity of penalties The hope of reward, more frequently than the fear of punishment, operates beneficially upon mankind. A resort to both might be serviceable. While penalties corresponding to the nature of the offence might be imposed upon delinquents, the faithful and good soldier should be cheered by the expectation of reward. To this end, an authority to make some reasonable compensation to those who obtain an honorable discharge should be granted. In conformity to this opinion, I would take occasion to suggest that, while some adequate punishment for so gross a violation of duty as that of abandoning a service voluntarily assumed, be imposed, it may also be provided that the soldier who serves faithfully, and is honorably discharged, shall receive, at the termination of his enlistment, one hundred and twenty dollars. Let him receive, instead of his present pay, four dollars per month, retaining the residue, payable at the end of service. The difference in expense thus created to the government, for the five years of enlistment, would be but sixty dollars; which increase it is hoped and believed, will be more than compensated for by a saving in the expenses which are incurred under the present system of restraining desertion. The amount retained always to be forfeited if at any time the soldier desert the service. It might operate as a strong incentive to good conduct, and would serve as a fund at the close of his engagement by which to establish him in some advantageous pursuit By the present mode he retires from the army dependent and poor as he entered; and often, instead of going home for a time to his family, he re-enters the army contrary to his will, his poverty and wants only consenting. Dissatisfaction takes place, and desertion presently follows.

Repeated efforts have been made to arrest this growing evil; and they should be continued so long as hope or fancy can suggest a remedy. The loss to the service is not so material. The greatest fear attendant is, that in peace the practice may become so frequent and familiar as in war to lose that odium which justly should pertain to so aggravated an offence.

Recently, by an order from the War Department, the whiskey part of the ration has been taken away with a view to ascertain how far a theory frequently introduced might be practically productive of benefit. Time, whereby to test the experiment has not been afforded; but little confidence, though, is reposed in the attempt. If the plan which I have sugges'ed—the giving some enlarged compensation to the non-commissioned officers—(to the possession of which every soldier may aspire,) shall fail as matter of remedy, I know not what other can be assayed with any reasonable prospect of success. That buoyancy which in war elevates the soldier, and leads him to the belief that, by gallantry and good conduct, he may aspire to promotion, in peace, being taken away, paralyzes his efforts. To be a non-commissioned officer is all that he can hope for or expect. To place this class of officers on some more advantageous and respectable footing, thereby to excite a spirit of emulation and good conduct amongst the soldiers, might prove highly serviceable. The subject, being one of importance, is at least worthy of consideration and experiment.

Connected with the army is the Military Academy at West Point. The beneficial effects which have been derived to the country already, and the more enlarged ones which are in prospect, derivable from this valuable institution, render it matter of importance that it should be maintained upon its present liberal plan and principles. The educating of two hundred and fifty young gentlemen, selected from every State of the Union, cannot fail to carry with it advantages and benefits correspondent to the demands it produces on the treasury. But apart from this, the education obtained there being of a military character, the benefits diffused through every section of our country cannot but prove highly beneficial when our country shall be involved in war. The information which is acquired there is carried to the several States; these young men become officers of militia; and in time, through the means thus afforded, something approaching to uniformity in the discipline of our militia may be expected. The able report of the Board of Examiners at the last commencement, and which accompanies this report, will present in detail the progress and advantages of the institution.

By the act of 1818, the President of the United States is directed to confer upon the graduates of this academy the appointment of brevet lieutenants. Already there are eighty-seven supernumerary officers thus created, and who cannot now be provided for in the line of the army. In June next there will probably be thirty-three more added, which will produce an excess of fourteen over the number authorized. The law prohibits the brevet appointments of a greater number than one hundred and six—one for each company; of course, upon a reasonable calculation, but few, if any, of the cadets, after June, 1831, will be entitled to a brevet commission. I would respectfully suggest if some rule different from the present be not necessary to restrict for the future brevet lieutenant appointments, retaining only so many as might supply the probable vacancies which would occur within the year. The number of promotions to the army from this corps for the last five years has averaged about twenty-two; while the number of graduates for the same period has been at an average of forty. This excess, which is annually increasing, has placed eighty-seven in waiting until vacancies shall take place, and shows that in the next year probably, and in the succeeding one certainly, there will be an excess beyond what the existing law authorizes to be commissioned. There will then be one hundred and six supernumerary brevet second lieutenants appurtenant to the army, at an annual expense to the government of $80,000.

In the Engineer department important operations, as regards the internal improvement of the country, have been in successful progress. The advantages to our commerce from the improvements which have been made in the navigation of the Mississippi and Ohio rivers have already been sensibly felt; and great good to the community at large is to be anticipated from further efforts to be made. The experiments begun, and in some respects completed, show that, at an inconsiderable annual expense, the Ohio river may be cleared of its bars and shoals, so as to afford a convenient and safe navigation at those seasons of the year when heretofore it has been considered impracticable.

This subject well merits the attention of the government. These rivers pass through an immense and fertile region of our country, and contribute their products essentially to advance our commercial interest. An inconsiderable expenditure from the public treasury will have the effect to give security to a commerce which at present is carried on at much hazard, and, by diminishing the insurance at present required, and preventing losses, speedily to reimburse to the community the cost which has been incurred or expense which may be required. At present the imports to the west are mainly through these rivers, and the export trade almost entirely. Usually for six months in the year one of these (the Ohio) ceases to be useful, because of the numerous obstructions and consequent hazards which are presented at those times when the waters are materially reduced. The inconvenience and risk thus felt are susceptible of such easy remedy and at so small an expense, that it becomes matter of surprise that improvements so important and valuable to a large community should have been so long overlooked or neglected. The necessity of improving the navigation of these rivers for commercial purposes all admit; of the practicability of effecting it none can doubt. The experiment lately made, through a most difficult obstruction at a place called the Grand Chain, conclusively tests the feasibility of improving other places; and shows that the expense will be inconsiderable. As it regards this branch of the subject, however, it appears to me that the importance and value of the thing to be done is of infinitely greater consequence than any apprehension of charge which it may occasion to the treasury.

The breakwater situated at the mouth of the Delaware river is another valuable improvement, which, within the last year, has been rapidly progressing. The work has already risen above the water, and furnished evidence of its importance to our commerce. During the violent gale of last September, several vessels which lay under the protection of this work were preserved. The force of the sea being broken by its opposition, they were enabled to keep at their moorings and to ride out the gale in safety Fifteen other vessels in view, not possessing the advantages of this position, were driven on shore and lost, or gotten off at much expense. A few years will complete this valuable work. The attention it has received since it was placed in charge of the Quartermaster's department by your direction, and the advantages already derived from it, give proof of the propriety of its completion, and of the numerous benefits it must afford to commerce. At this heretofore hazardous part of our coast navigation a security will be afforded, which, in a few years, may occasion a saving of property which will amply compensate for the cost incurred in its construction.

The Ordnance department is progressing as rapidly as the means afforded will permit in arming the militia of the States, and in preparing the necessary guns and carriages for garnishing the different fortresses of the country. It is worthy of consideration whether the appropriation applicable to this service should not be increased, so as to provide a suitable armament by the time the different fortifications along the coast shall be completed. For the forts which are finished a million of dollars will be necessary; but besides these others are in progress and will shortly be completed. With the annual appropriation of $100,000 towards this purpose, it will require ten years to accomplish the object for those which are in readiness. Should we be blessed with peace, no injury will arise; but should war take place, the effects upon our country would be of a serious and prejudicial character

In all the disbursing branches connected with the War Department I am happy to say that punctuality and fidelity have strictly, and almost without exception, been regarded during the year.

A new era in the history of this country has, within a few years, arisen in relation to Indian affairs. Under the act of 1802, and the practices of the government resulting therefrom, principles have been introduced, the correctness of which deserves serious consideration. By this act it is prohibited to any one to settle upon Indian lands, or to enter their territory; and, for its execution, the President is authorized and directed to employ the "military force" of the country.

It is worthy of reflection how far this act (as circumstances exist) is to be considered within the pale of the Constitution and obligatory for its execution upon the authorities of the government. Before the States were members of this Union they were sovereign. The United States government can legitimately exercise those rights only with which the States parted under their general compact. To regulate their internal municipal authority is a privilege which has not been surrendered; this remains as heretofore. Amongst those rights is the indisputable one of controlling their citizens and governing them after their own mode; with this exception, that a republican form of government is to be secured to each. The States, being independent and sovereign within their own limits, can admit no check upon their sovereignty, whether in the exercise it affects one citizen or another—the white or the red man. By courtesy the laws have been withheld from an interference with the Indians within a State; and that which heretofore was mere courtesy is now insisted upon as matter of paramount constitutional right. Surely this cannot be correct according to our notions and system of government; and if wrong, the act of 1802, from the moment the laws are extended by a State over Indian territory, must cease to be operative.

Reciprocity is always fair and just; and hence the law which would make it penal for a white man to tread unlicensed upon soil held through Indian occupancy should equally restrain the Indian from entering upon the domain of the white man. To the extent that treaties operate, the United States possess the power to concede this or any other privilege, because treaties, whether well or ill made, are the supreme law of the land; but they should be such as are permitted to be entered into by the Constitution, and which do not affect the rights of a State beyond what her consent in becoming a member of the Union has sanctioned and authorized. Everything beyond this becomes usurpation.

Under the authority confided by you during last summer I visited some of the Indian tribes, with a highly valuable auxiliary, General John Coffee, of Alabama, and made known to them their situation. With the Choctaws and Chickasaws (the only tribes with whom we acted) treaties were concluded. From all appearances they were well satisfied with their own decision and the course which we pursued towards them. If any different feeling has since been incited, it is the work of persons who have sought, through the channels of their ignorance, to persuade them to the belief that great injustice has been practiced. I undertake to assure you that, in all we did, the utmost fairness and candor were practiced. No other desire was before us in the trust confided; and if there had, your instructions would have operated as a restraint. We sought no other end than, through persuasion, to satisfy them that their situation called loudly for serious consideration. Pending the negotiation no secret meetings were had, no bribes were offered, nor promises made. Every argument adduced, or suggestion offered, was in open council, and in view of those whose rights were to be affected. Of this abundant evidence exists, whatever may be said to the contrary. No motive was had to impose upon or to deceive them. Our instructions forbade us to do so, and our inclination, beside, was an ample restraint. The treaties concluded are ready for submission; and how far any practiced injustice or want of liberality can be imputed, will be fairly ample and generous, has not been regarded, our wishes have failed, and our judgments been mistaken.

During this period I witnessed much of Indian character, their progress, refinement, and march towards civilization, and can well say that, in conducting the negotiation, everything was done to retain them in those pursuits which should tend to their advancement, and to which their situation could reasonably lay claim. Those who so zealously have espoused their cause, and who affect seriously to deplore their condition, are acting upon false premises, or are moved by mistaken considerations of kindness. But as mankind are found to differ even upon essential matters of faith, and their ultimate results, I can well imagine that, in reference to such a subject as the present, honest differences of opinion may be expected and will arise. Yet, before a desire be adopted earnestly to retain these people at their present homes, we should be careful not to receive mere impressions for facts, but rather to hear the suggestions of truth and reason. We should look to the red men as they are, and not as oftentimes they are represented to be; to their inaptitude to live under a well-regulated system of law, and to the danger and hazard of the experiment. A few of them are well-informed men, and capable of enjoying refined society. These are the mixed Indian—the half breed, as they are usually termed. Scarcely any of the others speak our language or are acquainted with the principles of our government. Little hope should be entertained, even by those most sanguine on the subject, that any material advances in civilization can be made with the present generation; those, I mean, who are now at maturity in life. Care and attention towards the rising generation may tend greatly to improve and, in time, to meliorate their present condition. To turn them to industry is of first importance. Labor is never an acceptable pursuit to Indians. In their unimproved state a fondness for war and the chase and oratory at their councils constitute their leading traits, because these afford the highest distinction. When, through the influence of culture and education, their taste upon these subjects shall be changed, and the character of an industrious agriculturist be held in higher estimation than dexterity of pursuit in the chase, then may they be expected to resort to industry and give attention to the duties of agriculture. Indisposition to manual labor, so peculiarly the characteristic of an Indian, causes him to select the poorest grounds, because of the ease with which the timber is felled and cleared away. The exceptions which exist to this are principally amongst those of mixed Indian blood, whose habits have been improved, and whose minds have been cultivated.

There are three divisions in the Choctaw nation, each of which is governed by a chief, who, within his limits, acts independently of the others. In his government he is aided by minor and subordinate chiefs, called captains, each of whom acts within his particular district. The people are subordinate to the captains, the captains to the chiefs. One of these divisions compose what is called the Christian district, the chief of which is a man of good mind, with a common English education, and is religious. His people, too, are seemingly pious. Each night pending the negotiation, until a late hour, they were at their exercises, singing and preaching. From every information this Christian party, as it is termed, are not accurately and correctly informed as to the principles and faith upon which they profess to act. A future state of rewards and punishments for virtues or for crimes is fashioned by their standard of savage life and its enjoyments, and, in their imagination, is made to conform to what they conceive to be essential to constitute happiness or misery here. Judging from their devotional conduct, they are, to all appearances, a religious people. Certainly there are some perceptible and beneficial changes amongst them. They have become mostly an agricultural people. The practice of perforating the nose and ears for the purpose of ornamenting them is rapidly disappearing, and considered a rude custom. Vermilion paint to ornament and to decorate the face is in a great measure given up. A credulity in supernatural agency, in witches, and in witchcraft, is fast yielding; and the use of ardent spirits, particularly in one of the districts, is in a great measure abandoned. A reasonable hope may be entertained that these people may in time prove that the zeal and efforts of the government to protect and civilize them are not improperly bestowed.

In concluding a treaty with these people candor and fairness were the only means resorted to by the commissioners. They were given to understand distinctly, that, in coming to visit them at their solicitation and at their homes, no design was entertained beyond communicating to them a knowledge of their true condition, and submitting to their judgment the course of policy by them to be pursued. We told them the opinion entertained by the government as to the authority of Mississippi to extend over them her laws, and that the United States possessed not the power to prevent it. The interviews had with them were in open council, where were present the chiefs and warriors, and some of our own citizens. Arguments addressed to their judgments were the means employed. No threat was used; no intimidation attempted. Under these circumstances a treaty was concluded and signed, more than 5,000 Indians being in attendance at the time. Amongst them was great apparent unanimity. Some did object and were dissatisfied, but not as it regarded the general policy of treating, but because they believed themselves entitled to obtain, and were solicitous to procure large reservations. The number thus influenced was small. Since

that time active efforts have been made in the nation to induce dissatisfaction amongst the Indians, and to persuade them that they had been greatly deceived and imposed upon.

An old chief, (Mushulatubbee,) who was favorable to the treaty, by a few of the discontented of his district, has been recently deposed, and the name of another sent to this office to receive recognition. The design is, probably, to show that the people are displeased because he signed the treaty. The answer returned to their application was that, while the government meant not to interfere with their mode or manner of self-government, it could not recognize what had been done by a few; yet, when a chief should be chosen by a majority of the division, and the fact so certified by their general council, he would be regarded as properly chosen and be considered as such. An examination of this treaty will clearly show, I think, that justice and liberality have been regarded. The great majority of the nation were satisfied when we left them, and, from information since received, yet continue to be satisfied. Their anxious desire is to get to a country, under the protection of the United States, where they can be free from any liability to State laws, and be able to dwell in peace under their own customs.

The commissioners appointed to further the execution of the treaty of Butte des Morts have discharged the trust confided to them, and have made their report. The difference between the New York and Green Bay Indians has been examined and adjusted; and, to be confirmed, only requires your approval agreeably to the second article of that treaty.

Very respectfully,

JOHN H. EATON.

The PRESIDENT *of the United States.*

Documents communicated to Congress by the President at the opening of the second session of the twenty first Congress, accompanying the report of the Secretary of War.

MAJOR GENERAL MACOMB'S REPORT.

HEADQUARTERS OF THE ARMY, *Washington, November* 30, 1830.

SIR: In conformity with the instructions of the War Department of the 7th of August last, I submit the following statements and returns:

1. A statement exhibiting the organization of the army, marked A.
2. A return of the actual state of the army, marked B.
3. A return exhibiting the strength of the eastern department, designating the posts and garrisons, marked C.
4. A return exhibiting the strength of the western department, designating the posts and garrisons, marked D.
5. A general map of reference, exhibiting the relative situations of the military posts occupied by the troops, marked E.*
6. A statement showing the number of recruits enlisted in the army, from the 1st of January to the 30th of September, 1830, marked F.
7. An estimate of funds required for the recruiting service for the year 1831, marked G.
8. An estimate of the expenses of the headquarters of the army for the year 1831, marked H.

The army continues to maintain its character for discipline and efficiency. The reports of the inspector generals and of the colonels of artillery represent the garrisons and arsenals which they have visited to be in good order.

Since my last annual report the following movements and changes in the positions of the troops have been directed:

Owing to the threatened hostilities among the several tribes inhabiting the country around the Prairie du Chien, and which might eventually have led to unpleasant consequences not only to themselves, but to our citizens on the frontiers, a detachment of four companies of the 3d regiment of infantry, in conformity to your instructions, was ordered from Jefferson Barracks to co-operate with the troops already at the Prairie, and in its vicinity, in interposing the authority of the United States, and obliging the parties to desist from carrying into effect their hostile intentions. The appearance of the troops among them produced the desired effect by enabling the commanding officer at the Prairie du Chien to exhibit a force sufficiently powerful to induce the Indians to listen to the friendly advice which he was directed to communicate to them concerning their own interests, and to respect the intimation made to them that the government would not behold with indifference any disposition on their part to enter into a war that would involve not only their own immediate welfare, but also the safety of our own citizens established near their borders. About the same time advices were received that a number of unauthorized persons had entered the country about Dubuque mines in search of lead, in violation of the laws. The same detachment was employed in removing them; after fulfilling that duty the detachment relieved the garrison at Rock island, and returned to its quarters at Jefferson Barracks.

Misunderstandings having been manifested among the tribes on the frontier of the Territory of Arkansas, the commanding officer at Cantonment Gibson was, in conformity with your instructions, directed to use his endeavors in pacifying the Indians in his vicinity, and, if necessary, to employ the force under his command for that purpose. The Indians were informed by him of those instructions, and they yielded to his counsel and advice.

The troops which had been previously assembled upon the frontiers of the Creeks and Cherokees in Georgia and Alabama, in consequence of the disorderly conduct manifested among those tribes, and to prevent collisions between them and the white people, were eventually marched into the Cherokee nation, in conformity with your instructions, to guard against the difficulties which, it was apprehended, would grow out of the conflicting operations of the Cherokees and the lawless intruders upon the mineral district within the limits of the State of Georgia. Having fulfilled the instructions of the government, the troops were directed to retire, for the winter, to their respective quarters.

In conformity with the appropriation for that purpose, at the last session of Congress, preparations

* This map accompanies the originals.

have been made for the military occupancy of Key West, and a company of the fourth regiment of infantry has been ordered to take post on that island.

Fort Jackson, at the Belize, near the mouth of the Mississippi, having been reported to be so far completed as to be in a condition to receive a garrison by the beginning of January next, a company of the second regiment of artillery has been ordered to occupy it. The tower constructed last year for the defence of the Bayou du Pré having been finished, it has, in like manner, been garrisoned by detachments of the same regiment from Forts Wood and Pike.

Agreeably to your instructions, two companies of the third regiment of infantry from Jefferson Barracks have been ordered into the Choctaw nation; and four companies of the same regiment, and from the same station, have been directed to proceed to the Red river to strengthen our positions, and to preserve quiet amongst the Indians in that quarter.

In consequence of the application of the Governor of Louisiana, the troops stationed at Baton Rouge and at the posts within Louisiana had been directed to co-operate with the authorities of that State in suppressing any insurrectionary movements that might be discovered. A battalion of the 4th regiment of infantry assembled at New Orleans and made a demonstration along the banks of the Mississippi, which produced a salutary effect.

Some of the principal fortifications on the seaboard being in a condition to receive their armament, I feel it my duty to bring the subject to your consideration, as they are at present without any means of defence, and but little preparation made towards a supply of ordnance and ordnance stores. As the guns required for these fortresses must principally be of very heavy metal, and few or none of which are as yet cast, it must naturally require not only large appropriations, but a considerable time to furnish them. At the rate at which the Ordnance department is now proceeding, many years must elapse before a sufficient supply can be furnished for the defence of the sea-coast; in the meantime circumstances may arise which would place us in a very awkward predicament; for if our strongholds should fall into the hands of an enterprising enemy, bringing with him the necessary means for completing their defence, the works will become, instead of our protection, the means of our annoyance. It appears from the report of the Ordnance department of November 30, 1829, that the usual annual appropriation of one hundred thousand dollars would not complete the armament of the new fortifications short of twenty years, while most of the works will have been completed in 1832.

It was my intention to have noticed in this report the evil consequences resulting from the allowance of ardent spirits to the troops as a part of their daily ration, but your late order directing the abolishment of the issue of that portion of the ration has anticipated all my wishes in that regard. The most sanguine hopes are entertained that, as soon as the excessive use of ardent spirits can be restrained, the most happy result may be anticipated in the melioration of the physical and moral condition of the rank and file of the army.

Respectfully submitted,

ALEX. MACOMB, *Major General, Commanding the Army of the United States.*

Hon. JOHN H. EATON, *Secretary of War.*

REPORT OF THE CHIEF ENGINEER.

ENGINEER DEPARTMENT, *Washington, November* 19, 1830.

SIR: In compliance with the instructions from the War Department, of the 7th August, I have the honor to present the following report and statements relative to the operations of this department during the year ending on the 30th September last:

1. FORTIFICATIONS.

The construction of the several fortifications enumerated in my last annual report has been actively and successfully continued.

Fort Hamilton, in the harbor of New York, and Fort Jackson, at Plaquemine Bend, will in a few months be ready to receive their garrisons; and the tower at Bayou Dupré, near New Orleans, is completed, and was on the 31st July last reported to receive a guard.

Of the appropriation for contingencies of fortifications, the balance of last year's appropriation and about $7,000 of that of the present year have been drawn from the treasury, to be applied chiefly to repairs at Fort Trumbull, Connecticut; Fort Columbus and Bedloe's island, New York; Fort Delaware, Delaware river; Forts McHenry and Washington, Maryland; Fort Moultrie, South Carolina; and Fort Wood, Louisiana. A small portion of that sum has also been applied to defray the expenses of the board of engineers for fortifications, and those incident to a resolution of the Senate relative to an examination of sites for an armory on the western waters, a report on which was presented to the Senate at the last session of Congress.

2. CIVIL CONSTRUCTIONS.

1. *Huron river, Ohio.*—The western pier at the entrance of this river having been completed, there remains to construct only a part of the eastern pier, about 60 yards in extent, across the outer bar. The depth of water in the channel of entrance has increased to nine feet at the shallowest part.

2. *Black river, Ohio.*—At the mouth of this river about 300 yards of pier work have been constructed during the past year, the effect of which has been such as to warrant the most favorable anticipations from the completion of the proposed plan.

3. *Cleveland harbor, Ohio.*—This harbor, at the mouth of Cuyahoga river, which is of great importance to the navigation of Lake Erie, as being the outlet of the Ohio canal, has been greatly improved by the works erected for removing the obstructions at its entrance, and it will now admit the largest class of vessels which navigate the lake. To secure this advantage a further extension of the western pier into deep water is required.

4. *Grand river, Ohio.*—The piers at the mouth of this river sustained some damage from having been left in an unfinished state, as mentioned in my last annual report, for want of funds to complete them during the year 1829; in consequence of which, the appropriation made this year for their completion has not been sufficient to effect that object. These works, like the others of a similar character on the lake shore, have been productive of great improvement in the navigation which was to be benefited by them.

5. *Ashtabula creek, Ohio.*—The operation of dredging a channel through the bar at the mouth of this creek has been continued with success during the past year. In order to render the entrance more accessible, it is proposed further to extend the piers which form the channel, and an estimate for that purpose has been submitted to you.

6. *Conneaut creek, Ohio.*—To the piers at the mouth of this creek, which were commenced last year, there has been added a length of 358 yards of pier work; the effect of which, and of the dam across the former outlet, is already manifested by an increased depth of the channel, which has now six feet water.

7. *Presque Isle bay, Pennsylvania.*—The improvement of the channel of entrance into this harbor still continues, and there is now not less than nine feet water on the bar. The object of the estimate presented this year is to obtain the means of repairing damages sustained during a gale of last winter by a dike constructed by the State of Pennsylvania.

8. *Dunkirk harbor, New York.*—In completing the pier constructed as a breakwater to protect this harbor, and securing it against the injury to be apprehended from leaving it during the winter in an unfinished state, the cost has exceeded by about $700 the appropriation for this year; and that sum is, therefore, required to pay the arrearages due on account of the work.

9. *Buffalo harbor, New York.*—During the past year the south pier and mole, forming the entrance to this harbor, have been completed to within 100 feet of their intended termination on the pier head proposed to be constructed as a foundation for a beacon.

10. *Black Rock harbor, New York.*—The pier and mole enclosing the western side of this harbor have been completed; but the cost of the work done during the last year has exceeded by about $1,800 the amount of the appropriation. This expenditure was considered absolutely necessary, in order to avoid jeoparding the safety of the whole work by leaving an important part of it in an unfinished state.

With regard to the three harbors last named, viz: those of Dunkirk, Buffalo, and Black Rock, it is proper to remark that their protection is not completed by the construction of the works already commenced; but as appropriations for the remaining works at these and other points were contained in a bill which was passed at the last session of Congress, but did not become a law, no notice is taken of them in the estimate for next year.

11. *Genesee river, New York.*—To the piers designed to facilitate the entrance into this river, there has been added during the last year a length of about 270 yards, and they will have been extended by the close of this quarter as far as the means afforded will allow. The benefit of the works, though incomplete, is already felt by those engaged in navigating Lake Ontario.

12. *Big Sodus bay, New York.*—The first appropriation for improving the entrance into this bay having been applied to constructing a portion of the pier on the western side of the bay, a corresponding pier on the eastern side has been commenced, and extended to a distance of 423 yards from the shore; and it is expected that an equal quantity of work will be done next year, the estimate being based on that supposition.

13. *Oswego harbor, New York.*—The balance which remained of the appropriation made in 1829 for improving this harbor has been applied to the construction of 164 yards of the eastern pier; to complete which, according to the original plan, an additional length of 60 yards is required. To finish this pier, and to pay a balance due the contractors according to agreement, an estimate which was submitted last year, but on which no funds were appropriated, is again included in the general estimate.

14. *Lovejoy's Narrows, Kennebec river, Maine.*—A contract has been made for completing the removal of the obstructions to the navigation of the Kennebec river at this point, and the operations have been attended with such success as to warrant the belief that the funds available will be sufficient to effect the object by the close of next year.

15. *Kennebunk river, Maine.*—The new pier at the entrance of this river has been completed, as was anticipated in my last annual report.

16. *Berwick branch of Piscataqua river, Maine.*—The operations for deepening the channel of this river have been successfully carried on during the last year. The shortness of the season for working in the water and the occurrence of frequent rains during the summer have prevented their completion, which may, however, be expected during the next year; the balance of funds available being thought sufficient for the purpose.

17. *Merrimack river, Massachusetts.*—The small appropriation made at the last session of Congress for the works at the mouth of the Merrimack was sufficient only to enable the agents to give a greater degree of stability to the work previously constructed, which stands well. An appropriation for completing their construction was embraced in the bill of the last session "for erecting light-houses," &c., which did not become a law; the same amount will, therefore, be required for the ensuing year.

18. *Deer island, Boston harbor, Massachusetts.*—The sea-wall for the preservation of Deer island is nearly completed, and is represented by the inspecting officer as a fine piece of masonry, with regard both to materials and workmanship.

19. *Plymouth beach, Massachusetts.*—The security and growth of this beach, though aided by artificial means, are chiefly the result of natural causes, the beneficial effects of which continue to be perceived.

20. *Provincetown harbor, Massachusetts.*—An agent has been employed to apply the funds appropriated for the preservation of this harbor to the planting of beach grass, and such other measures as the available means may enable him to take for effecting the object in view. Additional funds are requisite for this purpose, but no estimate is presented, as an appropriation was included in the bill which passed at the last session of Congress "for erecting light-houses," &c.

21. *Hyannis harbor, Massachusetts.*—On the breakwater intended to protect this harbor there have been deposited since September 30, 1829, between 5,000 and 6,000 tons of stone, by which the work has been extended about 250 feet in a substantial manner.

22. *Nantucket harbor, Massachusetts.*—The dredging machine used in cutting a channel through the bar at the entrance of this harbor has been kept in constant operation whenever the state of the weather would admit of it; and it is expected that the channel will be carried quite through by the close of the working season. That part of it already excavated preserves its depth, and seems to increase in width, from which circumstance it is thought that, on completing the cut, the action of the current will be sufficient to keep it open.

23. *Stonington harbor, Connecticut.*—The materials for constructing a breakwater to protect this harbor having been procured on very favorable terms, considerable progress has been made towards its completion, which will be effected next year by means of the funds now available.

24. *Mill river, Connecticut.*—The breakwater and dike for improving the navigation of this river are completed. The excavation of the channel, commenced this year, but interrupted by the approach of cold weather, will be continued next summer.

25. *Harbors of New Castle, Marcus Hook, Chester, and Port Penn, Delaware river.*—Under an appropriation made at the last session of Congress, a dredging machine has been contracted for, and will be applied to deepening these harbors; but owing to the lateness of the period at which the law was passed the machinery was not finished before the 30th of September last; a hired machine has, however, been in operation during the summer.

26. *Ocracoke inlet, North Carolina.*—The dredging machine to be used for deepening this inlet was completed and put into successful operation on the 7th of August, proving capable of excavating twenty-four cubic yards per hour. In consequence, however, of the tempestuous weather between that date and the end of September, but little progress has yet been made in opening the channel. Sufficient funds remain to carry on the operations next year.

27. *Cape Fear river, North Carolina.*—Considerable progress had been made in the construction of jettees designed to improve the navigation of this river below the town of Wilmington, when the occurrence of a gale of unusual violence in August caused the destruction of a greater part of the works. The materials have, however, again been collected without much loss, and the injury will be repaired as soon as practicable.

28. *The inland passage between the St. Mary's, Georgia, and St. John's, Florida,* has been opened so as to admit at high water vessels drawing not more than five and a half or six feet.

29. *St. Mark's river, Florida.*—The operations for improving the navigation of this river have been confined to the removal of trees overhanging the channel, and of the logs in the bed of the river, work which has been performed by common laborers. The chief obstructions, being oyster reefs near its mouth, can be removed only by the aid of machinery, which will be procured during the ensuing winter.

30. *Apalachicola river, Florida.*—The sum of $2,000, appropriated for improving this navigation, has been found insufficient to procure such machinery as would produce any considerable benefit. A part of it has, however, been applied to the removal of snags from some of the most difficult passes of the river; and an estimate of funds required for further operations has been presented to you.

31. *Harbor of Mobile, Alabama.*—A dredging machine for deepening the channel through Choctaw Pass, in this harbor, was in operation from the 1st of April to the 10th of September, when it was withdrawn for repair; but the excavations not having the depth required by contract, no payments were made to the contractor prior to the 30th of September.

32. *Pass au Heron, Alabama.*—The machinery employed in the operation at this pass having been much injured in a gale last autumn, it was not until late in the summer that the work could be resumed. The engineer anticipates the opening of the pass by the 1st of December.

33. *Pascagoula river, Mississippi.*—About 5,000 cubic yards of earth have been removed from the bar at the mouth of this river. The operations were suspended on the 15th of August, the prevalence of easterly winds rendering it impracticable to continue them in such an exposed situation, and the dredging machine was transferred for a time to Pass au Heron.

34. *Red river, Louisiana.*—The operation of opening a channel round the great raft of Red river has been commenced since my last annual report on the section of the river at the upper part of the raft, between the outlet of Red bayou and Clear lake, a distance of about nineteen miles, twelve of which have been cleared out and rendered navigable for boats.

35. *Mississippi river.*—The steamboat and other machine boats employed on this river have operated during the past year between the mouth of the Missouri and Bayou Sarah, a distance of more than 1,000 miles, in removing snags and fallen timber; and a large force has been at favorable times engaged in cutting snags from the sand bars that are dry at low water, and at some points in cutting the timber from the shores of the river to prevent the formation of new snags. By means of the steamboat alone more than 2,000 snags have been removed from the channel between the points above designated.

36. *Ohio river.*—The work at the grand chain has been actively carried on during the low stage of the water; and the superintendent reports that all the dangerous rocks in the chain have been removed by blasting, and buoys prepared to designate the channel thus formed.

The operations on the Mississippi and Ohio rivers were carefully inspected last summer by an officer of the corps of engineers, whose report is highly favorable as to the skill and industry of the superintendent.

37. *Cumberland road, in Ohio, west of Zanesville.*—For this branch of the national road, the annual report of its condition on the 30th of September last is not yet received, which precludes the possibility of stating what its condition was at that time; but from an inspection report made in August last it is stated that the arrangements adopted by the superintendent for its progress were judicious and conducted with zeal, and that the instructions of the department in relation to it were strictly observed.

38. *Cumberland road, in Indiana.*—Under the contracts of last year this road has been opened and grubbed the whole distance through the State, and the operation of grading it is now in progress. Stone being scarce, bricks and wood will be chiefly used in the construction of the bridges and culverts, which will not be commenced until next year.

39. *Cumberland road, in Illinois.*—Contracts have been made for opening and grubbing this road between the eastern boundary of the State and Vandalia, a distance of sixty-six miles, of which the fifty-nine miles east of Vandalia are to be finished by the close of this year, the remainder by April 1, 1831. The contracts are made on very low terms, involving an expenditure of about $11,000.

40. *Road from Detroit to Chicago, Michigan.*—The contracts which were made last year for constructing the unfinished parts of this road, between Detroit and the sixty-fourth mile, have been in most cases

complied with, as anticipated in my last report, a few quarter-mile sections only remaining to be completed. Under the appropriation for 1830 contracts have been made for continuing the road to the eighty-sixth mile before July 15, 1831.

41. *Road from Detroit to Fort Gratiot, Michigan.*—The construction of seventeen and a half miles of this road, which, as reported last year, was contracted for in 1829, has been completed, with the exception of some repairs, which the contractors are bound to make, and to cover the expense of which 10 per cent. of the value of work done is reserved. Further contracts have been also made for continuing the road to the end of the thirty-second mile from Detroit, being as great an extension as the funds will authorize.

42. *Road from Detroit to Saginaw, Michigan.*—The progress made in the construction of this road is nearly the same as that on the Fort Gratiot road, seventeen and a half miles having been completed, and contracts made for continuing the work to the end of the 1st quarter of the thirty-third mile.

43. *Road from Detroit to Maumee, Michigan,* is completed; a balance of $14 75 remains due to the superintendent, as stated in the general estimate for 1831.

3. SURVEYS ORDERED BY SPECIAL ACTS OR RESOLUTIONS OF CONGRESS.

The surveys for which appropriations were made at the 2d session of the 20th Congress, and which are enumerated in my last annual report, were completed and reported to Congress during the last winter.

A survey of the Wabash river, with a view to improving its navigation, and an examination of certain proposed sites for bridges over the Ohio river, have been made; but the officer charged with these surveys having been necessarily assigned to other duty, his reports on these subjects have not yet been completed.

In pursuance of a resolution adopted by the House of Representatives on the 6th of April last, a survey of the obstructions to the navigation of the Delaware and Raritan rivers, about the proposed points of junction with a canal across New Jersey, has been made, and the maps and report are in preparation.

The act appropriating funds for the location of a canal across the peninsula of Florida was passed too late in the season to permit of anything being done towards effecting the object before this autumn, when arrangements were made for commencing the survey.

4. SURVEYS UNDER THE ACT OF APRIL 30, 1824.

Under this head the following surveys have been in progress during the summer of this year:

1. Surveys with a view to connect the waters of Lake Champlain with those of the Connecticut river by the valleys of Onion and Wills rivers, Vermont.
2. Survey with a view to unite the Connecticut and Pemigewassett by the valley of the Oliverian, New Hampshire.
3. Survey of a canal route from Taunton to Weymouth, Massachusetts.
4. Survey of the Connecticut river, with a view to the improvement of its navigation by canals or otherwise.
5. Survey of a route for a railroad from Catskill to Canajoharie, New York.
6. Surveys with a view to connect the waters of Lakes Erie and Michigan with those of the Ohio, Indiana.
7. Survey of a route for a canal from Lake Michigan to the Illinois river, Illinois.
8. Survey of the falls of the Ohio, at Louisville.

The field-work of all these surveys is completed except those of the Taunton and Weymouth canal, and of the Lake Michigan and Illinois canal; the completion of the latter was prevented by the illness of the engineers employed on it.

At the request of the Pennsylvania canal commissioners, a topographical engineer has been associated with engineers appointed by them to make certain examinations concerning the best mode of crossing the Alleghany summit of the Pennsylvania canal. The Baltimore amd Susquehannah Railroad Company have been likewise aided in their surveys by some of the officers of this department.

5. THE BOARD OF INTERNAL IMPROVEMENT,

After completing the duties on which it was engaged at the date of my last report, has been occupied chiefly in preparing a plan and estimate for improving the navigation of the Tennessee river at the Muscle and Colbert shoals.

6. MILITARY ACADEMY.

For the condition of this institution, and the measures required for its further improvement, I beg leave to refer you to the very full report made by the board of visitors at the last general examination.

7. OFFICE OF THE CHIEF ENGINEER.

On the several resolutions of Congress, and other subjects from time to time referred to this office, I have had the honor to make special reports. The map of the United States, required by the House of Representatives for the use of the Committee on Commerce, is in progress, and nearly completed.

The resolution of the House of Representatives requiring a survey at or near the outlet of Lake Champlain, with a view to preparing a project of defence for that part of the frontier, has not been complied with, in consequence of the unsettled state of the question of boundary between the United States and Canada at that point.

A lithographic press for the War Department, for the purchase of which an appropriation was made at the last session of Congress, having been attached to this office, has been used in printing maps, circulars, &c.

The completion of several of the fortifications now under construction being near at hand, it is respectfully recommended that arrangements be made for continuing the system of defence by commencing others. An estimate of the funds that will be required for these and other new objects will be submitted to you.

The fiscal concerns of the Engineer department are fully exhibited in the annexed statements A and B.

Statement C shows the fortifications remaining to be constructed in order to complete the projected system of defence of the seaboard.

Respectfully submitted.

C. GRATIOT, *Brigadier General and Chief Engineer.*

Hon. JOHN H. EATON, *Secretary of War.*

A.—*Table exhibiting the fiscal concerns of the Engineer department for the year ending September* 30, 1830, *in which the funds which had accrued within that period, and the manner of their accruing, are stated and accounted for by showing their application; and showing, also, the amounts expended upon the several works under construction.*

Designation of the appropriations and the objects to which they are applicable.	Funds available for the service of 1830, and whence derived.			Amount available accounted for.				Cost of the several works on September 30, 1830.	Remarks.
	From appropriations for 1830.	From balances of appropriations undrawn from the treasury, and those remaining in the hands of agents, September 30, 1829, and amounts refunded, &c.	Aggregate available.	Amount applied, corresponding with accounts rendered and settled to Sept. 30, 1830.	Amount undrawn from the treasury on October 1, 1829.	Balances in the hands of agents on October 1, 1829.	Aggregate accounted for, and corresponding with the aggregate available.		
FORTIFICATIONS.									
Fort Adams	$100,000 00	$21,631 35	$121,631 35	$67,719 48	$29,400 00	$24,511 87	$121,631 35	$507,394 94

	Erecting a pier and beacon thereon, at or near a ledge of rocks, called "Allen's rocks," in Warren river, Rhode Island		226 44
		1,529,350 01	1,634,391 19

REMARKS.

The amount of remittances corresponds with the requistions made by the Engineer department. The excess of accounts rendered over the amount remitted arises from the balances in the hands of agents on the 1st of October, 1829, and from payments made at the treasury, not requiring a formal requisition from the Engineer department, and therefore not appearing on the books of the department.

TABLE C.

Exhibiting the works projected by the board of engineers which have not been commenced, and the estimate of their cost.

FIRST CLASS—TO BE COMMENCED AS SOON AS POSSIBLE.

Designation of the works.	Estimate of their cost.
Fort St. Philip, Louisiana	$77,810 79
Fort at Soller's Point Flats, Patapsco river	673,205 44
Fort Tompkins, New York	420,826 14
Redoubt in advance of ditto	65,162 44
Fort at Winkins's point, New York	456,845 51
Fort at Throg's point, New York	471,181 53
Fort at Dumpling's point, Rhode Island	759,946 57
Fort at Rose island, Rhode Island	82,411 74
Dikes across west passage, Narraganset roads	205,000 00
For the defence of Boston harbor:	
Fort on George's island	458,000 00
Fort on Nantasket head	539,000 00
Lunette in advance of ditto	79,000 00
Redoubt No. 2 in advance of ditto	32,000 00
Redoubt No. 1 (on Hog island) in advance of ditto	29,000 00
Dike across Broad Sound passage	140,000 00
Cutting off the summit of Gallop island	2,429 00
Works for the defence of Conanicut island, Narraganset bay, Rhode Island	220,053 43
	4,531,873 10

TABLE C.—*Exhibiting the works projected by the board of engineers, &c.*—Continued.

SECOND CLASS—TO BE COMMENCED AT A LATER PERIOD.

Designation of the works.	Estimate of their cost.
Fort at Grande Terre, in Louisiana	$264, 517 52
Tower in Pass au Heron, bay of Mobile	16, 677 41
Fort at Hawkins' point, Patapsco river	244, 337 14
Fort at St. Mary's, Potomac river	205, 602 33
Fort opposite the Pea Patch, Delaware river	347, 257 71
Fort at the Middle Ground, outer harbor of New York	1, 681, 411 66
Fort at East Bank, outer harbor of New York	1, 681, 411 66
Fort Hale, Connecticut	31, 815 83
Fort Wooster, Connecticut	27, 793 34
Fort Trumbull, Connecticut	77, 445 21
Fort Griswold, Connecticut	132, 230 41
Fort on Fort Preble point, Portland harbor, Maine	103, 000 00
Fort on House island, Portland harbor, Maine	32, 000 00
Fort Pickering, Salem	116, 000 00
Fort for Naugus head, Salem	35, 000 00
Fort Seawell, Marblehead	116, 000 00
Fort for Jack's point, Marblehead	96, 000 00
Fort on Bald Head, North Carolina	120, 000 00
Fort on Federal point, North Carolina	12, 000 00
	5, 340, 500 22

THIRD CLASS—TO BE COMMENCED AT A REMOTE PERIOD.

The rafts to obstruct the channel between Fortress Monroe and Fort Calhoun	$240, 568 00
Fort, Craney island flats	258, 465 14
Fort at Newport News	244, 337 44
Fort on Naseway shoal	673, 205 00
For the defence of Patuxent river :	
Fort on Thomas's point	173, 000 00
Fort on Point Patience	164, 000 00
Fort on the narrows of Penobscot river, Maine	101, 000 00
	1, 854, 575 58

RECAPITULATION.

First class, seventeen works	$4, 531, 873 10
Second class, nineteen works	5, 340, 500 22
Third class, seven works	1, 854, 575 58
	11, 726, 948 90

REMARKS.—The classification in this table, distinguishing three periods, exhibits the works enumerated in the order of their efficiency to meet the earliest possible emergency.

UNITED STATES MILITARY ACADEMY, *West Point, June*, 1830.

Honored by an invitation to visit the United States Military Academy at West Point, we have continued some weeks industriously occupied in the arduous, important, and delightful task assigned to our care. You requested us to be full and free in our investigation of every department. We have literally obeyed that injunction, and now come respectfully to present the result of our labors, not in a strain of formal applause, but in candidly discussing, on their separate merits, a few of the leading topics which have presented themselves.

Whoever has closely viewed this noble institution must feel a pride in its existence and prosperity; and we trust it is reserved for your hands, by a few judicious alterations, to model into perfection this cradle of future warriors and statesmen.

The true value of any institution can be appreciated only by comparing it with the results which it was intended to produce. We consider, then, that this academy is expected to furnish to the army a supply of efficient officers; to the militia an intermixture of well-trained citizens, qualified, on emergency, to discipline that last and best arm of republics; to internal improvement a corps of engineers capable of giving wholesome direction to the spirit of enterprise which pervades our country. It ought to furnish science for exploring the hidden treasures of our mountains, and ameliorating the agriculture of our valleys; nor is it upon inert matter alone that it ought to extend a vivifying influence. Inheriting from

our varied ancestry the discordant characteristics of every people on the globe, it yet remains to form a specific and all-pervading character for the American nation; nor do we conceive any surer method of stamping upon the yet glowing wax a more majestic form than by sending into every district young men emphatically the children of our country, trained to the manly exercise of arms, and imbued with the tastes of science and literature, instructed in the principles and action of our political system, and the living exemplar from which sound education may rear the social edifice.

These preliminaries being adjusted in the vestibule, permit us to conduct you into the interior of the academy, where we have attended the examinations with assiduous diligence.

It would stretch this report to inordinate length were we to detail the multifarious points examined; they can be found on the programme of the professors. Suffice it to say, that on all branches the answers were ready, thorough, evinced a fundamental understanding of the subject, and proved that the judgment of the pupils had been cultivated, rather than their memory superficially extended.

The art of war is, and ought to be, the grand object of attention. It naturally divides itself into three branches—engineering, artillery, and tactics. The theory of each is explained on mathematical principles, whether for attack or defence, in works or in the field. The construction of permanent or temporary fortifications; entrenchments, with their various uses and positions; movements and manœuvres; the effects and manufacture of various projectiles; in short, everything that could impress the principles or illustrate the practice of war was minutely insisted on. Objections were raised, difficulties were proposed, searching questions were asked, on each and every point; the answers evinced the subjects to be well understood. The board, however, without pretending to the knowledge of military men, would suggest whether the great and almost exclusive attention devoted to military engineering and the science of fortification does not retrench what is due to the "art militaire" in its most comprehensive sense; that is, to grand tactics, and what may be termed the strategy of war. A competent course of instruction in this department, we conceive, would require an additional text-book and a regular course of lectures on the art of war, embracing, for illustration, descriptions of remarkable battles, showing how they were fought, what excellence of generalship or stroke of genius won, or what errors lost them. Admirably situated, also, as the school is, with regard to its topographical advantages and adaptation to this purpose, it would be highly useful in perfecting the military education of the cadets if they were occasionally taken into the field and trained in the practical application of the science of engineering and topography, in which they are so well instructed in theory.

An astonishing proficiency in drawing proves that no ordinary praise is due to that department; but its character is entirely civil, and confined to the imitation of pictures and models. Is it not essential that military surveyors should be accustomed to sketch nature readily and accurately from the surrounding mountains?

Civil engineering has been also well taught; and we listened with much pleasure to a discussion on the properties and analysis of various materials, with all the details of arches, bridges, canals, locks, inclined planes, roads, tunnels, railways, embankments, harbors, &c., &c. We predict that the pupils of West Point will deliver the country from that quack engineering which has, in divers instances, inflicted deep wounds upon our system of internal improvement. Architecture receives due attention. Grecian and Roman models have been procured, and our country may be embellished by the taste of the cadets, provided they abstain from imitating the buildings in which they are taught that science.

We have made a patient and minute inquiry into the police, discipline, and fiscal concerns of the Military Academy at West Point. Considering it to be of the utmost importance to the welfare and stability of this valuable institution that its management, in these respects, should exhibit fidelity and sound judgment; and various circumstances having conspired to render it desirable, at the present time, that the Department of War and the public generally should be fully satisfied whether or not this is the case, we have felt called upon to devote our best attention to this branch of investigation. We feel much pleasure in acknowledging that every facility has been given us by the superintendent. Books and documents have been freely thrown open to our inspection, and every individual concerned has fully and readily answered our interrogatories.

For the sake of precision, our observations will be arranged under the three specific heads—police, discipline, and fiscal concerns.

1. *Police.*—We visited every part of the institution that properly comes under this head. In the tailors' and shoemakers' shops we examined the style of making the various articles of clothing provided for the cadets. We also visited the shop of the storekeeper, and are satisfied that these establishments are placed under regulations well adapted to secure the cadets from all imposition, and at the same time to restrain them from any needless extravagance. The mess hall and the kitchen were visited several times during the meals, and while the food was under preparation. The bill of fare and the other regulations were examined. We are of opinion that all the details of the establishment are so arranged as to secure a cleanly, wholesome, and abundant supply of food, and that the duties of the steward are performed in a most exemplary and faithful manner. We are no advocates of the Spartan black broth, yet it seems a question whether youths ought to be accustomed to a fare more generous than they will probably find on returning to their parental household. In the house assigned for the hospital service, the rooms and the apothecary's shop were found in perfect order and under excellent regulation. The building, however, was esteemed to be inadequate to the accommodation of the post; we were, therefore, much gratified in visiting the new hospital, for which an appropriation was recently made by Congress, and which is now almost ready for occupation. It contains sufficient accommodation for the sick, together with houses for the surgeon and his assistant under the same roof. With the neatness and solidity of the building, the convenience of its internal arrangement, and the beauty of its location, we were greatly pleased. While pursuing our inquiries in this department, we learned that, although the cadets are not liable to violent and fatal diseases, yet their general health does not appear to be as good as would be expected from the salubrity of the place in which they live, and the attention paid to their food, cleanliness, &c. A very great amount of medicines, such as are administered in a torpid state of the digestive organs, and in other diseases incident to persons of sedentary and studious habits, is used at this post. The proportion is believed to be much greater than that required for any other military station belonging to the United States. We esteem this to arise from a want of sufficient bodily exercise, and that it exists principally during the winter season and in the spring. In summer and autumn the daily drills and other excitements to bodily exercise are sufficient for the purpose of health, and the beneficial result is very obvious; but for nearly half the year the military exercises are suspended, and the severe winter climate in some measure precludes those of a voluntary nature. The young men are consequently obliged to pass at once

from an active state to habits sedentary and studious in no common degree, and the evils just intimated must follow as a matter of course. In order to alleviate or entirely remove them, we are convinced that a building should be erected adapted to winter drills and gymnastic exercises, and that these should be regularly required.

The sutler's establishment fell under particular examination. Although it is to be regretted that there is one at this station, yet we are fully convinced that its strict regulation prevents any injury resulting from it to the cadets; and that the soldiers and laborers, for whom alone it is wanted, are much less exposed to evil than if they were tempted, for want of such a place, to encourage the secret introduction of spirituous liquors, and the establishment of shops for selling it in the neighborhood, which would be under no control. We are glad to learn that, through the instrumentality of a temperance society recently formed among the soldiers, and of other measures prudently adopted, the consumption of spirituous liquors has manifestly decreased.

The hotel, the erection of which was authorized by the Department of War, has been occupied for a year past, and is at once an ornament to the Point, and a great accommodation to the numerous visitors who resort to it. For many years, the want of such an establishment has been seriously felt by the inhabitants of the Point, and by the many persons who are constantly landing there from motives of curiosity, or to visit cadets, their friends or relatives. Upon the farm purchased some time since by the United States there was, indeed, a tavern, but it was useless, being altogether out of the way of persons arriving at the station, and its purchase was rendered expedient, because it was sufficiently near the barracks to entice the cadets to resort to it. The present hotel is placed in the best possible position for the accommodation of visitors, and it is under such judicious regulations that no inconvenience can be reasonably apprehended from it. The regulations are annexed, (A.)

2. *Discipline.*—We at first experienced some little hesitation at entering minutely into this part of our investigation, lest it might bear the appearance of an unwarrantable distrust of the superintendent and the academic staff; but considering that the Department of War and the country at large have a right to full and explicit information upon this, as upon every other point connected with the management of the academy, and that the board of visitors are sent here for the purpose of obtaining and communicating this information, we esteemed ourselves under obligation to proceed. We regard it as no more than justice to the superintendent to say that, so far from having any unwillingness to being interrogated upon this head, he solicited, in the most frank and honorable manner, a full and minute inquiry. He made a lucid statement of the principles upon which every part of the discipline of the academy is conducted, and also exhibited the books and registers, in which all the proceedings relating to it are prescribed.

These we examined, and asked and received full information upon every point which required elucidation. The deliberate judgment which we arrived at is, that no discipline could be established upon sounder principles, nor administered with greater kindness, discrimination, justice, and decision, than that of the Military Academy at West Point. Certain rules for conferring approbation or administering reproof are laid down, well known and understood by the corps of cadets. It is believed to be impossible that any one of them should fall under censure, without having had previous and ample warning. Whether or not the custom of instituting courts-martial, to try the cadets for certain offences should be continued, or whether it would not be better to give this authority directly to the academic staff, we are not prepared to express a sentiment. We have no hesitation, however, in giving the decided opinion that sentences passed after a full and impartial investigation should be sustained, and that a case must be extreme indeed to warrant its being suspended or reversed. We are satisfied that such occurrences have a tendency to weaken discipline, and bring wholesome authority into contempt; and that, if frequently repeated, they would produce effects the most injurious to the true interests of the academy.

There is in successful operation a very thorough system of classifying the cadets and registering their relative standing, both as it respects general deportment and proficiency in the various studies. This information is transmitted to the Department of War in the former case every month, and in the latter case every week. By this effective and judicious system the public authorities are almost as fully and minutely informed of the relative merits of the cadets and of the general condition of the national school as they could be were it established at the seat of government. The only suggestion which the committee has to offer under this head is, that, if practicable, the parents and guardians of young men at the academy should have official information concerning their conduct and standing at stated periods; and especially that timely warning should be given when cadets exhibit a tendency to such neglect of study or irregularity of deportment as will subject them to censure, or such natural incapacity as renders them unfit to receive the public patronage. We are satisfied that, whenever such information has been requested by parents or guardians, it has been given by the superintendent promptly and frankly. But, if given universally and statedly, it would impose upon the superintendent an amount of correspondence which, in addition to his other weighty and responsible duties, it would be next to impossible to execute, even under the impulse of his well known and devoted zeal to the best interests of the academy. If the present suggestion then be entertained, some general plan must be adopted for carrying it into effect, and the superintendent must have the requisite assistance. It may be worthy of the serious consideration of the Department of War, whether such a measure would not be just in itself, as alleviating the anxieties of parents and guardians, and also expedient as having a tendency to prevent or remove such prejudices against the academy as have been excited in the minds of those to whom the information of the serious delinquency of their children or wards has been communicated without previous warning.

3. *Fiscal concerns.*—We have not been less diligent and minute in our inquiries under this head than under those which have preceded; on the contrary, if investigations have been more thorough upon any one point than upon another they have taken place upon that now under consideration. Having learned that the attention of previous boards had not been specially called to this subject, we thought that a time had arrived when, with advantage to the service, and with satisfaction to those particularly concerned, and to the country generally, the fiscal concerns of the academy, not only for the past year, but for a number of years previous, might be thoroughly examined.

We have visited the office of the quartermaster, and, as far as his department is connected with the academy, (and to this only could our attention be directed with propriety,) we are fully satisfied that it is well conducted; the system by which the various books are kept is very complete, and we have no opinion to express but that of entire approbation. The office of the treasurer and paymaster more fully employed our attention, as in this office are kept the accounts of expenditure amongst the cadets, and of the receipts and disbursements relating particularly to West Point. We will first express, in general

terms, not simply our approbation, but our admiration of the accuracy and neatness with which the whole business of this office is conducted. In the circular letter received from the Secretary of War by the members of the board, it is suggested to inquire particularly into the fiscal concerns of the academy; as, however, the receipt and disbursement of the pay of the cadets, and of other appropriations made by Congress, is regularly examined in another quarter, we supposed that it was principally incumbent upon us to examine relatively to the money which might arise from the property of the United States at the Point itself. As regards the cadets, their accounts are kept with great precision; they have to pass such a repeated examination, and are so effectually checked, that it seems hardly within the limit of possibility that any individual of the corps should suffer loss, or be permitted to indulge in extravagance Each one has a pass-book, being a transcript of his account on the books of the office; he has, also, a similar book for his running account with the different trades-people. No bill is discharged unless it has the signature of the cadet himself in testimony of its correctness; nor can he procure any article of dress or otherwise, except by express permission under the hand of the superintendent. We were fully satisfied in these particulars.

Our attention was then directed to the state of the public property at this post; we found in the books accounts opened with two different funds, called the land fund and the school fund. The former was commenced by virtue of authority derived from the Secretary of War, and communicated to the superintendant from the Engineer department, in a letter from General Macomb, bearing date December 20, 1822. It appears that the present superintendent, finding that a considerable saving might be made of small amounts derived from the public domain, which had previously been lost or thrown into the treasury without discrimination, suggested to the Engineer department the expediency of raising a fund from the same. The idea was communicated to the Secretary of War, was approved by him, and the superintendent duly authorized to make the proceeds arising from the public domain at West Point, by selling wood, hoop-poles, &c., &c., a separate fund, to be applied to the benefit of the institution. From this source, and from the rent of certain public buildings occupied by persons living at West Point, this fund was accumulated. We examined the books relating to it from its very origin, and followed up the accounts to the present period. We believe that every single article of receipt and expenditure came under our notice and inspection The wood was sold to persons who, under contracts regularly entered into and communicated to the Engineer department, bought it on condition of receiving half the proceeds for cutting it down and carrying it to market. These proceeds are regularly entered in the books. In some instances this wood was purchased from the contractors by the quartermaster, for the United States service, and upon reasonable terms. On this point we have to observe, that the fuel purchased for the use of the station, during the administration of the present superintendent, has been procured upon terms considerably more favorable than at any previous period. By strict economy and good management, the amount of $16,346 84 has thus been secured to the United States. It has been expended in erecting a kitchen to be attached to the cadets' mess-room, in constructing barracks, which were much needed, for the musicians of the band, and the balance of $8,713 has been appropriated to building the hotel above-mentioned.

The school fund has been raised from the profits accruing from the sutler's establishment. It has been expended in erecting two school-houses, and in partly maintaining teachers for the children of the soldiers upon the Point, and others connected with the public service. A small amount of this fund has been transferred, for a time, to the land fund, but it is to be returned when the charge for building the hotel is liquidated.

The station at West Point has been greatly benefitted in several respects, and especially by the erection of a large and commodious and handsome hotel, which commands the united approbation of all who have seen it, and which any person at all acquainted with the situation regards as having been a measure of indispensable necessity. The whole cost of the hotel is $17,226 12; of this sum $5,895 37 are yet unpaid. This balance, however, is rapidly decreasing by the proceeds of the land fund and the rent of the hotel. When this balance shall have been paid, the whole rent of the hotel, which can never be less than $1,000 per annum, and perhaps more, will be available to meet expenditures for the post schools, the library of the academy, and for other valuable objects connected with it. From this statement it will be obvious that no common degree of credit is due to the superintendent for his watchful care over the public interests, and for the good judgment with which they have been managed. For these important objects the government has not been called upon to make a single appropriation, nor been exposed to any expense whatever. The whole has been accomplished by a rigid economy of resources, which might have disappeared by neglect without the knowledge of any one; and which, in some degree, had disappeared, until arrangements were made by the present superintendent to preserve and increase them until they amounted to a fund adequate to the accomplishment of the above valuable purposes. We, therefore, cannot satisfy our feelings without expressing our unqualified approbation of the faithful and judicious conduct of the superintendent. We would esteem it an insult to his well-earned and well-sustained reputation, as a gentleman and a man of honor, to give him our public meed of approbation for his integrity in conducting these measures. This can never, for a moment, be impeached, from any quarter respectable in itself or deserving notice from its information upon the subject. We, however, with propriety, can repeat our judgment, that the land fund and the school fund have been raised and increased by the exercise of strict economy, and have been disbursed for valuable and substantial improvements with good taste and sound judgment.

Having, as you will perceive by the preceding review, minutely examined the police and fiscal departments of the institution, we consider it due to the gentlemen filling these departments to express our unanimous and warm approbation of the system, order, and efficiency, with which the duties of the military staff of the post are discharged.

We have the satisfaction of declaring that after a patient and minute investigation of the internal police, the discipline, and the fiscal concerns of the Military Academy at West Point, we find nothing to disapprove, little to suggest, and very much to commend.

Warfare, commencing on the ferocious onset of savage barbarians, rose gradually with civilization into an art, and, since the invention of gunpowder, has assumed the dignity of a science, based upon mathematics and natural philosophy. As such it is treated at West Point. Without troubling you with a detail of the numerous ramifications through which the study is followed, we shall only state that we have heard with interest and pleasure a very protracted examination upon all the leading topics of algebra, surveying, shades and shadows, perspective, spherical projections, and the calculi. These, with a long list of other performances, form a mathematical exercise surpassing in extent and accuracy, the course (we believe) of any other academic institution. While we pay a merited tribute to the learning and assiduity

of the preceptors, and the talent and diligence of the pupils, we must remark that this appears to us a pursuit of somewhat all engrossing character. To a certain extent, mathematics are indispensable, and must occupy much time; but beyond that universal test, utility, we think they ought to give place to studies of equal importance. Mechanics, optics, electricity, astronomy, and other branches of natural philosophy, next occupied our attention; and we consider them taught with a success as great as possible with a very limited apparatus. Considering the high importance of these subjects, an appropriation for this specific purpose would be well-judged liberality.

We think that some modification might be beneficially adopted in the apportionment of attention allotted to each branch of study. Mathematics are indisputably the basis of military science, and we would by no means disparage a branch of study of such pre-eminent importance. But mathematics are not the alpha and omega of the art of war. Few minds are competent to grasp, and still fewer to carry into their highest application, the recondite propositions of that science. Nor is this probably requisite. To a certain extent such inquiries are of paramount importance, but we doubt whether it be essential to the formation of an efficient officer that he be able to solve every question on the equation of osculatory circles. Let full scope be still afforded to genius of this species as often as it is discovered, and when sufficiently matured, let its claims be allowed a preference in the engineer and artillery corps; but let us not destroy talent in its other beautiful and useful forms, by clipping it into triangles and parallelograms. There are other qualifications of the citizen warrior (characters never to be separated) to which we recommend increased attention, convinced, as we are, that in the conduct of war genius of the highest order frequently exists without that peculiar bent which leads to excellence in mathematics.

Destined to become depositories of a power in its nature arbitrary, ought not these interesting youths to be early taught to appreciate the principles and venerate the authority of law, and through the kindly medium of philosophy to view their duties and relations towards friend and country? Circumscribed by quarters, garrisons, and camps, ought not the studies of language and literature to afford them, in the pursuits of cultivated taste, some refuge from the tedium of indolence, or the excitements of conviviality? Are history and geography as nothing amongst the qualifications of an accomplished soldier? Under such impressions, we have passed with undiminished interest from the laws of matter and motion, to the mental fields of ethics, rhetoric, and language. Upon international law, as well as upon the spirit, provisions, and operation of the federal Constitution, the cadets have exhibited a very competent knowledge; but this branch might be pushed with advantage into a much wider inquiry—the philosophy of government in its elements, and political economy in its administration. In ethics the answers were accurate, spirited, and gave earnest that their duties as men and citizens are well understood. We find no fault with the selection of words, the turn of expression, or the grammatical construction under which ideas were expressed; yet some little attention might be directed to these particulars. In the place of rhetoric there is a chasm to be filled up, as far as any useful purposes demand, with a very succinct course. Facility and grace in English composition are the results of habit, and young men ought to be exercised in committing their thoughts to paper. We therefore recommend that subjects for short essays be given weekly to students of the first class.

Although the dead languages may not form an object of primary importance, nevertheless, they whose previous education had proceeded upon this basis ought not to be suffered to throw away acquirements costing so much time. Greek may be superfluous, but following the example of English military schools, latin, if known ought not to be forgotten. Our institutions contemplate the soldier as something better than a mere machine for fracturing human limbs. Peace is the genius and natural state of the American government; war is only an exception to the general rule: the cadets ought, therefore, to be trained to maintain their rank in civil as well as military life. But this cannot be accomplished without some school library of cheap editions of English, classical, historical, and miscellaneous works, which might be made to circulate. A slight monthly examination in geography and history would enable the professor to give proper direction to this branch.

Another difficulty is here encountered. No professor can thoroughly discuss his subject without reference to authorities, and no student can successfully follow a chain of reasoning, if all inquiry be limited within the narrow precincts of a text-book. At every step collateral views arise, which cannot be pursued without access to a library—an arsenal which ought to contain every intellectual weapon. A library, then, is rich in all that regards military or physical science; but we seek in vain for the volumes of intellectual knowledge. The professor has done much, but he has done it from private funds; and we submit whether public liberality should not afford a small appropriation for books on moral and literary topics. To read the French with tolerable distinctness, and to translate it with facility, are perhaps all that is necessary in that language; and these objects have been successfully pursued. Accurate pronunciation and ready expression can only be acquired by long intercourse with natives, and are neither absolutely requisite nor entirely attainable at the academy; but as the language is taught by the most competent instructors, such increased attention to pronunciation as will not materially augment the time consumed in the study is deemed expedient.

Having recommended some extension of the scheme of instruction, we naturally look for the means by which it can be accomplished. The cadets are already tasked to the extreme of their powers, and it would be unreasonable to impose additional studies, unless some modification be adopted in the mathematical department, or higher qualifications be exacted for admission, or the course be prolonged to five years. A union of the first and last of these alternatives might be salutary, and would grant an additional hour daily for those exercises on which the bodily, nay, mental, vigor of youth so essentially depends.

Perhaps a school for preparing boys, during one year before their admission to the rank of cadet, would meet every difficulty, care being taken to admit none whose extreme youth renders it improbable that they can readily imbibe instruction. Sixteen years seems the lowest age at which a boy should be admitted as cadet.

Considering the disadvantages under which the department of chemistry labors, the examination upon that science and military pyrotechny was creditable alike to the instructors and pupils; not only the room appropriated for this department, but the chemical products and materials are insufficient, and these pursuits are of importance sufficient to merit increased consideration. A permanent professor, with adequate rank and emolument, additional rooms, and an increased apparatus, should be allowed, the value of these three requisitions being in the order in which we state them.

The application of mineralogy and geology to the "art militaire" may not be of indispensable importance; but if a large portion of the cadets are destined to act as civil engineers, and to assist in developing the natural resources of the country, then these sciences assume a new aspect. Some of us

have seen beds of the most valuable minerals, which had lain neglected and unknown, brought to light and utility by the cursory survey of a well-educated engineer.

The senior class of cadets was exercised in cannon and mortar firing. Their shot and shells were thrown with surprising accuracy, and could scarcely have been excelled by veteran gunners. The whole corps was carried through a series of artillery and infantry evolutions, and performed all its movements with a readiness and precision which evinced thorough instruction, practically as well as theoretically. The muscular steadiness and machine-like uniformity of a disciplined regiment are unattainable by youthful limbs, but in their celerity and accuracy of movement are visible the elements of future proficiency. Although divested of much of the pomp and circumstance of war, the general effect was truly military. Having reviewed the pupils, we now turn to the preceptors; and the first consideration which presents itself is the vital importance of commanding the services of men qualified in the highest degree. In this happy country the field is unbounded for the employment of talent and industry, and if any institution refuse an adequate remuneration, others are ready to attract able men by more liberal offers. In this respect there is ground to apprehend a deterioration subversive of the credit and value of the academy. While the institution at West Point exacts duties more extensive and more harassing than perhaps any other seminary, we are constrained to say that the emoluments of its instructors are below the general scale. Of these truths a practical illustration arose before us in the distinguished professor of engineering, who, it is probable, quits the establishment for the employment of a private company.

A short inquiry will satisfy you on these points, as well for the increase as for the equalization of salaries. Here let us add, that after a strict inquiry into the manner in which the authority of the superintendent is exercised over the cadets, the board is gratified to find that authority administered in a manner as parental and indulgent as would comport with a proper enforcement of the laws of the academy and with the true interest of the pupil. In this point of view, as well as in all others, the United States have been peculiarly fortunate in the gentleman who presides over the institution.

If health and vigor be necessary to the prosecution of any object, it is peculiarly indispensable that the early training of a soldier should conduce to the primary qualities of endurance, strength, activity, and hardihood. While we pay a tribute of applause to the mental discipline of the academy, we think that the zeal of science has overlooked somewhat of the attention due to that homely adage, "that a sound body is most frequently the domicil of a sound mind." We would therefore renew the recommendation of a former board, that provision be made for proper instruction in horsemanship, and that increased attention be directed to the exercise of the sword. These are part of a regular training in many private academies, and seem peculiarly indispensable in a military establishment. It may be true that most boys can ride and handle a weapon with tolerable dexterity; but the fate of a battle frequently depends upon the horsemanship of an aide-de-camp, and an officer's only weapon of offence and defence is his sword; and we submit that qualities upon which may frequently depend the success of an operation, or the life of an individual, ought not to be left to the hazard and awkwardness of self-instruction. These are attainable in perfection only by the flexible muscles of youth, and might be so arranged as to form a healthy relaxation from sedentary occupations. We therefore recommend that a building be erected for horsemanship, the sword, and gymnastic exercises. Eight thousand dollars appear to us an indispensable provision for that object.

In this place we may cursorily remark that, for a situation so highly favored by nature, and intended to become one of our monuments of national greatness, some architectural design is much wanted. When a new building is erected, it should be upon a site, and after some model, which may form a part of a general effect; whereas under the present system the eye is greeted only by the appearance of a somewhat irregular village.

West Point is an academy strictly national, founded for the benefit and supported by the liberality of the people at large. We have scrutinized with jealousy and perceived no ground for insinuating that the distribution of cadetships is the appendage of power or the tool of political patronage; yet it must not be concealed that such a prejudice, widely disseminated, has originated much of the dissatisfaction manifested towards the institution. An evident method presents itself to obviate such objections, and place the establishment upon the proper popular basis: Let a youth be selected from each congressional district—a *bona fide* inhabitant within that geographical circle—and, in all cases, never to be replaced but by one similarly qualified; but a wide margin should be left for the sons of deceased officers and the discretion of the War Department. Let this be represented by two cadets from each State and Territory. Thus, the academy will form a portrait of Congress, the distribution will be in the same ratio as our population, every portion of our country, however remote, will enjoy a fair share of its benefits, and general justice and satisfaction will be felt.

We shall not descend from general remarks to minute details; but we should do injustice to the academic staff and to the various departments, civil and military, of this noble institution, and an equal violence to our own feelings, were we to close without expressing, in broad and unqualified terms, our sense of the fidelity, diligence, and ability with which their respective avocations are conducted. Such preceptors and such pupils are worthy each of the other. Nor is this a scanty praise. We see before us the flower of American youth, the guardians of their country in war, its ornaments in peace, congregated from every region of our wide-spread republic, the destined warriors and statesmen of a future generation. May the friendships of their early life grow into ligaments, binding together the giant members of our confederation and giving perpetuity to those political institutions which form the best earthly hope of man.

In fostering this institution by all the means placed within your control, you will render one of the best services to your country which your high trust can enable you to perform. The extension of its benefits, either by the enlargement of the capacity and resources of this school, or by the establishment of a second in a different and distant part of the Union, would be one of the most substantial public

benefits which could mark your distinguished administration, or be conferred upon our country by the national councils.

All of which is respectfully submitted.

MONTFORT STOKES, *North Carolina*,
President of the Board.

Secretary of the Board.

Hon. SECRETARY OF WAR.

A.

ORDER No. 82.

UNITED STATES MILITARY ACADEMY, *September* 6, 1829.

The following regulations will be strictly observed by all concerned:

1st. Cadets are prohibited from going to the hotel at any time without a written permission, signed by the superintendent of the Military Academy.

2d. Cadets are prohibited from entering any room or hall of the hotel, except the hall and parlor of the first story.

3d. Every cadet will, as soon as he enters the hotel, write his name in a report book, to be kept for that purpose at the office.

4th. The keeper of the hotel is required to report to the superintendent every cadet who shall not strictly comply with the 2d and 3d paragraphs of this order.

By order of Lieutenant Colonel S. Thayer.

Z. J. D. KINSLEY, *Lieutenant, Acting Adjutant.*

Extract from the rules and regulations of the West Point House.

ARTICLE 5. No gentleman can have liquor in his chamber, or in the parlors, or elsewhere, except in the dining room for dinner; nor will any one be permitted to bring liquor to the house.

A true copy.

C. F. SMITH, *Acting Adjutant.*

Remarks.

Cadets are not allowed the privilege of entering the dining hall, (where, only, liquors are allowed to be drank,) or of taking any meal at the hotel.

The keeper of the hotel is held responsible that no cadet shall, on any occasion, while on a visit at the house, drink any wine or other strong drink.

REPORT OF THE QUARTERMASTER GENERAL.

QUARTERMASTER GENERAL'S OFFICE, *Washington City, November* 23, 1830.

SIR: In compliance with your order, I have the honor to report the operations of this department during the 1st, 2d, and 3d quarters of the present year, to which I have added the 4th quarter of 1829, thus presenting the results of an entire year.

The balance in the hands of the several officers on the 30th of September, 1829, amounted to		$46, 367 68
To which is to be added the amount remitted—		
In the 4th quarter of 1829	$113, 688 84	
1st quarter of 1830	133, 791 22	
2d quarter of 1830	184, 024 00	
3d quarter of 1830	282, 078 41	
		713, 582 47
Carried forward		759,950 15

Brought forward		$759,950 15
Proceeds of sales of damaged public property, and of the rents of lands and public buildings not required for military purposes during the above period		7,742 71
Making a total to be accounted for of		767,692 86
Of which there was accounted for by accounts of the 3d quarter of 1829, rendered after the date of the last annual report	$7,033 10	
In the 4th quarter of 1829	139,050 72	
1st quarter of 1830	102,972 11	
2d quarter of 1830	178,381 96	
3d quarter of 1830	275,711 30	
	703,149 19	
Deposited during the year to the credit of the Treasurer	1,864 32	
		705,013 51
Leaving to be accounted for		62,679 35

The accounts of five officers for the 3d quarter are yet to be received, which, it is believed, will reduce the balance about $7,000; and it has been ascertained from the statements already received for the month of October that more than $48,000 of the balance was applied during that month to the public service. I entertain not a doubt that the whole amount will be accounted for at the close of the present quarter. The large amount of public property under the administration of the department, whether in the hands of its officers or those of companies, is regularly and promptly accounted for.

I have been able to make a reduction in the estimates for the department proper of about fourteen thousand dollars. With judicious administration the sum asked for will be sufficient for the service of the year.

Of the works under the direction of the department, the barracks at Fort Crawford, authorized by appropriations made at the two last sessions of Congress, are in such a state of forwardness as to leave no doubt of comfortable accommodations being prepared for four companies during the present year; and it is believed the appropriation will be sufficient, or nearly so, to complete the works contemplated.

The officer charged with the improvements at Jefferson Barracks, authorized at the last session of Congress, reported on the 1st instant that they would be entirely finished by the 15th instant. The appropriation will be sufficient.

The barracks and quarters authorized at New London, Connecticut, by appropriations made at the two last sessions of Congress, have been completed. A small tract of land adjoining the post is necessary for the accommodation of the garrison, for the purchase of which I have submitted an estimate.

The barracks authorized at Fort Severn have been completed as far as the appropriation would admit; about three hundred dollars are required to finish them, and an appropriation is necessary for officers' quarters, for which an estimate has been submitted.

Under an appropriation made at the last session of Congress for barracks and quarters at Fort Gratiot, operations were commenced early in the season, and, at the date of the last report, the work had so far advanced as to leave but little doubt of its completion during the ensuing winter.

The title to the land occupied by the military at Fort Howard, Green Bay, being unsettled, it was considered advisable to defer for the present the erecting of the barracks and quarters authorized at that place by an appropriation made at the last session of Congress.

At the date of my last annual report about one-third of the military road in the State of Maine had been put under contract. Owing to the difficulties encountered by the contractors, only a small portion of the work was executed in the last year; it has, however, been completed in the present season, and the remainder of the road through to Houlton has been put under contract, and is in progress of execution. Operations were delayed in the early part of the year by the extravagant nature of the proposals which were received in the first instance. The prices offered were so unreasonable as to induce the determination to reject the bids and extend the time for completing the road to another season, by which course contracts have been formed on more favorable terms. The road is now in such a state of forwardness as to be passable for carriages a greater part of its course, and will form an excellent winter communication between Bangor and Houlton. The great number of streams which require bridges will increase the expense somewhat beyond the estimate of last year, and will render a small additional appropriation necessary.

Operations were commenced early in the year on the road leading from St. Augustine to New Smyrna, in Florida, and were continued until the sickly season set in, when they were necessarily suspended. The section lying between Tomoka and Spruce creek, a distance of twenty miles, and comprehending several bridges and many causeways, has been completed. The work was resumed on the 1st instant, and the officer charged with its superintendence reports that the remainder of the road through to New Smyrna will be finished by the middle of the next month.

The military road from Pensacola to Tallahassee, and thence to St. Augustine, has been repaired as far as the appropriations made for that object would authorize. The eastern section, however, lying between Alachua Court-House and Picolati, on the St. John's river, a distance of about sixty miles, has not received any repairs. The inhabitants in that vicinity represented that the road leading from Alachua Court-House to Jacksonville would afford greater convenience to the settlements, and it was deemed advisable to apply the appropriation exclusively to that portion of the military road lying between Alachua and Tallahassee.

Instructions have been given, under the provisions of the act of the 31st May last, to repair the road from Alachua Court-House to Jacksonville. The bridge authorized to be erected over the St. Sebastian river, near St. Augustine, where the military road crosses that stream, has been finished during the present year.

The road from Alachua to Mariana, in Florida, for which an appropriation was made at the last session of Congress, has been chiefly put under contract, and is progressing satisfactorily. Operations have been suspended on a portion of it with a view to a better location of the route, by which the distance will be shortened.

The operations for the improvement of Sackett's Harbor, suspended during the last winter, were

resumed on the 13th of April, and the officer charged with the work reports that everything required to be done will be accomplished during the present season, and that no further improvements will be necessary for many years to come.

Operations were resumed at the Delaware breakwater about the first of April, and have been attended with a success beyond our most sanguine expectations.

The contractors were bound by the terms of their contract to deliver seventy thousand perches of stone positively, and twenty-six thousand perches conditionally; but, in consequence of the loss of all their fixtures at their quarries on the Hudson by the ice, they were not only subjected to a heavy loss, but were delayed in their operations. We had the power to declare their contract void, but permitted them to go on and deliver as much as they had it in their power to furnish during the season. As the public interests, however, required that the work should be vigorously prosecuted, we availed ourselves of the delay of the contractors to purchase from others. The contractors delivered about forty thousand perches, and we purchased from others upwards of seventy thousand; making the whole quantity deposited equal to one hundred and eleven thousand five hundred and nine perches. This, added to twenty-three thousand five hundred and seventy perches deposited last year, makes the whole quantity deposited to the present time one hundred and thirty-five thousand and seventy-nine perches. The length of the deposit of stone on the *breakwater* is upwards of one thousand feet, or more than one-fourth of its intended length; and that of the deposit on the *ice-breaker* is upwards of eight hundred feet, or more than one-half of its proposed length. The lower point of the ice-breaker and the upper point of the breakwater are brought up quite to the level of high water, and comprise each an area of seventy by one hundred feet at the plane of low water.

The effect of the deposit already made, as a barrier to the force of the ocean, has been experienced by vessels in several instances during heavy gales of wind which prevailed in the latter part of the season; for, although there is but a small part of each dike above the plane of low water, the remainder, being but a few feet below that plane, has contributed to make a harbor. By limiting the deposits of the ensuing season to the present foundations the works can be brought up to their destined height, and made to afford shelter to a number of vessels, particularly those engaged in the execution of the work. The numerous wrecks that took place in August last have proved how much such a shelter is required.

The whole of the appropriation applicable to the work during the present season will be required to meet the public engagements to the close of the year; and, in addition to the sum of sixty-two thousand dollars appropriated for the first quarter of the next year, a further appropriation of two hundred and eight thousand dollars will be required for the service of that year; and it is respectfully recommended that an appropriation be asked for the year 1832.

Having been called on at the last session of Congress for an estimate of the expense of mounting a portion of the infantry for the defence of the western frontier, I take this occasion, as a western citizen, to remark that the nature of the country south of the Missouri river, and the character, habits, and resources of the Indians who inhabit or range on it, are such as to render it impossible to secure that frontier by infantry alone, how numerous or well appointed soever they may be, unless horses be provided to mount them. As well might we leave the defence of our maritime frontier, and the protection of our foreign commerce, to the artillery stationed on the seaboard. The means of pursuing rapidly and punishing promptly those who aggress, whether on the ocean or on the land, are indispensable to complete security; and if ships of war are necessary in the one case, a mounted force is equally so in the other. Were we without a navy, depredations might be committed upon our commerce with entire impunity, not only on the high seas, but within our harbors, and in view of our forts. So, without a mounted force south of the Missouri, the Indian, confident of the capacity of his horse to bear him beyond the reach of pursuit, despises our power, chooses his point of attack, and often commits the outrages to which he is prompted, either by a spirit of revenge or a love of plunder, in the immediate vicinity of our troops, and the impunity of the first act invariably leads to new aggressions. To compel him to respect us we must make him feel our power, or at all events convince him that the guilty can have no security in flight.

I would therefore respectfully recommend that provision be made to mount at least one company at each of the posts south of the Missouri; and I have the honor to be, sir, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

Hon. JOHN H. EATON, *Secretary of War, Washington City.*

REPORT OF THE PAYMASTER GENERAL.

PAYMASTER GENERAL'S OFFICE, *Washington City, December* 1, 1830.

SIR: I have the honor herewith to submit a tabular statement of the funds advanced to paymasters from the 1st day of October, 1829, to the 30th of September, 1830; the balances unexpended and deducted from the estimates for the fourth quarter of the present year, and the balance yet to be accounted for; also exhibiting the period to which the troops in each district have been paid.

From this statement it will be seen that of the $1,205,100 drawn from the treasury there remains but $13,084 45 to be accounted for; and I have information that the payments for which this last sum was advanced have been made, but the accounts have not yet reached me; they will probably be received before the close of this week, when the whole will be accounted for without the loss of a cent.

I have the satisfaction to add, that on no former occasion have the payments generally been brought to such late periods, or the accounts so fully rendered.

Most respectfully, your obedient servant,

N. TOWSON, *Paymaster General.*

Hon. J. H. EATON, *Secretary of War.*

Statement of the moneys drawn from the appropriations for the pay department and remitted to the disbursing officers on account of payments for the fourth quarter of 1829 *and the first three quarters of* 1830, *the amount unexpended and forming part of their estimates for the fourth quarter of* 1830, *the balances to be accounted for, the periods to which the troops have been paid and accounts rendered.*

Paymasters.	Amount of funds remitted in the fourth quarter of 1829 and the first three quarters of 1830.					Amount unexpended, and forming part of their estimates for the fourth quarter of 1830.					Balances remaining to be accounted for.					Periods to which the troops have been paid and accounts rendered.

* The troops on the Arkansas receive but two payments in the year, to wit: after the April and October musters.

† Resigned.

‡ Payment for the balance reported; vouchers not yet received.

PAYMASTER GENERAL'S OFFICE, *December* 1, 1830.

N. TOWSON, *P. M. G.*

REPORT FROM THE ORDNANCE DEPARTMENT.

ORDNANCE OFFICE, *Washington, November* 30, 1830.

SIR: I have the honor to submit herewith a general report of the operations of this office during the year past.

Statement marked A exhibits an account of the moneys drawn from the treasury and remitted through this office during the year 1829 to disbursing officers and contractors; and also the amount of accounts rendered, and the balance remaining in the hands of each at the close of the year. By this statement it appears that the remittances during the year 1829 amounted to $991,496 48
That the accounts rendered and settled during the same period amounted to 957,094 55

And that the unexpended balances remaining in the hands of the several disbursing officers at the close of the year amounted to 34,401 93

Statement B shows the amount of funds transmitted to the several disbursing officers of this department and to contractors during the three first quarters of the present year, by which it will be seen that the total amount transmitted was $708,087 91
And that the accounts rendered amounted to 620,423 25

Leaving an unexpended balance in the hands of disbursing officers on the 30th September of.. 87,664 66

Statement C exhibits an account of some of the principal articles made at the several armories and arsenals during the year ending 30th September, 1830; by which it will appear that 26,125 new muskets, with their various appendages, have been made at the armories, and that 20,956 small arms have been cleaned and repaired; 2,101 holsters, about 700 sets of accoutrements for small arms, and 90 new gun-carriages, have been made at the arsenals.

Statement D exhibits the number and description of arms, artillery, and other ordnance supplies issued by this department to the army and to the engineer department during the year ending 30th September, 1830; by which it will be seen that 965 small arms, 16 gun-carriages, and about 1,000 sets of accoutrements for small arms are among the principal articles issued to the army; 937,700 pounds of lead were issued to the engineer department.

Statement E exhibits an account of the expenditures made, and of the arms and artillery carriages and equipments procured, under the act of 1808 for arming and equipping the militia, during the year ending 30th September, 1830; from which it will appear that the arms procured are 11,240 muskets, 361 repeating and Hall's rifles, 2,101 holsters, and 86 field artillery carriages, with their various equipments; and that the amount expended was $187,520 39.

Statement F exhibits an account of the arms apportioned to each of the several States and Territories for the year 1829, and of the artillery arms and other military equipments distributed to the militia during the year ending September 30, 1830.

Statement G exhibits the general results of the operations of the public lead mines during the year ending 30th September, 1830; to which is appended a brief statement, showing the quantity of lead made at these mines in each year from 1821 to the present time. By these statements it will be seen that the rents which accrued during the year past amount to 563,567 pounds, being 890,564 pounds less than the rents of the previous year. The quantity of lead made at the public mines during the last year was 8,332,058 pounds, being less than the product of the previous year by 6,209,252 pounds. This falling off in the quantity of lead made is to be attributed to the low price which the article has borne in the market for two years past. The same cause has diminished the rents, but these have been further reduced by the lower rates at which rents have been charged since the 1st of January last.

The quantity of lead which has accrued to the United States for the rent of the mines during the year past, if sold in the market, would barely suffice for paying the expenses of collection.

It is not probable that any considerable extension of the mining operations will be made for years to come, for it is now satisfactorily ascertained that our mines have yielded, for a few years past, a much larger supply than the consumption of the country requires; and, unless a market for the excess be found in foreign countries, it is not to be expected that even the present rate of production can be sustained. During the past year a great number of miners have abandoned the business because the low price of lead did not afford an adequate compensation for the labor of procuring it.

It appears, upon a careful examination of the treasury statements for a number of years past, that the whole quantity of lead, in all its various forms, which was imported during a period of ten years, commencing with 1819, amounted to an average, per annum, of ..... 7,835,923 pounds.
And that during the same period the quantity exported averaged ..... 1,338,218 "

Leaving for domestic consumption an average of ..... 6,497,705 "

Which consisted of the following kinds, viz:
Of white and red lead and litharge ..... 2,786,639 "
Of pig, bar, and sheet lead, and lead pipes ..... 2,855,828 "
Of shot ..... 855,238 "

Average quantity derived from importations of foreign lead ..... 6,497,705 "

Prior to the year 1828 the product of the public mines had not been so considerable as materially to affect the market; but during that year the product was suddenly increased to more than 12,000,000 pounds, and during the same year the excess of importation was 8,603,439 pounds, exceeding the average of previous years more than two millions. This, with the product of the public mines, supplied the market with an unexpected excess of fourteen millions of pounds, being equal to a supply for two years in advance.

During the year 1829 the public mines yielded fourteen and a half millions pounds, and the importation ceased. There was an excess of exports in that year of nearly one and a half millions.

The average annual product of the public mines during the last three years is 12,728,366 pounds, being about double the quantity usually received from foreign countries prior to the year 1829.

The lead mines of Missouri were offered at public sale in October last under the act of March 3, 1829.

The section of country in which the mines on the Upper Mississippi are situated having been ceded to the United States by the treaty of Prairie du Chien, of August, 1829, and the value of these mines having been fully developed, it is believed that the time has arrived for surveying and selling these lead mine lands. It is supposed that the principal object of reserving these lands from sale was to prevent a monopoly of them while their extent and value were but little known to the public. They have now been so extensively wrought, and are at present so well known, that this object has been accomplished; and no reasons can be perceived why a survey and sale of them should be longer deferred.

Independent of the mineral riches of these lands, the climate is represented as remarkably salubrious, and the soil as fruitful and well adapted to support a dense population; and it may be considered of national importance to encourage the settlement of this remote and exposed frontier. I would, therefore, recommend that measures be taken for causing these lands to be surveyed and sold.

I have the honor to be, sir, your most obedient,

G. BOMFORD, *Brevet Colonel, on Ordnance Service.*

Hon. J. H. EATON, *Secretary of War.*

A.

G. BOMFORD, *Brevet Colonel, on Ordnance Service*

ORDNANCE OFFICE, *November* 30, 1830.

REPORT FROM THE COMMISSARY GENERAL OF SUBSISTENCE.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, *Washington, November* 11, 1830.

SIR: In compliance with instructions from the Department of War of August 7, ultimo, I have the honor to submit a statement, in duplicate, of the moneys remitted and charged to contractors and the disbursing officers of the commissariat in the first, second, and third quarters of the year, amounting to $233,013 16, and the moneys accounted for by them, amounting to $208,716 64, leaving a balance outstanding of $24,381 18, from which is to be deducted $2,808 42, charged to contractors, not as advances or remittances out of the annual appropriation for 1830, but as the difference between the prices of provisions previously contracted for, and the purchases made by agents of the department in 1829, to supply deficiencies at several posts, and totally unconnected with the fiscal operations of the present year; leaving $21,572 76 actually in the hands of the assistant and acting assistant commissaries at the expiration of the third, applicable to, and which will be entirely accounted for in, the fourth quarter of the year.

The sum originally charged to contractors on their failures is, by this statement, $4,502 31, of which $1,010 11 has been liquidated; and there is little doubt, from the solidity of the securities in the cases of the $2,808 42 unsettled, and from the disposition already evinced, that the whole will be promptly paid without resorting to suit.

It affords me great gratification to state that, of the moneys remitted and charged in the period embraced, there has not been one cent lost to government; and, of 91 officers disbursing in the commissariat, only three accounts have not been received; and although these are at the most remote posts, they will, in all probability, reach this office during the present month; it is, however, believed that, if received, the result of the statement would not be materially affected.

Very respectfully, your most obedient servant,

GEO. GIBSON, *Commissary General of Subsistence.*

Hon. JOHN H. EATON, *Secretary of War.*

Statement exhibiting the moneys remitted to contractors from January 1 *to September* 30, 1830; *the sums charged to them on account of failures, and the amounts accounted for by them; the balances in the hands of the disbursing officers of the department on December* 31, 1829; *the moneys remitted to them in the first, second, and third quarters of* 1830; *the sums charged to them on account of sales to officers on the frontier posts, sales of empty barrels, boxes, &c., and the amounts accounted for by them for the same period, together with the balances in their possession at the expiration of the third quarter of the year.*

GEO. GIBSON, *Commissary General of Subsistence.*

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, *Washington, November* 11, 1830.

REPORT OF THE COMMISSARY GENERAL OF PURCHASES.

COMMISSARY GENERAL'S OFFICE, *Philadelphia, October* 11, 1830.

SIR: In obedience to your instructions dated on the 18th September last, I have prepared, and now have the honor to enclose, four statements, as follows, viz:

No. 1. Of moneys drawn from the appropriation for the purchasing department (for 1830) during the first quarter of the year 1830.

No. 2. Of moneys received and disbursed during the same period on account of the purchasing department.

No. 3. Comparative statement of the cost of clothing for the United States army during the years 1829, 1830, and 1831.

No. 4. Statement of the cost of clothing for the army of the United States during the year 1831.

These statements will, I hope, meet your approbation, and be received in good time.

With great respect, I have the honor to be, sir, your most obedient servant,

C. IRVINE, *Commissary General of Purchases.*

Hon. J. H. EATON, *Secretary of War.*

No. 1.

Statement of moneys drawn from the appropriation for the purchasing department (for 1830) *during the first three quarters of* 1830.

COMMISSARY GENERAL'S OFFICE, *Philadelphia, October* 11, 1830.

April 2, 1830. By Secretary of the Treasury's warrant, No. 540, for	$20,000
May 10, 1830. By Secretary of the Treasury's warrant, No. 820, for	25,000
July 13, 1830. By Secretary of the Treasury's warrant, No. 1250, for	30,000
	75,000

C. IRVINE, *Commissary General of Purchases.*

Hon. JOHN H. EATON, *Secretary of War.*

No. 2.

Statement of moneys received and disbursed during the first three quarters of the year 1830, *on account of the purchasing department.*

COMMISSARY GENERAL'S OFFICE, *Philadelphia, October* 11, 1830.

To amount of moneys drawn from the Treasury Department between January 1 and September 30, 1830, as per statement No. 1		$75,000 00
By amount expended during the first quarter of 1830, passed to the credit of C. Irvine, Commissary General of Purchases, per account settled by the Second Auditor, Treasury Department	$13,810 03	
By amount expended during the second quarter of 1830, and credited as above, as per account settled by the Second Auditor, Treasury Department	42,678 80	
By amount expended during the third quarter of 1830, as per account preparing for transmission to the Second Auditor, Treasury Department, for settlement	34,013 12	
	90,501 95	
Deduct amount of the Secretary of the Treasury's warrant, No. 1295, being the balance remaining unexpended of the appropriation for 1829, received December 11, 1829, and embraced in the above expenditures	16,601 07	73,900 88
Balance unexpended of moneys received on account of appropriation for 1830, during the three first quarters of 1830		1,099 12

C. IRVINE, *Commissary General of Purchases.*

Hon. JOHN EATON, *Secretary of War.*

No. 3.

Comparative statement of the cost of clothing for the United States army during the years 1829, 1830, *and* 1831.

HON. JOHN H. EATON, *Secretary of War.*

21ST CONGRESS.] No. 459. [2D SESSION.

ON CLAIM FOR REMUNERATION FOR THE INVENTION OF AN IMPROVED GUN-CARRIAGE FOR THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 20, 1830.

Mr. DRAYTON, from the Committee on Military Affairs, to whom was referred the petition of John Balthrope, reported:

That the petitioner represents himself to be the author of an improved axle-tree and of an improved gun-carriage, which, for all practical purposes, are superior to those which are in use either in the United States or in Europe; he therefore prays that his improvements may be adopted in our service, and, in consideration of the advantages to be derived from them, that Congress will grant to him such pecuniary reward as they may deem him reasonably entitled to.

The improvements above mentioned were explained to and attentively examined by the committee, who are of opinion that the gun-carriages are preferable in many respects to those which are in our service; and that in the axle-trees now used for field artillery the petitioner has discovered material defects which he has remedied by various ingenious improvements, combining superior lightness and strength with greater utility and economy. As conclusive of this fact, the evidence of several officers in the Ordnance department was adduced. It also appeared that they had received from Mr. Balthrope several of his axle-trees, and, after subjecting them to the severest tests, had spoken of them in high terms of approbation.

Although the committee readily and cheerfully acknowledge the merit and the usefulness of the petitioner's improvements, they do not feel themselves at liberty to recommend any other reward for them than that which will be afforded by the adoption of the following resolution:

Resolved, That the petitioner is entitled to, and ought to receive from the Ordnance department, a full price for the axle-trees which he has made and delivered to them; and that whenever the government stands in need of further supplies he ought to be employed in the manufacture of them, and be liberally compensated for his skill and labor.

To the Congress of the United States:

Your petitioner, John Balthrope, of the State of Virginia, represents that he is the inventor of an improved axis and cannon carriage which he thinks is of great value. Repeated experiments have been made, under the direction of the Ordnance bureau in the Department of War, and his invention has withstood the most powerful and severe tests to which it could be subjected. It is decidedly superior in strength, lightness, and economy to the axle now in use both in Europe and America. Your petitioner respectfully submits to your honorable body the model of his improved invention, with testimonials in its favor, which he asks may be considered. If his invention be valuable, as he verily believes it is, he asks that Congress will adopt it into public use, and give him such reasonable compensation as, in its sense of justice, may be right.

JOHN BALTHROPE.

Relative cost of Captain John Balthrope's improved axle-tree for artillery, and of the axle-tree now used in the United States service.

ORDNANCE OFFICE, *Washington, December* 10, 1830.

SIR: The following is the cost of one twelve-pounder axle-tree made entirely of iron at the United States arsenal, in this city, viz:

1 blacksmith, two days' work	$3 60
3 helpers, two days' work each	5 40
10 bushels of coal, at 30 cents	3 00
180 pounds iron in the gross before being worked, at 5 cents per pound	9 00
1 turner, one day's work	1 80
2 laborers, one day's work each	1 60
	24 40

Respectfully, I am, sir, your obedient servant,

GEO. BOMFORD, *Bvt. Col., on Ordnance Service.*

Mr. JOHN BALTHROPE.

Charges omitted on the United States axle.

Cost of wood to make the wooden body	$1 00
Cost of preparing wood and putting irons	2 00
25 pounds iron, worked at 14 cents, to make bands and screw bolts	3 50
	6 50
Amount of twelve-pounder axle	24 40
Charges omitted and added in by the petitioner	30 90

United States to Joseph Cooper, Dr.

June 3, 1828.	For one six-pounder axle-tree, made to bear a twelve-pound gun; area, 4½ inches by 3 inches; 88 pounds of iron work, at 14 cents	$12 32
	For timber and workmanship on ditto	3 00
		15 32

I certify that the above is a true copy of the original account made out and paid at this arsenal, it being for an axle-tree on Mr. Balthrope's plan.

JOHN SYMINGTON.

WASHINGTON ARSENAL, *December* 10, 1830.

21ST CONGRESS.] **No. 460.** [2D SESSION.

ON THE APPLICATION OF JOSHUA SHAW FOR THE PURCHASE OF HIS PATENT-RIGHT OF A PERCUSSION PRIMER AND LOCK FOR DISCHARGING CANNON.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 7, 1831.

Mr. DRAYTON, from the Committee on Military Affairs, to whom was referred the petition of Joshua Shaw, a citizen of Pennsylvania, reported:

That the petitioner represents himself to be the inventor of a new method of discharging cannon by means of a lock acting on a primer of percussion or fulminating powder, for which he has obtained letters patent; and that by the application of his discovery the fire of artillery is rendered more certain, rapid, and effective, the quantity of powder required diminished, and the facility of working the gun much increased, whilst the matross is less exposed to injury, and perfect security is obtained against accidental explosion. He therefore prays that his patent-right may be purchased by the United States, and that he may be allowed a reasonable compensation for the labor he has undergone and the expense which he has necessarily incurred in bringing his improvement to perfection.

It appeared to the committee, by the concurrent testimony of officers of the highest respectability in the navy and the army of the United States, that the petitioner had not overrated his merits, and that he was justly entitled to the reputation of great ingenuity, judiciously applied to an important military object; but as the only reward which, under the Constitution, can be conferred upon him for his inventive labors, is the exclusive right of permitting them to be used at such price as he may think proper to demand for that privilege, a right already secured to him by his letters patent, the committee feel themselves constrained to refuse to him any pecuniary compensation, or to recommend that his patent should be purchased by the government. They therefore submit the following resolution:

Resolved, That the petitioner have leave to withdraw his petition and papers.

21ST CONGRESS.] **No. 461.** [2D SESSION.

APPORTIONMENT AND DISTRIBUTION OF SIXTY THOUSAND INFANTRY TACTICS AMONG THE MILITIA OF THE STATES AND TERRITORIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 13, 1831.

DEPARTMENT OF WAR, *January* 12, 1831.

SIR: In compliance with a resolution of the House of Representatives of yesterday, directing the Secretary of War to communicate to that House "what measures have been taken to carry into effect the provisions of an act providing for the printing and binding 60,000 copies of the Abstract of Infantry Tactics, including Manœuvres of Light Infantry and Riflemen, and for other purposes, approved the second day of March, 1829," I have the honor to report that, in obedience to the provisions of said act, I made a contract with Messrs. Hilliard, Gray & Co., of Boston, "for printing, binding, and delivering sixty thousand copies of the Abstract of Infantry Tactics, &c., for the sum of $11,700, and also for printing, binding, and delivering of five thousand copies "of a System of Exercise and Instruction of Field Artillery," &c., for the sum of $2,535, which contract has been fulfilled by them, and copies of these works have been forwarded to the several States and Territories according to the enclosed apportionment.

Very respectfully,

J. H. EATON.

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives.*

Apportionment and distribution of 60,000 copies of Infantry Tactics and of 5,000 copies of the System of Exercise and Instruction of Artillery among the militia of the several States and Territories as provided for by law.

R. JONES, *Adjutant General.*

ADJUTANT GENERAL'S OFFICE, *Washington, September* 25, 1829.

21ST CONGRESS.] **No. 462.** [2D SESSION.

STATEMENT OF THE MILITARY ROADS CONSTRUCTED BY THE ARMY OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 13, 1831.

DEPARTMENT OF WAR, *January* 11, 1831.

SIR: Agreeably to a resolution of the House of Representatives of the 15th of December last, directing the Secretary of War to lay before that House "a detailed statement of the several roads which have at any time been constructed by the army of the United States within any of the States or Territories thereof, denoting therein the termini and extent of the several roads respectively, the period of their construction, their cost to the United States, and the authority under which the same was incurred, and the sums of money which may at any time have been allowed to the troops of the United States on account of fatigue duty, distinguishing the year in which any such allowance may have been made, and, where practicable, the nature of the duty performed," I have the honor to present the enclosed reports from the Quartermaster General and Third Auditor of the Treasury.

The information afforded by the Quartermaster General falls short of the objects which the resolution contemplates, yet it is all that it is in his power to afford.

The Third Auditor, it will be perceived, is unable to meet the calls of the resolution. Payments of the description alluded to consist of items in the Quartermaster's accounts, and which are settled under the general head of disbursements on account of the Quartermaster's department. To ascertain these items, and to present an aggregate of the whole amount of expenditure for these purposes, would create the necessity of looking minutely into each particular account, from the present time back through all the

records of the office—a service which, the Third Auditor says, cannot be performed during the present session of Congress by all the disposable clerks of his office.

Under these circumstances, I have assumed it as the preferable course to submit the report of the Quartermaster General, and to bring the objections of the Third Auditor to the consideration of the House of Representatives, that, being informed of the attendant difficulties, it may be ascertained whether it be the pleasure of the House that the examination to answer the calls of the resolution shall be prosecuted further.

Very respectfully,

J. H. EATON.

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives.*

QUARTERMASTER GENERAL'S OFFICE, *Washington City, January 7*, 1830.

SIR: In obedience to your order requiring, under a resolution of the House of Representatives of the 15th of December last, a detailed statement of the several roads which have at any time been constructed by the army, and also the several sums of money which may have been allowed to the troops of the United States on account of fatigue duty, I have the honor to submit statements numbered 1 and 2.

No. 1, with the papers appended to it, lettered from A to F, contains all the information required by the first paragraph of the resolution which the records of this office, and of other offices to which I have had access, enable me to give.

Roads required for the troops in their own operations were sometimes opened by them previous to and during the late war; but there are no data within the control of the government from which anything more can be ascertained in relation to them than the fact that they were actually made by the labor of the troops.

Since the reduction of the army in 1821, it has not at all times been possible to spare a sufficient force from other duties to open the communications required, either between the posts on the frontiers, or from those posts to the interior; hence, in several cases, we have been compelled, in executing such works, to resort to contract or to hired laborers.

Statement No. 2 contains all the information required by the second paragraph of the resolution which I am able to furnish. Previous to 1820 no separate account was kept in this office of the sums paid for labor performed by the troops. The statement, therefore, commences with that year, and exhibits the amount paid in each year to the 30th of September, 1830, for all labor performed, but it is not possible to state the amount paid for each particular kind of labor. That information could be obtained only by an examination of the accounts, deposited in the treasury, of all the disbursing officers employed during the period stated.

I am, sir, respectfully, your obedient servant,

THOMAS S. JESUP, *Quartermaster General.*

Hon. JOHN H. EATON, *Secretary of War, Washington City.*

No. 1.

Statement of the several roads which have been constructed by the army of the United States, showing their location and extent, the period of their construction, the authority by which they were constructed, and their cost, as far as the same can be ascertained. Made in compliance with a resolution of the House of Representatives of December 15, 1830.

No.	Location—showing the points of commencement and termination.	The whole length of each road.	The portion constructed by the army.	Period of their construction.	The authority by which they were constructed.	Cost of each road, as far as the same can be ascertained.
		Miles.	*Miles.*			
1	Commencing at Madisonville, Louisiana, and terminating in Tennessee, 21 miles north of the Tennessee river, crossing it at or near the Muscle Shoals.	392	392	Commenced in June, 1817, and completed in January, 1820. 	Total...	2,552	1,902			

NOTE.—It is not practicable, in this office, to state the amounts expended for the first four objects named above. For No. 1 there was an appropriation of $5,000 made in 1816, and for No. 2 there was an appropriation of $3,500 made in 1823 towards completing it; but there do not appear to have been any further specific appropriations for those objects, and the remainder of their cost, like the entire expense of Nos. 3, 4, and 14, was charged against the general appropriation for the Quartermaster's department without distinction.

To ascertain the cost of those objects, it would be necessary to make a critical examination of the accounts of the various disbursing agents, which can only be made at the Treasury Department, where the accounts are filed. Some of the works were commenced before this office was instituted.

QUARTERMASTER GENERAL'S OFFICE, *January* 5, 1831.

A.

WAR DEPARTMENT, *September* 24, 1816.

SIR: An appropriation of ten thousand dollars was made during the last session of Congress for repairing and keeping in repair a road from Columbia, in Tennessee, to Madisonville, in Louisiana, and another road from Georgia to Fort Stoddart. Half of this sum will be expended upon the first road. I have received no information of the length of this road, the nature of the country through which it passes, or of its present state.

If there are many bridges to be erected the appropriation will be inadequate to the object. In that event the employment of a part of the troops may become necessary.

All the information which you possess upon the subject will be acceptable to the department. If more is necessary to be obtained to enable you to furnish what is necessary to the due execution of the law in question, as little time should be lost in collecting it as possible.

The necessary instructions will be given as soon as the information required shall be transmitted.

I have the honor, &c.,

WILLIAM H. CRAWFORD.

Major General ANDREW JACKSON, *Nashville, Tennessee.*

B. 1.

DIVISION ORDERS.

HEADQUARTERS NORTHERN DIVISION, *Buffalo, August* 9, 1817.

By order of the President, Major General Brown directs that Colonel Atkinson employ the soldiers of the 6th regiment, at Plattsburg, in improving the road from thence to the Chateaugay *Four Corners* until the 1st of November next, commencing with such parts of the road as the colonel may think advisable. He will direct the quartermaster of the regiment to provide the necessary implements for the work.

By order.

R. JONES, *Adjutant General.*

B. 2.

SPECIAL ORDER.

ADJUTANT GENERAL'S OFFICE, WESTERN DIVISION, *Brownville, October* 3, 1818.

Colonel Brady will forthwith detach a competent number of the troops under his command at the post of Sackett's Harbor for fatigue duty on the following public work, viz: On the road which is to commence, agreeably to a survey made during the last spring, at Madison barracks, and lead from thence to the village of Brownville; from the latter place to a spot called Evans' mill, in the town of Le Ray, where it will be made to unite either with the Ogdensburg turnpike or the Hammond road, as the government may hereafter direct.

The troops will commence their labor on the east side of Mill creek, and will lay open and make perfect a road according to the foregoing route in the same excellent manner with that made by the 6th regiment from Plattsburg toward Chateaugay. Tools will be furnished by requisition on the Quartermaster, who is hereby directed to supply the same.

As a portion of this road necessarily passes over lands belonging to the major general, he directs that no public labor be given to such parts, it being his determination to cause that part of the road which lays on his own property to be made at his own private expense.

By order of Major General Brown.

ROBERT M. HARRISON, *Aide-de-Camp.*

True copy.

R. JONES, *Adjutant General.*

C. 1.

QUARTERMASTER GENERAL'S OFFICE, *January* 27, 1823.

SIR: You will take measures to ascertain the best route for a road from Pensacola to the Barrancas, and will submit to this office a detailed report in relation thereto, stating the nature of the country, the number and description of bridges necessary to be erected, with an estimate of the expense.

I am, sir, &c.,

TH. S. JESUP, *Quartermaster General.*

Captain D. E. BURCH, *Assistant Quartermaster, Pensacola.*

C. 2.

QUARTERMASTER GENERAL'S OFFICE, *May* 1, 1823.

SIR: I have received your letters dated the 25th of March and 2d of April. The road to the Barrancas will be made on the best route.

I have required that the sum of one thousand dollars, in addition to five thousand required for you on the 4th of March, be transmitted to you on account of the Quartermaster's department.

It is the intention of the government to ask at the next session of Congress for an appropriation for the purpose of opening a road from Pensacola to St. Augustine; and in order that the best information may be obtained of the nature of the country and of the most eligible route, it is desirable that a survey be made during the present season. I wish you to consult the commanding officer and ascertain whether an officer competent to make the survey can be detailed, either from the artillery or the infantry stationed near Pensacola, and report to me as soon as practicable.

I am, sir, &c.,

THOMAS S. JESUP, *Quartermaster General.*

Captain D. E. BURCH, *Assistant Quartermaster, Pensacola.*

D.

QUARTERMASTER GENERAL'S OFFICE, *April* 12, 1824.

SIR: On the 1st instant I received your letter dated the 7th ultimo. The Secretary of War, to whom your letter was submitted, approves entirely of your views in relation to the road from Pensacola to Fort Mitchell, and directs that you commence your operations, should the season not be so far advanced as to endanger the health of the troops, as soon as your other duties will allow of your absence from Pensacola. The route by Sherlock's ferry, for the reasons which you have stated, is considered preferable to that by Beeler's ferry.

You will make such a road as to admit with facility the movement of carriages, carts, wagons, &c., and cause substantial wooden bridges to be erected over all the principal streams on the route which shall not require ferries. The commanding officer at Pensacola will be instructed to furnish a subaltern's command for this service, which will be under your orders.

It is desirable that the work be performed as early and at as little expense as possible.

I am, sir, &c.,

THOMAS S. JESUP, *Quartermaster General.*

Captain D. E. BURCH, *Assistant Quartermaster, Pensacola.*

E.

QUARTERMASTER GENERAL'S OFFICE, *March* 31, 1827.

SIR: The law, of which an extract was transmitted you with my letter of yesterday's date, provides for the survey and construction of the road leading from Fort Towson towards Natchitoches only "to the northern boundary line of the State of Louisiana;" but, to make it fulfil its objects in a military view, the War Department has determined to continue it to Natchitoches, and you will make your survey accordingly.

I am, sir, &c.,

THOMAS S. JESUP, *Quartermaster General.*

Lieutenant FRANCIS LEE, *Assistant Quartermaster, Natchitoches, Louisiana.*

F.

Extract of a letter from the Hon. William H. Crawford, Secretary of War, to Major General A. Macomb, dated May 29, 1816.

"The expediency of connecting by good roads the posts under your immediate command with the inhabited parts of Ohio, from whence in time of war, when the enemy commands the lakes, the subsistence of the troops by which they may be occupied must be drawn, has been sufficiently demonstrated by the events of the late war. The situation of the country through which these roads must pass affords but few facilities for the execution of public works of this nature. Under these circumstances the President has deemed it expedient to employ the troops under your immediate command in the construction of a military road from Detroit to Fort Meigs, at the foot of the rapids of the Miami of the Lakes. As soon as this letter is received you are authorized to detail such portion of the troops for the execution of this trust as shall, in your judgment, be necessary for its prompt and effectual accomplishment."

No. 2.

Statement of the amount paid to the troops of the United States under the act of Congress of the 2d of March, 1819, *for surveys, opening roads, and other constant labor, such as building barracks, quarters, and storehouses, from the 1st of January,* 1820, *to the 30th of September,* 1830.

In 1820	$6,514 65
1821	5,284 50
1822	6,182 45
1823	21,741 39
1824	17,528 88
1825	9,907 13
1826	15,385 52
1827	13,333 50
1828	12,388 76
1829	19,252 45
1830, 1st, 2d, and 3d quarters	13,787 54
	141,306 77

NOTE.—The above statement exhibits the total amount paid in each year for *all* the objects named. It is not practicable to state the amount paid for *each* object, as the analysis made of the accounts in this office does not go so much into detail. The statement cannot be made to go further back than 1820, as that was the year in which extra pay to soldiers was first estimated for distinctly and analyzed separately.

TH. S. JESUP, *Quartermaster General.*

QUARTERMASTER GENERAL'S OFFICE, *Washington, January* 6, 1830.

TREASURY DEPARTMENT, *Third Auditor's Office, December* 21, 1830.

SIR: In regard to that part of the resolution of the House of Representatives of the 15th instant which relates to this office, referred by you to me to report on, viz:

"1st. The cost to the United States of the several roads which have at any time been constructed by the army of the United States, within any of the States or Territories thereof;

"2d. The amount of the several sums of money which may at any time have been allowed to the troops of the United States on account of fatigue duty, distinguishing the year in which any such allowance may have been made, and, where practicable, the nature of the duty performed,"

I have the honor to state that, from the system established for stating and entering the accounts of the disbursing officers on the books of this office, the expenditures are arranged and charged to the respective appropriations made by Congress, without any other classification of the objects; and as the present subject belongs to the Quartermaster's department it will, in order to arrive at the information required from this office, become necessary to go into an examination of the accounts of all officers having made disbursements under that appropriation, which, it is believed, would consume more time, with all

the force practicable to be given to it, consistent with the other duties of the office, than the present Congress will remain in session; and then the information to be ascertained would not extend back beyond the year 1813, as all the accounts prior to that period settled and sent to the treasury were destroyed by the burning of the public buildings in 1814. Under these circumstances it is respectfully submitted to you to decide whether the examination shall now be gone into.

I have the honor to be, very respectfully, your obedient servant,

PETER HAGNER, *Auditor.*

Hon. JOHN H. EATON, *Secretary of War.*

21st CONGRESS.] No 463. [2d SESSION.

ON THE NECESSITY OF AN INCREASE OF THE ENGINEER CORPS AND TOPOGRAPHICAL ENGINEERS EXCLUSIVELY FOR MILITARY PURPOSES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 14, 1831.

DEPARTMENT OF WAR, *January* 13, 1831.

SIR: In obedience to a resolution adopted by the House of Representatives on the 7th instant, calling on the Secretary of War "to inform the House whether any, and if any what additions are necessary to be made to the corps of military and topographical engineers exclusively for military purposes," I have the honor to report:

With regard to the corps of engineers: In my report to the President accompanying his message to Congress in 1829, I expressed a concurrence in the opinion, which has been urged for years past by this department, of the necessity for increasing the number of officers in this corps. The advantages which might result from such an increase, in the construction of fortifications and other works of general improvement, were not lost sight of. The recommendation, however, had reference mainly to such an organization as it was believed would tend to greater economy and efficiency in the discharge of the military duties of this corps in time of peace.

The necessity of an increase of their number is illustrated by the fact, that whilst every officer of the corps is now on duty, and but three of them employed in other than military duties, there are only four of the fortifications under construction in the direction of which the superintending engineer is assisted by any officer of the corps. The necessity for such assistance, in preparing detailed plans and in superintending their proper execution, must be obvious to any one who reflects on the varied and often complicated nature of those works. This deficiency in officers is imperfectly supplied, in a few cases, by an occasional and temporary detail from other corps of the army, or by the employment of citizens at high rates of compensation.

The number of officers which should be added to the corps will be regulated by considering the number of fortifications that will probably be under construction at any one time, with other duties to which the officers are liable. The table of "works projected," which accompanies the annual report from this department, will show that, in addition to those already commenced, forty-three have been planned for the Atlantic and Gulf of Mexico frontier; besides which, it will be remembered that no defences are yet projected for the extensive frontier bordering on Canada.

Referring, for the present, to the works required for the defence of the seaboard alone, we may suppose that about twelve or fourteen of them will be under construction or repair at one and the same time, and the number of officers requisite for their superintendence may be estimated as follows:

On the eastern Atlantic frontier, say	1	field officer,	2	captains,	4	lieutenants.		
Do.. middle	do	1	do	4	do	8	do.	
Do.. southern	do	1	do	2	do	3	do.	
Do.. Gulf of Mexico	do	1	do	2	do	4	do.	
To which add—								
At the seat of government	1	do	0	do	1	do.		
Military Academy	1	do	1	do	2	do.		
Board of engineers for fortifications and to meet contingencies of service	1	do	2	do	2	do.		
Making a total of	7		12		24			

By such an arrangement there would be in each great division of the maritime frontier one field officer, who, besides having the immediate charge of a particular work, could act as a general inspector, and whose experience would enable him, in cases of need, to aid by his advice other officers within his district.

It is in accordance with these views that the project for an increase of the corps, heretofore presented to Congress, has been prepared, the details of which are contained in a bill reported at the last session by the Committee of the House of Representatives on Military Affairs.

On the subject of the topographical engineers, to which the resolution also refers, I shall have the honor to report in a few days.

I am, very respectfully, sir, your obedient servant,

J. H. EATON.

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives.*

21st Congress.] **No. 464.** [2d Session.

ON THE INEXPEDIENCY OF ESTABLISHING A MILITARY POST AT THE MOUTH OF LITTLE RIVER IN ARKANSAS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 14, 1831.

Mr. Drayton, from the Committee on Military Affairs, to whom was referred a resolution of the House, instructing them "to inquire into the expediency of establishing a military post or garrison at the mouth of Little River, in the southwest corner of the Territory of Arkansas," reported:

That it is contemplated by the War Department to establish a garrison of United States troops upon the Red river, near the mouth of the Kearche, which is deemed a preferable position to the one designated in the resolution, inasmuch as it will be in advance of our white population on the border of the province of Texas, and contiguous to the Indians.

The committee, therefore, recommend the adoption of the following resolution:

Resolved, That it is inexpedient to establish a military post at the mouth of Little river.

21st Congress.] **No. 465.** [2d Session.

ON THE IMPORTANCE OF THE TOPOGRAPHICAL ENGINEERS OF THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 21, 1831.

War Department, *January* 20, 1831.

Sir: In answer to that part of the resolution of the House of Representatives of the 7th instant which relates to the topographical engineers, I have the honor to state:

That the topographical corps of the army is of great importance to the country. Recently, its operations have been confined to what may be considered civil purposes—to the surveying of practicable routes for roads and canals, and to the opening and improving of the navigation of our streams, bays, harbors, and inlets. These, seemingly, are all exclusively civil objects, although they are not so in reality, inasmuch as the information thus obtained may be serviceably used hereafter in military operations. When war shall take place the benefits resulting from the industry of this corps will be found of incalculable advantage. A knowledge of the relative positions of places, of their elevations and depressions, and of the advantages promised by their occupation, will remain in the War Office, ready on proper occasions, to be turned to useful account.

The surveys which are now possessed are the work of this useful and valuable corps, and have been obtained by the industrious pursuit of its duties through successive seasons. If the works to which they have reference should ever be undertaken, the results of those surveys are in readiness, and furnish the necessary data; if not, their value will still be perceived and felt in future military operations. A commanding general may carefully watch and sedulously guard his army; yet, if he be a stranger to the country, and without information of its relative positions, and of the advantages to be derived from places to be occupied, he will but grope his way in darkness, and be vulnerable to an opposing officer who may have a better knowledge than himself of these facts. No general can operate successfully who is ignorant of the topography of the country, and of its assailable and defensible points, and of the various positions to be taken, which may benefit himself or produce injury to an enemy.

In this country we have an extensive inland and maritime frontier, and for their security and protection much labor has yet to be performed. Our entire line of frontier, our bays, harbors, and inlets, should be carefully examined and surveyed. Points which are assailable, and the mode of defending these, with all necessary details, should be carefully looked into, and the information so obtained treasured up with the archives of the country.

Under this aspect of the case, the classification of the duties to be performed by this corps, exclusively military, may be thus stated:

1st. Surveys of military positions for purposes of permanent fortifications.

2d. Surveys of our inland frontier to ascertain the points best situated for defence, after what manner attacks may be made, and the best modes of opposing them.

3d. An examination of the sea-coast generally, and particularly of all seaports, bays, and inlets, the avenue by which these may be approached, and the modes of protecting and defending them.

4th. The surveying of such military roads as may most advantageously connect the several military positions upon our inland frontier.

The foregoing remarks and statement of duties relate to the employment of the topographical engineers during a state of peace; but during times of war, for which all its peace operations may be considered as preparatory, their labors become more exclusively military, and may be said to embrace the extensive range of duties of the field engineer, and for which their occupation in times of peace qualify them. They are a necessary appendage to every army, and with propriety may be called the eyes of the commanding general and of the government, as it is upon the results and labors of such a corps that all judicious plans of military operations must be based.

The addition to the present topographical engineers, and the organization required, and which is now recommended, are such as will form a corps to consist of one colonel, one lieutenant colonel, two majors, ten captains, ten first lieutenants, and ten second lieutenants; which numbers and organization are considered as requisite to meet the present military wants of the country.

All which is respectfully submitted.

J. H. EATON.

The Speaker *of the House of Representatives.*

21st Congress.] No. 466. [2d Session.

ON THE EXPEDIENCY OF REDUCING THE NUMBER OF OFFICERS OF THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 31, 1831.

War Department, *January* 11, 1831.

Sir: At the last session of Congress a resolution was passed by the House of Representatives directing the Secretary of War to report "whether any reduction in the number of officers in the army of the United States can be made without injury to the public service," &c.

The inquiry presented by this resolution is in reference to the officers, not to the rank and file of the army; and, that I should be enabled fully to answer it, inquiries during last summer were addressed to the principal officers at the different posts, that their opinions might be obtained and their experience and observation availed of upon a subject of so much importance.

A digest of the several reports received by the major general has been communicated; but amongst them there is no general concurrence by which any certain conclusion can be arrived at. In reference to the resolution, I am constrained, therefore, to offer such opinions and suggestions, as to the general state and condition of the army, as are the result of my own reflections.

While our regular force is small, it is a consoling reflection that it is in the power of this country to boast of a militia who breathe an ardent love of country, and who are ready to devote themselves to any emergency that circumstances may impose. There is no disguising the fact, however, that they are unskilled in military discipline, and hence incapable of those efforts which should render them valuable and efficient in war. To relieve against this, various attempts have been made. Efforts to give some uniform organization to this force have been essayed, but in vain. The same rule of discipline that might prove operative in one State may fail to be beneficial in another. The system is defective, and must continue so until some more salutary plan than any yet devised can be adopted.

It occurs to me, (and I suggest it for consideration with great respect,) that, in peace, an organization of the army and militia should take place based upon principles which look altogether to a state of war. In 1812 this country was thrown into a belligerent attitude, and the disasters at the commencement furnish a lecture which the intelligence of statesmen ought not to disregard. It will not do to be compelled to organize an army *ab ovo* in moments of pressure and when the public safety is at hazard.

A preparation, to be serviceable, must take place when time and leisure afford the opportunity. All things being in readiness, should war ensue, a country has only to rely on the zeal, fidelity, and bravery of her citizens, and then everything will proceed well; but the exercise of all these high qualities will prove of slender avail if the preparatory means for aiding and assisting them be wanting.

It is not the conceded policy of this government to keep in service a large standing army, though its practice has always been to retain one to some extent. The economy which was practiced in 1801 did not suggest the employment of a less force than three thousand men, which were under the command of a brigadier general. Now our population and resources are three or four times greater than they were at that period of our history. The great desiderata to our army is to elevate in some way the soldier's character, and to infuse proper feelings of pride. Inducements are wanting to allure to the service proper materials. Inasmuch as a soldier, by existing laws, is without the hope of rising above the grade of a non-commissioned officer, the attaining that grade ought to be rendered more desirable than it is at present, by having increased pay and emolument granted, with the privilege to the soldier, after a limited period of faithful service, to retire and become stationary at some vacant ordnance post, where his services could be had by the government, and an adequate support afforded him. By such an inducement meritorious men may be brought into the army service, each of whom, aided by proper officers, would be able to give valuable instruction in a few weeks to the militia that should be called out, or to new recruits, as they might be wanted. Properly inspirited, every soldier might become a drill officer, the beneficial results of which, at the onset of war, would be sensibly perceived and felt.

The small military force we possess upon the present organization is based upon principles which, if occasion should require it, may give rise to immediate and beneficial effects. The rank and file, as they stand in relation to the number of officers in command, are of skeleton form, and capable to be multiplied and considerably enlarged, should the circumstances of the country make it necessary. In an emergency the number of our troops might be doubled or tripled, thereby, with the present officers, in a short time, to bring into active and useful service a force of fifteen or twenty thousand men. This was the design had in view by the act of 1821, which reduced the army. Change the organization and let some future necessity demand an enlargement, and a new recruit, both of officers and soldiers, will be required, the tendency and effect of which would be probable injury to the public service.

For reasons which have been often adverted to, the reliance of this country, in moments of difficulty, must be upon the militia; and the examples which past time presents afford an earnest that on this reliance we may safely depend. But while frequent instances have occurred to prove the value of this defence—that it is capable of high and daring gallantry—it should not be forgotten that, to render it still more efficient and valuable, the militia should be disciplined. To the attaining of this important object, the partial army we possess might materially conduce when new recruits are wanted. Could we entertain a reasonable expectation that the country would continue at peace for any definite period of time, the propriety of disregarding in the interim military preparation, and pride, and feeling, would be questionable.

As it relates to the command of companies, no reduction and no organization of the officers different from the present arrangement can be advantageously made, except as to the supernumerary brevet lieutenants. In the annual report from the War Department which accompanied the President's message, it stated that, in the ensuing year, perhaps, but certainly in the succeeding one, there will be 106 lieutenants attached by brevet appointment to the army, while the number that may be taken into service by regular appointment cannot exceed 22 annually; consequently, there will be regularly and constantly in each year 84 supernumerary officers not needed or required by the service, and which will occasion an annual expense of more than $60,000 to the government.

With the exception here suggested, I can perceive no beneficial change that can be made as it regards

the company officers, nor indeed any as it regards the regimental officers. In relation to these, the present organization is perhaps as perfect and complete as it can be rendered.

The officers retained under the reduction in 1821 were known to be proportionably greater than was necessary to the number of the rank and file upon a peace establishment; but the object of the organization was to present such a force, and under such circumstances, as that in war the greatest possible efficiency and activity might be attained at a short notice. But if these principles, then sanctioned and so long acquiesced in, are to be departed from, and the object of the resolution be to organize the army upon a mere peace establishment, in reference to present exigencies, and without regard to the probabilities of war and of danger at some future period, then, by that rule of adjustment, it might, for our present service, be sufficient to place the army under the command of a brigadier general. By such an arrangement one major general and a brigadier, with three aides-de-camp, could be dispensed with, and thereby a saving to the government be created of more than $14,000 a year.

In this view of the subject, the Pay department might also be reformed to advantage—be rendered more serviceable and less expensive than under the present system. The law at present authorizes fourteen paymasters to be retained, which cost the government annually about $32,000. Not more than six appear to be necessary. The public business could, with that number, be better attended to, and at a saving of $18,000 or $20,000 annually to the country. The great distances which the paymasters of the army travel in visiting their posts render the carrying of money hazardous, and occasion large expenses to the government on account of their transportation. These inconveniences may be avoided by retaining a few of them, to be arranged at different points, with a view to disburse the necessary funds to the subordinate agents at posts. Let a quartermaster or commissary at the several posts where troops are stationed have the trust confided to them of making payments to the troops, and the expense of eight paymasters and their clerks will be saved, and the public, by the arrangement, be better served. Instead of payment being made to the troops once in six months, as is the case now at some of the posts, it might be done monthly or weekly. The soldier will be better satisfied, and, by having only small sums of money in his possession, will have less disposition to desert, and fewer facilities to enable him to do so. Should this suggestion be adopted, it might be necessary to authorize the Secretary of War to demand, from time to time, such bonds, and in such penalties, from the principal and subordinate paymasters, as the exigency of the service might seem to require.

By this arrangement there would be a considerable saving in the expenditures of the government, even after making to the subordinate paymasters a reasonable compensation for their disbursements, if to grant any shall be considered advisable. But whether the number of paymasters be reduced or not, an authority should be given to the Secretary of War to appoint pay agents at distant posts, and to place them under bonds for the faithful performance of their duty. The paymaster, for example, who is charged with the superintendence of the troops at Cantonment Gibson, resides at Louisville, Kentucky. To visit this post once in two months, as the law requires, will make the transportation account alone nearly equal to $8,000 a year. By an act of the last session of Congress a post is directed to be established at Key West, not far from the Island of Cuba. One company has accordingly been ordered there. Going to and returning from that post to Pensacola (the residence of the paymaster) will make his transportation account to constitute a considerable item in the course of the year, when, by the authority asked for, the payments may be as well and safely made (and at a trifling expense) through some selected officer of the company. The same remark is applicable to all our remote and distant posts. Transportation accrues to the paymasters and their clerks, and the expenses of a guard are oftentimes to be incurred to give safe convoy to the funds in their possession. Subordinate agents being stationed at these distant places, by drafts to be drawn on the principal paymasters, large expenditures, and particularly the risk of transportation, would be avoided.

The Surgeon General of the army might be dispensed with. He has no disbursements to superintend or make, no bonds to receive, no accounts to revise, or responsibilities to encounter. The principal and material duty to be rendered by him is in the purchasing and distributing of medicines—a duty which is performed by a quartermaster of the army at New York, at which place medical supplies are obtained, and from which point they are distributed to the several posts.

The two Inspectors General of the army, it occurs to me, are not essential to the service under a contemplated peace establishment. As these offices heretofore were executed, the incumbents were required to make secret confidential communications to the department of the conduct of the officers, together with the more general duty of reporting the situation of our posts, their condition, arms, and armament. It is not compatible with the dignity, the feelings, the pride, and character of an officer to have private, confidential reports made of him and his command, to be placed privately away amongst the archives of the office. There are some on file of former times, which, if rendered public, could not fail to produce strife and difficulty amongst individuals. Why inspect the conduct of an officer? Reliance must be had on his pride of character. He is unfit to command who deserves not implicitly to be confided in. If, in anything required by law or regulation, an officer disregards or omits a performance of the trusts confided to him, remedies are at hand, and vigilance for their fulfilment on the part of his associates is seldom or never wanted. The approach of an inspector to a post is nearly periodical. The officer in command can calculate with much accuracy as to the period of the visit, and can well arrange everything to meet his arrival and the inspection. If disposed to do his duty, the inspector brings no benefit, produces no good; if careless of it, a few days of preparation will place him securely beyond any effect from the inquest.

Harmony is essential to the quiet and well-being of an army, and to this regard should be had if one is to be retained. Strife and jealousy amongst different branches and departments of it should be avoided, if possible. Their consequences are disagreeable, and their tendency injurious to the public service. To effect so desirable an object, I beg leave to say, as matter connected with the subject of the resolution under consideration, that the administrative branches of the staff of the army should not be connected with the line of the army. The fancied ease and increased emolument which these offices afford make them the cause of solicitude to those who obtain them, and of jealousy on the part of others who are less successful in their applications. To avoid this, it has become an object with the department, in the distribution, to equalize these appointments amongst the respective regiments as much as possible. It might be preferable to separate them entirely—at least, the experiment might be safely and advantageously assayed for the present—by some changed organization in the Ordnance department.

In peace or in war this is a most important arm of our service. Through it are provided munitions of war, to be in readiness in moments of danger, and by it are constructed the arms which are required

for the defence of the country. Immense quantities (more than ten millions) of public property are in its possession and care. Officers, when composing a part of the army, in justice to themselves, to their own improvement in the lines, and that jealousies may be suppressed, should occasionally return to their commands. Changes must take place, and these changes affect the regularity of the system, and often occasion a waste of public property. A bill was introduced at the last session which, if properly matured and acted upon, would contribute to the efficiency of this arm of service and to the public interest, and at the same time add but little, if anything, to the present expenses of the army.

All of which is respectfully submitted.

J. H. EATON.

The SPEAKER *of the House of Representatives.*

Reports, &c., from departments and officers of the army relating to a reduction of the officers of the army.

QUARTERMASTER GENERAL'S OFFICE, *Washington City, October* 20, 1830.

SIR: In compliance with your order directing a report under a resolution of the House of Representatives of the 26th of April last, which requires the views of the Secretary of War to be presented to that House at its next session as to the propriety of reducing the number of officers of the army, and as to the most efficient organization in conformity with the reduction proposed, I beg leave to remark that whether any of the officers composing the army can be discharged without injury to the public service must depend upon the objects for which that body is maintained, and the duties it is required to perform.

The nature of our political system, with the advantages derived from our geographical position, enables us to dispense with large standing armies in time of peace; but the obligation to be at all times prepared for war, imposed upon us by a prudent regard to our own security, is not thereby lessened: on the contrary, it is a solemn duty which we owe to ourselves and to the cause of free government to be able to call into action the whole physical energies of our country whenever circumstances may require it. This is peculiarly so at the present time, when revolution pervades the eastern continent, and it is uncertain whether liberal or despotic principles are ultimately to prevail. The representative system has existed on this continent nearly two centuries without interruption. It is, therefore, no longer an experiment: its results are to be seen in the liberty, the happiness, and the prosperity of our country. The *moral* influence of that system, without any physical effort on our part, is silently but gradually and certainly sapping the foundations of every absolute government in the civilized world. Those interested in perpetuating ancient abuses are aware of the source of their danger, and are fully sensible, if our institutions continue in successful operation, there will be no security for them. They have, therefore, all those motives of interest and of sympathy which so powerfully influence human action to unite against us; and should the contest now going on result in the ascendancy of despotism, nothing can save us from the attempt but the most erect and determined attitude on the part of the nation, and its ability to return, with interest, every blow aimed at it. Our peace establishment has, therefore, more important duties to perform and higher destinies to achieve than any other army on the globe. But before we proceed to enumerate the duties which devolve upon it, let us examine the objects for which the armies of other countries are maintained.

If we look to the great States of Europe, we perceive in their past history that the reasons for supporting their large establishments in peace are to protect the person, secure the authority, and enforce the edicts of the sovereign; and, in addition to those duties, to defend the country, and to carry on offensive operations in war. But if we recur to our own condition, we must be sensible that the former of those objects were never intended to be attained by military force. Public opinion is strong enough here to guarantee the execution of the laws, to secure the internal peace of the country, and to protect the public functionaries in the performance of their duties; and the small force composing our peace establishment, dispersed as it is over a territory embracing nineteen degrees of latitude and twenty-eight degrees of longitude, could never have been calculated to meet even the first shock of war. Hence it is manifestly maintained for other and different objects, some of the more important of which are to acquire and preserve military knowledge and perfect military discipline; to construct the permanent defences, and organize the materiel necessary in war; to form the stock on which an army competent to the defence of the country may be engrafted, and, by means of depots of instruction, directed by intelligent and able officers, hastened to maturity to present a rallying point to the militia, and, by means of instructors and an intelligent administrative staff, to impart to that essential arm of the national defence a part of its own efficiency. Many of these important duties devolve on officers without the agency of troops. All that relate to defences, reconnoissances, arming and equipping the militia, the formation of depots, the construction of military roads, and the preparation and preservation of arms, munitions, and stores, must be performed, whether we retain a single private soldier or not; and the duties of the officers immediately connected with the troops depend not so much upon their numerical force as upon the extent of the national territory, and the consequent extent of the frontiers to be covered, and the number of posts to be occupied.

It is, therefore, apparent that we require a much larger proportion of officers in time of peace, compared with the rank and file, than most European nations, with their large force and small territories, could find employment for, the more especially as with them those works of defence and measures of preparation which with us can hardly be said to have commenced have been accomplished. If we recur to the military condition of France, for instance, we find her frontiers covered with fortresses; her arsenals filled with arms and munitions; her interior depots established; her bureaus filled with maps, plans, and topographical surveys, the valuable results of the labors of her staff; all her communications, such as roads and canals, which afford her the means of rapid concentration, complete. Besides occupying, as she does, a small territory compared with her immense population and resources, she requires but few officers connected with those important works compared with her large military force.

The United States have, on the contrary, an extensive frontier; their population and resources are dispersed over a widely-extended territory; the internal communications of the country, so necessary for rapid military movements, whether projected by national or State authority, are incomplete; and, in short, in all their military relations they present, when compared with France, the most striking contrast. It is not the policy of the country to retain, in time of peace, a large military establishment, particularly a numerous soldiery; but it is of the utmost importance to educate and retain a body of officers sufficient

for all the labors preparatory to war, and capable of forming soldiers, of supplying them, and putting them in motion in the event of war.

If these views be correct, it is not easy to perceive how any of the officers making part of our military establishment, as authorized by the act of 1821, or by subsequent acts, can be dispensed with. Our companies are now sufficiently large for all the purposes of instruction and for the services required at most of our minor posts; and the officers are barely sufficient for the duties actually required to be performed.*

The infantry and artillery furnish most of the assistant professors at West Point, two-thirds of the officers on topographical duty, all those on ordnance duty, and, with four exceptions, all those attached to the Commissary's and Quartermaster's departments. It is true, the officers serving with those corps might be permanently attached to them, and the regiments be reduced to a corresponding extent; but the measure would be one of transfer merely, and not of reduction. The supernumerary officers, however, attached to the army from the academy and waiting for vacancies, being no part of the establishment, as authorized by the laws referred to, might be reduced; they now amount to eighty-four, and increase at the rate of about fourteen annually. The cadets at the academy might also be reduced from 250 to 150; the services of the supernumerary officers are not required, and 150 cadets constantly in the course of education would be sufficient for all the vacancies of the army in peace, and for those of the engineers, the ordnance, the artillery, and topographical corps in war. The legal authority to appoint and retain either supernumeraries or cadets is extremely doubtful. If the cadets do not make part of the corps of engineers, there is no law in existence to authorize the appointment of more than ten; if they do form part of that corps they are retained with it by the act of 1821; but as that act limits the officers of the army, and provides for no supernumeraries, there is no legal authority to attach the graduated cadets to the companies as such.

As to the organization which may be considered the more proper or the more efficient for a peace establishment, we should, regardless of European organization, be governed by our own situation and the circumstances of our own country. The body of the army should be so formed as to admit of the greatest extension on the approach of war, and the staff should be so constituted as to be attached to either the regular force or the militia; this latter is the more necessary, as the militia must, in the event of war, form the greater part of our defensive force.

As but little progress has been made in the fortification and military survey of the country both corps of engineers should be numerous. They should be as much so in peace as in war; for it is in peace only that scientific surveys can be faithfully made, and that permanent and durable works can be erected. The number of officers in both corps should then depend upon the works to be executed, and not upon the number of troops in service. We have more duty for them to perform, though our army is but six thousand strong, than France with her three hundred thousand men.

* For the exercise in time of peace of an artillery company, four pieces with four caissons are sufficient. The pieces should consist of two six-pounders, one twelve-pounder, and one howitzer. A captain should command the whole, and each section of two pieces should be commanded by a lieutenant. The line of caissons should be directed by a lieutenant, who should be conductor of ordnance, and receive and account for the stores of the company An orderly sergeant is required to assist the captain in the military details, and an ordnance sergeant to assist the conductor of ordnance in the administrative details. A non-commissioned officer and eight privates are required for each piece, and one with two privates to each section of two caissons, and three artificers to each company; and there should be at least one lieutenant to each company for the duties of the several staff corps.

The company for peace would then consist of—

1 captain, to command.
2 lieutenants, to command sections.
1 lieutenant, conductor of ordnance.
1 lieutenant for topographical, ordnance, and other staff duty.

5

1 orderly sergeant.
1 ordnance sergeant.
2 sergeants and 4 corporals. } attached to pieces and caissons.
2 musicians.
3 artificers.
32 privates.

45

Being five officers and forty-five rank and file, or an aggregate of fifty; being ten less than our present companies.

In war, a company serves six pieces, with a caisson to each; and, in addition to the number of officers, non-commissioned officers, and privates to the pieces and caissons, a farrier, a saddler and harness-maker, five additional artificers are required for the company, and two drivers to each piece and each caisson.

The company for war, without allowing for a single casualty, or a single officer for the staff, would then consist of—

1 captain, to command.
3 lieutenants, commanding sections.
1 lieutenant, conductor of ordnance.

5

2 orderly sergeants.
1 ordnance sergeant.
3 sergeants and 6 corporals, } attached to pieces and caissons.
2 musicians.
1 saddler and harness-maker.
1 farrier.
8 artificers.
24 drivers.
48 privates attached to pieces.
6 privates attached to caissons.

101

Making five officers and one hundred and one rank and file, or an aggregate of one hundred and six; which force is barely sufficient for a company in the field, without allowing for a single casualty, or furnishing a single officer for the staff.

The Ordnance department should be so organized as to require no augmentation in war; its most important labors are performed in peace. It is then that arms must be fabricated and every munition prepared, and that depots should be established on all the great avenues leading to the frontiers. The operations of this department were paralyzed by the act of 1821, which merged the corps in the artillery. As its labors have but little relation to the peace establishment, but depend upon the whole military force, regular as well as militia, either in service or liable to be called into service in war, it is of the utmost importance to the future defence of the country, perhaps to its security and the preservation of its liberties, that the officers be separated from the body of the army, in order to devote themselves exclusively to their own peculiar duties. It is desirable, not only that our whole population be armed, but that the arms be of the best quality; for on their excellence, as well as on the skill of those who use them, depends their effect. So little attention had been paid to this branch of service previously to the late war that it sometimes happened, out of ten thousand stands of arms taken to the point of distribution, not more than seven or eight hundred could be put into the hands of the troops; and it is a fact which, so far as I am informed, public men have not yet dared to tell the nation, that before the close of the war we were unable to furnish arms to the troops at the various points assailed, and that we could not have armed properly a force of forty thousand men, had a campaign been necessary in 1815. Surely, if the lessons of experience be not entirely lost upon us, we would not again place ourselves in so perilous a situation. Our citizens are all acquainted with the use of fire-arms, and it should be our policy to perfect that knowledge as far as possible. If we could quadruple the effect of our fire, compared with that of the troops of European nations, one of our soldiers would be equal to four of theirs; the effect might be increased tenfold; but it is to the ordnance, more than to any other department, we must look for this improvement.

The Adjutant General's department requires but few officers. We have an Adjutant General to the army and an adjutant to each regiment. To perfect the organization of that branch of service, an assistant adjutant general should be attached to each geographical department. Those officers should be taken from the lieutenant colonels and majors of the line, as a detail might be made from those grades with less inconvenience to the service than from any other.

The Inspector's department is one of the most important in the army, but the officers are not sufficiently numerous. Each inspector general should have an assistant, to be taken from the lieutenant colonels and majors of the line. This addition to the department, as well as that to the Adjutant General's department, would involve no increase of the officers of the army, but would merely change the duties of four field officers. The inspectors, with this addition to their number, would be able to direct their attention to every department and branch of service, embracing all the fiscal concerns of the army, as well as its discipline and police. The change, though important to the public interests, would cause no additional expense; indeed, the expense might be lessened by dispensing with the inspections now made by the colonel of artillery.

The labors of the Subsistence and Quartermaster's departments depend upon the dispersed situation of the troops and the number of posts they occupy. Those labors are increased by every movement made, and by every new position taken by the troops. For peace, the organization could not well be improved; and, in the event of war, nothing more would be required for the Subsistence department than a purchasing commissary for each geographical division, and a receiving and distributing commissary for each army; and, for the Quartermaster's department, a regimental quartermaster to each regiment, a small number of forage, wagon, and barrack masters, and a corps of artificers. No army, however well appointed in other respects, could long keep the field in this country without an efficient commissariat; nor could it operate with effect without an able quartermaster.

The efficiency of those departments is much more essential to success here than in any other country, because the military, having no right to command the civil power, can derive from it no other than voluntary aid; whilst, in other countries, the civil power is made to co-operate with, and is, in some respects, subservient to the military. Even in Great Britain it is made, by law, the duty of every magistrate to facilitate the movement and supply of the troops.

The labors of the Pay department depend more upon the number of troops than those of any other branch of the administrative staff. Those labors, however, are considerably increased by the number of posts occupied, and their great distance from each other. The organization of the department could not well be improved.

In regard to the body of the army, it may be proper to remark that, if military knowledge be essential in war, it is the true policy, not only of this, but of every free country, to adopt such an organization of the military force as shall, with the smallest numbers, preserve that knowledge in peace, and give it the greatest extension in war; for this is the only means by which a competent defence can be provided for the State without the expense of supporting a large military establishment in time of peace. To attain this object with certainty, the true principle of organization is this: *present the largest possible base from a given numerical force.* Our present establishment, though defective in its organization, approximates this principle. The defect in the organization of the infantry consists in having ten companies, and that of the artillery in having nine companies, in place of eight, to a regiment. That is the best organization which admits of the greatest facility in manœuvring. A regiment of ten companies cannot be manœuvred unless two of its companies be thrown out of the line. It may be divided into two divisions, of five companies each, but there the division must stop; whilst a regiment, composed of eight companies, is susceptible of division down to sections and files It may be said the supernumerary companies are to act as light troops; but why have two kinds of troops in the same corps? Do we not, in this case, make a distinction without a difference? Are not the officers as well as the soldiers formed, armed, and equipped in the same manner, and disciplined according to the same principles? and have they not similar duties to perform? In incorporating light troops into our regiments, we have adopted the *forms* of European service without regard to the *principle* which governs there, or to the peculiar circumstances of our own country. In Europe, militia and volunteers are seldom used, and are never relied on; hence, as light troops are required in war, they are necessarily maintained in peace. But in this country, where we are compelled to use large bodies of both, we have always too great a proportion of light troops. All our regular troops should, therefore, be formed and organized for the duties of the line. But if we must so far sacrifice utility to the prejudices of the day as to have light companies, let them be formed into regiments, have the most convenient organization for manœuvring, and be so instructed as to take their place in the line or not, as the interests of the service may require.

To present my ideas the more clearly on the subject of organization, I annex to this report a paper,

(marked A,) which is a copy of a tabular statement presented by me to one of your predecessors about ten years ago. It exhibits the plan of an organization adapted to a base of six thousand men, with the proposed extension in the event of war. The simple inspection of that paper will give a better idea of the practicability and advantages of the proposed plan than the most labored report that could be written. With our army organized upon the principles there laid down, we should, on war becoming probable, be able to double our force by doubling the private soldiers of our companies; and, should it become inevitable, we have only to add to each regiment an additional battalion of eight companies, and we convert our peace establishment of six thousand men into a division twenty-four thousand strong, with the certainty of imparting to the whole, in less than two months' time, the discipline and efficiency of veteran troops. With such a foundation, we might prepare for the field, in six months, an army of a hundred thousand men—not mere recruits in uniform, but well-instructed soldiers, partaking, in a great degree, of the character and efficiency of the original base of six thousand. To effect this important object, nothing more would be necessary than to establish, in convenient situations, fifteen or twenty depots of instruction throughout the country, and attach to each a well-instructed field officer, one or two captains, and three or four subalterns. The instruction at those depots should not be confined to the regular army alone, but might be extended to all the militia officers, and to all the volunteer companies in the country. There are those, I am aware, who, in opposition to the facts of history and the convictions of experience, deny the necessity of previous instruction and of practical military knowledge to the military commander. With such gentlemen it would be useless to reason; but it is proper to remark of them that their own practice, in the most ordinary concerns of life, is in direct opposition to the principles they profess and the opinions they hold; for, whilst they declaim against the necessity of professional knowledge and experience in those to whom the important duty of defending the country is confided, they require both even in the laborers and domestics whom they employ. Not one of them would engage a carpenter to make his coat, or a tailor to build his house; and he would think the man insane who would ask a lawyer to set a broken limb, or a physician to conduct a suit at law; and yet there would be as much propriety in either as to expect a farmer, a merchant, a lawyer, or any other citizen, without previous study, careful preparation, and experience in the practice of service, to become an able and accomplished officer.

Without referring to other countries, we have only to turn over the pages of our own history to be satisfied of the deplorable consequences resulting from a want of timely preparation, as well in the personnel as the materiel of the army. We had, previously to the late war, submitted to outrages upon our commerce and our citizens until forbearance had ceased to be a virtue. The voice of the whole country was for war, and we plunged into it without a proper organization of the army, or any of those preparations which it was our duty to make, and which an ordinary degree of foresight must have demonstrated to be necessary; and, having committed the blunder, we neglected the only means by which the disastrous results of our measures could have been averted. In place of calling forth the intelligent and well-instructed officers of the old corps, and employing them where their talents and acquirements would have been useful to the country, the higher ranks of the army were, for the most part, filled by men selected rather for their political influence than their military fitness. The consequence was, we had no discipline or subordination in our corps, no accountability in the administrative departments, no well-digested plan of operations, no combination or concert in the movement of the different armies; but the strength and resources of the country were wasted in puny and unsuccessful efforts, without use or object, on extensive and distant frontiers, and we presented the singular spectacle of a powerful nation, with more than a million of men capable of bearing arms, with resources vastly exceeding those of any other nation of equal population, with two hundred thousand men actually under arms, invaded and defeated at all points, several of our posts captured and held by the enemy, our capital taken, our credit destroyed; and all this effected, too, by a petty province, aided at no time by more than twenty-five thousand men from the mother country, including the whole force that assailed us on every frontier. This is a picture, it must be acknowledged, by no means flattering to our national pride; but it is a true picture, and the time and the occasion require that the truth be told.

One great moral advantage certainly was gained by the war, and it is, perhaps, full compensation for all our misfortunes. We demonstrated that we have, among the body of the people, men with capacity for every exigency; and we settled the question in regard to the permanency of our institutions, by proving that they were strong enough for war. But what, let me ask, would have been the character of the country under its accumulated defeats but for the victories on the ocean, achieved by officers who were masters of their profession, and those gained on land, either by men who had forced their way forward from the old corps, or who had been formed during the war, partly in the militia and partly in the regular service, and had qualified themselves to lead to victory by the practice of two campaigns.

Had there been any military information in our councils at the commencement of the war, that policy, which pressed like a nightmare on the nation and paralyzed all its energies, had been avoided; and, in place of being compelled to close the war, not only without having gained a single object for which it had been declared, but by conceding to the enemy the right of retaining a part of his conquests, to which he asserted a claim, and of making stipulations in favor of the Indians within our territories, whom he had chosen to designate as his allies, we had been able to dictate the terms of peace. History was open before us, and we had only to profit by its lessons to strike our enemy in the most vital point. The statesman or the military man, accustomed to trace the current of human events through the history of the preceding century, could not but have observed the astonishing rise of the French naval power and its rapid decline; and, if in the habit of tracing effects back to their causes, he must have perceived that this power rose with the possession, and declined with the loss, of the northeastern coast of this continent and the islands adjacent to it. That coast and those islands are as important to Great Britain as they were to France. They formed when war was declared, as they form now, the principal pillar of British naval power. They were within our grasp. We could have reached the more important parts of them without naval force; and, had timely preparations been made for war, and the national energies been properly exerted, the first campaign must have placed them in our possession with as little difficulty as a single campaign has placed Algiers in the possession of France. It is hardly possible to estimate the effects of so important an acquisition on the character and events of the war, or its influence on the negotiations for peace.

The length to which this paper has run admonishes me that it should be brought to a close; but I deem it due to myself to add that, although I deprecate the reduction of the officers of the army proper as a measure fraught with the most injurious consequences to the national interests, I am not to be understood as including my own case. I leave it to others to determine the importance to the public of the

station which I hold, as well as the value of the services which I perform; for I could not, consistently with a proper self-respect, be induced, on this or any other occasion, to offer a single argument as to the necessity for any office on which my official existence may depend.

I am, sir, respectfully, your obedient servant,

TH. S. JESUP, *Brig. General and Quartermaster General.*

Hon. J. H. EATON, *Secretary of War, Washington City.*

A.

Table of the organization proposed for the peace establishment, with a view of its practicable extension in the event of war.

PEACE ESTABLISHMENT.

Organization.	Major generals.	Brigadier generals.	Aides-de-camp.	Colonels.	Lieutenant colonels.	Majors.	Adjutants.	Captains.	First lieutenants.	Second lieutenants.	Sergeant majors.	Quarterm'r sergeants.	Principal musicians.	Sergeants.	Corporals.	Musicians.	Privates.	Total.	Aggregate.
Company	....	..	....	....	....	..	....	1	1	1	.....	.....	.....	3	3	2	42	50	54
Regiment	....	....	....	1	1	1	1	8	8	16	1	1	2	24	24	16	336	400	435

* The principles upon which this extension is made, are—1st. To double the rank and file of companies. 2d. Add a battalion, consisting of eight companies, to the regiment, with an additional lieutenant colonel. 3d. Promote the first lieutenants of the old companies to captaincies in the new battalion, and one of the second lieutenants of each of the old companies to first lieutenants in the new battalion. 4th. Assign half of the companies of the old battalion to the new one, and in the like manner receive half the companies of the new battalion into the old one.

1 regiment light artillery, 4 regiments foot artillery, 10 regiments infantry—total 15 regiments.

ORDNANCE OFFICE, *Washington, November* 30, 1830.

SIR: In compliance with your instructions to report on the resolution of the House of Representatives, dated April 26, 1830, I have the honor to submit the following remarks:

The propositions contained in the resolution refer to the line of the army, and to all of the several departments of the military service. It has, however, been considered proper to limit this report to such matters as concern the Ordnance department alone, for the reason that the officers, who are charged with the direction of the other branches of service, are much better prepared, by experience and merited distinction, to report on all those points which concern their respective departments.

In reference to the question "whether any reduction in the number of officers in the army of the United States can be made without injury to the public service," I have the honor to state that by the present laws no more than *four* officers are specially provided for the performance of ordnance duties, viz: the four supernumerary captains of the artillery regiments. For any additional officers which the ordnance service may require, a contingent provision is made in the law, by giving to the President of the United States authority to detach from the regiments of artillery such number as may be necessary for this service.

The officers who serve in the Ordnance department, and who may be considered as composing it, consist of the four captains provided by law, and such others as may from time to time be detailed from the artillery. The number of the latter is not prescribed by law or by regulation, and is not constant, but varying according to the necessities of the service, and is generally about thirty. But whether this number be large or small, it has no effect to increase or diminish the whole number in service, as the change is effected by a mere transfer from one branch of service to another.

The entire abolition of the department would therefore make the military establishment consist of only four officers less than at present.

In order that an opinion may be formed of the number of officers required for the performance of ordnance duties, it appears to be proper that the character, extent, and responsibility of those duties should be briefly stated These duties are defined by law, and consist in providing, preserving, distributing, and accounting for every description of artillery, small arms, and all the munitions of war which may be required for the fortresses of the country, the armies in the field, and for the whole body of the militia of the Union. In these duties are comprised that of determining the general principles of construction and of prescribing in detail the models and forms of all military weapons employed in war. They comprise, also, the duty of prescribing the regulations for the proof and inspection of all these weapons, for maintaining uniformity and economy in their fabrication, for insuring their good quality, and for their preservation and distribution.

The extent of these duties may be perceived by referring to the fact that, for carrying into effect the

general purposes here stated, Congress has appropriated for many years past nearly one million of dollars per annum. And that in order to fulfil these purposes, extensive operations are conducted at the following establishments, viz: at two national armories, nine private armories, four cannon founderies, fourteen national arsenals, four ordnance depots, and an extensive region of public lead mines. These establishments are situated in the different parts of the Union, and they employ more than a thousand men, consisting chiefly of artificers and mechanics. They are all conducted under the general supervision, and (with the exception of the private armories) under the immediate and special direction of the Ordnance department.

To this brief outline of the character and extent of ordnance duties, it seems proper to add a few remarks on the responsibilities which are involved in their proper discharge. These are, in some material respects, peculiar to this branch of service alone, and do not exist in any other branch of the military service. The appropriations for the ordnance service are applied to the production of arms and other military supplies of a durable character, which are stored in depot for future service, and are reserved to meet the future exigencies and defence of the country. They are not consumed and extinguished in the current service of the day, like most of those which are obtained by the expenditures of other branches of the military establishment. The value of ordnance supplies now in depot, which have been accumulated under former appropriations, exceeds eleven million dollars, and the value is constantly augmenting at the rate of nearly one million dollars per annum. The ordnance branch of service is therefore responsible that all the various munitions of war are provided in due proportion to the wants of the service, and are constructed on the most approved models and of suitable quality; that the whole body of the militia be efficiently armed and equipped to the fullest extent of the means appropriated to that object; that large annual disbursements be faithfully made and promptly accounted for; that they be applied to authorized purposes, and no other; and that they produce a just and substantial equivalent, in military supplies, of enduring value to the country; and that the accumulating product of these expenditures be securely preserved and duly accounted for.

From this brief statement of ordnance duties it will be perceived that a greater number than four officers is necessary for the performance of them. And as this number is all which the ordnance service adds to the aggregate of the whole military establishment, it follows that it cannot be reduced without injury to the service. A reduction of the number of officers serving in the Ordnance department, by details from the regiments, would not lessen in any degree the aggregate of the army, and is, therefore, considered as not being within the scope of the inquiry contained in the resolution.

But as it is necessary that a considerable number of officers should always be detached from their regiments for ordnance service, it is also necessary that those regiments should possess an excess in order to be able to supply this demand without deranging the regimental service. The regiments of artillery, from which alone officers for ordnance service can now be drawn, are provided with *five* officers for each company; while the infantry companies, consisting of nearly the same number of men, are provided with three only. This excess in the artillery regiments was provided expressly for the purpose of enabling them to furnish the details for ordnance service, as appears by the plan reported by the Secretary of War on the 12th of December, 1820, in pursuance of an order of the House of Representatives. This report is published in State Papers, vol. 1, 2d session 16th Congress, document No. 21. It stated that the number of officers allotted to each company of artillery was greater than the regimental service required.

A reduction in the artillery regiments, to an extent equal to the number usually detached from them for ordnance service, and a permanent assignment to the latter of an equal number, it is believed, would be advantageous to both branches of service. A measure of this kind would leave four officers in each company for regimental duties, and would provide a sufficient number for ordnance service.

In reference to that clause of the resolution which calls for "a plan of the most efficient organization of the army," I beg leave to state that so much of the present organization of the army as provides for the ordnance service is considered defective, and the public interests require that a more efficient system should be provided for this branch of service.

The principle on which the present system rests, that of furnishing officers for ordnance service, by temporary details from the regiments, is inapplicable to duties of that character, more especially to such of them as are performed by the senior officers who direct and control the most important part of them. From the general character of these duties, as described in a former part of this report, it may be readily perceived that experienced officers are necessary for their proper performance. They differ from those which are practiced in other branches of service. No other department is charged with the duty of devising and determining the plans and models of military weapons, nor with the supervision of extensive mechanical operations and fabricating establishments. No other performs any duties in immediate connexion with, or for promoting the efficiency of the whole body of the militia, and none other is charged with the care and preservation of a vast amount of munitions of war; the responsibility of the ordnance, in this respect, being greater than that of all the other departments united. It is, besides, the only department, except the Engineer, whose duties are but little affected by any change from peace to war, or from war to peace, whose services have no immediate connexion with the line of the army, and whose duties would remain the same whether the peace establishment be large or small, or be entirely abolished. From the peculiarities of this service, the experience acquired in other branches can be of little avail in this; yet, by the present system, its duties are required to be performed solely by officers detached for short periods from the regiments. And, since 1821, when the system was adopted, these duties, which include a disbursement of more than seven million dollars, have been distributed among one hundred and sixty different officers, a large portion of whom were necessarily without previous experience in them.

The embarrassments incident to these fluctuating changes may be exemplified by relating those which occurred at a single post in one quarter of a year. Soon after the commencement of a quarter the proper commander transferred to his successor the balance of public funds and the military stores on hand, and left the arsenal. Funds for the current service of the quarter were transmitted to the second commander, but did not reach him until he also had departed, and was four hundred miles distant. The third commander also left the post, and placed it under the charge of the surgeon, who, in his turn, was relieved by a fifth. Funds were again transmitted, the former having been repaid into the treasury, but before they reached the post, the fifth commander to whom they were sent had been superseded by the sixth, and the quarter had expired, leaving the workmen employed at the post unpaid. These changes were all unknown to the department which is charged with directing the services of the post, and is responsible for them until after each had occurred.

The several departments for subsisting, clothing, paying, healing, quartering, and transporting the

army, and for constructing the military defences of the country, have each a separate and stable organization. The department for *arming* them alone remains subject to the fluctuations and embarrassments of an unstable system. Experience has fully demonstrated the wisdom of the laws which gave stability to the other departments, and an extension of the same principle to the ordnance service would doubtless prove alike beneficial.

Plans for a more efficient organization of the ordnance, on a basis similar to that of other departments, have at different times been submitted and have received the consideration of the proper committees of Congress, who have uniformly sanctioned them by reporting bills for carrying them into effect. One of the bills thus reported passed one house, but was laid over at the close of the session in the other for want of time to act upon it.

The bill reported by the Committee on Military Affairs of the House of Representatives at the last session (No. 77) contains all the provisions which are considered essential for giving to this branch of service an efficient organization. It is believed, however, that some additional provisions would be found useful. I beg leave, therefore, respectfully to suggest that provision be made for appointing one sergeant for each military post, whose duty it should be to receive and preserve the ordnance, arms, ammunition, and other military stores at the post, and, under the direction of the commander, to issue and account for the same under such rules as shall be prescribed by the Secretary of War. It is suggested, also, that the appointments be made by the Secretary of War from among those sergeants who have served in the army eight years at least, four of which to have been served in the grade of non-commissioned officer, and who shall produce certificates of faithful service and of good moral character from their regimental and company commanders. It is also proposed that the sergeants thus appointed shall receive five dollars per month in addition to the pay which is or may be allowed to any company sergeant.

In reference to this proposition it appears proper to state that, by the 3d section of the act of March 30, 1814, provision was made for appointing a junior lieutenant of each company of artillery a *conductor of artillery*, whose duty it was made to receive and account for all military stores furnished for the use of the company, for which service he was to be allowed ten dollars extra per month. The act of March, 1815, fixing the peace establishment continued this provision. It was also continued in the act of April 20, 1818, which remodelled the artillery. But as no such provision was contained in the act of March, 1821, which reduced the peace establishment, the office of conductor of artillery then ceased. And as the law was silent as to the performance of this duty, the Army Regulations have since confided it to the respective commanders of posts. This, however, has been found inconvenient in practice. It obliges the commanders to devote much of their time and attention to the care and preservation of the military stores of the posts, and to making up the quarterly returns of them. This requires attention to numerous little details, which, in reference to the other and more appropriate duties of a commander, are comparatively of minor importance. By relieving the commanders of posts from this duty, and confiding it specially to a subordinate, (subject, however, to the directions of the former,) whose attention would not be diverted from it by more important avocations, more personal attention could be given to the care and preservation of valuable military stores, and it is believed the duty would be better performed.

The plan suggested, that of appointing experienced and faithful sergeants to this duty, would present to the meritorious of that grade an incentive to good conduct, and, at the same time, afford the means of rewarding it, and it is believed that the measure would have a beneficial influence upon the rank and file of the army.

It should be observed that this measure is proposed to be applicable to the forts or posts which are garrisoned by the troops, and not to extend to the arsenals. The care of the public stores at the latter is confided to ordnance officers. But no ordnance officers are stationed at garrisoned posts, nor do they exercise any immediate control of the military stores there deposited.

Respectfully submitted.

GEO. BOMFORD, *Brevet Colonel, on Ordnance Service.*

Hon. J. H. EATON, *Secretary of War.*

PAYMASTER GENERAL'S OFFICE, *Washington City, November* 15, 1830.

SIR: In compliance with what is believed to have been your intention in furnishing me a copy of the resolution of the House of Representatives of the 26th of April, 1830, on the subject of reducing the number of officers of the army, I have the honor to submit the following remarks in relation to the Pay department.

The present organization gives fourteen paymasters for the army, and one for the corps of engineers and the Military Academy, who is also the treasurer of that institution.

It is required of these officers, when practicable, to pay all persons connected with the service every two months; to effect which, it would be necessary that each of the following posts should be visited six times in a year, to wit:

Fort Brady, Michigan Territory.
Fort Mackinac, Michigan Territory.
Fort Howard, Michigan Territory.
Fort Dearborn, Michigan Territory.
Fort Gratiot, Michigan Territory.
Fort Niagara, New York.
Madison Barracks, New York.
Hancock Barracks, Maine.
Fort Sullivan, Maine.
Fort Preble, Maine.
Fort Constitution, New Hampshire.
Fort Independence, Massachusetts.
Fort Wolcott, Rhode Island.
Fort Trumbull, Connecticut.
Fort Columbus, New York.
West Point, New York.
Fort Moultrie, South Carolina.
Oglethorpe Barracks, Georgia.
Fort Marion, Florida.
Fort Snelling, Upper Mississippi.
Fort Crawford, Upper Mississippi.
Fort Winnebago, Michigan.
Fort Armstrong, Upper Mississippi.
Cantonment Leavenworth, Missouri.
Jefferson Barracks, Missouri.
Cantonment Gibson, Arkansas.
Cantonment Jesup, Louisiana.
Baton Rouge, Louisiana.
Fort Wood, Louisiana.
Fort Pike, Louisiana.
Fort St. Philip, Louisiana.
Cantonment Clinch, Florida.

Fort Delaware, Delaware.
Fort McHenry, Maryland.
Fort Severn, Maryland.
Fort Washington, Maryland.
Fortress Monroe, Virginia.
Fort Johnston, North Carolina.
Arsenal, Frankford, Pennsylvania.
Arsenal, Baltimore, Maryland.
Arsenal, Washington, District of Columbia.
Arsenal, Richmond, Virginia.
Arsenal, Augusta, Georgia.
Washington City, District of Columbia.
Cantonment Brooke, Florida.
Fort Mitchell, Alabama.
Arsenal, Watertown, Massachusetts.
Arsenal, Watervleit, New York.
Arsenal, Rome, New York.
Arsenal, Pittsburg, Pennsylvania.
Arsenal, Baton Rouge, Louisiana.
Arsenal, St. Louis, Missouri.
Arsenal, Vergennes, Vermont.
Cantonment Eaton, Georgia.
Cantonment Atkinson, Louisiana.

For the security of the government, as well as the paymasters, their funds are directed to be deposited in banks designated by the Treasury Department, and drawn out, from time to time, as disbursed. This makes it necessary that the stations of paymasters should be governed by the locality of the banks rather than that of the posts, in order that they may have free access to their deposits; consequently, the most central points of their districts, or those which would most reduce the travel, cannot be selected. Under these circumstances, it will be seen by every person familiar with such duties, that to visit each post, pay the troops, make up and transmit the accounts, and receive funds for the next payment, will give full employment to fifteen paymasters for two months, the time in which the law requires the duty to be performed; but as the communication with some remote posts is cut off during the winter season it is impossible that the troops at them *can* be paid every two months. The paymasters, whose districts embrace such posts, will, therefore, not have full employment during that time.

I have reflected much on this circumstance, with a view to a reduction of the officers of this department, and the result is a thorough conviction that it will be injurious to the service, so long as the number and position of the posts remain as at present, for when the communication is open it is difficult even for the present number to pay as often as the law requires. But, apart from the inconvenience to the troops, consequent on the delay of payment which would necessarily follow a reduction of paymasters, there is another circumstance deserving much consideration, and in my judgment makes it doubtful whether it would be advisable to reduce the number, if it should cause no other difficulty; it is this: The less the number of paymasters, and the longer the time for which payment is due, the greater the amount of funds they must necessarily carry with them; of course the greater the hazard to themselves, their sureties, and the government, from accidents, robbery and death, on their routes, especially when travelling through a country inhabited only by Indians and profligate whites, and where they have sometimes to pass the water-courses on rafts constructed by themselves. Some of them suppose they could not obtain insurance against the risk they incur at a less rate than five per cent. on the amount they carry with them, a considerable part of which must be in specie, for change. I think it probable that it could not be effected for the western country, on an average, for less than two per cent. The risk, even now, in some districts, is considered so great as to deter many prudent persons from applying for the appointments, who would otherwise wish to obtain them; and if it is much increased, there will not be sufficient inducement to tempt capable and responsible persons to accept them.

From statements the paymasters have furnished, it appears that, even now, they are, on an average, one-third of the year travelling, and are under the necessity of carrying with them, annually, about 700,000 dollars, upwards of 50,000 dollars of which must be in specie.

It is evident that the duties and responsibilities of paymasters, in a great degree, depend on the number and position of the posts, and that it is as easy, or more so, to pay a large army serving together as it is to pay a small one serving in detachments widely dispersed. If this is taken into consideration, it will be found that the duty of the paymasters is as heavy at this time as it has been under any organization of which we have a correct record, with the exception of that from 1816 to 1821, as will appear from the following facts:

The estimates of this office show the number of paymasters at present, to the persons to be paid, to be as one to four hundred and eighty-two, and the average amount annually disbursed by each $78,634. The compensation they receive for this service through this department is equal to 1.91½ per cent. on the disbursement. This is exclusive of certain contingent allowances made through the Quartermaster's department, which, as I have not the means of ascertaining for former periods, is not taken into view in this comparison; it would not, however, materially vary the result. The amount of defalcations in the department, as reported by the accounting officers, from 1821 to 1825, the first five years under the present organization, was equal to .22 of one per cent., which, added to the compensation of the paymasters, is equal to 2.13½ per cent. on the disbursements. For the last five years there has been no defalcation.

Under the law of 1808 there were seventeen paymasters, district and regimental, taken from officers of the line, with additional compensation. The average number of persons paid by each was 584, the amount disbursed $60,158, the compensation equal to 1.52½ per cent., and the defalcations to 1.58¼, making the total cost to the government 3.10¾ per cent. on the disbursement.

In 1810 the troops were stationed at forty-nine posts; at present they are stationed at fifty four, and on a circuit much greater in proportion. To the former there were seventeen paymasters; at present there are but fifteen. Of course the labor of paying, as well as the amount to be paid, by each, was less under the former organization than it is under the present; and if the defalcations be added to the compensation, it cost the government .97¼ of one per cent. more on the amount disbursed under the former than it did for the first five years, and 1.19¼ per cent. more than it has done for the last five years under the present organization.

For the period of the war the average number of paymasters was one hundred and twenty-eight, the number of troops, &c., to each five hundred and thirty, and the amount to be disbursed by each averaged $79,564. During this period the troops served in large bodies, which reduced the trouble and difficulty of paying very materially. The compensation amounted to 1.38½, and the defalcations to 2.98¼, being together 2.23¼ per cent. more on the amounts disbursed than it cost the government from 1821 to 1825, and 2.45¼ more than it has cost since.

From the organization after the war to the present, say from 1816 to 1820, a period of five years, there were nineteen paymasters, being one to every seven hundred and twenty-five persons to be paid. The estimates of the department for the same period amount to $85,669 per annum per paymaster. The

compensation of a paymaster then was the same as it now is, and was equal to 1.73¼ per cent. on that sum, the defalcations to 2.38½ per cent. on the disbursements, total 3.11¾ per cent. The number of posts was less in proportion to the paymasters than they are at present, but the number of troops and the amount of payments were greater, and, altogether, it is probable the duty of the department was heavier under that organization than it is under the present. It is worthy of remark that the defalcations were nearly as great for that period as they were during the war, and that it cost the government 2.20¼ per cent. more to make the disbursements then than it now does.

From the view I have taken of the subject, I do not think that it would be even a saving to the government to reduce the present number of paymasters, so long as the troops continue dispersed, as at present, and that it must be attended with great inconvenience to the army and to the department.

Most respectfully, your obedient servant,

N. TOWSON, *Paymaster General.*

Hon. J. H. EATON, *Secretary of War.*

INSPECTOR GENERAL'S OFFICE, *Nassau, New York, October* 23, 1830.

SIR: On my return to this place from a recent tour of inspection to the eastern posts I received your communication of the 10th ultimo, through the office of the Adjutant General, requesting my views on the subject of the resolution of the House of Representatives requiring the Secretary of War to report at the next session of Congress "whether any reduction in the number of officers in the army of the United States can be made without injury to the public service, and if any, what reduction; together with a plan of the most efficient organization of the army, in conformity with the reduction proposed."

We are not informed whether the inquiry contemplated is to be limited to the immediate or future wants of the service, or whether both are to be embraced in the inquiry. If it was intended to be limited to our present wants, without reference to a state of war, I would unhesitatingly say that one-third of the whole military force might be dispensed with. Presuming, however, that such could not have been the object of the House of Representatives, and that an inquiry was anticipated, both as it regards a state of peace and war, my experience compels me to say that no reduction can be made, either in officers or rank and file of the army, without injury to the public service. To be convinced of this it will only be necessary to take a view of past events as connected with the present and future, embracing the condition of the army previous to and during the late war with Great Britain, and the disastrous consequences which followed the want of system, organization, and officers, to direct its operations.

Hitherto the political and military relations of the world have been such that the sovereigns of Europe, for the safety of their empires and the security of their governments, have placed their chief dependence upon the strength of armies, which have been increased in proportion as each government has been menaced by surrounding nations. The United States, it is true, has been much more highly favored. Their distant situation from the continent places them in a great degree beyond the influence of the threatened attitude of the great powers of Europe; consequently they have been relieved from the necessity of supporting extensive military peace establishments. Yet neither three thousand miles distance, nor the cautious and wary policy of the government, have shielded them from evils incident to a state of war. They, too, after years of submission to insults and injuries, have been compelled to organize armies and fight battles in defence of their rights.

It must be obvious to all who reflect upon the subject that the condition of nations must be that of alternate peace and war. It therefore follows as a self-evident truth, that a long continuance of peace indicates the nearer approach of war, and instead of relaxing the efforts to sustain an efficient military organization, they ought to be increased in a ratio corresponding with the length of the peace. The period when a military organization could be relinquished with the least danger to the national safety is immediately after the termination of a war. This is submitted as a general proposition. But the disturbances in Europe at the present moment furnish, as I conceive, a strong additional argument for keeping our military organization as perfect as possible, and for increasing rather than diminishing our military force. Our peaceable relations with the nations of Europe are always endangered whenever those nations are belligerent and the United States neutral. It is then that little regard is had to the neutral flag, and neutral commerce is constantly subjected to vexatious interruptions and serious depredations. The flag is insulted, our citizens on the high seas are exposed, not only to the loss of property, but to personal indignities, and the violation of personal liberty; and the marauder of the ocean, to justify his outrage, points to the belligerent flag of his nation. Such wrongs and indignities, as a nation, we have encountered, and to such, in all probability, we shall again be exposed.

It is impossible to foresee all the consequences which may follow the revolutions in Europe. One thing, however, is certain, the chances of hostilities are everywhere increased, and no wise nation will, at such a period, deprive themselves of any part of their existing means of defence. It should also be taken into consideration, that colonies of the most powerful maritime nation of Europe border on the territories of the United States, on the north and on the east; that another of the European nations with whom our relations have frequently been not only unfriendly, but threatening, is now in possession of a large, populous, and wealthy colony, almost within sight of our shores, and in the vicinity of those States where a servile insurrection might be productive of the most disastrous consequences.

If it be true that the late minister of the United States at the government of a neighboring republic was obliged to fortify his house, and arm his servants to protect his person, it indicates a temper not only uncourteous and unfriendly, but of a character so violent and rash that it would disregard the usages and laws of civilized nations. Such a temper, appearing amongst a people whom we have made great efforts to conciliate, who have met our friendly overtures generally with indifference, sometimes with sullenness, and with whom, as yet, we have been unable to establish even a commercial treaty, is strong evidence of the existence of feelings, not of mere aversion, but of acrimonious dislike. And it is also a melancholy truth that all the nations of South America, in whose prosperity we have taken so deep an interest, and whose independence was hailed by us as the prelude of eternal amity and intimate connexion, have, in their intercourse with us, evinced more jealousy than confidence.

In the event of hostilities, there is not a nation in the world on whose friendship we could rely. Our reliance must be on the valor and patriotism of our own citizens. But little will those virtues avail us,

unless their energies shall be made efficient by science and discipline; then, indeed, we may pursue our onward course, though a lion should lay in our path.

The lessons derived from experience are more valuable than plausible theories, and no sagacious statesman will suffer his imagination so far to delude his judgment as to believe that the world will, in this age, become sufficiently enlightened to renounce the practice of war, or to believe that wars are no longer necessary, in some cases for the ends of justice, and in many for the protection of the interests, the rights, and the honor of nations. The future is shrouded in darkness, the past is our own. To the future we may look for possible blessings, to the past we *must* look, if we would guard ourselves from probable evils. Recurring, then, to past experience for lessons to guide us in our future course, I would call up your recollections of the last war, and of the situation of the country at its commencement. Great Britain, with a force never exceeding thirty thousand rank and file, during a war of nearly three years, defended her extensive possessions in America against all the efforts of the United States, with a population exceeding eight millions; and, what is more wonderful, with a force of less than ten thousand regular troops, not only defended her own possessions for two years, but made conquests in the United States. Yet during the same period, although her vessels of war covered the ocean and thronged the coasts, although there was not a seaport from Maine to Georgia that did not hear the sound of her cannon, no naval trophies were won from Americans, whilst a series of victories on their part astonished the queen of the ocean, and humbled her pride on her own element, surrounded as she was with her thousand ships of war. Had the organization and discipline of the army been as perfect as that of the navy, the northern and western frontier, instead of being the scene of disasters and defeats, would have presented cities and fortresses as the prizes of our valor and skill, won by our prowess in arms; and history would have perpetuated American names as renowned as that of Wolfe.

A profound knowledge of the science of war, united with talents and experience rather than numbers, generally decides the issue of military operations. To this, during the earlier period of the last war, we may trace our successes on the ocean and on the lakes; to the want of it, we may trace our defeats and disgraces on the land. The efficiency of every army must be looked for in the composition of the material and organization, which should be so constituted as to be capable of enlarging itself according to emergency, in the shortest time, and at the smallest possible expense to the nation. Such an organization is particularly required in the United States, where only a small military force is maintained in time of peace, and which, I apprehend, is not intended so much for immediate defence as instruction. It is supported in anticipation of the future, by which officers may learn the art of war. If this is not the object, I am yet to learn for what purpose it is maintained. It cannot be for the protection of our frontier against the incursion of savages, for a few militia would keep them from making war or committing depredations on the inhabitants. It is to provide the means, when required, of preparing and directing the physical resources, the militia as well as the regular troops of the country, against the attacks of some civilized power. If such is not the object, why erect those immense fortresses on the seaboard? They certainly cannot be intended as a defence against Indians. The rank and file of an army can be obtained at any time, but not officers, for it requires years of study and reflection to qualify them for command; therefore the necessity, if you would avoid defeat and disgrace in time of war, of retaining, with a small peace establishment, not only a large proportion of officers, but an organization embracing all the grades and all the corps required in war. By these observations, however, it should not be inferred that we have a greater number of officers than are necessary to perform the services required by our peace establishment. On the contrary, distributed as the troops are, I am confident we have not too many.

The peace establishment, exclusive of engineers, is about six thousand strong. It is divided into two corps, seven regiments of infantry and four of artillery. These corps are distributed on a line encircling the inhabited part of the United States, comprising a distance of at least six thousand miles. The infantry is stationed on the eastern, northern, and western frontier, extending from the extremity of Maine to the Sabine; and the artillery on the seaboard, extending from Fort Sullivan to Fort St. Philips. To take charge of this force, and superintend the due administration of its affairs, separated into forty commands, we have a major general, two brigadiers, two inspector generals, and one adjutant general, the last is taken from the line to discharge the duties of quartermaster, commissary of subsistence, and paymaster; we have our quartermaster general, four quartermasters and twenty assistants, one commissary general, two commissaries and forty assistants, and one paymaster general, and fourteen paymasters; and for the medical department we have one surgeon general, and forty-five surgeons and assistant surgeons. Of these, the quartermasters and assistant quartermasters, commissaries and assistant commissaries, are taken from the line.

If the army was concentrated, one general officer in time of peace might probably answer for the command, and the duties of the staff might perhaps be discharged by one adjutant general, two inspector generals, one quartermaster general and six assistants, one commissary general and ten assistants, one paymaster general and four assistants, and fifteen surgeons and assistant surgeons. But, dispersed as the establishment is over the United States, it would be difficult indeed to enforce the rules and regulations for its government, to correct errors, prevent abuses, and to establish order, uniformity, and a regular system of discipline, with less than three general officers, two inspector generals, and one adjutant general. And it would be equally difficult for the quartermaster general, commissary general, and paymaster general, without an increase of officers proportioned to the increase of posts, to discharge the duties of their departments. The troops of each post must be paid, subsisted, and supplied with quarters, fuel, forage, transportation, &c. The services of these departments require separate and distinct agents, and must be performed either by officers of the army or other agents appointed for that purpose. If they can be performed by officers, which hitherto has been the case, it supersedes the expense of special agents, and at the same time gives active and useful employment to a large proportion of officers who would be, with the knowledge thus acquired, all important when called into active service. The officers of the line, thus employed in the staff with those on ordnance, topographical surveys, at the Military Academy, and acting as engineers, make about one hundred and fifty in number, all of whom are performing services, with the exception of those on topographical duty, (not, however, the least important,) which could not be performed by any other persons, without materially deranging the organization of the army, changing the system of accountability, and of rendering the whole incomplete and inefficient. With this number of officers detached from the line, including those on the recruiting service, we have scarcely a sufficient number remaining to discharge the ordinary duties of a garrison.

With these views on the subject presented for inquiry, I am unable to arrive at any other conclusion

than that any reduction of the military forces at this time would be unwise and prejudicial to the "public service."

With considerations of the highest respect, I have the honor to be, sir, your obedient servant,

JOHN E. WOOL, *Brigadier General United States Army.*

Major General A. MACOMB, *General-in-Chief, Washington.*

SURGEON GENERAL'S OFFICE, *August* 1, 1830.

SIR: In compliance with a resolution of the House of Representatives, received on the 4th of May last, and requiring a report "whether any reduction in the number of officers of the army of the United States can be made without injury to the public service, and, if any, what reduction; together with a plan for the most efficient organization of the army in conformity with the reduction proposed," and in relation to the medical department, I have to state that, notwithstanding a very considerable increase of the number of military posts and stations, the number of medical officers is less now than it has been at any period within the last twenty years. Under the establishment of 1808, before the late war, there were 69 surgeons and mates; under that of 1815, after the war, there were at first 77, and subsequently 69, while under that of 1821, with a trifling, if with any reduction of posts, it was reduced to 53. This number, even if a furlough or leave of absence be granted on no occasion, and the whole be constantly fit for duty, is insufficient to meet the demands of the service, as has been stated and fully explained in former reports to the department on the subject. From 10 to 12 private physicians have generally been required at the regular stations, and others are necessarily employed during the year for limited periods. By a report to the department on the 18th of April last, it appears that $22,633 were expended in the years 1828 and 1829, of which $18,370 were paid to those employed at the several stations, and for attending detachments on the march; and the remainder for attendance on officers and their families stationed at places where there was no surgeon of the army. The amount expended on this account, during the two first quarters of the present year, was $6,025. Even under the establishment of 1802, with half of the force, and probably less than half the number of stations, there were 33 surgeons and mates, and at least double that number is required at present. Unless, therefore, there be a material change in the distribution of the army, and the posts be reduced below what they have been for the last ten years, no reduction can be made in the number of surgeons without a proportionate increase of the expenses of the department, and without disadvantage to the public service.

With regard to the administrative branch of the department, it is believed to have answered the purpose for which it was established, by securing the professional responsibility of its several officers, a strict accountability for public property, and a material reduction of its expenses. By the regulations of 1818, which were compiled with a special reference to the well known deficiencies of the department, in all these respects, both during the late war and under the organization of 1815, every officer is required to make full reports to the chief of the department on all matters relating to his professional duties, with "remarks relative to the nature and symptoms of the diseases reported, the treatment adopted, the medicines and stores most in demand, &c., &c., together with observations on the medical topography of the post, station, or hospital, the climate, prevalent diseases, their probable causes," &c., &c. Reports of this character from every surgeon having charge of a hospital, made at various periods, and from every section of the country, will enable the latter, on his part, to make "the returns and reports necessary to explain all the concerns of the department under his charge, with such remarks relative to improvements in practice and police, and to the clothing, subsistence, &c., of the army, as may seem to be required for the preservation of health, the comfort and recovery of the sick, and the good of the public service;" and if he possess the requisite professional information and experience in army and hospital practice, these communications cannot fail to furnish him with the means of appreciating the qualifications, services, and merit of those by whom they are made.

The information thus obtained in relation to the diseases of the several posts, and the practice of the surgeons, as well as of the state of their supplies, and the quantities ordinarily expended, with a given number of men, in the several sections of the country, through the returns and requisitions required by the regulations, will not only enable him to keep every post regularly and amply supplied, but to examine all returns with reference to these facts and circumstances, and to see that every article is satisfactorily accounted for, and that the expenditures are in proportion to the diseases and causes reported.

From these data, again, accurate and specific estimates can be made of the probable expenses of the department for each year, and for any given number of men, while a supervision of the purchases and disbursements enables him to limit the expenses to the several items of appropriation that may have been made in conformity with these estimates; so that while, on the one hand, he is held responsible that the hospitals are regularly furnished with suitable medical attendance, and amply supplied with whatever may be necessary for the comfort and recovery of the sick, on the other he has every inducement to effect this at the least possible expense. The result of these arrangements has been to render the expenses of the department materially less than they have been at any former period.

In 1806 and 1807, under the establishment of 1802, they were $4 per man; in 1810 and 1811, under that of 1808, and before the late war, they were $5 per man; in 1817 and 1818, under that of 1815, and for the two years previously to the present organization, they were $7½ per man; while in 1819 and 1820 they were but $3 per man. The average of 1817 and 1818 was $95,416, and that of 1819 and 1820 but $39,104. In 1818, $87,745 were expended, and in 1819, under precisely similar circumstances, but $40,914, or less than one half. Since the reduction of the army, in 1821, the ratio has continued the same, with the exception of that for private physicians, as has been above explained.

The 73d article of the army regulations is believed fully to exhibit all the duties that can devolve on the medical department either on a war or peace establishment; and it is also believed that a reference to these regulations, and to the operations of the department for the last twelve years, will show that the organization of 1821 is well calculated to insure the efficiency of the department at the least possible expense, it being only necessary to increase the number of surgeons in proportion to the force to be raised, the service to be performed, and the number of posts to be occupied, and to allow the chief of the

department the assistants required for the performance of his duties as its "director and immediate accounting officer."

Very respectfully, your obedient servant,

JOS. LOVELL, *Surgeon General.*

Hon. J. H. EATON, *Secretary of War.*

NASHVILLE, TENNESSEE, *November* 30, 1830.

SIR: In reply to your letter referring to a resolution of the House of Representatives dated the 26th of April, 1830, requiring the Secretary of War "to report to the House, at the commencement of the next session, whether any reduction in the number of officers in the army of the United States can be made without injury to the public service, and if any, what reduction, together with a plan of the most efficient organization of the army in conformity to the reduction proposed," I do myself the honor to state that, from every view which I have been able to take of the past history and present aspect of the political condition and overbearing propensities of most of the nations of Europe and America, with the great and rapidly accumulating means given us by nature, and by the Giver of all good, for our protection and security against foreign aggression, I am convinced that no reduction in the number of officers in the army can safely be made. On the contrary, I am decidedly of the opinion that an augmentation is requisite of at least four regiments of artillery, one of light dragoons, and one of riflemen. Our present corps, with this additional force, would enable us to hold our fortifications, with our most valuable and vulnerable seaports, in a state of preparation and consequent security; and at every one of which we might institute a corps of instruction, or "school of practice," which, with a proportionate augmentation of the Military Academy, would, in the course of a few years, as I shall endeavor to show, supply every section of the United States with able military instructors, and supersede the necessity of any other means of instruction for the militia of the United States. This, with our growing naval strength, would enable us, amidst the political volcanic heat and threatening explosions in Europe and South America, to maintain towards the former the enviable attitude of honest defiance and unwavering neutrality; and to extend to the latter the friendly counsel, and, if necessary to our own preservation, the helping hand of a brother.

The time appears to have arrived at which the *example* of the *American republic* cannot but attract the attention and excite the emulation of no inconsiderable portion of the people of all the rest of America, if not of Europe; but we must show that we are true to ourselves before our example can have any salutary influence on our unsettled neighbors; and the time has probably passed by when any respectable statesman can seriously calculate on a rich, commercial, and manufacturing nation like ours maintaining peace or independence, or of preserving the respect of her neighbors, without a naval and military force sufficient to *command* that respect, or, in other words, sufficient to punish the author of any outrage upon her peace or commerce. When all nations become Quakers it will be different. We may then gladly destroy our military and naval weapons, and gladly embrace the glorious millenium; but until then we must, if we hope for peace, hold ourselves ready for war.

The example of an unarmed nation will have little or no effect on its neighbors habituated to war, and who have never known anything of a great political change being effected otherwise than by war. The counsel of the *unprepared* is seldom heeded by those who have long held themselves *ready for action.* With the proposed land and naval forces, our example and counsel would do much with our neighbors of Mexico and South America towards settling those afflictive collisions which have long disturbed, and may for some time to come retard, their march from colonial vassalage to the condition of freemen qualified for self-government. Our friendly counsel may relieve the friends of freedom in America, and even in Europe, from a description of government which appears to have become popular with men who have long been considered as the veteran apostles of liberty in Europe and America—a government which even our long-tried friend Lafayette is reported to have pronounced to be "the best of republics," namely, "a monarchy!" coupled with the word "limited" or that of "representative," words full of the enchantment of *sound,* signifying little or nothing when coupled with MONARCHY. A monarchy in its mildest aspect would, sooner or later, work inevitable destruction to every valuable feature of a republic; and if a republic will not provide for its own independence and preservation by naval and military means, the monarchy that succeeds it, mild as it may first seem, will assuredly provide naval and military means for preserving itself even against the people who created it, and who will find their boasted liberty to be similar to that of the people of a neighboring limited monarchy, nine-tenths of whom own not a foot of land, and who labor incessantly to obtain money to pay taxes, in effect, to enable their royal and aristocratic masters to force them to continue to labor incessantly and pay taxes, enjoying only *the poor privilege of complaining,* without the shadow of any prospect of ever being able to appropriate to their own use anything like the value of their own labor, much less to enjoy any one of the substantial blessings of a free government.

Upon the subject of an *efficient organization* of the army, I do myself the honor to refer you to my report of the year 1826, a copy of which I transmitted to the Department of War about the 1st of December of that year, and which was afterwards printed among the documents of Congress, with my reports of the year 1827. Of the first-mentioned report I have retained no copy, and am therefore compelled now to refer to it altogether from memory, which will not enable me with certainty to enter into minute details. In that report, however, I recommended a plan for the organization of the army, adapted alike to the army and militia of the United States, of which the army *must* be always in time of war, and should be in time of peace, principally composed.

Subsequent time and reflection have suggested to me the propriety of some slight modification in the details, but none in the governing principle, of the proposed plan of organization. My views were, in substance, as follows:

1st. That the chief of each branch of the general staff should have high and equal rank, with equal pay and emoluments; and that an officer should be added to each, as a senior assistant, for the sole purpose of discharging duties connected with the militia of the United States, to co-operate with such State authorities as may be designated by the States, respectively, for such service. The additional number of senior assistants of each branch of the general staff always to accord with the number of divisions in service, whether of regular troops or militia; and the number of junior assistants to each branch of the general staff to accord with the number of brigades in service; leaving the staff duties for each separate post not

garrisoned by a division, brigade, or regiment, to be discharged whenever practicable by the subaltern officers of such posts, excepting those of the medical department; and for that department there should be a senior assistant surgeon for each regiment, brigade, and division, with a junior assistant surgeon for each post.

The Adjutant General, Ordnance General, Engineer General, Quartermaster General, Subsistence General, Paymaster General, Inspector General, and Surgeon General to have equal rank and equal pay and emoluments as general officers; and each one to have a senior assistant for militia service, to be stationed at the seat of government, with one senior assistant for each division, together with one junior assistant for each brigade in the service of the United States, whether of regular troops or militia, to be attached to and serve at the headquarters of such divisions and brigades respectively. The senior assistants to have the rank, pay, and emoluments of major; and the junior assistants the rank, pay, and emoluments of captain. The rank of all staff officers to have reference, in all promotions, to the staff, and to that branch of the staff only to which the officer claiming promotion shall have belonged at the time of the vacancy.

2d. That all the regiments of every arm and of every description of force, whether regular, volunteer, or militia, be organized alike, equal in officers of every grade and equal in their number of men. For example:

A regiment, whether artillery, infantry, cavalry, or riflemen, to consist of—

FIELD AND STAFF.

1 colonel.
2 lieutenant colonels.
2 majors.
1 senior assistant surgeon.
2 junior assistant surgeons.
1 adjutant.
1 regiment quartermaster.
1 regiment paymaster.
2 chief artificers, with rank and pay of lieutenants.
1 sergeant major.
1 quartermaster sergeant.
1 paymaster sergeant.
2 hospital stewards.
2 senior musicians.
10 captains.
20 first lieutenants.
20 second lieutenants.
10 sergeants as company quartermasters and clerks.
40 sergeants.
40 corporals.
40 artificers, with the pay and rank of corporals.
20 musicians, and
1,000 private soldiers.

1,220 aggregate strength, officers, non-commissioned officers, and private soldiers.

Each company to consist of—
1 captain.
2 first lieutenants.
2 second lieutenants
1 sergeant as company quartermaster and clerk.
4 sergeants.
4 corporals.
4 artificers.
2 musicians, and
100 private soldiers.

Each brigade to consist of—
1 brigadier general.
1 aide-de-camp.
1 junior assistant adjutant general.
1 junior assistant ordnance officer.
1 junior assistant engineer.
1 junior assistant quartermaster.
1 junior assistant subsistence officer.
1 junior assistant paymaster.
1 junior assistant inspector.
1 junior assistant surgeon, with
2 regiments, whether of artillery, infantry, cavalry, or riflemen.

A division to consist of—
1 major general.
2 aides-de-camp.
1 senior assistant adjutant general.
1 senior assistant ordnance officer.
1 senior assistant engineer.
1 senior assistant quartermaster.
1 senior assistant subsistence officer.
1 senior assistant paymaster.
1 senior assistant inspector.
1 senior assistant surgeon.
1 judge advocate.
1 chaplain, with
2 brigades.

The corps of engineers to consist of the *officers* of a brigade.

Every regiment in service, of artillery, infantry, cavalry, and riflemen, to be liable to a reduction of four hundred rank and file during a period of peace. Each regiment will comprehend two battalions, of five companies each.

Believing that every honest statesman of the republic who has reflected upon the subject, and who considers the government of the United States as an institution of their own, in their joint and several capacity, created by the revolutionary patriarchs of the American people for the equal use and common benefit of *all*, and not for exciting the jealousy or ill-will of the people or State governments against that of the United States, will concur with me in the opinion that the *army* should be taken from the several States equally, according to their relative numbers; and that it should be more immediately identified than it has hitherto been with the States and the people, and thus cease to be viewed by any portion of either as the army of a foreign rival power, or as the army of a distant monarchy was once viewed by our ancestors; and, moreover, believing the existing organization, with our system of recruiting, to be wholly repugnant with the nature and spirit of our institutions, and adapted rather to favor the vices of a caucusing aristocracy than to sustain the moral beauty and efficiency of a sound republic, I propose to complete my plan of organization by recommending, that from and after the time at which the militia of the United States shall have received a uniform organization and classification, such as I have proposed in my report of the year 1826, all regimental officers of the line of the army, with all non-commissioned officers and private soldiers, be taken by detail from the disposable organized militia of the United States, between the ages of twenty-one and thirty-five years: provided, that the President of the United States be authorized to accept for the service of the United States no *officer* who shall not have received a military education, or who shall not have served reputably as a non-commissioned officer or private soldier for at least five years previous to the time at which he shall have been detailed from the militia as an officer for the army of the United States. This measure, aided by the Military Academy, it is believed, will give to the army the highest possible degree of respectability and efficiency, and will, in a few years, distribute throughout every section of the United States citizen soldiers qualified, by military education and actual experience, to give the most perfect course of military instruction, and hold ready for action on the approach of war a

million of the young men of our country, such as would always be willing and anxious to measure their strength in battle with any invading foe.

The proposed improvement in the organization of the general staff may be effected without adding any one individual to the number of officers now in service, as the surplus number of officers in the Quartermaster General's department, with a small selection from the brevet and other majors, captains, and lieutenants, (whose places may be supplied by a regular course of promotion in each regiment, leaving the vacancies of the lower grades to be filled by the brevet second lieutenants,) will more than supply the wants of every branch of the general staff, excepting only the pay and medical departments, where the additional assistants may not be required until an augmentation of the army renders it more necessary than at present, as on the approach of war it certainly will be; nor will it add to the present expense of the officers of the army, excepting the difference of pay and emoluments that will result from the promotions, viz: of three colonels, one Paymaster General, and one Surgeon General to the pay, &c., of brigadier, with the promotion of a few company officers, together with some additional expense of stationery and printing.

The proposed improvement in the organization of the general staff, if it be met by an accordant spirit on the part of the several State governments, cannot fail to establish between the militia and the general government that efficient co-operation and harmonious intercourse which seems to have been contemplated by the framers of the federal Constitution when, "in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defence, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity," they authorized Congress "to provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States;" and when they provided that "the President should be commander-in-chief of the army and navy of the United States, and of the militia of the several States when called into the actual service of the United States."

The proposed organization, with the consequent prompt distribution of laws, regulations, and orders necessary to prepare the militia for a state of war, together with the collection and methodical arrangement of detailed reports from the State authorities concerning the militia of every section of the United States, with correct information touching the military resources of each State, designating the particular districts and divisions, with the requisite supplies, which, from their location, might with the greatest facility be concentrated at the most assailable points upon the maritime or inland frontier, would constitute an essential part of the duty of the staff. The government of the United States, possessing such information as a few years of judicious exertion and hearty concert between the United States general staff and that of the several States, would in one hour, on the approach of war, enable the President to prepare a better plan of operation for the defence of the whole or of any threatened section of the country than, without such preparation, could possibly be prepared in one year, nor without an expense far exceeding that of the proposed measure.

It is believed that the late war had continued more than a year before the government of the United States obtained anything like correct returns of the militia of more than two-thirds of the States; and it is certain that neither the general staff of the army nor any other public functionary at Washington could obtain accurate detailed information as to the military resources of the different sections of the United States most immediately applicable to the various exposed points upon the national frontier, other than such as could be picked up from unauthentic and erroneous sources, such as from individuals reporting from casual observation and imperfect memory. Hence it was that millions of dollars were expended for ordnance and ordnance stores, for materials for fortifications, for dragoon horses, for draught horses and cattle, for subsistence, for soldiers' clothing, for bank paper to pay the troops, for medical and hospital stores, &c., &c., whilst the officers or agents of the government were seldom provided with any such information as the proposed measures would supply, or as would guard the public from fraud or imposition—the seller having usually held the advantage over the purchaser so entirely as to obtain exorbitant prices for military supplies, seldom of the best, often, indeed, of the meanest quality, and sometimes absolutely unfit for service. And thus it was that millions of the public money were uselessly squandered for want of some precautionary measures of instruction and preparation such as I propose, and *such as would not, probably, in one hundred years cost the United States as much money as was wasted during the late war in less than three years*, to say nothing of the consequent loss of national character and military reputation, with the sacrifice of private and public property; all of which losses would, in all human probability, have been obviated by an efficient organization with the preparatory measures which I have had the honor to recommend.

In proposing an organization hitherto unknown in this or any other country, I am aware of the responsibility which I have assumed of being bound in honor to assign substantial reasons demonstrative of the *utility* or *expediency* of the proposed measure. To do full justice to myself and to the subject under consideration I should need more leisure and more space than my present avocations or the limits of an ordinary report will afford me. I should take a cursory view of the peculiar nature of our political institutions, of the geography and history of our country, and of the native military character of our countrymen. I should endeavor to show the powerful tendency the proposed plan of organization would have to strengthen the union of the States, and to convince every citizen that the great privilege of *self-government* cannot be preserved without our cherishing with equal pride and pleasure the kindred privilege and exalted duty of *self-defence*, and that these kindred privileges and duties should be regarded as the most vitally important to the cause of human liberty that can possibly engage the attention of man. But I will confine myself to a reply to a few questions that have been asked since the publication of my report of December, 1826, to which I have before referred, namely: What duties can devolve on the officer for militia service for each branch of the general staff that could not be as well discharged by the chief of any one branch or department?

I answer, that if the chief of any one branch of the general staff does his duty honestly and faithfully his time will be wholly occupied with the duties at present assigned him; that the duties to be assigned to the officer for militia service for each branch of the general staff will be as numerous and as complicated as those assigned to any one subordinate officer of any of the great departments of the government. What are they? I might answer this question by asking another. What information is necessary and proper to communicate to the officers of twenty-four States, with more than a million of young men, (whose duty it is to defend their country,) to prepare them for the efficient discharge of this great duty? But I will answer somewhat more in detail.

The first senior assistant adjutant general will promptly transmit to the adjutant general of each

State and Territory all regulations and general orders for the government of the army and militia when in the actual service of the United States, and consequently necessary for their information when not in actual service to prepare them for the same. He will receive and keep a record of all returns and reports of the organized militia of each State and Territory, and report the same from time to time to the Department of War; he will keep a roster and furnish details for service, and he will correspond with the general staff and other officers of the militia of the United States upon all subjects connected with their duties, rights, and interests, in relation to the service of the United States.

The first senior assistant of ordnance will promptly communicate to the ordnance officer of each State and Territory all regulations and orders for the government of the officers of that department, with descriptions, accompanied by exact drawings or models of every kind of arm, gun-carriage, caisson, and other article of ordnance stores authorized by the President to be employed in the service of the United States. He will receive and keep a record of all returns and reports of ordnance and ordnance stores from the ordnance or other officer of the militia of each State and Territory; and he will correspond with all such State authorities upon all subjects connected with their duties in relation to the Ordnance department. The most important matter to be embraced in this correspondence would consist of a prompt communication of every well-tested improvement in the manufacture of arms, ammunition, and equipments, and improvements in the use of the same, with information as to the iron, copper, nitre, and other materials, with the quality and current prices of each, for the construction of ordnance and ordnance stores.

Knowledge is power—a power which monarchists and despots alone deem necessary to their safety that it should be confined to the *favored few* and concealed from the *turbulent many*. But the vital principle of a republic depends mainly upon the extension which is given to knowledge. There is no description of human knowledge so much altogether calculated to establish free institutions as a knowledge of the art of war; and there is no branch of this noble art so difficult to comprehend or so essential to the interests of a republic as the *construction* and *use* of ordnance and ordnance stores. I may be told that it is not necessary to the security of a republic that the citizens of every town within its limits should know how to construct a cannon and other ordnance, or even a rifle. I reply, that every town destitute of men qualified for this duty is necessarily weak and dependent, compared with towns embracing citizens capable of constructing all sorts of ordnance and other arms, and of wielding them in action. But if every *town* should not contain a cannon foundry or armory, with artists and mechanics qualified to render the important service of constructing arms for their own and their country's defence in war, this is no argument why a sovereign State, one of the main pillars of the republic, should remain destitute of this knowledge. On the contrary, it were better that every State had ten thousand citizens qualified for every duty of the ordnance department than that the arts and sciences upon which these duties depend should be locked up, as they are in many of the States of Europe, in the breasts and bureaus of a few individuals. My object is to enable the Ordnance department, with the aid of a board of the most experienced officers in service, and with liberal appropriations of money, to obtain from all the enlightened nations of the world, as well as from our own armories and our able artists and mechanics, the most approved arms; and, after testing their utility by a series of experiments, to furnish every State and Territory with samples, and with suitable drawings, models, and instructions to enable their artificers to construct the requisite machinery with similar arms; and, as often as an improvement in any arm or other supply is ascertained, to furnish drawings, models, and instructions sufficient to afford every State and Territory the immediate benefit of all such improvements.

It is by providing the best of arms and equipments, and the best of men, and the best of instruction, that we can calculate with certainty on maintaining our independence and our national military character. Having but few well-instructed troops kept in service in time of peace, (less than one thousand for every million of inhabitants,) we should take care, by every possible preparation and precaution, to enable them, on the approach of war, to beat the invading foe, man to man, battalion to battalion, and army to army. The question on the adoption of an arm should not be whether the expense is or is not the lowest, but whether the arm itself is such as will, to a moral certainty, enable a given number of men to beat an equal number of the troops of any neighboring power. Every officer and every private soldier should be enabled, as far as it may be in the power of the government, by the excellence of their arms and preparatory measures, to feel assured of that excellence. But if, on the contrary, they should have reason to feel convinced that their arms, &c., are inferior to those of the enemy opposed to them, a few slight misfortunes or a few unsuccessful conflicts would often tend to produce a panic in our inexperienced ranks that might tend to the most serious disasters.

With respect to the other departments of the general staff I will, for the present, omit the details, which I hold myself prepared to furnish whenever required, and to show that an officer may be usefully employed in each department on militia service even during a period of peace; and that on the approach of war the proposed organization will be attended with the most salutary effects, and that without such an organization of the general staff many of the deplorable losses of money and reputation, such as were experienced in the late war, may be expected on the return of another.

I have recommended that the regiments of every arm should be equal to each other in the number, as well as in the relative rank, pay, and emoluments of their officers, non-commissioned officers, artificers, and private soldiers, and each regiment to have an aggregate strength of 1,220, because experience proves that there is no good reason why the regiment of any one arm should contain more or less officers or men than another, and that there are good reasons why they should be of equal strength, and that none should be less than 1,220 officers and men. I have chosen this number from an impression that it accords with the most convenient and proper strength of *companies*, *brigades*, and *divisions*, and is best suited to all the important duties that usually occur in a state of war.

It cannot be denied that our officers of all grades are capable of serving reputably in the artillery and infantry; most of them, indeed, are equally qualified for serving meritoriously in both corps; nor can it be doubted that they are likewise highly qualified to serve in the rifle corps; and that they would, in the course of a few months, make valuable officers of cavalry I entertain no doubt. In this variety of service they will be found, in the course of another war, soaring above the prejudices and breaking through the cobweb shackles of monarchical institutions. Neither officers nor private soldiers of our army, organized as I have proposed, would willingly remain for many months ignorant of the duties of any one arm; and when, in the course of another war, it is seen that detachments or other bodies of troops composed of every arm come in contact with an invading army where, from the peculiarities of the face of the country, it may become necessary for all to serve as infantry, or artillery, or riflemen, then the propriety of the proposed organization will be obvious.

The time must soon arrive at which we shall be sensible of the utter uselessness of any such *whimsical varieties* of organization as the armies of Europe have exhibited, and such as we have in part made attempts to imitate. The armies of Europe have at different times had regiments of from *one thousand* to *six thousand* strong. There it has been for some centuries past the practice and the policy of the monarch at the head of the government to create the greatest possible number of high officers in order to be able to give to every influential favorite, and often to the relation of every favorite, either male or female, a snug place of honor and profit at the expense of the people. Hence it was that in one great monarchy the high places thus created have been multiplied until their annual register has grown to a volume nearly as large as our blessed Bible, and until their list of field marshals, generals, lieutenant generals, and major generals has amounted *to four hundred and eighty general officers;* and among them are generals of foot, generals of artillery, generals of cavalry, &c., &c.

It was the will and pleasure of the King, and the aristocracy of that nation, that it should be so, "and the King can do no wrong." But our true policy suggests the propriety of our having in service no more than can be usefully employed; hence, we can have no reason to follow the example of our European neighbors in this particular any more than we should permit ourselves to adopt their blackest vices—such, for example, as to create a great duke, and allow him to set up, in a palace in the metropolis of his country, the *blushing* trophy of his meretricious conquest, the frail Mrs. C., to sell commissions to officers and to assist in regulating the army.

All which is submitted for the information of the proper authorities with due respect.

EDMUND PENDLETON GAINES, *Major General by brevet, U. S. Army.*

Adjutant General JONES, *Washington City, D. C.*

HEADQUARTERS EASTERN DEPARTMENT, *New York, October* 15, 1830.

SIR: I have had the honor to receive from the War Department, and from your office, letters containing the resolution of the House of Representatives of the United States, passed at its last session, relative to a reduction of the army, and in which letters I am "invited to communicate my views on the subject."

I have now had this resolution under consideration for several months, with the Army Register before me, and with an eye to the several branches of service in all their detail, as carrried on and executed by the aggregate of the commissioned officers in the staff and the line, and I do solemnly declare that I scarcely know one who could be dispensed with, "without injury [more or less] to the public service."

To begin with the *major general,* or commander of the army—an office which it has several times been proposed to abolish.

I consider this place without reference to the late, the present, or any future incumbent, as *essential* to the symmetry of the army; to its just organization; to its efficient and uniform administration, under the head of *orders,* or the technical subdivisions, *service,* and *discipline.* These, I am intimately persuaded, cannot be carried on and maintained with uniformity and efficiency without a central and abiding commander. The Secretary of War has not, either by the act creating his department, the rules and articles of war, or any other act of Congress, any *direct* command over the army. He can only issue orders in the name or by the express authority of the President. He has rarely been appointed, and never may again be appointed, with a reference to his practical knowledge of the history and actual state of the military service. He is a high political and ministerial functionary, and therefore usually changed at the beginning of every administration, and frequently during the same administration. Thus we have had, since the present organization of the army, (1821,) four Secretaries of War, and at least as many more, *par interim;* whereas in the same period there have been but two commanders of the army, each, of course, professionally and minutely acquainted with the history, actual condition, and wants of the service committed to his immediate charge.

Of the Adjutant General and the two Inspectors General, who serve under the immediate orders of the commander of the army, I have heard no objection either to their usefulness or necessity, and can anticipate none.

I am of opinion that one of the aides-de-camp of the general-in-chief might usefully be sent back to the line, and that the other should be attached to the Adjutant General's office as an assistant. In other words, I am of opinion that the general-in-chief requires but *one* aide-de-camp, and that *that* one should be employed as the Adjutant General's assistant.

It appears to me impossible to curtail the *personnel* of the departments of the Quartermaster General, of the Commissary General of Subsistence, of the Paymaster General, of the Surgeon General, or of the Commissary General of Purchases, (with one exception,) as at present organized, without injury to economy and the efficiency of the service. The exception is to the first department named. In my opinion the Quartermaster General is authorized, under a late law, to employ five more officers, to be taken from the line as *assistants,* than the public service requires.

Of those scientific and necessary corps, the engineers and topographical engineers, the universal opinion seems to be, among intelligent men, that both should be slightly increased to meet the important demands of the public service.

In this review I speak not of the Ordnance department as a distinct corps, because all the officers serving in it are drawn from the regiments of artillery.

Motives, directly personal, restrain me from speaking for or against that part of our organization which consists of two brigadier generals, with one aide-de-camp each.

The four regiments of artillery were expressly organized in 1821 with the *war* complement of officers, in order that they should furnish the whole *personnel* of the Ordnance department. Thus, each company has, with but fifty-five enlisted men, five officers, one captain, two first and two second lieutenants. To take away, as has been suggested, one first and one second lieutenant per company: that is, eighteen lieutenants per regiment, or seventy-two from this arm, without, at the same time, creating a new and distinct corps of ordnance, could not fail to cripple, even for service in time of peace, the regiments themselves, but also to destroy the Ordnance department. This can be desired by no one who is aware of the immense amount of *materiel* at the arsenals and fortresses now in the charge of the ordnance or artillery officers, and of the constant inspection, handling, and care which that *materiel* requires. The labors of fixing ammunition, of constructing gun-carriages, and of inspection of ordnance at the founderies and manufactories of arms, employ many other artillery officers. Finally, it may be added that it is prin-

cipally from those regiments and the class of *lieutenants* that about thirty officers are generally employed in geodesical and trigonometrical surveys of the country, and surveys with a view to *internal improvements* under specific resolutions of Congress. Indeed, these various drafts could not have been made upon the artillery, leaving a sufficient number of officers with the companies, but for the brevet second lieutenants which are attached to those companies.

The seven regiments of infantry are, at present, neither on a *peace* (or skeleton) nor on a *war* establishment, but approach rather nearer to the former than the latter. Like the four regiments of artillery, each has one field officer (a major) less than would be required for a state of war; and, unlike the artillery, each company of fifty-one enlisted men has but three company officers, instead of five. When it is reflected that these regiments are stationed on the remote inland frontiers, and mostly surrounded by hostile or doubtful tribes of Indians, it is conceived that the number of officers belonging to them cannot with safety be curtailed, though it would be desirable that the number of enlisted men per company should be extended to sixty or sixty-five.

I have the honor to submit the foregoing, in compliance with the letters before mentioned, received from the War Department and your office.

WINFIELD SCOTT.

Colonel R. JONES, *Adjutant General United States Army.*

HEADQUARTERS WESTERN DEPARTMENT, *Jefferson Barracks, September* 28, 1830.

SIR: I have received, through the Adjutant General of the army, a copy of the resolution of the House of Representatives of the 30th of April, 1830, requiring the Secretary of War to report to the House, at the commencement of the next session, whether any reduction in the number of officers in the army of the United States can be made without injury to the publice service; and, if any, what reduction; together with a plan of the most efficient organization of the army in conformity with the reduction proposed.

Upon this subject I am invited to communicate to you my views.

I have looked upon the army, under the organization of 1821, as wisely adapted to the interest of the country in a time of peace. The principle of skeleton regiments, in a state of tranquillity, reduces the number of troops to a small body, and, of course, a proportionably reduced expenditure, yet preserves the germ or nucleus of an army that may be at once augmented, on the occurrence of a war, to a strong and defensible character.

Assuming this position to be correct, I do not think a reduction in the regimental officers can be made without manifest injury to the public service; nor can the number or grade of the general officers be reduced, having regard to the proper distribution of commands, on which depends the efficiency and harmony of the army, as well as the preservation of its symmetry and its strength and respectability.

With regard to the branches of the general staff, experience admonishes us of their necessity and usefulness. I am not prepared to say whether either can be reduced; most probably not.

Adjutant General's department, indispensable.

Inspector General's department, useful.

Quartermaster General's department, indispensable. It appears to be well regulated; but were it organized into a corps distinct from the line it would promote the public service and avoid an encroachment on the line of the army. Should it remain as at present organized, the captains acting as assistant quartermasters should be returned to their companies, and the duty in future be done by subalterns from the line. There are now four captains, assistant quartermasters, permanently absent from the sixth regiment—an injury to the corps.

Subsistence department, indispensable. It is well regulated; but it would be to the interest of the public service were the commissaries authorized to go into the market and purchase the supplies for the troops, instead of depending on contractors, who comply or fail, according to a prospect of profit or loss to them. This assertion is made upon data that cannot be controverted.

Pay department, essential.

Medical department, essential. The number of medical officers are not as extensive as the service demands under the wide distribution of the troops.

Engineer department. It would seem from the great number of officers detailed from the line for duty in this department that the corps require being augmented rather than reduced.

Ordnance department. I am not sufficiently acquainted with the extent of duty in this branch of the service to offer an opinion. I should presume, however, from my limited knowledge, that it should be organized into a corps distinct from the line.

I have made the foregoing remark with a frankness corresponding with the importance of the subject, which I beg leave to submit without further comment.

With great consideration and respect, I have the honor to be your most obedient servant,

H. ATKINSON,

Brigadier General United States Army, Commanding Western Department.

Major General MACOMB, *Commander-in-Chief, Washington City.*

FORT TRUMBULL, *October* 7, 1830.

SIR: In compliance with the invitation contained in the Adjutant General's letter of September 10, I have the honor to submit my views on the subject of the resolution therein referred to.

To the first branch of that resolution, inquiring "whether any reduction in the number of officers in the army can be made without injury to the service, and if any, what reduction," I should reply that I do not think the number susceptible of any reduction without injury to the service, or of so little as to present an object not worthy of legislation.

The proportion of officers to the numerical force of the army is doubtless somewhat greater than it has been at any former period; and it is probably owing to this reversed ratio that the inquiry contained in the resolution has been instituted. But there are, I apprehend, very sufficient reasons, not only in a military but in an economical view, to warrant this increase. At the reduction in 1821 it was admitted to be desirable to retain an extra number, or greater proportion of officers, with the view to enable the

establishment to be extended with little delay. So many of these officers, however, have been employed by the Department of War in what may strictly be termed civil service, that a less proportion has been left for military duties proper than at any former period. By reference to the Army Register, it will be found that in the beginning of 1830 thirty-one lieutenants were employed on topographical duties, and nineteen as assistant instructors at West Point; two field officers and four captains and sixteen lieutenants on ordnance service; six lieutenants of regiments on duties with engineers proper, making in all *seventy-eight* officers abstracted from the line of the army, for services which, if not performed by the army, must have been obtained at much greater expense to the government; and these services are not in the nature of lineal or regimental duties; besides the above enumeration, the service of supplies and agencies as now rendered within the army, and with great efficiency and economy, by the officers of regiments serving in the quartermaster's and commissary's departments, by which many of them are necessarily withdrawn from their regimental duties. When these deductions are made, it will be found that the average number of officers remaining for regimental service is as small as, with the present rank and file of the army, can be admitted. Thus the government has the advantage, on the present plan, of retaining the number of officers, which would enable it to double the establishment in a very short time, whilst those officers who are supernumerary for the present lineal service, are returning in services not military a full equivalent for their pay.

If, however, the resolution had required me to say what branches of the army would bear reduction with *least* injury to the service, I should have replied that the general officers commanding departments and the field officers of regiments are equal to the inspectoral duties of the army; that some reduction in the rank and number of the quartermaster's department might be made; and that the Military Academy, if reduced one-third, would yet be equal to furnishing all the officers required by the army.

The law increasing the number of students at the Military Academy to 250, and authorizing the President to attach one brevet second lieutenant to each company, passed April 29, 1812, at which time the rank and file of the army was greatly superior to its present strength; and I would further add that the pay department might be reduced so as to render it equally efficient to its present organization.

I have the honor to be, very respectfully, sir, your obedient servant,

W. K. ARMISTEAD, *Brevet Brigadier General of Artillery.*

Major General MACOMB.

HEADQUARTERS SECOND BATTALION, 4TH INFANTRY,
Camp, Sandy Creek, 20 miles from Baton Rouge, Louisiana, October 12, 1830.

SIR: In reply to the Adjutant General's letter of the 10th ultimo, relative to a contemplated reduction "in the number of officers in the army of the United States," I do myself the honor to state that such is my health at this moment that I must confine myself in giving to you my views upon this subject to an opinion only, without giving at length the chain of reasoning by which I arrived at the conclusion, or a statement of the facts and authorities upon which such opinion was formed.

It is due to myself and the army to premise, however, that my military ideas are the growth of *twenty years'* service in peace and in war, of some little study, of more reflection, and after a zealous attempt to make myself acquainted as well with our own military system (or rather with what it ought to be) as with those of foreign nations.

I am of opinion, then, that no "reduction" in the number of officers in the army of the United States can be made without *manifest* and *serious* injury to the public service.

I have for several years believed that a reduction in the staff of the army might be made with manifest advantage to the service. This, according to my views, would not diminish the number of officers in the army, but would take some officers from the staff and put them to their *appropriate duties;* and would operate a saving to the government of the difference between their staff pay and that which they would receive in the line.

Much stress I understand has been placed upon a contrast of the number of officers with that of the rank and file of the army. A more erroneous method of arriving at the truth than this course of reasoning would present when applied to an army, and more particularly to our army, could not be devised by the ingenuity of man.

A report from the Adjutant General's office, showing the various duties upon which the officers of the army are employed in most cases, in obedience to resolves of Congress, together with the number absolutely present with the troops, would at once put to rest this theory, and show that instead of containing too many the army contains too small a number of officers at the present moment.

Take my own post for an example, and it will show that for the last three years I have not averaged one officer to a company of men, and yet, as at the headquarters of a regiment, I ought to have an adjutant, a commissary, a treasurer of the post fund, and a secretary of the council of administration; and generally, as at this time, I have had but one officer to perform *all* these duties in addition to the command of a company.

It may and probably will be urged, in refutation of my opinion, that the annual addition of brevet officers from the school at West Point will ultimately more than fill the army, and bear too heavy upon the treasury of the country. Admit this as matter of fact, and yet it by no means follows that a reduction of the officers of the army is the proper remedy of this evil. And I go still further, and deny that it is either just, wise, or honorable to do so.

Between the officer who has faithfully served his country and spent his best days in marches and encampments, and the cadet from West Point, educated at the expense of the government, and just preparing to enter upon that life and that routine of duty which the other has finished, I do hope and trust no man in either house of Congress will for a moment hesitate.

A long life is required, even when combined with the requisite *natural talents*, to form an officer. Let no man for a moment suppose that *four years* spent at a military school will ever qualify the most accomplished youth to command your army.

I have several objections *to our* national military school, and think its rules of administration might be advantageously altered. No young man ought to enter that school until he is at least sixteen years

old, and ought certainly not to graduate until he is twenty-two years of age, making his term of study six years. If it is *too* numerous, why not place a portion of the graduates in the navy?

In point of principle I object to it as being, in my opinion, in operation at least, at variance with the spirit of our institutions; and, above all, I shall ever oppose it while in practice it closes the ranks of our army to *every* citizen of this great country not educated there.

Open the ranks of the army to every American citizen, and there lives not the man who can calculate the moral power of this great lever. It puts at defiance all the learning of the mathematician, and becomes at once a question of transcendent geometry.

You complain of desertion. Put it in the power of the American recruit to say to himself, I may one day command in chief the army of my country, and you have done all you can to prevent desertion, except, indeed, you add to it the commonplace distinction of the veteran from the recruit, in a few privileges and a small pecuniary reward; and by all means increase the pay of your non-commissioned officers.

I am, sir, with the highest respect, your obedient servant,

WILLIAM S. FOSTER,
Lieutenant Colonel U. S. Army, Major 4th Infantry, Commanding.

Major General ALEXANDER MACOMB,
Commander-in-Chief U. S. Army, Washington, D. C.

FORT NIAGARA, *November* 4, 1830.

SIR: In reply to a communication received from the Adjutant General of the army, under date of the 10th September last, inviting me (among other officers of the army) to communicate my views as to the propriety of a reduction of the officers of the army, &c., &c., I have the honor to state, in complying with the invitation, I feel sensibly the delicacy of expressing opinions that may be instrumental in depriving brother officers, who have long served their country gallantly and faithfully, of situations, which, though they might, in my present opinion, be dispensed with without serious injury to the service, yet, upon trial, it may appear that opinion was erroneous; and one injurious consequence must certainly ensue, (and one which I sincerely think would counterbalance any advantage I may be able to suggest,) viz: that, from continued attempts to reduce and displace the officers of the army, it will go far to show the instability and frail tenure by which commissions in the army are held. Gentlemen who were retained in service, especially after the last consolidation, very reasonably calculated on making the army a profession; but if every two or three years a portion are legislated out, the effect can be more easily foreseen than remedied after it has occurred. But, sir, I conceive the invitation given by you as intended to elicit the candid opinions of those to whom it is addressed, and I shall therefore, much as I dislike the office, express frankly my opinions, such as they are, in regard to those officers that I think may be dispensed with. To commence, I would recommend abolishing the office of inspector generals, and substitute that of *one* adjutant and inspector general, making it the duty of the colonel of each regiment to inspect his command annually, and thus save, in salaries alone, $5,592 96. Dispense with the district paymaster, and, as formerly, appointing a subaltern in each regiment, with, say $26 additional pay per month, thus saving, by there being eleven paymasters (one to each regiment) instead of the present number, $26,200 annually, besides the saving in travelling expenses, those paymasters being always at the headquarters of their regiments, except only when paying companies at a distance; and in lieu of paying, as is now done, every two months, that the paymasters be directed to pay only semi-annually. By this means there will not only be a direct saving in transportation, but a much greater benefit received by the government, from the less number of desertions; as I have just stated, the present mode is, in most cases, to pay off the troops every *two months*, thus affording to those harpies, the owners of tippling shops, in the neighborhood of every post, (but without the jurisdiction of the officers,) a ready return of money from the men; whereas, if they were obliged to trust them six months, the hazard would be too great, and, besides, they could not afford to wait so long for their pay. Do away with the office of assistant quartermasters, and make the assistant commissaries of posts perform those duties, (as it is now done at many posts,) say $5 additional pay, thus saving annually $6,000. In lieu of the present number of cadets at West Point, let the corps be reduced to, say 100, and should there be at any time more vacancies in the line of the army (which I think would rarely be the case) than the annual number promoted from the academy would fill, let the residue be made up by selection from citizens, or meritorious sergeants, making it at least *possible* for non-commissioned officers to receive promotion, as in other service.

The good effect of such a measure as the last mentioned would be immediately felt in the army, and greatly tend to do away the apathy that now prevails in that grade of the service, and at the same time hold out an inducement for young men of a better class than those now enlisting to enter the ranks, and to *remain in service*, when the recruit may look forward to the command, perhaps, of an army, while, under the present regulations, he cannot hope, however meritorious his conduct, to ever receive a lieutenant's commission. The saving thus made will amount to $50,000, in pay and rations of cadets; and a corresponding reduction of the officers of that academy would probably amount to, say $5,000 more. Any alterations beyond what I have stated, I conceive would be highly injurious to the country; and sooner than recommend a reduction of the officers in the line of the army, I would be in favor of a disbandment of the whole, for at present there is scarcely a company in service that has a sufficient number with them to keep it in proper order, and attention to the discipline and wants of the soldiers.

I am, sir, respectfully, your most obedient servant,

WM. WHISTLER, *Major 2d Regiment Infantry, U. S. A.*

Major General A. MACOMB, *United States Army, Washington.*

FORT ADAMS, *Newport Harbor, September* 16, 1830.

SIR: I have to-day received a letter from the Adjutant General of the army inviting me to communicate my views on the subject of a resolution of Congress of April 26 last, touching a reduction of the number of officers in the army; and it is proper for me now to state that I fear it will be impossible for me to find time to comply with this invitation.

All my present impressions as to this matter are favorable to our present organization, and decidedly opposed to the tenor of the resolution; but, at the same time, it would not be complying with the terms of the letter just received to state my bare dissent as to the propositions involved in the resolution, nor respectful to the source whence it emanated, or to the department to which I am asked to address my views, to offer any suggestions not resulting from careful and deliberate investigation.

I do, however, most sincely hope, as I confidently trust, that the Secretary of War, aided by the talents of the army, of which there is such just reason to be proud, will not fail to make it appear that our military establishment admits of no retrenchment of its members; that if the organization be in any degree imperfect, it is, compared with the entire interest, in small and unessential particulars; that the imperfections, if any, in its details, are due to the actual diminutiveness of the whole; and, above all, that the welfare and efficiency of the army as a body, much as they are disturbed by frequent legislative interference with its organization, are not thereby put in equal hazard with the safety and honor of the nation.

I have the honor to be, very respectfully, your most obedient,

JOS. G. TOTTEN, *Lieut. Colonel of Engineers, Brevet Colonel.*

Major General ALEXANDER MACOMB, *Commanding U. S. Army, Washington.*

BOSTON, *September* 24, 1830.

SIR: In obedience to the directions contained in your communication of September 10, 1830, I have the honor to submit, in answer to the question "whether any reduction in the number of officers in the United States army can be made without injury to the public service," the following considerations:

The inquiry naturally divides itself into two branches: 1. Is there a superfluity of officers in the staff? 2. Is there a superfluity in the line? With respect to the staff, not having the means of precisely estimating the services performed by the various officers included in its organization, I feel myself totally incompetent to decide on the merits of that organization. Every nation liable to the casualty of war (and none are exempt) should be provided with a staff for the promulgation of orders and intelligence, for the procurement of supplies of food and clothing for armies, and for the transportation and transmission of such supplies; which organization (when its officers have become skilful and experienced by a proper distribution of their duties and a just accountability for the execution of them) should not be lightly or without good cause disturbed in time of peace, and should exist without reference to the policy which may dictate an increase or diminution of the troops of the line. My own opinion is that the general staff has attained a consummate and perfect organization, and will admit of no reduction without injury to the service, with the exception of the office of inspector general, which possibly might be dispensed with, by devolving the duties of inspection on the field officers of regiments, and requiring of them to inspect different regiments, and even corps, from those to which they are arranged. I hazard this opinion, though with great distrust, because I do not stand on ground which gives me a full view of the subject. On the second branch of the inquiry I respectfully present to the consideration of the commanding general such suggestions as have occurred to my limited knowledge and observation.

It is asserted that, under the organization of 1821, we have double the complement of officers in commission required by the service; or, in other words, that we have a *double complement of officers*. It is evident that this assertion has in itself no definite meaning, and that it can only be predicated of the organization of 1821 by comparison with some other military organization. Accordingly, it grows out of the fact that, at the reduction of 1821, the rank and file of the United States army was reduced from 11,904 to 5,558, or about one-half, whilst the commissioned officers were reduced from 535 to 427, or between a fourth and a fifth. It assumes the organization of 1815 to be the most perfect and efficient for a military force, and condemns that of 1821 as being imperfect in proportion to its departure from that *standard*. As the excess or redundancy of officers is tested by the proportion of rank and file to the command, the argument is that the latter being reduced one-half, the former should be reduced one-half also, and that all over that proportion is superfluity or redundancy, and should be lopped off. If it were not taken for granted, then, that the organization of 1815 was the most perfect of which a military body was susceptible, it could not be assumed that we have a *double complement* of officers in service; and the merits of the existing organization would be tested by other considerations than those which grow out of a comparison of it with that of 1815.

The illusion appertaining to this proposition is, that that which is true by the rule of three is not always true in itself—the rule of three being a fallacious measure of truth when applied to moral, political, and military subjects. The alleged superfluity of officers, under the organization of 1821, must consist in one of two things: 1st, either that there is too great a number of officers allowed to a company as such, with reference to the number of its rank and file; or, 2d, that the number of officers, compared with the number of rank and file, both as to companies and regiments, is disproportionably great. With respect to the number of officers allowed to a company, military nations have varied, not only from one another, but from themselves, at various periods. The United States military organizations exhibit all the varieties of allowance, from three to six officers to a company. Military writers insist on only one principle as established by experience to be essential to the efficiency of companies, which is, that a company should never have *less than four* commissioned officers. This allowance of four officers to a company, whatever may be its magnitude, is the result of its liability to break into four equal fractions for the purposes of movement and action, whilst it rarely or never breaks into odd fractions, or fractions represented by 3, 5, 7, &c. The allowance of officers to a company, or to any other military force, is further affected by the necessity which exists of sometimes detaching from that company or force, in which case an increase of officers is wanted by the casualties to which officers are subject of sickness and death, and by the necessity they are sometimes under of soliciting and obtaining furloughs. To the four commissioned officers then admitted to be indispensable to the efficiency of a company, most military nations allow an additional number, rendered necessary by the

considerations above stated. Thus the organization of the United States army in 1808 allowed six officers to a company. The French organization allows six officers to an artillery and five to an infantry company.—(See Science of War, p 49 and p. 59.) Compared with these, the organization of 1821 exhibits no superfluity, the allowance being five officers to a company of artillery and three to one of infantry. If superfluity of officers, then, exists in the present army, it must be under the second head stated above, viz: that the number of officers, compared with the number of rank and file, is disproportionably great. The truth of this proposition I propose to test by submitting to the major general the various military organizations of the United States, from the commencement in 1790 down to 1821; and for this purpose I subjoin the following tables, showing the ratio of apportionment between officers and men in each of them. The statements made are the result of a careful examination. The artillery and infantry are kept distinct. The apportionments are dated regimentally and according to companies. The letters R. R. stand for regimental ratio; the letters C. R. for company ratio.

ARTILLERY ORGANIZATIONS.

Regimental ratio.

1794,	R. R.,	1 officer to	$11\frac{3}{5}$	rank and file.	
1798,	R. R.,	1 do.	10	do.	
1799,	R. R.,	1 do.	$11\frac{43}{51}$	do.	
1802,	R. R.,	1 do.	14	do.	
1808,	R. R.,	1 do.	$9\frac{43}{68}$	do.	
1812,	R. R.,	1 do.	16	do.	Years of war.
1814,	R. R.,	1 do.	$21\frac{41}{48}$	do.	Years of war.
1821,	R. R.,	1 do.	$10\frac{47}{49}$	do.	

Company ratio.

1794,	C. R.,	1 officer to	$12\frac{3}{19}$	rank and file.	
1798,	C. R.,	1 do.	$12\frac{3}{19}$	do.	
1799,	C. R.,	1 do.	$12\frac{3}{4}$	do.	
1802,	C. R.,	1 do.	15	do.	
1808,	C. R.,	1 do.	15	do.	
1812,	C. R.,	1 do.	18	do.	Years of war.
1814,	C. R.,	1 do.	23	do.	Years of war.
1821,	C. R.,	1 do.	11	do.	

This table shows that the organization of 1821 is very nearly equal (in the apportionment of officers to the number of rank and file) to those of 1794,-'98,-'99, 1808, differing not materially from that of 1802, but materially from those of 1812 and 1814, years of war; in other words, that it conforms to five out of seven organizations adopted by Congress for a time of peace, and differs materially from only two organizations by the same authority, made for a state of war.

INFANTRY ORGANIZATIONS.

Regimental ratio.

1790-'91,	R. R.,	1 officer to	$19\frac{19}{44}$	rank and file.	War.—St. Clair's defeat.	
1796,	R. R.,	1 do.	$15\frac{7}{13}$	do.		
1798,	R. R.,	1 do.	$18\frac{3}{35}$	do.		
1799,	R. R.,	1 do.	20	do.		
1802,	R. R.,	1 do.	$17\frac{43}{44}$	do.		
1808,	R. R.,	1 do.	12	do.		
1812,	R. R.,	1 do.	$23\frac{43}{84}$	do.		
June 26, 1812,	R. R.,	1 do.	$20\frac{43}{59}$	do.	War.	
1813,	R. R.,	1 do.	$17\frac{14}{59}$	do.		
1815,	R. R.,	1 do.	$21\frac{26}{38}$	do.		
1821,	R. R.,	1 do.	$15\frac{29}{53}$	do.		

Company ratio.

1790-'91,	C. R.,	1 officer to	25	rank and file.	War.—St. Clair's defeat.	
1796,	C. R.,	1 do.	$20\frac{3}{19}$	do.		
1798,	C. R.,	1 do.	20	do.		
1799,	C. R.,	1 do.	25	do.		
1802,	C. R.,	1 do.	19	do.		
1808,	C. R.,	1 do.	13	do.		
1812,	C. R.,	1 do.	$27\frac{3}{4}$	do.		
June 26, 1812,	C. R.,	1 do.	$25\frac{3}{4}$	do.	War.	
1813,	C. R.,	1 do.	$20\frac{3}{7}$	do.		
1815,	C. R.,	1 do.	26	do.		
1821,	C. R.,	1 do.	17	do.		

This table shows that the organization of 1821 is very nearly equal (in the apportionment of officers to the number of rank and file) to those of 1796, 1798, 1802, and even one year of war, 1813; that it differs materially from those of 1790,-'91,-'99, 1812, June 26, 1812, and 1815; 1791 and 1812, both years of war, the one Indian, the other British; and that in 1808, the apportionment of officers to the number of rank and file is greater than in 1821. Thus out of ten organizations of infantry by Congress, the apportionment of officers to rank and file is nearly the same with that of 1821 in four; greater in one, viz: 1808; and less in five, three of which five were war organizations. Further, out of seventeen military organizations by the government of the United States, ten sustain the apportionment of 1821, seven are

variant from it, and six out of that seven are war organizations. The double complement, then, of officers, or superfluity asserted to exist in the organization of 1821, can only be so estimated in reference to the organization of 1815, which, so far from having a claim to be viewed as a standard of perfect apportionment, is in itself an *anomaly* in our military legislation not analogous to any other peace establishment adopted by the United States. If, by that solitary act of organization, it is made to appear that we have a double complement of officers now in service, the whole military legislation of the country refutes the supposition by repeated enactments in which ratios of apportionment, conformable to that of 1821, are deliberately settled. Those who assert, then, that we have a superfluity now in service, cannot, evidently, sustain themselves by recurring to the military legislation of this country, which, in almost every page, will falsify their assertion.

The most striking and imposing sanction of the ratio of apportionment adopted in 1821 is the organization of 1808. This organization was adopted by an administration* lauded, and with great justice, for its rigid economy, imperturbably pacific, and certainly not obnoxious to the charge of lavish expenditures on military establishments from any overweening affection for such establishments; and yet this organization exhibits a greater allowance of officers, in proportion to number of rank and file, than even that of 1821. The wisdom of this increased allowance is evident from the history of the country. The United States had unexpectedly acquired, by the purchase of Louisiana, an increased frontier of perhaps some 4,000 miles. To occupy the various stations on this new frontier, in addition to the old, it became necessary to break the United States army into numerous detachments, each of which, however small, would require a commissioned officer. I leave it to those who assert the superfluity of officers in the existing army to decide how far the increased frontier acquired by the purchase of Florida between 1815 and 1821 has diminished the necessity of detached service, and its inevitable attendant, multiplicity of commissioned officers.

Having shown that the asserted superfluity of officers now in service is relatively to the organization of 1815 only, I will conclude by comparing our military establishment with that of the French as to the apportionment of officers to rank and file.

French infantry war establishment.

R. R., 1 officer to 18 rank and file. C. R., 1 officer to 20 rank and file.—(See page 48, Science of War.)

French artillery war establishment.

R. R., 1 officer to $13\frac{79}{130}$ rank and file. C. R., 1 officer to 14 rank and file.—(Science of War, page 48.)

But the French war establishment is to the peace as 8 to 5;† consequently, on the peace establishment the ratio of apportionment is:

Infantry.—R. R., 1 officer to $11\frac{1}{4}$ rank and file. C. R., 1 officer to $12\frac{6}{13}$ rank and file.
Artillery.—R. R., 1 officer to $8\frac{1}{11}$ rank and file. C. R., 1 officer to 8 rank and file.

It will be seen that the French peace establishment exhibits a greater superfluity of officers than the organization of 1821.

To recapitulate: If, 1st, there be not a superfluous allowance of commissioned officers to a company—if, 2d, there be not a greater apportionment of officers to rank and file than is allowed either by former organizations of our own country or by the establishment of the most powerful military nation in Europe, all of which positions I have clearly established, I conclude that the asserted superfluity of officers does not exist, and that, consequently, their number will not bear reduction consistently with the interests of the service.

I am, very respectfully, your obedient servant,

WM. LINDSAY, *Brevet Col. 3d Artillery, Commanding.*

R. JONES, *Adjutant General.*

HEADQUARTERS LEFT WING, DEPARTMENT OF THE EAST, *Detroit, November* 1, 1830.

SIR: Your communication of the 1st of September last, calling for my opinion whether or no the number of officers in the army could be reduced without injury to the service, was duly received. The question is a delicate one for a member of the army to answer; but I shall meet it with candor, and answer it without partiality, favor, or affection. For this purpose I shall place myself in the attitude of a citizen of the country, and then say, in the words of the father of our country, that during peace is the time to prepare for war; and it is evident the then Secretary of War (the Hon. J. C. Calhoun) had in mind the words quoted when he answered the call of Congress in 1820 to report at the next session of Congress a plan for reducing the army. In that plan the number of enlisted men was reduced from ten to six thousand, and the present peace establishment was considered competent to guard our public property, and make a little military show at our exposed points, and to have a foundation upon which to build an army in case of need. To be so prepared it was indispensable to retain a greater number of officers than would be required to command the six thousand in time of war. If in 1821 it was thought necessary to have a well-appointed and efficient army, what has transpired to make it proper in 1830 to destroy its organization by reducing a portion of the officers? As I do not know of any changes, either at home or abroad, for the better, I respectfully report against a reduction of any of the officers of the present peace establishment.

I have the honor to be, very respectfully, your obedient servant,

H. BRADY, *Bvt. Brig. Gen. U. S. Army.*

Major General MACOMB, *Commanding the Army, Washington, D. C.*

* Jefferson's. † See Science of War, page 48.

HEADQUARTERS 1ST INFANTRY, *Fort Crawford, October* 10, 1830.

SIR: In answer to your letter of the 10th ultimo, which I have just received, I have to observe, in order to determine whether the present military establishment can be further reduced or not, it will be necessary for those who discuss the question to put themselves in the situation of an officer charged with the defence of the country, and then to ask themselves this question: what would such an officer require to enable him to discharge this duty with honor to himself and with advantage to his country?

Such an officer would be most anxious to see every important point of his country well fortified and garrisoned with officers and troops perfectly acquainted with their duties, and upon whom the utmost reliance could be placed in the hour of danger. It would be at those points the enemy would strike, if he attempted to strike at all. In war the blow is always aimed at the most vital part.

Such an officer would also most anxiously wish to have a number of well-formed officers to intermix with new levies. The beneficial effects of such a mixture can scarcely be appreciated except by those who have seen service. An experienced officer will form a better regiment in six months than one of the same grade of talent and without experience would form in as many years. Of course I speak generally. There are always exceptions in favor of peculiar talent and peculiar genius.

I am satisfied if you were to ask the ablest officer of the day what was the first requisite towards the formation of an army, he would answer good officers; what the second requisite, good officers, and what the third requisite, good officers.

Such an officer would also most anxiously desire to have officers intimately acquainted with every portion of our frontiers. Hence the importance (besides other weighty reasons) of retaining our higher grades, and hence the importance of occasional changes of our regiments, when this could be effected without too great an expense to the public service.

Such an officer would also most anxiously desire to have officers intimately acquainted with every branch of service. What the consequence of beginning to form officers when war is at your very doors?

With these views of the subject, and considering the extensiveness of our frontiers, and the many important points to be defended, I should not deem it expedient to reduce the line of the army, nor do I see how the organization of this portion of it could be materially improved.

The articles of war, however, ought to be revised, both for the sake of the officer and soldier, the army and militia. The offences are too loosely defined, and both officer and soldier are too much exposed to the operation of passion and prejudice. By such a revision the expenses attending courts-martial could, I think, be materially reduced.

It has been said that there are too many officers; but setting aside the importance of having well-formed officers against the hour of trial, if such be the case, I do not remember to have witnessed it on our frontiers. Such is the great variety of detail and casualties along our extensive frontiers, I have not unfrequently seen a second lieutenant in command of two companies.

It has also been said that the officers of the old army did not distinguish themselves eminently during the late war. To this assertion there are many highly honorable exceptions; and, coming fresh into the army, as I did, at the commencement of the late war, as a captain, and having seen the army during that period and since in almost every variety of situation, I declare that I am decidedly of opinion that the country would have been greatly benefited if those officers had been more diffused throughout that army.

I do not mean to speak of the staff of the army. They will be able to explain how their respective departments operate. I wish, however, our captains could be disconnected from the staff and returned to their companies. The frequent changes in the commands of our companies, arising from the absence of our captains, are attended with serious disadvantages to our service.

These observations are respectfully submitted. I had no intention of entering largely into this subject.

Very respectfully, your obedient servant,

W. MORGAN, *Colonel 1st Infantry.*

Major General A. MACOMB, *Commander United States Army.*

FORTRESS MONROE, *Virginia, November* 12, 1830.

COLONEL: In obedience with the contents of your communication of the 10th of September last, I have the honor to state that, in my opinion, no reduction in the number of officers *of the line* of the army can be made without injury to the service. In thus expressing myself, I am guided by the opportunity which has been presented to me by being stationed at this post for the last two years, during which time there has seldom exceeded *two* officers per company, and at no time has ever this number been present with every company, notwithstanding this command is considered *one* requiring the presence of as *many* company officers as the good of the service would permit, from its peculiar duties and instructions, as directed in the regulations for the government of the same. Although I have expressed an opinion unfavorable to any reduction of the officers in the line, I hope I may be permitted here to take the opportunity to submit the following remarks on the organization of the army, &c.

1. The ordnance to remain as at present organized, with its bureau, &c., at Washington; but that a board of five officers, selected from the field officers and captains of the artillery and ordnance, be formed and permanently stationed at the seat of government; that the senior colonel of the artillery be the president of the board; that this board should have the general direction of the ordnance, so that no alteration in cannon, garrison or field-carriages, or as to small arms, &c., be made without a full report of said board, and that to be supported by its being the result of practical experiments, and which this board should in its report fully explain in all its parts.

2. That the topographical corps of engineers be organized on the principle of the corps of engineers. In which case, and with the supposition that the officers for the same would be selected from the artillery, *one subaltern* from each company of artillery would thus be deducted from the present number of artillery officers.

3. That the subalterns of the corps of *engineers*, as well as those of the *artillery*, should *all* have the *rank* of *first lieutenants*. This is proposed, 1st, because it is in justice due to the graduates from the Military Academy who by their exertions have rendered themselves meritorious, and have accordingly been *selected* for the aforenamed corps; 2d, because it will in some respect equalize the promotions in the artillery and engineers with that of the infantry, in which last it is much more rapid; and, 3d, because the

situation of the former corps is also more expensive than that of the infantry; and thus, for the reasons as above and others, not only the officers but even the enlisted men of the aforenamed corps receive in the European service an extension of pay.

4. That all permanent appointments in the quartermaster's and regimental staff be made from the captains and first lieutenants, and equalized from the regiments, *whose places in the same* should be filled by promotion, so that the effective strength of the several companies should always be the same. These selections for staff duties should not impair their lineal rank; so that in case they return to their regiments at any time, others of the same regiment and rank would be selected to fill their staff appointment.

5. To urge the passing of the bill as before Congress (I believe in January, 1830,) for the increase of pay to non-commissioned officers, and for the encouragement of re-enlistments, to which add, as an amendment, the appointment of a non-commissioned officer, called in the French service *fourrier, (company quartermaster,)* whose duty would be indispensable in the preservation of all company records and accounts between the captain and each individual soldier, as well as all other public property in charge of the same, so that in case that officer should be killed in action, taken prisoner, or otherwise unexpectedly displaced, his successor, through the explanations of this *fourrier* or *company quartermaster*, could at once understand the exact state and accounts, &c., of that company, thereby preventing the numerous mistakes, losses, &c., which always occur, and frequently to the great injustice of private soldiers, and also to the government, on such unexpected removal of officers. This company quartermaster should be considered as a non-combatant, retiring, whenever the company goes into action, with the books, papers, baggage, &c.; and he would thus be able to preserve for final settlement each soldier's claims, (although the latter may have been killed, &c.,) thereby rendering justice to widows and orphans, as well as to the government. It is believed that the services of this *fourrier* or company quartermaster would be even more important in our service, in consequence of the detached situation in which our companies frequently are, and particularly in time of war, than in the European service, where such non-commissioned officers are highly estimated. Such non-commissioned officers should have the rank of sergeant, and next to that of the orderly sergeant, and the same pay, &c., as the last named.

6. As the punishment of death for the crime of desertion, and others in the army in time of peace, has been abolished, the only punishment now left for the crime of desertion is the condemnation to hard labor for a certain period. This, it appears, is not much regarded by those who render themselves liable to incur that penalty; in fact, it falls almost as severe on those who are detailed to accompany such culprits as guard during their hours of labor; and as to the shame or disgrace of this kind of punishment, it is well known that such culprits are perfectly callous. It is believed, therefore, that, under the existing just and correct regulation and instruction for the recruiting officer, there can be no unfair means resorted to with intention of deceiving a man so as to induce him to enlist into the army; and it being understood that all who now enlist have previously been fully made acquainted with the situation in which they will find themselves, a deserter should therefore be held up to the *public scorn* for having thus *shamefully abandoned the standard of his country, disregarded his solemn oath, and forfeited the rights of citizenship.* Let, then, the law award him a punishment by *stripes*, under the sentence of a general court-martial, and the deserter to receive the number of —— stripes, afterwards be drummed out of the service as incapable of ever serving in the army; and should such deserter afterwards be discovered as having re-enlisted in the army, that for such offence he should receive double the number of stripes as ordered by the aforenamed sentence. With such punishment, it is believed that few will ever expose themselves to a second offence, and almost certainly not to a third. Deserters might also be condemned to hard labor for a certain number of years, but to undergo that punishment at some of the navy yards or on board of a government vessel, and never with any department attached to the army.

7. That, in lieu of the present mode of making payment to the troops, each artificer or private soldier be paid weekly one-fifth of his monthly pay, and that the balance remaining be credited to him, and paid over at the expiration of his term of service; that the non-commissioned officers be also paid weekly, but without any deduction as above for the artificers and privates.

8. That no graduates from the Military Academy, on their leaving the same, should be furloughed (as it is at present the case) without having to that effect the request of their parents or a near relation. This is stated with a view to prevent the ruin of many young and valuable officers who may be induced, in consequence of the removal of restraint and the allurements of cities, to spend their furloughs in the indulgence of habits ruinous to their health, and ultimately render them unfit for the *objects* of their education. Graduates from the Military Academy, if not furloughed as above, should receive special orders to repair in as short a time as practicable (and the space of time should be named in the order) to the headquarters of the corps or regiment to which they may have been appointed; and afterwards they should not be ordered on any extra service out of their corps or regiment, without having at least served one full year with the same; and this because an officer should not be placed in a situation to *lead* and *command* soldiers before he has had an opportunity of serving with them under older and experienced officers, who would serve as a check upon the rashness of inexperience.

9. With this last remark I would take the liberty to suggest the necessity of some establishment for the more effective instruction of cavalry, a corps which is as useful as its maintenance is expensive, and therefore a greater attention towards it is required. The experience of fourteen years' active service in that *arm*, both in peace and war, in the European armies, has fully satisfied me of the want of such means of instruction in our army, and particularly after having witnessed the great sacrifice in men and horses during the late war, although no corps was better composed in officers and men than our two regiments of dragoons. We have now in service four companies of light artillery. If they were mounted and incorporated, they would be sufficient for the intended object of instruction, and they not only would be instructed in all that is required for this arm proper, but in due time would also be made to serve as a school of instruction and practice for cavalry, at least in that which could be performed with two squadrons, and with which nearly all the manœuvres of a regiment could be performed; all this will require time, but can be effected by perseverance.

Respectfully submitted by, colonel, your obedient servant,

J. B. WALBACH, *Brevet Colonel 1st Artillery.*

Colonel R. JONES, *Adjutant General United States Army.*

HEADQUARTERS SECOND INFANTRY, *Madison Barracks, September* 26, 1830.

SIR: The communication of the Adjutant General of the 10th instant has been received, in which I am requested to give my views in relation to a reduction of the number of officers of the army, together with a plan of the most efficient organization thereof.

I cannot see that any reduction can be made from the officers of the line of the army without great injury to the service. So large a portion of our officers are detached on staff and other duties that we seldom have more than two, and frequently but one, with a company; and when that is the case, any accident or casualty happening which would take that officer from it would cause embarrassment to the command.

In looking over the Army Register, I find more than eighty officers of different grades detached from the line and doing duty in the several branches of the staff and ordnance departments, among whom are seventeen captains—a grade which should never be separated from its lineal command, as the efficiency of a company will always be lessened by the absence of its proper commander. This fact must be obvious to every military man. The evil, also, is without any good resulting from it; for it must be admitted that many persons may be found competent to the staff duties performed by those captains, but none equally competent to the command of their companies, because of the frequent changes in the grade of subalterns having a tendency to destroy responsibility. I would, therefore, propose the following plan of organization, which, I think, will in some measure remedy the evil:

PEACE ESTABLISHMENT.

The general staff of the army to consist of one major general with two aides-de-camp; two brigadier generals with one aide-de-camp each, (the aides-de-camp to be taken from the subalterns of the line;) one Adjutant General; one Quartermaster General; one Paymaster General; one Commissary General of Subsistence; one Commissary General of Ordnance, and one Surgeon General, to be attached to general headquarters, and two deputies to each of the heads of the staff, one of which to be attached to the headquarters of a department commanded by the brigadier general.

The number of assistants in the Quartermaster's, Subsistence, and Ordnance departments to be regulated by the President of the United States as the service may require.

The line of the army to consist of —— regiments, (and on a peace establishment there should be no distinction of corps, as they may all be required to perform the various duties of artillery, infantry, or riflemen, as the good of the service may demand,) each regiment to consist of one colonel, one lieutenant colonel, one major, one adjutant, one quartermaster, one paymaster, (to be taken from the subalterns,) one surgeon and two assistants, one sergeant major, one quartermaster sergeant, two principal musicians, and ten companies; each company to consist of one captain, one first and one second lieutenant, one orderly sergeant, three sergeants, four corporals, two musicians, and —— privates.

The rank, pay, &c., of the different officers of the staff to be fixed by Congress.

A small reduction of the number of cadets at West Point might be made with advantage. At present promotion is so slow in the army that the graduates generally remain several years as brevet second lieutenants before a vacancy offers for them.

I have the honor to be, very respectfully, your obedient servant,

ALEXANDER CUMMINGS, *Lieutenant Colonel 2d Infantry.*

Major General A. MACOMB, *Commanding the Army, Washington City.*

MEDICAL STAFF.

P. S.—In addition to the medical officers attached to regiments, there should be a certain number of surgeons and assistant surgeons attached to posts.

CANTONMENT JESUP, *October* 18, 1830.

SIR: I have received by the last mail a letter from the Adjutant General's office, dated on the 10th of September; and, in reply to the questions therein propounded, I state as my opinion that no reduction of the officers of the army can be made without injury to the service.

As far as my observation extends, I have almost uniformly observed a scarcity of officers for duty, owing, I presume, to the number employed in the staff and other duties.

I have the honor to be, sir, respectfully, your obedient servant,

JAMES B. MANY, *Lieutenant Colonel 7th Infantry.*

The ADJUTANT GENERAL, *City of Washington.*

HEADQUARTERS FOURTH INFANTRY, *Cantonment Brooke, T., October* 11, 1830.

SIR: The circular from the office of the Adjutant General, dated 10th of September, 1830, and based on the resolution of the House of Representatives dated the 26th April, 1830, has been received, and I have the honor to state that, after having given the subject embraced in the resolution the most serious consideration and reflection, in my opinion no reduction in the number of the officers of the army of the United States can be made without materially deranging its present able and efficient organization, and thereby inflicting a serious injury on that important arm of national defence.

With much respect, sir, your most obedient servant,

D. L. CLINCH, *Colonel 4th Infantry, Commanding.*

Major General MACOMB, *Commanding United States Army, Washington.*

FORT MACKINAC, *October* 26, 1830.

SIR: In reply to a communication from the Adjutant General, dated on the 10th ultimo, inviting me to give my views in relation to the resolution of the House of Representatives of the 26th of April last, I have the honor to submit the following as the result of my reflections on the subject:

1. That the present organization, so far as the line of the army is concerned, cannot be improved by any reduction, and that the "public service" does not require or admit of such reduction.

2 That there should be no reduction in the number of general officers, because it would mar the symmetry of the existing organization and weaken its responsibilities.

3. That the Quartermaster's department should be reorganized, and made to consist of a Quartermaster General with the rank of colonel, two quartermasters with the rank of major, and as many assistant quartermasters as the President may deem necessary. The Quartermaster General and the quartermasters to hold no rank in the line of the army; the assistants to be taken from the subalterns or captains; but if from the grade of captains, the acceptance of the staff appointment to vacate their lineal rank, leaving to them the staff rank of captain.

4. That the Inspector's department should be abolished, and colonels required to inspect their own regiments yearly, and to forward their reports through the proper channel to the War Department; and that the generals of departments should, as now required, *actually* inspect their commands once in two years, reporting in like manner.

5. That the Adjutant General should hold no regimental rank.

6. That an Ordnance department should be organized, consisting of one colonel, two majors, and —— captains, holding no rank in the line, and such number of subalterns as the good of the service may require; the latter to be detailed from the artillery and infantry indiscriminately, and relieved at the will of the War Department.

7. That the topographical corps should be increased and organized in a manner similar to that suggested for the ordnance.

8. That the Subsistence department should be so modified as to deprive the two commissaries of their regimental rank.

9. That the Pay department might be reduced, by disbanding some two or three paymasters, without any injury to the service.

10. That, as the service sustains serious injury by the absence of so many captains from their companies, officers of all grades ought to be prohibited, by *law*, from becoming clerks in any of the departments.

11. That the pay proper and rations of all officers of the same grade, whether in the staff corps or line, ought to be the same.

I am with great respect, your obedient servant,

E. CUTLER, *Lieutenant Colonel 5th Infantry.*

Major General MACOMB, *General-in-chief, Washington.*

PIKESVILLE ARSENAL, *October* 5, 1830.

SIR: I have had the honor to receive your letter of the 10th September, in which I have been invited to communicate my views on the subject of the resolution of the House of Representatives, dated the 26th April, 1830, by which the Secretary of War has been directed to report "whether any reduction in the number of officers in the army of the United States can be made without injury to the public service, and, if any, what reduction; together with a plan of the most efficient organization of the army in conformity with the reduction proposed."

To decide, in a satisfactory manner, whether any reduction in the number of officers in the army can be made without injury to the public service, it is proper to inquire what are the duties the officers have to perform, whether any of those duties can be dispensed with, and, if indispensable, whether they can be performed by a less number of officers than are now employed. The officers in the army have now to perform, besides their proper duties in the line, the duties of the Ordnance, Quartermaster's, and Subsistence departments; many are employed on topographical duty at the Military Academy, and in other branches of the staff.

The proper number of officers which should be assigned for duty to each company of its present strength should not be less than four. If we take into consideration the casualties incident to every military establishment, such as sickness, occasional furloughs, and the number of officers who must be constantly employed on the recruiting service, it is evident that this proportion of officers for duty, with each company, will not be too great; that the number for duty would rarely average *three;* and probably the monthly returns would show that the number seldom averaged more than *two* to each company. It would be an act of supererogation to prove that, with a less number of officers to each company, the discipline and efficiency of the army could not be maintained.

By referring to the Register of the army it will be seen that nearly a hundred officers of artillery and upwards of fifty of infantry are employed on other than regimental or company duties. This number, deducted from the whole number of officers of the several regiments, leaves less than four officers, including the brevet second lieutenants, to each company.

About thirty officers of artillery are employed on ordnance service; and this number will be, probably, too limited when all the arsenals are completed which have been projected.

As it is evident that the duties of the ordnance service cannot be dispensed with, it will be for consideration whether those duties shall be performed by the officers of artillery or by a distinct ordnance corps. If not performed by the officers of artillery, it will be indispensably necessary to establish an ordnance corps to the full extent of the number of the officers now employed on that service; and in doing this, no reduction of the number of officers in service would be made. The intimate connexion of the artillery and ordnance service suggest the propriety of employing the officers of artillery on that service.

In addition to the topographical corps, upwards of thirty officers, principally of artillery, have been employed on that service. If the public interest should continue to require the services of the same number of officers, as is most probable, they must be taken from their regiments, or the topographical

corps increased to an equal number. The improvement which our well-educated young officers would derive from being occasionally employed in this department would strongly recommend the existing arrangement. The same observations will apply to the number of officers engaged as instructors at the Military Academy.

I cannot undertake to say whether the number of officers employed in the Quartermaster's and Subsistence departments is too great; but I presume that not more are thus employed than are absolutely necessary.

I have now stated the various duties which are performed by the officers of the army, and the number employed; and I think it may with safety be affirmed that these duties are indispensable. It appears, therefore, that the number of officers in service is not disproportioned to the services required of them.

Could a reduction of the number of officers be made without injury to the service by a consolidation of two regiments into one, by uniting two regiments into one, and retaining in the consolidated regiment the same number of companies *now* in each regiment, one-half the number of officers might be discharged, but all the officers retained must, from the increased strength of the companies, be exclusively employed with their regiments; none could be spared for any other duties which have been enumerated. Take, for example, the regiments of artillery. The number of officers in these four regiments amounts to 196; of this number about one-half are now detached from their regiments on other than regimental duty. If, then, by uniting the regiments, and one-half the number of officers are discharged, an equal number must be appointed to separate corps, to discharge the duties now performed by them; a consolidation of the regiments would not, therefore, lessen the necessity of having as many officers in service as there are now. Besides, great inconvenience and much mischief would result, particularly to the regiments of artillery, from this measure. These regiments now consist of thirty-six companies, and, by consolidation, the number would be reduced to eighteen companies. The number of posts to be garrisoned by the artillery would exceed this number of companies; and to give to each post a garrison, it would be necesssary to divide the companies into detachments, which invariably destroys the discipline of the company, prevents instruction from being advantageously imparted, and lessens the interest which the captain feels in, and his responsibility for the good order of, his company, with a train of consequences destructive of the efficiency of the army.

The best organization of the army, on a peace establishment, is that in which the rank and file are reduced to the minimum number indispensably necessary to perform the services required of the army, with such a proportion of officers as would be required, in the event of war, for the augmented and full strength of the companies and regiments. The four regiments of artillery are now organized on this plan. The companies are reduced to about one-half the number of men they would consist of on a war establishment, with a sufficient number of officers for full companies. In the event of the necessity to augment the strength of the army, it would only be necessary to increase the number of men in the companies; and by thus uniting recruits in the same company with disciplined soldiers, the skill and discipline which had been previously acquired by the older soldiers would be readily imparted to them; and in a shorter time we should have a more efficient force than it could be with one-half the army composed separately of recruits. These considerations alone sufficiently recommend the present organization of the regiments of artillery; but there are other considerations of some weight. The officers are now fully employed; and the variety of duties they are called upon to perform gives them a practical knowledge in these several departments of service, increases their acquirements, and enlarges their sphere of usefulness.

It would, I think, be advantageous to organize all the regiments in service as the regiments of artillery are now organized; and, perhaps, the establishment of a very limited ordnance corps would be beneficial. A corps to consist of one colonel and ten captains would be sufficient for the present. This number of officers, with a portion of the lieutenant colonels and majors of artillery having charge of the several arsenals, and about thirty subalterns of artillery detailed for service therein for limited periods, would constitute a very efficient corps; and the expense of the service would be limited to that of only one colonel and six captains to be appointed, there being now four supernumerary captains of artillery intended for ordnance service.

This corps, thus constituted, and the topographical corps, which now consists of a sufficient number of officers to take charge of the several parties engaged on the duties appertaining to that service, would be schools of practice for our young officers.

I might go much more into detail on the subjects adverted to in this communication, but I am unwilling to trespass longer on your attention, and cannot flatter myself that I could impart any new or valuable ideas.

I have the honor to be, very respectfully, your most obedient servant,

JAMES BANKHEAD, *Colonel United States Army.*

Major General MACOMB, *Commanding United States Army.*

FORT COLUMBUS, *New York, October* 11, 1830.

SIR: I have the honor to acknowledge the receipt of a letter from the Adjutant General of the 10th ultimo, in which he states that the Secretary of War has been directed "to report to the House, at the commencement of the next session, whether any reduction in the number of officers in the army of the United States can be made without injury to the public service, and, if any, what reduction; together with a plan of the most efficient organization of the army, in conformity with the reduction proposed."

You are pleased to invite me to communicate my views on the subject of this resolution. I should have replied to this communication at an earlier period, but official duties took me from my post, which has prevented. At the same time, I offer my opinion with great diffidence, as I am fully sensible there are many officers of higher rank who are more capable of giving correct opinions on this subject than myself. I shall, however, give my views with frankness and candor.

In the first place, I shall at once state that, in my opinion, no reduction of the officers of the line of the army can take place without injury to the service, unless a topographical corps should be established on an enlarged organization; in which case, one second lieutenant from each company of artillery could,

with great propriety, be reduced, as no details would then be made from the artillery for this branch of service.

As regards the staff, I think there could be a reduction without any injury to the service; on the contrary, a benefit, by lessening the expense. I would propose that the generals should be the same number as at present. One major general to command the army; one brigadier general of artillery to command that arm, and to be the inspector of the same, and also director and inspector of ordnance, to be authorized to detail as many field and other officers as may be necessary to conduct this branch of the service; one brigadier general of infantry, to be also inspector of the same; the Adjutant General to remain as at present; the two inspector generals to be reduced as unnecessary; the Quartermaster General's department to be reduced to the rank of a colonel, with two deputies with the rank of majors, and twelve assistants, to be taken from the subalterns of the line, and, while performing the duties of assistants, to receive the pay and emoluments of a captain. This number, it is conceived, will be amply sufficient for all necessary purposes in this department; and as the chief of the staff, which is considered in all services as the Adjutant General, holds only the rank of a colonel, there is no sound reason why a secondary department should have a superior grade. The Commissary General's department to consist of one colonel, one deputy commissary with the rank of major, and as many assistant commissaries as may be necessary for the service, to be taken from the lieutenants of the line, to receive the same compensation as is now allowed, but not to be excused from their duty in the line, which is considered as totally unnecessary, unless when required to perform the duties of assistant quartermasters in addition to their other duties, and then to be excused only on the recommendation of the commanding officer of the post to which they are attached, when the number of troops stationed at the same exceeds two companies.

The Paymaster General's department, it is conceived, could be conducted by a Paymaster General, as at present, with *eleven* paymasters, or one for each regiment, reducing three. This would enlarge the duties of some few of them, but it is confidently believed they could very easily perform it.

The Medical department, it is believed, would be improved by abolishing the grade of assistant surgeons, (as there is no rank or distinction among medical men, except what merit may give,) and fixing their pay and emoluments according to their length of service, and allowing them a higher scale of consideration, when they come in contact with officers of the line, than they have heretofore received.

No staff officer to hold rank in the line of the army except the assistant quartermasters and assistant commissary of subsistence, as it is contrary to the spirit of our institutions for any person to hold two offices at the same time, and cannot but be injurious to the service.

I have thus freely offered my views on this subject, and am sensible there may be many imperfections, but which is submitted to your superior judgment for correction.

With great respect, I am, sir, your obedient servant,

J. B. CRANE, *Brevet Lieutenant Colonel 4th Regiment Artillery.*

Major General A. MACOMB, *Commanding the Army, Washington, D. C.*

HEADQUARTERS, *Cantonment Leavenworth, October* 22, 1830.

SIR: I have the honor to acknowledge, by the last mail, the receipt of your circular of the 10th ultimo, inviting me to say whether, in my opinion, "any reduction in the number of officers in the army of the United States can be made without injury to the service."

In the army proper I do not think any reduction can be made consistent with the good of the service. My experience does not suggest to me any organization preferable to the present one, with, perhaps, the following exceptions:

Brevet rank, I think, should be abolished. It has done much injury to our little army, and may do more.

Captains should not be permanently detached, on staff duties, from their companies. Is it not strange that the law should prohibit the major general of the army from employing an officer of higher rank than a lieutenant as aide-de-camp, yet authorizes the Quartermaster General to take captains as assistant quartermasters? The good of the service, I think, calls for a change in these cases. But what we most of all need, and is called for by the best feelings of the human heart, is the means of governing our men.

Very many have already fallen victims to our philanthropic system. Besides, it has introduced among us a lamentable state of disorder and insubordination, and left us without the hope of reformation unless we are aided by legislation.

I consider the general staff of the army and the military institution at West Point as collateral branches of the army, and do not find myself called upon to give my views upon either. If these require reform, I will leave to those who have, perhaps, made them more their study than I have to point out the way.

I have the honor, sir, to be your obedient servant,

WILLIAM DAVENPORT, *Major 6th Infantry, Commanding.*

General A. MACOMB, *Washington City, D. C.*

21st Congress.] No. 467. [2d Session.

ARMY REGISTER FOR THE YEAR 1831.

COMMUNICATED TO THE SENATE JANUARY 27, 1831.

DEPARTMENT OF WAR, *January* 26, 1831.

SIR: I have the honor to transmit fifty copies of the Army Register for 1831, for the use of each member of the Senate of the United States, conformably to a resolution of December 13, 1815.

Very respectfully,

J. H. EATON.

The PRESIDENT *of the Senate of the United States.*

Register of the army of the United States for the year 1831.

MILITARY ACADEMY, WEST POINT, NEW YORK.

INSPECTOR.

Brevet Brigadier General Charles Gratiot, chief of the corps of engineers, (*ex-officio,*) inspector of the Military Academy.

SUPERINTENDENT AND COMMANDANT.

Brevet Lieutenant Colonel S. Thayer, corps of engineers.

INSTRUCTOR OF TACTICS, AND COMMANDANT OF THE CORPS OF CADETS.

Captain Ethan A. Hitchcock, first infantry.

ASSISTANT INSTRUCTORS.

Second Lieutenant Charles F. Smith, second artillery.
Second Lieutenant Joseph L. Locke, second artillery.
Brevet Second Lieutenant Simon H. Drum, fourth artillery.

INSTRUCTOR OF ARTILLERY.

First Lieutenant Z. J. D. Kinsley, third artillery.

ACADEMIC STAFF.

PROFESSOR OF NATURAL PHILOSOPHY.

Edward H. Courtenay.

ASSISTANT PROFESSORS.

Second Lieutenant Thomas J. Cram, fourth artillery.
Brevet Second Lieutenant Cath. P. Buckingham, third artillery.

PROFESSOR OF ENGINEERING.

Captain David B. Douglass.

ASSISTANT PROFESSOR.

Brevet Second Lieutenant Charles Mason, corps of engineers.

PROFESSOR OF MATHEMATICS.

Charles Davies.

MILITARY ACADEMY—Continued.

ASSISTANT PROFESSORS

First Lieutenant Edward C. Ross, fourth artillery.
Second Lieutenant Albert E. Church, third artillery
Second Lieutenant O. McK. Mitchell, second artillery.
Brevet Second Lieutenant Joseph B. Smith, fourth artillery.
Brevet Second Lieutenant Charles W. Hackley, third artillery.
Brevet Second Lieutenant Miner Knowlton, first artillery.
Cadet Robert P. Smith, second class.
Cadet Frederick A. Smith, 3d class.

CHAPLAIN AND PROFESSOR OF ETHICS.

Rev. Thomas Warner.

ASSISTANT PROFESSOR.

Second Lieutenant Joseph A. Smith, third artillery.

PROFESSOR OF CHEMISTRY AND MINERALOGY.

———— ————.

ASSISTANT PROFESSORS.

Second Lieutenant William F. Hopkins, fourth artillery.
Second Lieutenant William W. Mather, seventh infantry.
Second Lieutenant John C. Casey, second artillery.

TEACHERS OF THE FRENCH LANGUAGE.

Claudius Berard.
Joseph Du Commun.

ASSISTANT TEACHERS

Cadet Roswell Park, first class.
Cadet Henry Clay, first class.

TEACHER OF DRAWING.

Thomas Gimbrede.

ASSISTANT TEACHER.

Lieutenant Theophilus B. Brown, third artillery.

SWORD MASTER.

Louis S. Simon.

MILITARY STAFF.

QUARTERMASTER.

Æneas Mackay, third artillery.

SURGEON.

Dr. W. V. Wheaton.

PAYMASTER AND TREASURER.

First Lieutenant Thomas J. Leslie, corps of engineers.

ADJUTANT.

First Lieutenant F. L. Griffith, second artillery.

Officers of the army attached to the Military Academy.

RESIGNATIONS.

COLONEL.

Bvt. Brig. Gen. John McNeal, jr., 1st infantry, April 23, 1830.

MAJOR.

Samuel Babcock, corps of engineers, December 22, 1830.

FIRST LIEUTENANTS

Charles Despenville, 4th artillery, March 1, 1830.
Thomas McNamara, 7th infantry, June 30, 1830.
Wm. Reynolds, 1st infantry, August 1, 1830.
Rawlins Lowndes, 1st infantry, December 31, 1830.
William B. Thompson, 5th infantry, December 31, 1830.

SECOND LIEUTENANTS

Augustus J Pleasonton, 3d artillery, June 30, 1830.
Jas. J Anderson, 4th infantry, July 1, 1830.
Andrew Kinnard, 1st artillery, October 31, 1830.
T. P. Ridgeley, 2d artillery, December 31, 1830.

BREVET SECOND LIEUTENANTS.

James Clark, 4th infantry, August 18, 1830.
Antes Snyder, 2d infantry, September 20, 1830.
W. L. E. Morrison, 2d infantry, October 16, 1830.
Joseph H. Pawling, 1st infantry, November 30, 1830.

DEATHS.

CAPTAIN.

James Young, 2d infantry, May 26, 1830.

FIRST LIEUTENANTS.

Henry Clark, 5th infantry, October 14, 1830.
J. B. Pendleton, 2d infantry, February 2, 1830.

SECOND LIEUTENANT.

John G. Furman, fifth infantry, August 29, 1830.

BREVET SECOND LIEUTENANTS.

Charles May, sixth infantry, January 19, 1830.
James H. Wright, 6th infantry, September 21, 1830.

SURGEON.

John Gale, July 27, 1830.

DISMISSED.

CAPTAIN.

Joseph Pentland, sixth infantry, April 22, 1830.

SECOND LIEUTENANTS.

Joseph Cadle, 7th infantry, April 7, 1830.
Ephraim K. Smith, 5th infantry, October 6, 1830.

The following list of cadets is attached to the Army Register conformably to a regulation for the government of the Military Academy requiring the names of the most distinguished cadets, not exceeding five in each class, to be reported for this purpose at each annual examination.

REPORTED AT THE EXAMINATION IN JUNE, 1830.

Names.	Studies in which each cadet particularly excels.
FIRST CLASS.	
Alexander J. Swift	Mathematics, natural philosophy, chemistry, engineering, French language, drawing, rhetoric and moral philosophy, artillery and tactics.
Wm. E. Basinger	Mathematics, natural philosophy, chemistry, engineering, French language, rhetoric and moral philosophy, artillery and tactics.
Walter S. Chandler	Mathematics, natural philosophy, chemistry, engineering, French language, drawing, rhetoric and moral philosophy, artillery and tactics.
Francis Vinton	Mathematics, natural philosophy, chemistry, engineering, French language, drawing, rhetoric and moral philosophy, artillery and tactics.
William N. Pendleton	Mathematics, natural philosophy, chemistry, engineering, French language, rhetoric, and moral philosophy, artillery and tactics.
SECOND CLASS.	
Roswell Park, James Allen	Natural philosophy, chemistry, and drawing.
Henry Clay, Richard H. Peyton, William A. Norton	Natural philosophy and chemistry.

LIST OF CADETS ATTACHED TO THE ARMY REGISTER—Continued.

Names.	Studies in which each cadet particularly excels.
THIRD CLASS.	
Robert P. Smith	Mathematics, French, and drawing.
Benj. S Ewell George W Ward Jacob W. Bailey Lewis Howell	Mathematics and French.
FOURTH CLASS.	
Frederick A. Smith John H. Allen Francis H Smith David B. Harris	Mathematics and French.
Wm. H. Sidell	Mathematics.

A list of the military posts and arsenals.

Permanent commanders of military posts	Regiments.	Posts.	State or Territory.	Post office.	Sutlers.
Captain Wilcox	5th infantry.	Fort Brady	Michigan Territory.	Sault Ste Marie.	C. W. Griswold.
Lieut. Col. Cutler	5th infantry	Fort Mackinac	....do	Michilimackinac.	David Jones.
Colonel Lawrence	5th infantry.	Fort Howard	....do	Green Bay	S. Clark and S. Clark, jr.
Brevet Major Fowle	5th infantry.	Fort Dearborn	....do	Fort Wayne	Benjamin B. Kerchival.
Brevet Major Thompson	2d infantry.	Fort Gratiot	....do	Fort Gratiot	William B. Hunt.

Bvt. Lieut. Col. Fanning	2d artillery.	Arsenal, Augusta	Georgia	Augusta	John Fetters.
Lieut. Anderson	3d artillery.	Arsenal, Baton Rouge.	Louisiana	Baton Rouge	

The western department comprises all west of a line drawn from the southernmost point of East Florida to the northwest extremity of Lake Superior, taking in the whole of Tennessee and Kentucky; and the eastern department all east of such line.

The headquarters of the general-in-chief are in the District of Columbia.

The headquarters of the western department are at Jefferson barracks.

The headquarters of the eastern department are in the city of New York.

Those officers whose stations are changed by transfers and promotions will report for duty accordingly.

By order:

R. JONES, *Adjutant General.*

21st Congress.] No. 468. [2d Session.

ON THE SUBJECT OF A CHANGE IN THE ORGANIZATION OF THE MILITARY ACADEMY AT WEST POINT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 28, 1831.

DEPARTMENT OF WAR, *January* 28, 1831.

SIR: A resolution from the House of Representatives of the 11th January directs that the Secretary of War "communicate to the House whether the existing laws do not provide for a greater number of cadets at the United States Military Academy than is consistent with the objects for which it was established; and if so, that he report a plan and organization for that academy corresponding with the alterations and reductions which may be deemed expedient."

In reply, I have the honor to state that this subject was adverted to in the annual communication to the President from this department at the commencement of the present session of Congress, and, more recently, in another report, founded upon a resolution of the House of Representatives, on the subject of reducing the number of officers which compose the army of the United States.

The graduates who obtain commissions in the army, and whose services are not needed, are perhaps the greatest inconvenience which attaches to the Military Academy, or is one which, more than others, calls for reformation. The act of Congress of 1818 does not absolutely require that each and every one who graduates shall receive a brevet appointment; yet as ours has become, in a great measure, a country of precedent, and as the practice so long has been to appoint to the army every graduate, the right of each to admission has assumed, in a great degree, the character and force of law. To remedy this is, perhaps, matter of the first and highest importance. It is a sound maxim that no government should employ more agents than are necessary to attend to its service and its wants; all others should be dispensed with. The understanding and the direction should be, that no more of the graduates of this academy shall be retained for army purposes in future than may be necessary to the probable vacancies that happen within the year in the different corps of the army; the others to return home, to enter into such engagements and pursuits as their discretion may suggest.

My opinion, as it regards the Military Academy, is, that it is one of the most valuable institutions of which the country can boast. It should be to us not matter of jealousy and opposition, but of pride. Objections have been often urged against it. It is said to be an institution to which the sons of the wealthy alone obtain admission. This is not correct. No consideration of the kind influences in the selections which are made. The rules which govern are, first, to select those of best seeming merit, and, next, to distribute them as equally as possible throughout the States. It has been usual to appoint a cadet for each congressional district, that the military advantages received at the institution might be as extensively diffused as possible, and every section of the country obtain equal benefits; but that the wealth or influence of the applicant and his relations give any preference is incorrect; or, if correct, it attaches to the member of the district who prefers and urges the claim, not to the department. It is impossible for the Secretary of War to be acquainted with all the applicants; he must rely on the information of others; and on none more securely ought that reliance to be placed than on those whom the people select as the organ of their wishes. He does repose respect and reliance there; and hence, if there be error committed, it is not his, but the fault of those to whom this confidence is extended. The rule which has been sought to be rendered general (other things being equal) is to select for this school the parentless and the poor, upon the calculation that they have the least opportunity to obtain an education. A failure to reach the Military Academy to a youth of humble means may prove fatal to his hopes and prospects; while those possessed of wealth and friends, through the provision which such means secure, may rise superior to the failure. The one cannot, while the other may, obtain an education notwithstanding the disappointment.

By an estimate made for the last five years, it appears that the supply to the army from the corps of graduated cadets has averaged about 22 annually, while those who graduate are at about 40, making in each year an excess of 18. The number received annually into the academy averages 100, of which only the number stated, to wit, 40, pass through the prescribed course of education at the school, and become supernumerary lieutenants in the army. Thus, it is perceivable that but two-fifths of the young gentlemen who in each year are admitted to the academy succeed in passing through the regular course of studies, or obtain admittance into the military service of the country.

Two plans suggest themselves for the consideration of Congress as remedies for this state of things:

To reduce the number which may be admitted, corresponding to the actual or probable vacancies which may occur in the army. Let the number to be appointed in each year be limited to 60; and then, supposing two-fifths, as heretofore has been the case, to be graduated, there will be but 24 at the termination of each annual commencement of the institution, which, by the standard of the last five years, will supply the exigencies of the annual army deficiency.

But a more acceptable plan than this, and which I beg leave to suggest, would be to direct that no greater number of the graduated cadets shall receive brevet commissions than may be equal to the probable vacancies which may take place, and that no more appointments to the army be made until the present number of supernumerary brevets be absorbed.

The importance and value to the country of this military institution is plainly perceivable. It constitutes the great nursery of military science. When war shall overtake us, it will be our main reliance for all those important benefits and advantages which the scientific and informed can lay claim to over the untutored soldier. Examples are familiar in our country of persons not trained to the profession of arms who have risen to the highest military distinction. It has been remarked, too, of a distinguished writer, that, without the knowledge of the rules of prosody and grammar, he produced a poem which has been the admiration of successive ages. But these make the exceptions, not the rule. The intelligent and thinking must admit that, though the human mind may oftentimes display itself to bold and admirable advantage, yet it will not answer to assume as a general rule that education and culture are unnecessary. These, it is true, cannot give mind, but all must admit that they may enlarge and greatly expand it.

I should be pleased that those who believe in the inutility of this institution, could for a while be

present to witness its course, government, and the character of its instruction. The important points available in war for assault and defence, the means of guarding the various approaches to our country, our towns and seaports, and the proper selections for military posts, with all the important and valuable topography we possess, result from the untiring industry of the graduates of this institution. These are on file in the Department of War, for the future service and benefit of the country; and when danger and occasion shall make it necessary, the fruits of this industry will be found to be of invaluable importance.

At the commencement of our late war, many were the disasters encountered. It is true we were badly prepared, but in a great measure are the discomfitures we met with attributable to the circumstance, that nothing was known of the topography of the country where those military operations were carried on. Without this information, a general cannot act securely or to advantage. It is to the Military Academy that we are essentially indebted for the valuable information we possess on these subjects. It is to those who have been graduated at the institution that our indebtedness arises for the construction and erection of our various fortifications, those valuable defences which give protection and safety to our commerce; and it is to them we are hereafter to look for that knowledge and science in war which, being diffused through the country, shall become general and servicable. The advantages to be derived from this institution, and which in time will be derived, surely cannot be computed by any standard of dollars and cents.

I agree it is not necessary or proper to retain persons in office whose employment is not actually necessary or needful to the public service. It might be advisable, therefore, to retain no more of those young gentlemen than are necessary to supply vacancies in the army; but, while a provision to this extent should be made, it is questionable if the interest of the government does not require rather that the academy should be enlarged than reduced; whether, if the resources of the country permitted, it would not be preferable to create another similar institution, rather than in the least to diminish the present one.

From the remarks I have made, it will be seen that upon the present plan the average number which is annually graduated is 40, and the vacancies in the army 22; of course there will be 18 in each year who cannot be brevetted and who will return home. The benefit to be derived, however, from their educations will not be lost, but, on the contrary, will be felt in the several States where they reside. By preserving this institution upon this organization, other advantages will result. The graduates, understanding that about one-half only of the class can receive appointments in the army, will become more emulous and industrious, and hence will be found to be better qualified for military service.

With this report, I beg leave to submit a plan of organization for the institution; it is the same which was presented at the last session of Congress.

Very respectfully,

JOHN H. EATON.

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives.*

MILITARY ACADEMY, *West Point, November* 18, 1829.

SIR: I have the honor to submit, for the consideration of the department, a "bill making further provision for the Military Academy." The act placing the academy on its present footing was passed in April, 1812. It cannot, I think, be matter of surprise to any one, that a plan for the organization of the academy, drawn up so long ago as the commencement of the last war, and without the lights of experience, should be found at this time to be susceptible of great improvements. That the present organization is essentially defective in many of its parts is generally acknowledged. As to the nature of these defects and the proper remedies, there is also a very general agreement of opinion among those who have enjoyed the advantage of witnessing the operation of the system, and of making examinations on the spot. My own views on the subject are embraced in the bill now presented. Other improvements of minor importance might be suggested; but in drawing up the bill, it was my object to include in it only such provisions as were deemed indispensably necessary to the advancement of the institution. By reference to the reports of the various boards of visitors, appointed to attend the annual examinations in the course of the last six years, it will be seen that nearly every provision embraced in the bill has been discussed and recommended in some one or more of these reports. Although the provisions of the bill are many, they all, with a single exception, tend towards one object; which is, to prevent frequent changes in the corps of instructors, and thus to render it permanent and efficient. Some idea of the frequency of these changes may be inferred from the fact that of the twenty-eight instructors employed in the academy, fourteen have filled their situations only one year, and not more than eight over three years. As a large body, therefore, they are measurably destitute of experience, and consequently of skill. This is the grand obstacle to the progress of the institution, although it may not be duly appreciated, except by those who are practically acquainted with the business of the instruction. To remove it, I can suggest no other way than by a moderate increase of the pay of a certain portion of instructors. The whole amount of the increase proposed is $1,807 36, which, together with the compensations of the professor of chemistry and teacher of French, as also proposed, would add to the present expenses of the academy the sum of $4,368 60, as is more particularly shown in the subjoined statement. Thus the effect of the bill would be to increase the present expenses of the academy about four per cent.; on the other hand, its effects on the condition of the institution would be more than proportionally great, or rather would be incalculable.

In the hope that the present may be deemed a favorable time for presenting the subject to the consideration of Congress, I remain, very respectfully, your obedient and humble servant,

S. THAYER, *Lieutenant Colonel, Superintendent Military Academy.*

Brig. Gen. CHARLES GRATIOT, *Chief Engineer, Inspector of the Military Academy.*

A BILL making further provision for the Military Academy at West Point.

SEC. 1. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the President of the United States be, and he is hereby, authorized to appoint a professor of chemistry and mineralogy in the United States Military Academy.

SEC. 2. *And be it further enacted*, That the professors of the Military Academy, from and after the passing of this act, shall receive each the pay and emoluments allowed to the professor of natural and experimental philosophy.

SEC. 3. *And be it further enacted*, That the teacher of the French language and teacher of drawing shall each receive the pay and emoluments of a major of infantry.

SEC. 4. *And be it further enacted*, That the President of the United States be, and he is hereby, authorized to appoint two other teachers of the French language, who shall each receive the pay and emoluments of a captain of infantry.

SEC. 5. *And be it further enacted*, That the President of the United States be, and he is hereby, authorized to appoint an assistant professor of chemistry and mineralogy, who, together with the assistant professors already provided, shall, if an officer of the army, receive so much, in addition to his pay and emoluments, as shall equal those of a captain of infantry; and if not taken from the army, shall receive the pay and emoluments allowed to a captain of light dragoons by an act entitled "An act to raise, for a limited time, an additional military force," passed the twelfth day of April, one thousand eight hundred and eight.

SEC. 6. *And be it further enacted*, That all lieutenants who shall, under the direction of the President, be detailed from the army to act as instructors, assistant professors, or assistant teachers in the Military Academy, shall, after the first year, while so employed, be allowed each ten dollars per month, in addition to his pay in the line.

SEC. 7. *And be it further enacted*, That each officer of the army, in the actual command of a company of cadets, shall be entitled to receive the same additional compensation as is allowed to every officer in the actual command of a company in the army by the second section of an act entitled "An act giving further compensation to the captains and subalterns in the army of the United States, in certain cases," passed the second day of March, one thousand eight hundred and twenty-seven.

SEC. 8. *And be it further enacted*, That so much of the act entitled "An act making further provision for the corps of engineers," passed the twenty-ninth day of April, one thousand eight hundred and twelve, as confines the selection of assistant professors to the corps of engineers and cadets, shall be, and is hereby, repealed.

SEC. 9. *And be it further enacted*, That the professors and officers attached to the Military Academy who, by law, are entitled to forage, shall receive, in lieu thereof, an equivalent in money, at the rate allowed to officers of the army, although they may not actually keep the horses for which they are allowed the forage.

SEC. 10. *And be it further enacted*, That all officers, professors, teachers, and their assistants, and all other persons authorized to be employed for the service of the Military Academy, shall be subject to the rules and articles of war which are now, or which hereafter may be, established.

Remarks on the foregoing bill.

SEC. 1. The importance of a knowledge of chemistry, mineralogy, and geology, to the military officer, will not, it is believed, be disputed by any one. Those sciences form a part of the system of education in every military school of Europe, and have been taught (imperfectly, it must be confessed) at this institution for more than eight years, during which there have been four different persons acting as professor. Little or no improvement can be expected in this department of instruction till provision shall be made by law for a permanent professor, as recommended by various boards of visitors.

SEC. 2. The object of this section is to equalize the compensation of the professors. This may be done either by reducing the compensation of the professor of natural and experimental philosophy, or by allowing to each of the other professors one hundred and ninety-three dollars a year more than he now receives. The latter is recommended as both reasonable and expedient. The pay and emoluments of the professors, increased as proposed, would be considerably less than the salaries paid the professors at many of our colleges and universities; those, for instance, of Pennsylvania and Virginia, in which the professors receive from two to three thousand dollars a year.

SEC. 3. The considerations which I would mention in favor of this section of the bill are the importance of French and drawing in a system of military education; the number of cadets attending to these branches, which varies in the French department from 160 to 180, and in drawing from 120 to 140; the valuable services rendered by the able teachers who have presided over those departments, the one for fifteen and the other for eleven years; and, finally, the prospect of promotion which it holds out to the under teachers, and which will, as I believe, be found necessary, in order to procure competent under teachers for the moderate compensation proposed in the next section.

SEC. 4. The number of French teachers at the academy is three, (the same number that has been employed during the last twelve years,) each of whom has about 60 pupils under his charge. There is, however, no legal provision for more than one teacher. The second teacher is employed by virtue of an order issued by the Secretary of War in February, 1818. The third is an officer of the army detailed for that purpose. It is proper, however, to state that he performs the duty with reluctance, because he is sensible that it can be properly performed only by a native Frenchman.

SEC. 5. The object of the last clause of this section is to induce the principal assistant professor in each department to resign his army commission, that he may be connected with the institution by stronger and more durable ties than at present. As the law now stands, an assistant professor would be required to leave the academy on his promotion to a captaincy; even while a subaltern, he is liable to be removed, either at the will of his superiors or at his own request. From one or the other causes such removals must frequently occur; moreover, it cannot be expected that an assistant professor, who considers himself as only on temporary duty at the academy, and is looking elsewhere for promotion or a more durable situation, will pursue those peculiar studies which best fit him for the profession of a teacher, or that he will be as devoted as one whose entire views and prospects are confined to the institution.

SEC. 6 proposes to allow to lieutenants performing the duties of instructors the same extra compensation as is now allowed by the army regulations to cadets detailed to perform the same duties. Until two or three years ago these duties were almost exclusively performed by cadets, whose extra compensation amounted to $1,200 or $1,400 a year; since that time the places of cadet instructors have, agreeably to the recommendation of the boards of visitors, been gradually supplied by graduates, so that the number of the former employed now is only two, while that of the latter (in addition to the

assistant professors provided for by law, and the assistant instructors of tactics) is twelve, which may be considered as the average number that will be required. Of these, *two* have been attached to the academy three years; *three* during two years; and the other *seven* since last September. According to the principles proposed in the bill, the first five only would be entitled to extra pay, although, should the bill pass, it may be calculated that, one year with another, *eight* would be entitled to the extra allowance, the total amount of which would be $960 a year. It must not, however, be supposed that this sum, small as it is, would be so much added to the expense of the academy, since it cannot be doubted that if the provision recommended be refused, resort must again be had to cadet instructors. The only question is whether it shall be paid to lieutenants or to cadets—for good or for bad instruction.

SEC. 7. The provision embraced in this section having been discussed at length and strongly recommended in the report of the visitors who attended the examination in June last, any further remarks on the subject are deemed unnecessary

SEC. 8. The provision proposed to be repealed would, in effect, become null and void by passing the 5th section of the bill. Indeed that provision has never been complied with. The officers of engineers having been required elsewhere, and cadets not being qualified to discharge the duties of principal assistant professors, it became indispensably necessary to make the selection from other corps.

Statement showing the number of professors, teachers, assistant professors, and assistant teachers at the United States Military Academy, and the amount of pay and emoluments of each.

ACCORDING TO THE PRESENT ORGANIZATION.

Professor of natural and experimental philosophy, pay and emoluments of lieutenant colonel..		$1, 699 24
Professor of mathematics, pay and emoluments of major		1, 506 24
Professor of engineering, pay and emoluments of major		1, 506 24
Second lieutenant, acting professor of chemistry and mineralogy, ten dollars a month extra pay, (1)		180 00
Chaplain, and professor of geography, history, and ethics, pay and emoluments of major...		1, 506 24
Second lieutenant, assistant professor of natural and experimental philosophy, extra pay to equal pay and emoluments of captain, (2)		180 00
First lieutenant, assistant professor of mathematics, extra pay to equal pay and emoluments of captain, (2)		120 00
Second lieutenant, assistant professor of engineering, extra pay to equal pay and emoluments of captain, (2)		180 00
Two teachers of French, pay and emoluments of captains, (3)		1, 724 24
Teacher of drawing, pay and emoluments of captain		862 12
Twelve cadets, assistant professors, each ten dollars a month extra pay, (4)		1, 440 00
Pay and emoluments of the professor of chemistry, and of an additional teacher, as proposed in the bill	$2, 561 24	
Proposed increase of the pay of the present professors, teachers, and assistants..	1, 807 36	
		4, 368 60
		15, 272 92

ACCORDING TO THE PROPOSED ORGANIZATION.

Professor of natural and experimental philosophy, pay and emoluments of lieutenant colonel.	$1, 699 24
Professor of mathematics, pay and emoluments of lieutenant colonel	1, 699 24
Professor of engineering, pay and emoluments of lieutenant colonel	1, 699 24
Professor of chemistry and mineralogy, pay and emoluments of lieutenant colonel	1, 699 24
Chaplain, and professor of geography, history, and ethics, pay and emoluments of lieutenant colonel	1, 699 24
Second lieutenant, assistant professor of natural and experimental philosophy, so much extra pay as equals that of captain, (5)	180 00
First lieutenant, assistant professor of mathematics, so much extra pay as equals that of captain, (5)	120 00
Second lieutenant, assistant professor of engineering, so much extra pay as equals that of captain, (5)	180 00
First lieutenant, assistant professor of chemistry and mineralogy, so much extra pay as equals that of captain, (5)	120 00
One teacher of French, pay and emoluments of major	1, 506 24
Second and third teachers of French, pay and emoluments of captains	1, 724 24
Teacher of drawing, pay and emoluments of major	1, 506 24
Eight lieutenants, acting assistant professors, ten dollars per month extra pay	960 00
Four lieutenants, commanding companies of cadets, ten dollars per month extra pay	480 00
	15, 272 92

(1) The acting professor of chemistry and mineralogy, who is a lieutenant, is, by a regulation of the War Department, allowed ten dollars a month in addition to his pay proper.

(2) The principal assistant professor in each of the departments of mathematics, natural and experimental philosophy, and engineering, is, by law, entitled to so much, in addition to his pay and emoluments as a lieutenant, as shall equal those of a captain. This difference only is chargeable to the academy.

(3) One teacher of French only is provided for by law. The other is employed by virtue of an order issued by the Secretary of War in 1818.

(4) See remarks on the bill under 6th section.

(5) These assistant professors are here supposed to be officers of the army, as at present. Should any of them be appointed from citizens, the compensation to which each would then be entitled should be inserted in lieu of the extra compensation here charged.—(See 5th section of the bill)

21st Congress.] No. 469. [2d Session.

ON THE CONSTRUCTION OF FORTIFICATIONS AT OCRACOKE INLET.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 3, 1831.

War Department, *February* 2, 1831.

Sir: In reply to a resolution adopted yesterday by the House of Representatives, directing the Secretary of War to "inform the House whether or not it is expedient to erect fortifications at or near Ocracoke inlet, with a view to the more permanent security of that section of North Carolina in case of invasion," I have the honor to state that in the present condition of the inlets on the coast of North Carolina, the completion of the projected works at Beaufort, and at the mouth of Cape Fear river, will effect all that is considered essential in the way of *permanent* fortification for the security of that coast. Should the measures now in progress for deepening the channel of entrance into Ocracoke inlet be attended with complete success, or should a suggestion made by the board of engineers relative to the connexion by canals of the Roanoke, Tar, and Neuse rivers with Beaufort harbor be ever carried into effect, it may then be necessary to provide against the interruption of this communication by an enemy having access through Ocracoke inlet. These, however, will be subjects for consideration at a future time, and the erection of fortifications at that inlet is not, therefore, considered expedient.

I have the honor to be, very respectfully, sir, your obedient servant,

J. H. EATON.

Hon. Andrew Stevenson, *Speaker of the House of Representatives.*

21st Congress.] No. 470. [2d Session.

ON CLAIM OF A SUTLER OF THE ARMY FOR PROPERTY DESTROYED BY THE ARMY TO PREVENT ITS BEING USED BY THE ENEMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 4, 1831.

Mr. Whittlesey, from the Committee on Claims, to whom had been referred the bill from the Senate (No. 9) entitled "An act for the relief of Benjamin S. Smoot, of Alabama," reported:

The Committee on Claims, to whom has been referred a bill from the Senate for the relief of Benjamin S. Smoot, have had the same under consideration, and a majority of the committee dissented from the Senate in believing the petitioner is entitled to relief, and recommend the adoption of the following resolution:

Resolved, That the bill from the Senate for the relief of Benjamin S. Smoot be rejected.

SENATE REPORT.

The Committee on Claims, to whom was referred the petition of Benjamin S. Smoot, of Mobile, Alabama, report:

That the petitioner was sutler to the second regiment of the United States infantry from the year 1809 to 1815, and that he, with his partner in business, Dennison Darling, erected, in the year 1812, at Fort Bowyer, a storehouse, thirty-five feet long and eighteen feet wide, one story and a half high, of good materials; that the commanding officer, by and with the advice of his subordinate officers, on the approach of the British land and naval forces at that place in 1814, ordered said storehouse to be demolished and destroyed to prevent its being occupied by the enemy as a shelter, and as a point from which to attack the fort, it being in musket shot of the same. The building is proved by the witnesses to be worth one thousand dollars.

The committee are of opinion that, as the property of the petitioner was destroyed by the order of the United States to prevent its being useful and advantageous to the enemies of the country, he is entitled to relief. They therefore report a bill for that purpose.

PETITION OF BENJAMIN S. SMOOT.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

Your petitioner, Benjamin S. Smoot, of Mobile, Alabama, represents that he was sutler to the second regiment of the United States infantry from 1809 to 1815; that he, with his partner in business, Dennison Darling, erected, about the year 1814, at Fort Bowyer, a storehouse, which was of the following dimensions, viz: thirty-five feet long by eighteen feet in width, and a story and a half in height, of good materials, weather-boarded, floored, and ceiled, and fitted with all necessary appurtenances, and that just previous to the attack on the fort by the land and naval forces of Great Britain in 1814, the com-

manding officer had said storehouse demolished, in order that it might not afford to the invaders a shelter.

In testimony of the above, your petitioner begs leave to refer to the deposition herewith of Major R. Chamberlain, then of the second infantry, who was present at the attack above mentioned, and that of Mr. Curtis Lewis, the agent and clerk of the sutler. These gentlemen estimate the cost of the storehouse at about one thousand dollars; but this amount is not within five hundred dollars of the actual expense incurred in its erection. By the destruction of this house your petitioner has sustained a loss of at least one thousand five hundred dollars, independently of a very considerable loss in goods by their hasty removal and deposit in an insecure and exposed situation. Your petitioner therefore asks that the amount of his house may, with legal interest, be paid to him; and, as in duty bound, he will ever pray.

BENJAMIN S. SMOOT.

WASHINGTON CITY, *December* 17, 1830.

Major R. Chamberlain's deposition.

Major Reuben Chamberlain is respectfully requested to answer the following questions upon oath:

1. How long did you serve in the south, and in what regiment, and with what rank?

2. Was Benjamin S. Smoot sutler to the second regiment during the years 1809-'10-'11-'12-'13-'14, and 1815, and up to the capture of Fort Bowyer, in 1815, by the British army?

3. How much pay was due to the second regiment in 1815?

4. Was it disbanded without pay? if so, why was it not paid prior to its discharge?

5. Was it not the custom to permit the soldier to take up the amount of his pay, or nearly so, from the sutler as it became due?

6. During the inability of the United States to pay their troops, would not their privations have been vastly increased but for the stores of the sutlers?

7. If the United States had paid their troops agreeably to law, would the sutler have lost anything?

8. Did the troops, by order of the commanding officer at Fort Bowyer, demolish a building of the sutler, Benjamin S. Smoot, or Smoot & Darling, on the Point of Mobile, prior to the assault on Fort Bowyer, in 1814; if so, what was his object in so doing, and what was the size, construction, and value of said house?

9. Did the sutler sustain any damage by the removal of his goods, other than the destruction of the house? If so, state the probable amount as well as you can.

BENJAMIN S. SMOOT.

Answers to the foregoing interrogatories.

1. I served in the south from 1814 to the disbanding of the army in 1815, in the second regiment of infantry, in the grades of second and first lieutenant and captain, and was promoted to the twentieth regiment in 1814.

2. He was.

3. There were several months' pay due, but how many I do not recollect.

4. They were disbanded without pay, because the paymaster had no funds.

5. It was my custom, and I believe the custom of the officers commanding companies in the second regiment generally, to permit the soldiers, as their pay became due, to receive from the sutler from one-half to three-fourths of the amount of their pay, and on pay day to see the sutler paid.

6. The troops received many comforts and conveniences from the sutler's store which they could not have procured from any other.

7. The sutler would have lost but little, if anything.

8. Colonel (then Major) Lawrence, the commanding officer at Fort Bowyer, (by the advice of his subordinate officers,) prior to the assault on Fort Bowyer, in 1814, ordered the sutler's store, owned by Smoot & Darling, to be demolished, it being so situated as to afford the enemy a shelter within musket-shot of the fort. The size and construction of the building I do not distinctly recollect, but I suppose that such a building, at that time and place, would have cost something like one thousand dollars.

9. The sutler no doubt did sustain considerable loss by the removal of his goods, but the amount I am not able to state.

R. CHAMBERLAIN.

STATE OF ALABAMA, *Washington County, ss:*

Personally came before me, Paul Deane, one of the justices of the peace for the county aforesaid, R. Chamberlain, and made oath that the above answers to the foregoing interrogatories are true, to the best of his knowledge and belief.

R. CHAMBERLAIN.

Sworn before me and subscribed, at St. Stephen's, this 6th day of January, 1830.

P. DEANE, *Justice of the Peace.*

Curtis Lewis's deposition.

STATE OF ALABAMA, *County of Mobile, ss:*

Personally appeared before me, B. B. Breedin, a justice of the peace in and for Mobile county, Curtis Lewis, for a long time one of the custom-house officers for the district of Mobile, to me well known, who, being duly sworn on the Holy Evangelists of Almighty God, did solemnly swear that he went into the service of Benjamin S. Smoot and Dennison Darling, who were sutlers in copartnership for the second regiment of United States infantry, in the month of February, in the year eighteen hundred and thirteen; that the station was at that time at Mobile Point; and that deponent continued in their service until the spring of the year eighteen hundred and fifteen—he thinks about the month of May; that deponent was made and continued the active agent of the said Smoot & Darling in their sutling business; and that

their assortment and stock were always extensive, and well calculated to contribute to the comfort and necessities of the regiment; that it was the uniform practice of the officers in command of companies to permit their men to trade with the sutlers, in advance of their pay, from one-half to three-fourths of the same; that at the time the troops were disbanded, in the year eighteen hundred and fifteen, as nearly as deponent recollects, there was something like one year's pay due to them, and, there being no funds, the men were discharged on certificates; that Smoot & Darling built a storehouse at Mobile Point, in which they kept their sutler's merchandise. The house was a story and a half high, about thirty-five feet long, by about eighteen feet wide; it was a frame house, weatherboarded and ceiled inside; it was worth from nine hundred to a thousand dollars; it was the only house they ever had at Mobile Point.

And further, that the sutlers, upon the troops being discharged on certificates, lost the whole of the amount which had been taken up in anticipation of their pay.

CURTIS LEWIS.

Sworn to and subscribed before me the 27th day of October, anno Domini 1830.

B. B. BREEDIN, *Justice of the Peace.*

HEADQUARTERS, *Washington, January* 9, 1831.

No one is permitted to build a house or other establishment within the limits of a post or the lands attached to it without the approbation and consent of the commanding officer or some other higher authority. If any one should build a house within such limits without the proper authority, the commanding officer could either remove it or pull it down. Sutlers or others, permitted to build for their own accommodation within the limits of a fort, have suitable places assigned them, with sufficient grounds.

From the size of Fort Bowyer, as represented by the plan as it was at the time of the attack, there does not appear to have been room within for the accommodation of the sutler—the area not occupied by parapets, ramparts, and magazines, being exceedingly limited.

ALEX. MACOMB, *Major General, Commanding the Army.*

Colonel SMOOT.

NEW YORK, *February* 4, 1831.

MY DEAR SIR: Having been compelled to leave Washington very suddenly, I had not time to give you the information you required. I now forward you, under cover to D. H. Lewis, esq., the answers to your interrogatories, which, I trust, will be satisfactory, and shall be happy if they contribute to the adjustment of your claim.

Very truly, dear sir, your friend,

SANDS.

B. S. SMOOT, Esq.

Captain A. L. Sands is respectfully requested to answer the following questions upon oath:

1. How long did you serve in the south, and in what regiment, and with what rank?

2. Was Benjamin S. Smoot sutler to the second regiment of infantry during the years 1809–'10–'11–'12–'13–'14, and 1815, and up to the capture of Fort Bowyer, in 1815, by the British army?

3. How much pay was due to the second regiment in 1815?

4. Was it disbanded without pay? If so, why was it not paid prior to its discharge?

5. Was it not the custom to permit the soldiers to take up the amount of their pay, or nearly so, from the sutler as it became due?

6. During the inability of the United States to pay their troops, would not their privations have been vastly increased but for the stores of the sutlers?

7. If the United States had paid their troops agreeably to law, would the sutler have lost anything?

8. Did the United States troops demolish a building of the sutler, Benjamin S. Smoot, or Smoot & Darling, on the Point of Mobile, prior to the assault on Fort Bowyer, in 1814? If so, what was the object in doing so, and what was the size, construction, and value of said house?

9. Did the sutler sustain any damage by the removal of his goods other than the destruction of this house? If so, state the probable amount as well as you can.

To the accompanying interrogatories of Benjamin S. Smoot, esq., I answer as follows, viz:

1. My first tour of service in the south was from 1809 to 1816, my rank that of lieutenant of artillery, and in October, 1812, was attached, as ordnance officer, to the second regiment of infantry, with which I served until its capture at Mobile Point, in February, 1815, at which time I was in command of Fort Charlotte, (in the town of Mobile,) having a part of that regiment under my orders.

2. Smoot & Darling were sutlers to the second infantry from the time of my joining it until its capture.

3. I do not recollect exactly how much pay was due at the time of its capture, but believe something like twelve months, as I had nearly or quite two years' pay due on the arrival of a paymaster in the spring of 1816.

4. It was disbanded without pay; the reason, of course, the want of funds in the hands of the paymaster, which were not supplied, as before stated, until the spring of 1816.

5. It was the custom to allow the soldiers to trade with the sutler to the amount of half their pay; in many cases to a larger extent.

6. The soldiers were dependent upon the sutlers for all their comforts, which could not have been elsewhere procured while they were kept without pay.

7. If the men had been paid, the sutlers could have lost nothing, as it was the duty of the commanding officers of companies to attend the pay-table and see that their men settled their accounts with the sutler.

8. A frame building belonging to the sutlers at Mobile Point was destroyed, by order of Major Lawrence, in September, 1814, to prevent its affording a cover to the enemy, then landing to assault the fort. The value of the building I do not know, but presume, from the difficulty and expense of transporting materials at that time, and the high wages of mechanics, it must have cost some twelve or fifteen hundred dollars.

Of the 9th interrogatory I know nothing.

A. L. SANDS, *Late Captain United States Artillery.*

Sworn this 4th day of February, 1831, before me.

WM. VAN HOOLE, *Notary Public, City of New York.*

21ST CONGRESS.] No. 471. [2D SESSION.

ON THE EXPEDIENCY OF REDUCING THE NUMBER OF CADETS AT THE MILITARY ACADEMY, DISCHARGING SUPERNUMERARY BREVET SECOND LIEUTENANTS, AND APPOINTING MERITORIOUS NON-COMMISSIONED OFFICERS OF THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 4, 1831.

Mr. DRAYTON, from the Committee on Military Affairs, to whom the following resolutions were referred by order of the House, viz:

1. "*Resolved*, That the Committee on Military Affairs be instructed to inquire into the expediency of dismissing from the army the supernumerary second lieutenants by brevet commission."

2. "That the committee also inquire into the expediency of fixing the age between seventeen and twenty-one years as the period of admission into the West Point Academy, and that all the graduates from time to time at that institution shall be discharged from the army when not needed in the actual service of the country."

3. "That they inquire into the expediency of authorizing appointments in the line of the army from the meritorious non-commissioned officers of the army."

4. "And also of reducing the number of cadets in said academy now authorized by law," reported:

1. The committee do not think that the addition to the regiments of artillery and infantry of the number of second brevet lieutenants authorized by the existing law would exceed what is necessary for the performance of the duties of the company officers belonging to those regiments, and of officers of the staff and other appointments, which are discharged by the officers of companies. They are therefore of opinion that it would be inexpedient to dismiss from the army the brevet second lieutenants who are now attached to it.

2. The committee are of opinion that cadets under the age of sixteen ought not to be admitted into the United States Military Academy, and that it would be expedient to discharge from the army all the graduates of that academy after the number of one hundred and six brevet second lieutenants shall have been annexed to the several regiments in the service, excepting those who may be appointed to supply vacancies.

3. After an examination of the acts of Congress, the committee cannot find that the President is restrained by any of them from conferring commissions in the army upon non-commissioned officers; and were such a limitation imposed upon him it would, they conceive, be unconstitutional and void, as, by the Constitution, he is vested with the power to "nominate, and, by and with the advice and consent of the Senate, to appoint" all officers of the United States, civil and military, with certain exceptions not applicable to the subject under consideration. In addition to the constitutional objection to this restraint upon Executive authority, it would, in the judgment of the committee, be utterly at variance with the genius and spirit of our government to exclude any class of citizens from eligibility to any office. The committee are therefore of opinion that commissions ought to be given to non-commissioned officers whenever the President considers that their merits and qualifications entitle them to advancement.

4. The committee, being satisfied that more cadets are educated at the Military Academy than are necessary to supply the vacancies in the army, recommend that from and after the ——— day of——— the number be so reduced as to be adequate to that object.

The committee report a bill to carry into execution the second and fourth of the foregoing paragraphs.

21ST CONGRESS.] No. 472. [2D SESSION.

STATEMENT OF THE NUMBER AND RANK OF OFFICERS OF THE ARMY ON DUTY IN THE LINE, STAFF, OR DETACHED SERVICE, AND THOSE ABSENT ON FURLOUGH.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 8, 1831.

DEPARTMENT OF WAR, *February* 7, 1831.

SIR: I transmit herewith the information required by the resolution of the House of Representatives of the 29th of January, in reference to the officers of the army.

Respectfully,

J. H. EATON.

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives.*

HEADQUARTERS OF THE ARMY, *Washington, February* 7, 1831.

SIR: I have the honor to present herewith a return exhibiting the number and rank of field and company officers now upon duty with their regiments or companies, or exercising appointments in the staff, or other appointments which detach them from their regiments or companies; and also the number of officers who are upon furlough, distinguishing their grades, and the length of time for which their furloughs have been respectively granted, required by a resolution of the House of Representatives of the 29th of January, and am, respectfully, your obedient servant,

ALEX. MACOMB, *Major General, Commanding the Army.*

Hon. SECRETARY OF WAR.

Statement showing the number and rank of field and company officers of the army on duty with their regiments and companies; the number and rank of officers of the line employed in the staff or other detached service; and also the number of commissioned officers absent on furlough; in obedience to a resolution of the House of Representatives of January 29, 1831.

Regiments.	Field and company officers on duty with their regiments and companies.								FIELD AND COMPANY OFFICERS EMPLOYED IN THE STAFF OR OTHER DETACHED SERVICE.

21st Congress.] **No. 473.** [2d Session.

ON CLAIM OF AN OFFICER FOR PAY AFTER HAVING RESIGNED HIS COMMISSION IN THE ARMY.

COMMUNICATED TO THE SENATE FEBRUARY 9, 1831.

Mr. Naudain, from the Committee on Military Affairs, to whom were referred the petition and documents of John Clarke, late a lieutenant in the 22d regiment of United States infantry, reported:

That the petitioner, on May 26, 1814, resigned his commission in the United States army, alleging as his reasons therefor his pecuniary circumstances and the duty he owed to his family. This resignation was transmitted to his commanding officer, Colonel Brady, who, on June 3, 1814, informed the petitioner that his resignation had been forwarded to the War Department, and directing him to deliver over all military stores and funds in his possession, and return to his residence until he should hear from the War Department. It appears further that his resignation was accepted by the department on June 18, 1814, and notice thereof forwarded to the petitioner to Brownsville, New York, instead of Brownsville, Pennsylvania, the place of his residence; the petitioner having omitted, in his letter of resignation, to mention the State in which he resided, although it must have been known to the department that the 22d regiment was a Pennsylvania regiment. It appears further that the petitioner was fully paid up till the acceptance of his resignation.

It does not appear that after his resignation, and the order of Colonel Brady superseding him in command, he ever performed any military duty, or took any measures to ascertain whether his resignation was accepted or not; but he must have presumed that it had been accepted, as no instance occurred of such resignation being refused; and although the petitioner alleges that he did repair to his residence, in pursuance of the colonel's orders, and there remained waiting instructions from the government, and considered himself in service, the committee do not think his case of that character to warrant the interposition of Congress in his favor; and especially so, because, besides not having performed any duty, he ought, when he found there was a delay in acknowledging the receipt of his resignation, and he considered himself subject to orders, to have reported himself for duty to his senior officer in command in the district in which he resided.

The committee therefore ask to be discharged from the further consideration of the subject, and that the petitioner have leave to withdraw his petition and documents.

21st Congress.] **No. 474.** [2d Session.

ON THE APPLICATION OF THE WIDOW OF COLONEL WILLIAM KING, LATE OF THE ARMY, WHO HAD BEEN SUSPENDED BY A COURT-MARTIAL, ETC., FOR PAY CLAIMED TO BE DUE HIM.

COMMUNICATED TO THE SENATE FEBRUARY 9, 1831.

Mr. Barnard, from the Committee on Military Affairs, to whom was referred the memorial of Mrs. Catharine King, widow of Colonel William King, late of the United States army, reported:

That they have carefully examined the case of the memorialist, and find that Colonel King was tried by a court-martial in November, 1820, and suspended from rank, pay, and emoluments for five years, which sentence was approved of by the President, and took effect from February 7, 1821; that during such suspension, by virtue of an act of Congress of March 2, 1821, the military peace establishment was reduced, and a new organization of the army having accordingly taken place, Colonel King was left out of service and considered as disbanded from and after June 1, 1821, as appears by a general order from the War Department of the date of May 17, 1821. But, by the same order, all arrests and proceedings of courts-martial instituted against officers not retained in service were so far annulled as to release such officers from arrest, and who were to be thereafter discharged from duty. The sentence of the court having deprived Colonel King of all pay and emoluments for five years, he was entitled to no compensation till the expiration of that period; but the order referred to, of May 17, 1821, having released him, as a disbanded officer, from arrest, and the new organization not taking effect till June 1 following, his legal representatives may, perhaps, be entitled to his pay for the intermediate time. By the act for reducing the army, three months' extra pay was allowed to all officers disbanded under it; and as Colonel King was one of this class, his legal representatives are also entitled to this sum. By an application to the Pay department of the army there can be no difficulty in receiving these amounts.

The committee, being of opinion that no further claim can be made on the government, offer the following resolution:

Resolved, That the committee be discharged from the further consideration of the subject.

21st Congress.] **No. 475.** [2d Session.

ANNUAL RETURNS OF THE MILITIA OF THE UNITED STATES FOR THE YEAR 1830.

COMMUNICATED TO THE SENATE FEBRUARY 12, 1831.

Department of War, *February* 9, 1831.

Sir: I have the honor to transmit herewith abstracts of the returns of the militia of the United States, required by the first section of the act of March 2, 1803, entitled "An act in addition to an act entitled 'An act the more effectually to provide for the national defence by establishing an uniform militia throughout the United States.'"

Very respectfully, J. H. EATON.

The President *of the Senate of the United States.*

Abstract of the general annual return of the militia of the United States, by States and Territories, according to the act of March, 1803.

ADJUTANT GENERAL'S OFFICE, *Washington, February* 8, 1831.

R. JONES, *Adjutant General.*

21st Congress.] No. 476. [2d Session.

APPLICATION OF OFFICERS OF THE ARMY FOR COMPENSATION FOR PRIVATE PROPERTY LOST BY THE DESTRUCTION OF FORT DELAWARE BY FIRE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 15, 1831.

War Department, *February* 15, 1831.

Sir: The enclosed communication from Major General Macomb, transmitting to this department a letter from the commanding officer of Fort Delaware, with a petition from the officers of that post, praying to be remunerated for losses of property sustained by them at the late fire, is respectfully submitted to the consideration of Congress.

The facts upon which the petitioners rest their claim are fully stated in the accompanying papers, and they will, it is hoped, receive that attention which they well deserve.

The principle of making compensation for losses sustained in the discharge of public duties claims commendation from the consideration that its tendency is to stimulate to laudable exertions in the public service; while to withhold such compensation, especially under circumstances so peculiar as in the present case, would naturally have the opposite tendency, and induce a preference of individual to the public interest.

I have the honor to be, very respectfully, sir, your obedient servant,

J. H. EATON.

The Hon. Speaker *of the House of Representatives.*

Schedule of losses sustained by the undersigned officers of the United States army, at Fort Delaware, by the conflagration on the night of the 8th instant.

Major B. K. Pierce, one hundred and ninety dollars.
Captain John L. Gardner, thirteen hundred dollars.
Lieutenant Harvey Brown, four hundred dollars.
Lieutenant Charles Ward, six hundred and forty dollars.
Assistant Surgeon Alfred W. Elwes, three hundred dollars.
Sutler John Farley, eighteen hundred dollars.

We certify on honor that by the fire at Fort Delaware we have, to the best of our knowledge and belief, sustained losses to the amount set opposite our names respectively.

B. K. PIERCE, *Major United States Army.*
JOHN L. GARDNER, *Captain.*
HARVEY BROWN, *Lieutenant Fourth Artillery.*
CHARLES WARD, *Lieutenant 4th Regiment U. S. Artillery.*
ALFRED W. ELWES, *Assistant Surgeon.*
JOHN FARLEY, *Sutler.*

Delaware City, *February* 11, 1831.

To the honorable the Senate and House of Representatives:

The petition of the undersigned officers of the United States army, recently stationed at Fort Delaware, most respectfully showeth: That your petitioners, by the late conflagration at that post, have sustained considerable losses by the destruction of a large portion of their furniture, stores, and the clothing of themselves and families; and they would state that during the time in which they were employed in endeavoring to arrest the progress of the flames, removing the powder from the magazine, and various other public duties incident to their situation, they were precluded from making those endeavors to save their own property which they otherwise might have made; and whereas their losses are in no manner to be attributed to their carelessness or negligence, but to their endeavors to save the public property, they most respectfully solicit that they may be remunerated therefor. They would also represent that the annexed schedule contains, as they believe, a very small estimate of their respective losses. They therefore request aid. And, as in duty bound, your petitioners will ever pray.

B. K. PIERCE, *Major United States Army.*
JOHN L. GARDNER, *Captain.*
HARVEY BROWN, *Lieutenant.*
ALFRED W. ELWES, *Assistant Surgeon.*
CHARLES WARD, *Lieutenant 4th Regiment U. S. Artillery.*
JOHN FARLEY, *Sutler.*

Delaware City, *February* 11, 1831.

Headquarters of the Army, *Washington, February* 14, 1831.

Sir: I have the honor to hand you herewith a communication just received from the commanding officer of Fort Delaware, enclosing a petition from several of the officers of that post, praying to be remunerated for the loss of property sustained by them at the late fire at Fort Delaware. It will be per-

ceived by the communication herewith that all the officers were busily engaged during the conflagration in endeavoring to save the public property, by which means they were unable to make any exertion to save their own, and it would seem to be but an act of justice that some remuneration should be made for the loss which they have sustained.

I respectfully submit the subject to your consideration, and have the honor to be your most obedient servant,

ALEX. MACOMB, *Major General, Commanding the Army.*

The Hon. SECRETARY OF WAR.

FORT DELAWARE, *February* 11, 1831.

SIR: I have already communicated to you, through the Adjutant General, that a calamitous fire on the night of the 8th instant had placed the command generally in a very distressing situation. After due consideration on the subject, it has been deemed expedient, and a matter of justice to those who have sustained heavy losses, to send an officer to Washington, to give to you a detailed account of all the circumstances attending the late conflagration. I have therefore thought it most advisable to write to you direct by Doctor Elwes, whom I have ordered upon this service. On the night of the 8th instant, at about half-past ten o'clock, the sentinel gave the alarm of fire, which appeared from the roof, or under the roof which covers the walls of the fortification. The officers and men, with great promptness and alacrity, leaped from their quarters and repaired to the scene of danger to arrest and suppress the fire. Axes were put in requisition, and attempts made at various points to cut away the roof, but the roof being very dry, the fire and smoke spread with amazing rapidity under the roof, so much so that in a few minutes the men with axes and buckets of water were driven from every part of the roof to avoid suffocation and death. The powder was early removed from the magazine and thrown through the embrasures out upon the canal, to prevent an explosion and destruction of the walls, which remain, I believe, uninjured.

Finding the roof could not be saved, the exertions of the officers and men were directed to the preservation of the platforms and quarters, but the flaming shingles and rafters falling in constant succession upon the platforms, the parade, and against the quarters, rendered the increasing exertions of all hands unavailing. It was with difficulty and peril that the families of the officers were removed from the garrison.

After contending long to arrest this terrible element, it became impossible to save the property in their quarters, and they have all sustained more or less some heavy losses. I trust in the justice of the government that the amount of the losses of those unfortunate officers may be refunded, and I most urgently solicit your aid in that object. From the rapidity with which the fire spread around the roof, it has been suggested that it must have been the act of an incendiary, but I can hardly believe that there is a human being on the station so depraved and wicked as to commit so diabolical an act. I would, therefore, rather conclude, that the roof took fire from some of the stove pipes of the fireplaces, to which it has always been exposed, and on account of which I have repeatedly represented the importance and necessity of a fire-engine as the only means of preserving the work should it unfortunately ever take fire.

I have the honor to be, sir, most respectfully, your obedient servant,

B. K. PIERCE, *Major Commanding.*

Major General A. MACOMB, *Commander-in-Chief of the Army.*

21ST CONGRESS.] **No. 477.** [2D SESSION.

ON THE APPLICATION OF OFFICERS OF THE ARMY FOR COMPENSATION FOR PRIVATE PROPERTY LOST BY THE DESTRUCTION OF FORT DELAWARE BY FIRE.

COMMUNICATED TO THE SENATE FEBRUARY 19, 1831.

Mr. BENTON, from the Committee on Military Affairs, to whom was referred the bill for the relief of the officers and soldiers of Fort Delaware, reported:

That nothing has appeared in the evidence submitted to them to induce the belief or suspicion that the destruction of the fort was occasioned by design, negligence, or want of due exertions to suppress the flames; but that the destruction of a fort by fire is an event of so serious a nature, involving always a loss of public property, endangering the country in time of war, exposing to loss papers and vouchers on which the settlement of accounts or other important matters might depend, and liable, besides, to happen in so many ways besides that of accident, that the committee are of opinion that every event of the kind should become the subject of a court of inquiry; and accordingly recommend that no further proceedings be had on the bill referred to them, and which is herewith returned to the Senate, until a court of inquiry shall examine into the circumstances of the destruction of Fort Delaware, and the facts of the case be reported to the Senate through the Department of War. The committee have the satisfaction to add, that since this report was resolved upon by them, they have learned that immediately upon the happening of the accident to Fort Delaware, the commanding officer, Major Pierce, applied for a court of inquiry, and that it has since been ordered.

The committee recommend, for the present, that the bill for the relief of the officers and soldiers of Fort Delaware lie upon the table.

21st Congress.] **No. 478.** [2d Session.

COMPROMISE OF THE TITLE OF THE ISLAND ON WHICH FORT DELAWARE HAS BEEN CONSTRUCTED.

COMMUNICATED TO THE SENATE FEBRUARY 19, 1831.

To the Senate of the United States:

I present for the consideration of Congress a report from the Secretary of War, relative to a compromise of title of the island on which Fort Delaware has been constructed.

Very respectfully,

ANDREW JACKSON.

Washington, *February* 19, 1831.

Department of War, *February* 18, 1831.

Sir: The island below New Castle, upon which Fort Delaware is situated, is held by the United States under a cession by the State of Delaware. A citizen of New York, Dr. Henry Gale, alleges the title to be in him by virtue of a grant of New Jersey, and of subsequent purchases made under that grant.

The agent of Dr. Gale has proposed a surrender of title to the United States for the sum of $17,000, subject to an examination as to the strength and validity of this title.

The United States having expended large sums in the construction of Fort Delaware, it is not proper that the right of property should be at all questionable.

I present to you copies of an agreement entered into with the agent, and propose that authority be given by Congress to have the title inquired into, and if ascertained to be defective, then to be compromised upon the terms stated in the agreement; for which purpose an appropriation will be necessary.

Very respectfully,

J. H. EATON.

The President *of the United States.*

It is agreed by James La Tounette, agent and attorney in fact of Henry Gale, on the one part, and John H. Eaton, Secretary of War, of the other part, for and on behalf of the United States, as follows:

The United States are possessed of an island, on which is constructed Fort Delaware, situated about seven miles below New Castle, in the State of Delaware, which island is claimed by Henry Gale.

James La Tounette being agent and specially authorized to dispose of said island, proposes, and it is agreed to, that the United States government may examine into said title, and on being satisfied that the right and claim of said Gale is a valid one, shall pay the sum of seventeen thousand dollars.

And on payment of said amount, said agent covenants and agrees to and with the said Eaton to convey the whole of said island, by good and sufficient title, to the United States.

This agreement to be submitted to Congress, and to be binding on the United States if Congress shall make the appropriation and the title now held be ascertained to be defective.

Executed this 18th February, 1831.

JNO. H. EATON, *Secretary of War.* [L. S.]
JAMES LA TOUNETTE, *Attorney for Henry Gale.*

Witness: Law. L. V. Kleech.

21st Congress.] **No. 479.** [2d Session.

STATEMENT OF SUMS PAID TO OFFICERS OF THE ARMY ON ACCOUNT OF REGULAR AND EXTRA PAY IN THE YEAR 1829.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 22, 1831.

February 21, 1831.

Gentlemen: I have the honor, in reply to your request of the 31st ultimo, to lay before you the enclosed report to me from the Second Auditor of the Treasury Department.

Very respectfully,

J. H. EATON.

C. P. White, C. Dorsey, and D. H. Miller, Esquires.

Treasury Department, *Second Auditor's Office, February* 19, 1831.

Sir: In compliance with the request contained in a letter from the Hon. C. Dorsey, C. P. White, and D. H. Miller, dated the 31st ultimo, and referred to this office the 7th instant, I have the honor to transmit herewith a statement of the sums paid to officers of the army on account of extra pay or compensation for the whole or any part of the year 1829, showing the amount to which each was entitled in the line of the army, and the amount received for extra pay or compensation.

With great respect, your obedient servant,

WM. B. LEWIS.

Hon. J. H. Eaton, *Secretary of War.*

Statement of the sums paid to officers of the army on account of extra pay or compensation for the whole or any part of the year 1829; showing the amount to which each was entitled in the line of the army, and the amount received for extra pay or compensation; furnished from the records of the Second Auditor's office pursuant to a requisition of the Committee on Naval Affairs of the House of Representatives, dated January 31, 1831.

Names and lineal rank.	Lineal pay and emoluments.	Nature of the services or command for which extra pay or compensation was received.	Extra pay or compensation.	Amount of extra and lineal pay, &c.
A. Macomb, major general	$4,819 00	Double rations as commanding general	$1,095 00	$5,914 00

TREASURY DEPARTMENT, *Second Auditor's Office, February* 19, 1831.

W. B. LEWIS.

21st Congress.] **No. 480.** [2d Session.

RECOMMENDATION BY THE SECRETARY OF WAR OF AN APPROPRIATION OF FIFTY THOUSAND DOLLARS FOR THE REPAIR OF FORT DELAWARE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 22, 1831.

DEPARTMENT OF WAR, *February* 21, 1831.

SIR: As there will not be time before the adjournment of Congress to prepare a satisfactory plan and estimate for repairing the damage caused by the recent fire at Fort Delaware, and as it is desirable that no time should be lost in commencing the repairs, I respectfully suggest the expediency of making a provision for that purpose, and recommend an appropriation of fifty thousand dollars towards effecting the object.

I am, sir, very respectfully, your obedient servant,

J. H. EATON.

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives.*

21st Congress.] **No. 481.** [2d Session.

ON THE CLAIM OF COLONEL HENRY B. LIVINGSTON FOR REMUNERATION FOR SERVICES IN THE REVOLUTIONARY WAR.

COMMUNICATED TO THE SENATE FEBRUARY 23, 1831.

Mr. NAUDAIN, from the Committee on Military Affairs, which, by a resolution of the Senate of January 4, 1831, was "instructed to inquire into the justice and expediency of extending to Henry B. Livingston, late a colonel in the service of the United States in the revolutionary war, the benefits of the act of May 15, 1828, for the relief of certain surviving officers and soldiers of the army of the revolution," reported:

That, on the 19th day of January, 1776, Congress resolved that four battalions of troops should be raised in New York.

On the 8th day of March, in the same year, Congress appointed the field officers of the said battalions, viz:

Alexander McDougal, colonel; Herman Zedwitz, lieutenant colonel; and Joseph Benedict, major, of the first battalion.

James Clinton, colonel; Henry B. Livingston, lieutenant colonel; and Peter P. Schuyler, major, of the second battalion.

Frederick Weisenfels, lieutenant colonel; and John Fisher, major, of the third battalion.

Cornelius D. Wyncoop, colonel; Philip Courtlandt, lieutenant colonel; and John Nicholson, major, of the fourth battalion.

On the 9th day of August, 1776, Congress appointed Alexander McDougal and James Clinton, the colonels of the first and second battalions, to be brigadier generals.

On the 16th day of September, in the same year, Congress resolved "that eighty-eight battalions be enlisted as soon as possible to serve during the war, and that each State furnish their respective quotas in the following proportions."

In the apportionment which follows, the quota of New York is four battalions.

At the same time Congress further resolved "that the appointment of all the officers and filling all vacancies (excepting general officers) be left to the governments of the several States."

The committee has not been able to ascertain at what time the convention of New York, acting under the authority of this resolution of Congress, appointed the field officers of the battalions thus ordered to be raised in that State. They observe, however, from the journals of that Congress that on the 15th day of August, 1777, a letter was received from Henry B. Livingston, and referred to the board of war. On the 4th day of September, 1777, the board of war report: "That they have taken into consideration the dispute with regard to the relative rank of Colonels Courtlandt, Gansevoort, Dubois, and Livingston, commanding four of the New York regiments, and find that a committee of the convention of that State, being properly authorized, did appoint the officers above mentioned to their respective regiments in the following order, viz: Colonel Courtland, second; Colonel Gansevoort, third; Colonel Dubois, 4th; and Colonel Livingston, fifth. As this arrangement must be presumed to have been founded on principles of justice and public utility, the board are of opinion that it would be highly inexpedient to make any alteration in the relative rank of these officers."

"*Resolved*, That Congress agree with the board in their report."

On the 20th day of November, 1778, Congress received a letter from Henry B. Livingston, requesting leave to resign his commission; and on the 13th of January, 1779, Congress accepted his resignation.

By sundry resolutions adopted on the 3d and 21st days of October, 1780, Congress made a new arrangement of the whole army; and on the latter day passed the following resolution, viz:

"That the commander-in-chief and commanding officer in the southern department direct the officers of each State to meet and agree upon the officers for the regiments to be raised by their respective States

from those who incline to continue in service; and, where it cannot be done by agreement, to be determined by seniority, and make return of those who are to remain, which is to be transmitted to Congress, together with the names of the officers reduced, who are to be allowed half-pay for life."

The first section of the act of the 15th of May, 1828, "for the relief of certain surviving officers and soldiers of the army of the revolution," provides "That each of the surviving officers of the army of the revolution, in the continental line, who was entitled to half-pay by the resolve of October twenty-first, seventeen hundred and eighty, be authorized to receive, out of any money in the treasury not otherwise appropriated, the amount of his full pay in the said line, according to his rank in the line, to begin on the third day of March, one thousand eight hundred and twenty-six, and to continue during his natural life: *Provided*, That, under this act, no officer shall be entitled to receive a larger sum than the full pay of a captain in said line."

In support of the claim of Colonel Livingston to the benefits of the act just recited, it is alleged that he was improperly and unjustly outranked by Colonel Courtlandt and others by the report of the board of war and resolution of Congress of the 4th September, 1777; that his resignation was the consequence of this act of injustice; that it would have been inconsistent with that high sense of military honor which pervaded the revolutionary army for him to have remained in the service after this indignity had been offered him. Thus his resignation was not *voluntary*, but he was *compelled* to resign—*driven* from the service by the injustice of Congress. Had this not been done, he would have remained in the service until the new arrangement of the army in 1780; and had he then been reduced as a supernumerary, he would have been entitled to the benefits of the act of May 15, 1828.

To the committee this argument is not satisfactory. The promise of Congress of half-pay for life, made by the resolution of the 21st of October, 1780, was limited to such officers as were *then* in service, and might be reduced as supernumeraries. It had no retrospective action. It made no promises to such officers as had left the service before that time, and cannot justly be so construed as to extend to the case of an officer who had resigned nearly two years before this promise was made.

After the act of alleged injustice of which Colonel Livingston complains, and to which his resignation is solely attributed, he remained in the service for the period of fourteen months before he asked leave to resign. After submitting to this injurious arrangement of relative rank for this period without injury to his honor, the committee are bound to believe that he might have continued in the service for any longer time without sacrificing that honor so highly and so justly prized by high-minded military men. In this view of the subject the committee can perceive no distinction between a service of fourteen months and as many years.

But the committee believe that it is now too late to look into the causes of a resignation made more than fifty years ago. It is enough for them that the resignation was made; and they would deem it indecorous in themselves, and unjust to the memory of the Congress of 1777, to determine that that Congress had been guilty of treating a valuable and meritorious officer, one, too, who had been honored by their votes, with such gross injustice and indignity as to force him from the service of his country in that hour of her peril.

The committee, upon a full consideration of this case, are unable to perceive any material difference between this and the other numerous resignations made during the revolutionary war; and as Congress has hitherto never allowed the claim for half-pay to any officer who resigned, the committee do not believe this to be such a case as to demand a departure from that principle.

The committee, therefore, recommend the adoption of the following resolution:

Resolved, That the Committee on Military Affairs be discharged from the further consideration of the said resolution of the Senate of the 4th January, 1831.

21st Congress.] **No. 482.** [2d Session.

APPLICATION OF THE OFFICERS OF THE MILITIA OF MASSACHUSETTS THAT AN EFFICIENT AND UNIFORM SYSTEM BE ADOPTED FOR THE REGULATION AND GOVERNMENT OF THE MILITIA OF THE UNITED STATES.

COMMUNICATED TO THE SENATE FEBRUARY 23, 1831.

Memorial of officers of the Massachusetts militia, praying that an efficient and uniform system be adopted for the regulation and government of the militia of the United States.

At a meeting of delegates from the several divisions of the Massachusetts militia, assembled at Boston on the 19th day of January, 1831, after a full discussion, during a session of three days, of the evils and abuses of the present militia system, it was unanimously voted that Major Huntington, of Salem, and Colonel Tyler, of Bostor, and Captain Blake, of Boston, be appointed a committee to draught a memorial to the Congress of the United States setting forth the views of this convention, and that said committee be authorized to transmit the same.

Attest:

WM. P. ENDICOTT,
ROBT. CHAS. WINTHROP, *Secretaries.*

To the Senate and House of Representatives of the United States of America in Congress assembled:

The memorial of a convention of the officers of the militia of Massachusetts from all parts of the Commonwealth, assembled in Boston on January 19, A. D. 1831, respectfully represents: That, considering a well regulated militia as the only natural, safe, and proper defence of a free State, we have ever held

the principles of this institution in the highest respect. *History* teaches how much we are indebted to it for the renown which was accorded to us as colonists, and *experience* teaches the extent of our obligation to it for our glory as a nation. The militia system is so intimately incorporated with our republican institutions as at once to become the principal means of national security, State sovereignty, and individual liberty. Its destruction, therefore, cannot be viewed by us with indifference; but we are firmly convinced that its preservation essentially depends upon its being so improved and ameliorated as better to adapt its principles to the circumstances of our present condition.

The Constitution of the United States has given Congress the power to provide for organizing, arming, and disciplining the militia, and in certain cases for calling them into actual service, reserving to the States respectively the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress. Thus, co-ordinate powers over the same subject are vested in different authorities, demonstrating the necessity of good faith and mutual co-operation in their exercise. It would be entirely useless for the United States to provide for the enrolment, organization, and arming of the militia, and a system of discipline for its government and instruction unless the several States provided for officering, training, and instructing it according to such organization and system of discipline; so on the other hand, any State provision for the exercise of its reserved powers of *officering* and *training* would be useless unless Congress provided for an enrolment and organization, according to which the power of training the militia might be applied. Since the passage of the act of Congress of May 8, 1792, the legislature of this Commonwealth has apparently endeavored by various enactments to carry into effect the requirements of that law, and of such other acts of Congress as have since been passed. To this end various fines and penalties have been prescribed, such as the legislature has deemed sufficient to enforce obedience. These fines have been modified from time to time. The number of persons liable to the performance of active duty has been once and again reduced, and the number of *training days* has been lessened; yet discontents have existed and still prevail in regard to the operation of the present system in this Commonwealth, some of which, we apprehend, can be allayed only by an amendment of the laws relating to the enrolment, organization, and arming of the militia. These are matters within the sole control of the national legislature; and we have deemed it proper, therefore, respectfully to ask the attention of Congress to some of the evils of the existing laws, that they alone who have the power may apply the remedy.

Of all the checks upon the different branches of authority in our government none, at first sight, appear to be more incongruous than those which relate to the militia. These were imposed, however, by experienced statesmen, and were not merely the result of reflection but of practice.

When we consider that the national government, with its powerful army and navy divided or concentrated at will, its garrisoned forts at the mouths of our navigable rivers, and of the harbors of our populous cities, may also have the militia in its service and under its control, the value of the reservation to the States of the right to officer and train that militia may be properly estimated. The only dependence the States would have against an attempt at concentrated authority under such circumstances would be upon the State pride and connexions, the local habits and feelings, the interest, the virtue, and patriotism of their own officers, and their habitual influence over men of like habits with whom they had always trained and associated. Should such an attempt be made, inasmuch as this would be the only safeguard of State rights, we look to the friends of the federal Union for its support and continuance. Congress must begin the great work of militia reform. We humbly conceive that the States have a right to demand it at their hands. Though the militia is a State force, the States have authorized the United States to command its services on certain occasions, and these are probably the most important occasions of any on which it will be called to act. The States have yielded to the national government the important powers of enrolment and organization, and of providing the mode of arming the militia, and prescribing its system of discipline. This was done under the full belief that these powers would be exercised according to the emergencies of the countries.

It is not intended to impute to the national councils any disposition to avoid the fulfilment of their obligations, far from it; we have derived equal advantage and satisfaction from the distribution, under a resolution of Congress, of books of tactics to the officers of the militia; and we have observed that committees of both Houses of Congress have been appointed at every session since the late war, most of which have reported bills of different forms, all intended to give relief, though none have passed to be enacted. The subject, we are aware, is attended with numerous intrinsic difficulties. Even the practicability of establishing a uniform national militia in a confederacy of sovereign States has been doubted by many; though none, as we believe, doubt its utility if it can be accomplished. We believe, however, that no constitutional impediment to a harmonious co-operation between the State and federal governments on this subject exists. We reject that unfounded jealousy which considers the national government as a foreign government, made *for* us and not *by* us, as independent of public opinion, and not founded upon it. If public sentiment requires a change in the militia system, it matters not whether the powers by which it is accomplished belong in whole or in part to the State or the United States; whether they are co-ordinate, dependent, or contingent, it will be effected, and the voice of the people will applaud what the good of the people demands.

Confiding, then, in the entire practicability of establishing a uniform militia system throughout the United States, we beg leave to advert to the vast difference between the circumstances of the country at the time the existing law of enrolment was passed and the present, to show the *necessity* which, in our opinion, imposes on Congress the duty of revising and amending the militia system.

In 1792 our population was but about four millions; the British Canadian and other possessions circumscribed our northern borders; notwithstanding the peace the British army retained the possession of several strong military posts within our acknowledged territory; the Indians were in a state of hostility, or of uncertain quiet; the Spaniards possessed Florida and Louisiana, and claimed to hold fast the keys of the Mississippi; our army was small; we had neither a navy nor fortifications; our republican principles awakened the jealousy of kings; our strength and resources were scarcely known abroad; and our laws were openly resisted by our own citizens at home. Under these circumstances, the enrolment of every able-bodied man from eighteen to forty-five was not only justifiable, but necessary. But so widely different is the condition of the twelve millions of people our limits now comprehend, so directly and strongly contrasted in every essential particular, that a recital of our present happy situation is manifestly unnecessary. May we not inquire, then, whether much less than the present number of militia, if properly instructed, would not be fully sufficient to meet any sudden emergency which may be expected to arise? Anticipating an affirmative reply to this inquiry, we cannot perceive an objection to a reduction of the

present enrolled force to such a number as should always be sufficient to enforce the execution of the laws, suppress insurrection, and repel the first onset of the invader; and we humbly apprehend that this necessary number will be left if the present ages of enrolment should be essentially reduced.

Again, we humbly conceive that nothing but the state of the public *resources* could have justified the requisition of the act of 1792, *that privates should arm themselves*, which is now the subject of such just complaint; and the further requisition, that the officers should provide their companies and regiments with musical instruments and colors. Do not these provisions, especially the first, in the present state of our country, bear heavily upon a class of society who are the least able to sustain them? All have life and liberty to preserve, and these are as valuable to the poor as to their exempted and opulent neighbors; they, therefore, most willingly and cheerfully contribute their *time* in support of an institution which gives them a perfect confidence of their own freedom; but they consider this sacrifice to patriotism their full share; and they ask why those who have *property* as well as life and liberty at stake, should not furnish the *instruments* of its preservation, at least, to those who are willing to use them? They ask whether the *power* to provide arms does not impose the *obligation* to furnish them? And it appears but reasonable that the alleviations of the burdens of all *other* classes of the community consequent upon the increase of population and the abundance of our national resources should be extended to *that* which is subject to active duty in the militia. The present appropriation for arming the militia, which would require seventy years for the accomplishment of its purpose, is so entirely inadequate that any suggestion from us for its extension becomes unnecessary.

The organization of the militia is also thought to be defective. It does not conform to that of the army, with which the militia would be called to operate in actual service; nor is it adapted to the convenient exercise of the power of *training* reserved to the States. The existing law requires all the enrolled militia to be divided into divisions, brigades, regiments, battalions, and companies, and limits the number of companies that a regiment, and of men that a company shall contain. It also requires that all persons between the ages of eighteen and forty-five shall be enrolled; but as the power to *train* its own militia is reserved to each of the States, the State legislatures have undertaken to determine *how many* of the persons actually enrolled shall be trained. In the exercise of this prerogative great diversity of practice has arisen, and will doubtless hereafter prevail. The legislature of this Commonwealth has recently granted conditional exemption to all persons after they shall arrive at the age of thirty years; now, as all persons between eighteen and forty-five are required to be enrolled, and divided into companies of sixty-four privates each, and those of them only who are under thirty years of age are required to train, it is apparent that a sufficient company on the roll usually will prove a very limited one in the field. This has a very dispiriting effect upon both officers and men, and is subversive of that pride which is so essential to the maintenance of the institution.

We have observed that the bill pending in the House of Representatives at the present session contains divers alterations of the existing organization. With some of the provisions of that bill we are well pleased, but we doubt whether it is expedient to alter the minimum age of enrolment from eighteen to twenty-one years; and we humbly conceive that the provision contained in the sixth section of the said bill, to wit: that the two oldest companies of a regiment shall act as light infantry, should be qualified by *excepting* regiments to which light infantry companies may be attached, or by a general provision for the distinct organization of light infantry, riflemen, and grenadiers into separate regiments whenever such corps exist in sufficient force. We would respectfully suggest that the difficulty we have alluded to respecting the difference between the *enrolled* and *active* force of companies may be obviated by vesting in the State legislatures a discretionary power over the subject, by means whereof the numerical force of the companies may be graduated according to the proportion of enrolled men which the States respectively may require to train.

The number of *exemptions* under the existing laws has been and remains a fruitful source of complaint. The unlimited authority over this subject which Congress has conferred upon the States has been exercised in widely different forms by different legislatures.

This has led to great diversity and inequality in the operation of the system as a whole, and of course to much dissatisfaction on the part of those who are thus made sensible of the inequality of their condition as compared with that of some of their fellow citizens. The necessity and propriety of granting exemption from duty in the militia to many individuals and classes of the community is too apparent to require argument or illustration.

The difficulty is to ascertain precisely where the line should be drawn. There would be manifest injustice in exacting fines of any person for the neglect of *personal service* in one situation, which his *personal duties* to society in another render it impossible for him to perform. Such a penalty would be nothing less than a pecuniary mulct in addition to his other taxes. The exemptions complained of are not of such persons as these; they are confined to that large class of professional and other citizens whose useful duties to society are *not* so strictly *personal* as to be incompatible with militia duty. At present, the evils of this description arise principally under the State laws; but, as the power to grant exemptions is incidental to that of enrolment, we humbly conceive that it is expedient for Congress to provide that none shall be exempted except those officers of the national and State governments, and other public functionaries, whose services in their several vocations are incompatible with the discharge of militia duty.

We have observed in the report of the board of militia officers, which sat at Washington in 1826, the recommendation of three measures which, in their opinion, would have a most beneficial influence upon the preservation and utility of the militia system, viz:

1. The appointment of a superintendent general of the militia of the whole United States, to be attached to the War Department.

2. The establishment of camps for theoretical and practical instruction of the officers of each division ten days in a year. The officers to be paid for travel and attendance, and to be provided with tents and camp equipage at the expense of the United States.

3. The printing and distribution of books of tactics, &c. The latter recommendation having been adopted by Congress, we have only to express our satisfaction therewith. The other measures we deem highly important, and such as will, if carried into effect, essentially benefit the militia. We hope they will soon receive the consideration and sanction of Congress.

We respectfully recommend to the consideration of Congress the expediency of adopting some measures for the encouragement and support of volunteer companies of cavalry, artillery, light infantry, grenadiers, and riflemen. Almost every regiment in this Commonwealth has appropriate flank companies,

which, from the correctness of their drill, the exactness of their subordination, and the beauty of their appearance, have had a most beneficial effect upon the regiments to which they are attached and the military generally. Our volunteer companies present an aggregate of 13,000 men, mostly provided with tents and camp equipage, and drilled to manœuvre with troops of the line; and chiefly maintained at the cost of the high spirited and patriotic individuals who compose them.

The value of a force of this character, four-fifths of which, in case of emergency, can be called for the defence of any important position on the seacoast in five days' time, cannot be lightly estimated. An authority in the State governments to organize such corps into separate regiments or battalions, where their numbers are sufficient, would, in our opinion, admit of the exercise of an additional stimulus to that ambition which has been so usefully displayed in the formation and support of these valuable companies; and we humbly apprehend that without some provision to this effect, the enactment of the 6th section of the bill now before Congress would prove highly detrimental, if not totally destructive, to these corps. Those who consider the militia as the only safeguard of a free State cannot but feel the utmost regret that it is fast falling into disrepute for want of that encouragement which has been afforded to almost every other institution.

The opinion prevails throughout the country that this is the fact; even the legislatures of some of the States appear disposed to withhold their support from the existing system, owing, as we apprehend, to the evils which Congress alone can remedy. We therefore most earnestly and respectfully ask the attention of Congress to the subject at this time, fearing that delay will tend still further to diminish the respect in which the system is held.

The militia system is strongly identified with our national history, and in the opinion of an eminent jurist, whose commentaries on constitutional law entitle his observations to great weight, "has materially contributed to form and elevate our national character." "If we take enlarged views of the past and future," he observes, "we shall conclude that the liberties of the people, and the just residuary powers of the States, rest essentially on the preservation of that institution." The state into which this bulwark of republican liberty appeared to be falling excited in the breast of the learned civilian, whose defence of the American constitutions evinced the extent of his knowledge of the human character, the most alarming apprehensions.

He considered "the militia as the most essential foundation of national defence; the most plentiful nursery of armies and navies, to which the American States had owed their existence for more than two hundred years;" and in his opinion "neither schools, nor colleges, nor town meetings, had been more essential to the formation and character of the nation than the militia. Whenever the militia comes to an end," said he, "or is despised or neglected, I shall consider this Union dissolved, and the liberties of North America lost forever." We might quote the authority of Washington, and of almost every distinguished member of the convention which formed our Constitution, in favor of the militia, but we content ourselves with extracting shortly from those which have probably had a more immediate influence upon the public sentiment in this Commonwealth.

A late governor of this Commonwealth, who had been a soldier of the revolution, and for many years a major general in the militia, observed, "that it comported with his own observations to remark, that few if any of our public institutions tend to direct men to more elevated modes of thinking, or conduce more strongly to form a high sense of character, so indispensable to habits of virtue, than a well organized militia.

His successor in the chair of State and compatriot of the revolution, in his speech to the legislature, remarked: "There are two objects which have always appeared to me to merit the constant care and first attention of the legislature—our primary schools and the militia. Without the former a knowledge of our civil rights would not have pervaded the great body of the people; the principles of civil liberty would neither have been understood nor rightly appreciated; and without the latter we could not have engaged in the contest which eventually established them. Imperfect as our militia system was previous to the revolution, an appeal may be safely made to history and to the recollection of the few remaining sages who conceived the great design of our emancipation, that but for the militia the defence of our rights would not have been attempted. An appeal to arms was, in fact, an appeal to the militia, the only existing force at the time. If independence is a blessing dear to freemen and worthy of transmission to posterity, the arm that sustained it is entitled to the gratitude and support of every friend to his country. If the system which regulates it be imperfect, let it be improved, and let those who are loudest in its censure bear in mind that under its influence, imperfect as it is, a degree of discipline and of military knowledge has been attained which has hitherto never been equalled, and which does the highest honor to the zeal and exertions of those who compose this patriotic band. By this institution the moral as well as physical force of the State is increased; it constitutes our safety against any aggression on the laws, assures our internal tranquility, and forms our only defence from the encroachments of other powers."

To the weight which these opinions give to our memorial we must add that concise and strictly philosophical view of the oldest living President, whose opinion on the powers and influence of this important constitutional establishment has not been generally disseminated: "As auxiliary to a regular force," says he, "and a substitute for a large one in time of peace, a disciplined militia forms an essential part of a republican system, it being certain that liberty cannot be safe with powerful standing armies, nor in danger without them, and that without an effective militia the danger of such armies cannot be precluded."

No government can exist without a physical force of some sort. The militia is the only one which can be employed with safety among a free people to enforce obedience to the laws when the civil power is insufficient to carry them into effect.

Without the militia occasions would frequently occur for the employment of the national forces, and the moment the regular army is called in to enforce the execution of a State law, State sovereignty becomes impaired, and the harmonious operation of our political system is destroyed.

We cannot therefore, as citizens and friends of the federal Union, look upon the decline of the militia without fear, nor anticipate its overthrow without indulging serious apprehensions for the safety and perpetuity of the republic.

We have been favored with the perusal of a letter addressed to the adjutant general of this Commonwealth by the distinguished officer at the head of the national board of engineers. The views of the militia as a military institution therein expressed are so much in accordance with the principles of our political society that we cannot forbear presenting an extract, which we deem well deserving of the attention of that government whose service the writer honors.

"Without the institution of militia," says he, "our maritime frontiers could not be defended, except by increasing the regular army to an extent incompatible with our free institutions; and without the militia the system of permanent defensive works now constructing for the security of our coast will neither afford the results which they are designed to secure nor justify the cost of their construction. The principal ends which this system of works is destined to accomplish are, to afford to our navy ports of shelter, and ports of construction, and for refitting; to occupy the outlets to the sea of those great arteries through which our foreign commerce circulates; and to exclude the enemy from the roads and anchorages whence they might blockade these important outlets; to defend the points of intersection of the internal navigation parallel to the coasts; to enable our navy to act on the offensive, instead of merely attempting to cover our maritime frontiers; finally, to eloigne from our great towns on the coast the points of debarkation of an enemy who intends to attack them, and thus compel the hostile forces to act upon a line of operations sufficiently long to give time to the militia to muster, and separate the enemy from their fleet.

"If we suppose for a moment the militia not to exist, this system falls to the ground. An invader may then disembark whenever he pleases, turn the permanent defences with impunity, and strike successively and without resistance the various points that he would assail.

"The navy would alone remain for the defence of our coasts, but its offensive operations would be paralyzed, and it would be constrained to act merely on the defensive. Instead of protecting our commerce on the high seas, capturing and destroying that of the enemy, and menacing his colonies and establishments, it would remain anchored to our shores, and sink from a principal to an auxiliary means of defence. In our system of defence the militia is indispensable to accomplish the cutting off an enemy from his point of debarkation, and without them it would, in time of war, be difficult and excessively expensive to maintain full garrisons in the forts which constitute part of this system. But with the aid of the militia one-third of each efficient garrison will suffice, the other two-thirds being furnished by the local militia at the approach of danger, and withdrawn when this danger ceases to exist.

"It follows as a natural consequence that the militia is of the first importance in the defence of our maritime frontier, and that without them it would be impossible to foresee the extent of the calamities that an enterprising invader might shower upon our coast, or the immense expenditure of public treasure that would ensue. A militia is no less indispensable to repel the invasion of our inland frontiers than to defend us from debarkations upon our coasts. Whatever may be the extent of the territory of a nation, it may be invaded, if not conquered, whenever its defence is confided exclusively to regular troops; for when they are once broken and routed, the nation has no alternative but submission. But with a well-organized and disciplined militia the whole aspect of affairs will be changed. These advance like overflowing torrents and assail the invaders in every direction; the enemy find themselves unable to fight, except in detail; they can form no plan of operations, for they have no one determinate object; their convoys are intercepted and their reinforcements cannot join them; and whilst they are thus harassed on their flanks and in their rear their progress in front costs them dearly, from the resistance of positions fortified by art and nature, and so well chosen that it is impossible to turn them.

"In such a critical juncture each march to the front brings them nearer to their final destruction; for what the militia of America has more than once achieved, it will again. The few days that the militia have to spare, however, from their individual occupations in time of peace, and the few months that in time of war they would be in service before the enemy, must forever disqualify them from becoming troops of the line, that is, manœuvring troops. The militia and army have essentially different parts to perform, notwithstanding that they must often co-operate and combine their exertions together. Hence the necessity of giving to each that particular organization which is suited to their several parts, and which will afford to the militia every possible facility to act in concert with the army in time of need."

From the weight of these authorities, and from their own knowledge of the operation of the present militia laws, your memorialists feel themselves justified in remarking that, although the system is defective, unequal, and in some degree oppressive, the principles upon which it is founded are correct; carried into operation in the incomplete manner at present adopted by us, our country exhibits a militia force such as Europe cannot boast. But should *we* rest satisfied because those who have as much to *fear* as we have to hope from such an institution have not brought it to the same degree of perfection as ourselves? Should those who have placed their military and civil dependence upon this force be content with the militia *only comparatively better* than that of governments which always resort to it with fear, and never dare place arms in the hands of the people but when pressed by foreign danger? The possession of arms by all the able-bodied men of the country gives them that perfect sense of their own freedom which can only result from the conviction that each is the guardian of his own liberty.

Such an institution, which would dissolve an arbitrary government, confirms and strengthens the free. "If France had such a militia," said Lafayette a few years since, "she would have a free government." His words were prophetic. She has a free government: her militia gave it.

Considering the subject to be one of vital importance, your memorialists most respectfully but earnestly request that it may have your early attention, and they confidently rely upon the *ability* and *disposition* of Congress to devise and adopt such a system as will meet the approbation of all classes of the community.

Per order of the convention.

ASAHEL HUNTINGTON,
JOHN S. TYLER,
EDWARD BLAKE,
} *Committee.*

21st Congress.] No. 483. [2d Session.

ON THE APPLICATION OF OFFICERS OF THE ARMY FOR REMUNERATION FOR PROPERTY LOST BY THE DESTRUCTION OF FORT DELAWARE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 1, 1831.

Mr. Drayton made the following report:

The Committee on Military Affairs, not having been furnished with the proceedings of any court of inquiry to substantiate the facts connected with the destruction of Fort Delaware, nor with any statement to show the circumstances under which the [officers and soldiers at that fort were] alleged loss of their property was sustained by the officers and soldiers at that fort, recommend the adoption of the following resolution:

Resolved, That their chairman be instructed to move to strike out the enacting words of the bill of the Senate.

21st Congress.] No. 484. [2d Session.

STATEMENT OF THE EXPENDITURES AT THE UNITED STATES ARMORIES AND THE ARMS MANUFACTURED THEREIN DURING THE YEAR 1830.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 2, 1831.

Department of War, *March* 2, 1831.

Sir: In pursuance of an act of Congress of the 2d April, 1794, concerning arsenals and armories, I have the honor to transmit herewith a statement of the expenditures at the United States armories, and of the arms, &c., manufactured therein during the year 1830.

Very respectfully,

J. H. EATON.

Hon. Andrew Stevenson, *Speaker of the House of Representatives, U. S.*

Statement of the expenditures made at the national armories, and of the arms, &c., made therein during the year 1830.

	Expenditures.					Arms, &c., made.						
	For lands, buildings, canals, repairs, and other permanent improvements.	For the manufacture of arms.	For the manufacture of Hall's rifles.	For miscellaneous purposes, not embraced in the foregoing.	Total amount expended.	Muskets.	Screw-drivers.	Wipers.	Ball screws.	Spring vices.	Flint caps.	Arm-chests.
Springfield, Massachusetts....	$3,602 22	$182,309 95	.....	$1,611 83	$187,524 00	16,500	16,500	16,500	1,650	1,650	16,500	1,660
Harper's Ferry, Virginia.....	14,431 93	117,540 19	$32,377 06	1,218 24	165,567 42	10,130	.....	.....	.....	.....	51,575	564
Total.....	18,034 15	299,850 14	32,377 06	2,830 07	353,091 42	26,630	16,500	16,500	1,650	1,650	68,075	1,224

Statement in detail of the operations at the armory at Springfield.

Dr.

To value of component parts of arms on hand January 1, 1830.....	$108, 434	31
To value of unwrought materials on hand January 1, 1830.....	50, 296	79
To total amount received from the treasury and expended during the year 1830	187, 524	00
To value of 3,100 pounds powder received from the storekeeper for the use of the armory, at 20 cents.....	620	00
To value of 4,006 pounds lead received from the storekeeper for the use of the armory, at 4 cents.....	160	24
		$347, 035 34

CR.

By amount expended in permanent improvements, per foregoing statement..	$3, 602 22	
By arms and equipments made, viz:		
16,500 muskets, average cost of each $10 99 and a fraction	181, 438 58	
16,500 screw-drivers, average cost of each 8 cents	1, 320 00	
16,500 wipers, average cost of each 12½ cents	2, 062 50	
1,650 ball screws, average cost of each 15 cents	247 50	
1,650 spring vices, average cost of each 30 cents	495 00	
16,500 spare lead flint caps, average cost of each 1 cent	165 00	
1,660 gun boxes, average cost of each $2	3, 320 00	
By value of supplies furnished the Harper's Ferry armory	$493 68	
By value of supplies furnished to arsenals	1, 348 20	
	1, 841 88	
By amount expended in preserving arms, and for miscellaneous purposes not incidental to the manufacture of arms	1, 611 83	
By amount of supplies furnished for inspecting contract arms	28 86	
By value of component parts of arms on hand December 31, 1830	99, 919 11	
By value of unwrought materials on hand December 31, 1830	50, 982 86	
		$347, 035 34

Statement in detail of the operations at the armory at Harper's Ferry.

DR.

To value of component parts of arms on hand January 1, 1830	$63, 537 91	
To value of unwrought materials on hand January 1, 1830	$45, 437 97	
From which deduct the amount of debts due on the 1st January for articles delivered and included in the inventory of that date, but which remain to be paid for in 1830	9, 208 92	
	36, 229 05

G. BOMFORD, *Brevet Colonel, on Ordnance Service.*

ORDNANCE OFFICE, *Washington, March* 2, 1831.

22D CONGRESS.] No. 485. [1ST SESSION.

ANNUAL REPORT OF THE SECRETARY OF WAR, SHOWING THE CONDITION OF THAT DEPARTMENT IN 1831

COMMUNICATED TO CONGRESS, WITH THE PRESIDENT'S MESSAGE, DECEMBER 6, 1831.

DEPARTMENT OF WAR, *November* 21, 1831.

SIR: In obedience to your instructions, I have the honor to submit herewith a general view of the operations of this department, and of the various branches of its administration, together with the accompanying reports of the officers in charge of the different bureaus for the past year.

The plan of organization by which the great objects of public concern committed to the War Department are divided into different classes, and placed under the more immediate control of respectable and responsible officers, is well calculated to promote fidelity, promptitude, and economy in the management of these important interests. By assigning to each office a particular branch of the service, experience in the general administration is acquired at the department, and in the practical details at the places of execution. On this subject I have only to remark that the importance of our Indian relations, both present and prospective, demands a similar arrangement for this portion of the public affairs. The existing organization rests upon executive authority, but the efficiency and responsibility of that department would be greatly promoted if its duties were regulated by a legislative act. This measure has, more than once, been recommended in the reports of my predecessors, and I beg leave to add my conviction to theirs of its necessity.

The condition of the army is satisfactory in its *materiel*, and so far in its *morale* as depends upon the exertions of the officers. Its appropriate functions are performed honorably for itself and usefully for the country. Although some of the details of the service are susceptible of improvement in their administration, and some in their legislation, still, in the general result, whether viewed as an arm of national defence, or as a depository of military knowledge and experience, it has attained the great objects for which it was raised and is maintained. It is efficient without being expensive, and adequate to the exigencies of our service without being dangerous. I refer to the report of the major general commanding for the detailed operations of the year.

The annual reports of this department have already brought before the government the subject of desertion, and I regret to state that this serious evil not only continues, but increases. Inquiries have been instituted into the causes of this offence, and the most efficient remedy and much valuable information is contained in a report from the War Department of February 17, 1830. But no measures have been adopted to check a practice which, from its extent and impunity, not only materially injures the service by the loss of the men, and the consequent expense, but threatens, in its progress and by its example, to destroy that principle of fidelity which is the only safe bond of connexion between the soldier and his country In the present state of our martial law, and of its necessary administration, there is in fact no adequate punishment for the crime of desertion. Confinement and employment at hard labor are the only efficient sentences which military tribunals can inflict; and where a soldier is confined in a guard-house, and his companions stationed without to secure him, and with all the facilities of constant communication, we may well doubt whether his situation is so much more unpleasant than theirs as to give to this mode of punishment any salutary effect upon the discipline of the army; and at all our posts, and particularly at those upon the inland border, the soldiers are generally employed either in the line of their duty or upon fatigue, and a sentence to hard labor subjects them to little more than the ordinary demands of the service.

Whether any system of moderate rewards will prevent this practice may be doubted; but certainly the abolition of all efficient punishment, without providing any substitute to operate upon the pride and hopes of the soldier, is in fact to invite him to abandon his colors whenever the restraints of discipline cause temporary dissatisfaction.

To retain a part of the bounty and pay, and thereby to provide a fund for the use of the soldier when discharged; to reduce the period of service, and to increase the pay of the rank and file of the army, and particularly of the non-commissioned officers, are among the most prominent suggestions which have been offered upon this subject.

The number of desertions in 1826 were	636
1827	848
1828	820
1829	1,115
1830	1,251
And in 1831 they will probably amount to	1,450

An estimate has been prepared at the Adjutant General's office, founded upon a minute examination and comparison of the various expenses incident to the maintenance of a soldier, and exhibiting the actual pecuniary loss of the government arising from this cause.

This loss was for 1826	$54,393
1827	61,344
1828	63,137
1829	98,345
1830	102,087
1831, probably	118,321

The tabular statement accompanying the report of the commanding general shows that the pay of the non-commissioned officers, musicians, and privates may be increased so as materially to improve their condition, and not exceed the aggregate amount of $85,920. The non-commissioned officers particularly are, in our service, inadequately paid. Every military man is sensible of their importance to the

character and efficiency of an army; and such inducements should be offered as would insure the engagement of competent men, qualified by their principles, habits, and intelligence, to acquire the confidence and to command the respect of the soldiers. That this additional compensation would have a tendency to diminish the mischief of desertion, there is no doubt; whether in so great a degree as to save the whole sum proposed to be given experience only can determine.

A very large proportion of all the crimes committed in the army may be traced to habits of intemperance. This vice is, in fact, the prevalent one of our soldiery. I am satisfied that ardent spirits should not form a component part of the ration. By issuing it, we furnish to those already accustomed to its use the means of vicious indulgence, and we invite those who are yet temperate to acquire this destructive habit. It is certainly sufficient for all useful purposes, if there be, in truth, any utility in the consumption of ardent spirits, that the officers be authorized to grant permission for its purchase, in proper quantities, to those whose situation may require it, without the direct agency of the government in allowing and providing it.

There were issued to the army in 1830 72,537 gallons of whiskey, at the cost of $22,132. If this sum were applied to the purchase of tea, coffee, and sugar, for the use of the soldiers, their habits and morals would be greatly improved, and the discipline and respectability of the army promoted. The regulation of this department, by which an offer is made to the soldier of commuting the whiskey ration by the payment of one cent, is productive of little advantage. In this estimate of the value of this part of the ration, reference has been had only to the actual average cost of the article, delivered in large quantities at the various posts. But this is unjust to the soldier. He estimates it very naturally at the retail price, averaging probably five cents, and the present offer of commutation is, in fact, to ask him to sell his whiskey for one-fifth of its value. It is far better to leave the troops no choice, but to allow them a liberal compensation, and in such articles as will be most useful.

The American soldier is well paid, fed, and clothed; and, in the event of sickness or disability, ample provision is made for his support. But his moral culture is wholly neglected. There is no arrangement in our service for his mental or religious improvement. And there is perhaps no similar service in which such a measure is more necessary. Many of the positions occupied by our troops are upon the verge of civilization, or beyond it. There they are retained for years, and under circumstances which, if not counteracted, almost necessarily lead to great demoralization. None of the ordinary means of instruction are within their reach, and neither their habits nor principles can be improved or fortified by those institutions, which are elsewhere so generally established and so useful. Independently of any obligation which may be supposed to exist on the part of the government to provide for the moral as well as the physical wants of a class of men who, in devoting themselves to the service of the country, become unable to provide for their own wants, it is certain that, as a question of expediency, this measure is recommended by powerful considerations. Where moral and religious principles are practically acknowledged, their sanctions will add validity to the obligations voluntarily assumed by the soldier, and his duties will be performed with more fidelity and alacrity. As he becomes a better man he will become a better soldier. Discipline and subordination will be promoted, punishments diminished, and all the details of the service will feel the spirit of improvement. I am satisfied, that the appointment of chaplains, and their employment at such of our military posts as, from their position and the strength of the garrisons, may seem to call for such a measure, would be productive of great advantages to the service; and to the soldiers individually the measure would be equally beneficial. Reproofs and exhortations in life, and the consolations of religion in death, would be freely offered to them. The experiment, I think, is worthy of trial; and the expense can scarcely be placed in fair competition with an object which promises such useful results for the present improvement and future happiness of the soldiers.

The various departments of the staff of the army have performed with fidelity their accustomed routine of duties. In the three great divisions of efficiency, economy, and accountability, the present mode of administration seems well adapted to the nature of our service. The several tabular statements accompanying this report exhibit the satisfactory manner in which the public funds have been expended and accounted for. Nor is there any reason to believe that the slighest loss will occur from the fiscal operations of the year. A system whose effects are thus beneficial must be not only safe in itself, but safely administered. And for this administration we are indebted to the superintending care of the several bureaus, and to the various officers employed under them, throughout the country. It is evident that a fund of knowledge has been provided which cannot fail to be useful in any future exigency. Armies may be suddenly raised, and discipline in some measure introduced, by great exertions, and in great emergencies. The experience of other nations, and of our own, too, has demonstrated that the peculiar information, upon which depend the subsistence, the health, and the movement of troops, and the supply of their necessary *materiel*, can only be acquired by time and experience. The disasters and prodigal expenditures in the beginning of the late war furnished a memorable lesson upon this subject, which, it is hoped will not be forgotten, as we recede from the period of their occurrence. Our present organization is small enough for the wants of the service, and yet such is its nature that it may be indefinitely extended, as the pressure of circumstances may require, insuring in every branch of the service a judicious system of administration, and experienced officers to direct and apply it.

The Military Academy has existed sufficiently long, under its present mode of instruction, to enable the government and the country to form a correct estimate of its value, both with relation to the cadets themselves and the character of the army. Of 560 officers, having rank in the line, and now in service, 404 were educated at that institution. These young men have been prepared by a rigid and judicious course of instruction and discipline for the various duties of their profession. Six hunndred and sixty have entered the army, of whom but thirteen have been dismissed; and during the present year only two have been brought before courts-martial, and they upon charges not affecting their moral character.

These facts are honorable and decisive proofs of general good conduct, when the high state of discipline and the course of vigilant inspection in our service are taken into view. In the annual reports of the visitors at West Point is exhibited the result of the most careful observations, made by persons competent to estimate, and prepared to scrutinize, the claims and condition of the institution. For some years these reports have borne unequivocal evidence to the fidelity and ability of the superintendent, and the academic staff generally, and to the proficiency and correct deportment of the pupils. The record which is kept of their progress and conduct, the spirit of emulation necessarily excited, and the judicious plan of rewards, which are offered, by the publication of the names of the most distinguished individuals, and by their admission into the army in the order of merit, are powerful incentives to exertion, and, when

combined with the strict and impartial examinations to which all must submit, can scarcely fail to secure for the service of their country such, and such only, as are qualified to be useful.

The science of war is an advancing one. In Europe, where peace is seldom long maintained, a large portion of the talent and intelligence of the community is devoted to this study and to the consideration and suggestion of changes and improvements in all the branches of their military establishments, whether they relate to the operations in the field, to the various supplies, or to the necessary course of administration. We must look to those nations for the benefit of their experience; and our progress in the elements of military knowledge will depend, in a great measure, upon the careful preparation and education of the young men who are annually appointed in our service. Our local position, as well as our free institutions, may delay, but we have no right to expect they will prevent, the occurrence of war. As this event may happen, it is the part of true wisdom to be prepared for it, as far as preparation can be made without too great a sacrifice. Our army is barely sufficient to furnish small garrisons for the fortifications upon the seaboard and to hold in check the numerous and restless Indian tribes upon our inland frontier. Under these circumstances the practical duties of the profession are acquired, and as long as the officers enter the service with a well-grounded knowledge of its principles, we may look to the army as the depository of a fund of information upon this important subject which will enable the government to diffuse it among the community upon the approach of danger. By assigning a portion of the officers previously in service to new regiments and corps, these will soon acquire a competent knowledge of their duties, both in subordination and discipline. The great objects of present economy and future security can in no other mode be so certainly attained. When we advert to the comparative effects of training young men for the course of life before them, or of selecting them indiscriminately for the army, without reference to previous pursuits, it will be manifest that the present system can alone insure the attainment of the important objects connected with our military establishment.

It has been stated that the number of cadets allowed at the Military Academy is two hundred and sixty. There are in the line of the army five hundred and twelve officers of all descriptions. Of these, on the 1st day of November, there were present for duty three hundred and three, of whom nineteen were field and two hundred and eighty-four company officers. There were sixty-six sick and on furlough, and one hundred and forty-three were detached upon various staff duties, including the regular staff departments of the army, objects of internal improvement, and the emigration of the Indians. The number of companies being one hundred and six, there were not three officers to each company. Taking into view the casualties of the service, there ought not to be less than that number at all times with their companies. The law provides that there shall be three to each company of infantry, and five to each company of artillery. In addition to these, the act of April 29, 1812, allows one supernumerary brevet second lieutenant to be attached to each company. Of these there are in service ninety-three, leaving thirteen vacancies to be filled from the graduates of the Military Academy for 1832. The number of the average annual vacancies in the army for five years has been twenty-three, and of the graduates to fill these forty. There may therefore, at the next examination, be forty cadets candidates for appointment, and but thirty-six vacancies to be filled. I would suggest the expediency of adding thirty-four to the number of brevet second lieutenants, and leaving them unattached, to do duty whenever required. Every company may thus have three officers at all times present, to the great advantage of the service.

I refer to the report of the chief of the Engineer department for the various details connected with this interesting branch of the public service.

The suggestions he has made appear to me worthy of consideration, and I particularly recommend to your notice the proposition for a new organization of the corps of engineers. The views of this department upon that subject were expressed in a report of January 13, 1831, in answer to a call of the House of Representatives, and in those views I fully concur. The measure is required by the public interest.

Unless provision is soon made for the repair and preservation of the road constructed by the United States from Cumberland to the Ohio river, that expensive and useful work will be ruined. Many parts of it are now so seriously injured as to render travelling difficult, and sometimes dangerous. The destruction of this great connecting link between the Atlantic and the western States, which, with a light transit duty and a proper system of administration, would last for ages, cannot be anticipated without great concern. The continuation of this road in the State of Ohio is free from this danger. With the assent of the general government that State has established toll-gates and levies a moderate duty upon that part of the road within her jurisdiction which is finished.

I consider it my duty to bring this matter before you, in the hope that it will engage the attention of Congress, and that a similar system for the preservation of the road from Cumberland to the Ohio river will be adopted. If it were placed by the general government in proper repair, and then surrendered to the States, respectively, through whose territories it passes, under the same conditions as were annexed to the cession of the road in Ohio, there is reason to believe that the arrangement would receive the sanction of those States, and that a permanent system and adequate means would be provided for the preservation of this work, and in a manner not burdensome to the communication upon it. If this be not done, or some other expedient adopted, the road will soon fall into a state of entire dilapidation.

By an executive regulation of the 21st of June, 1831, the topographical corps was separated from the Engineer department, and now constitutes a distinct bureau. The duties of this corps are important to the country, and if its organization is rendered commensurate a mass of valuable materials, exhibiting a general and accurate view of the geographical outlines of the Union, will be collected, to be used for any of the great purposes of peace or war. In a report from this department of January, 1831, this subject was considered, and the necessity of the measure stated and enforced. To that report, containing valuable suggestions, I take the liberty of referring.

A minute knowledge of the features of a country is essential to any plan of military operations, and this knowledge should be gathered in a season of leisure and deposited in our archives. In Europe it is considered one of the most important elements of military science, and upon its contributions have often depended the efforts of a whole campaign. All the surveys made by the topographical corps are returned to the depot in this department, where they can be detached or combined, as it may become necessary to exhibit views more or less general. These surveys, dissecting the country in all directions, and particularly along its streams or routes where roads already are or probably will be established, present those features which are most important to the operations of armies. A general survey of our coasts, both Atlantic and interior, is demanded by considerations of national interest, as well as of character. Arrangements for the former were made some years since, and expensive instruments procured, which are yet in the possession of the government. The work was actually commenced, but was abandoned before much

progress had been made. If this operation were resumed and committed to one of the scientific corps of the army, its constitution would prevent the recurrence of those circumstances to which the abandonment of the project may be attributed. Our own lakes are but imperfectly known to us, and the advance of the settlements and the extension of commerce require that this defect should be supplied. Labors of this nature have engaged the attention of the most enlightened governments, and the materials become a part of the general stock of public knowledge. The necessity of peculiar instruction for officers devoted to these duties, both in the scientific principles and in the practical details, is well illustrated in the report from the Topographical office. Some of the operations require an intimate knowledge of the most abstruse investigations of the present day in mathematical and physical science, and we shall in vain look for their accomplishment unless the government make provision for the measure.

To the Ordnance department is committed the duty of providing and preserving the necessary armament for the land service of the United States. The trust is a responsible one, requiring fidelity in the administration, and practical as well as scientific knowledge in the execution. The expenditure for these objects exceeds $900,000 annually, and the value of the accumulated property equals twelve and a half millions. But the nature of the service gives it a still deeper interest than the pecuniary considerations connected with it. Unless our arms are well fabricated and preserved, and in sufficient abundance, and unless we keep pace with the improvements which modern science and ingenuity are making, the consequences may hereafter prove disastrous. The necessary provision for these objects cannot be made without much time and experience, and that they may be ready for war they must be procured in peace. A stable and efficient organization is therefore essential to the ordnance corps; and in the report of the officer at the head of it will be found his views of its present condition. I recommend the subject to your favorable notice. The suggestions are the result of much experience, and present in a forcible manner the defects of the existing system, and the meliorations that are required. I am satisfied that the adoption of the measures proposed would give renewed efficiency to the operations of this section of the public interest, and more economy in its expenditures.

A commission of experienced officers will be directed to investigate the subject, and to report their views concerning the various matters connected with it; and particularly with respect to the patterns and construction of the small arms and cannon, and any alterations which experience may have indicated. Their report, when received, will be laid before you.

I have made some examination into the condition of this branch of the national defence with the view of ascertaining the supplies in service and in depot, and determining the quantity yet required to meet the demands of a prudent forecast. The result I shall submit for your consideration.

The United States have now in serviceable condition about 465,000 muskets. The annual demand to supply the necessary loss in the army and the militia, and to furnish the issues to the respective States, is 18,300. The number manufactured in the public armories is about 25,000, and at private works about 11,000, making a total of 36,000, at the average cost of twelve dollars each. We had at the commencement of the late war 240,000 muskets in depot, and during its progress sixty thousand were made and purchased. At its termination there were but 20,000 at the various arsenals, and many of those in the hands of the troops were unserviceable. Eight years were then required to replace the number lost during the war.

From 1802 to 1814 there were 3,956,257 small arms of all descriptions procured for the French service.

And during the same period for the British service, 3,142,366.

The average number of small arms annually fabricated in the French arsenals from 1805 to 1814 was 219,372.

In the British arsenals from 1802 to 1814, 261,947.

The stock on hand in Great Britain in 1817 in depot was	818,282
In the public service	200,974
Total	1,019,256

The number in depot in France in 1811 was 600,000, not including the great number in service.

These statements may be useful in determining the proper number of small arms which ought to be provided in this country. Being almost imperishable when properly secured and preserved, their accumulation occasions no actual loss, as the time must in all probability come when they will be wanted.

Considering the nature of our service, requiring, as it does, an unusual expenditure of these articles in consequence of the great proportion of militia we employ, and the system of rotation by which their services are regulated, and great losses consequently occasioned, and also the necessity of large deposits in different sections of such an extensive country, each of which should be adequate to any probable emergency, it is evident that our stock of small arms should at all times be large. Whether the quantity now on hand be sufficiently so is for Congress to determine.

There are now 623 cannon of various calibres for field service. And there are at the arsenals and in the old fortifications 1,165. But these cannon are all of antiquated patterns, and, with the exception of the six-pounders, amounting to 344, and a few of the heavier pieces, are considered unserviceable. There have been procured for the armament of the new fortifications 1,214 cannon of the improved pattern.

The old fortifications will require (probably)	646
The new, already completed	2,587
Those contemplated by the board of engineers, a part of which are now constructing	4,045
Besides these, proper field-trains deposited in different sections of the Union, and sufficiently large to meet probable contingencies, may be estimated at	850

The average cost of our cannon is $5 94 per hundred pounds, which gives the following prices for those of different calibres:

For 42-pounders	$520
For 32-pounders	450
For 24-pounders	330
For 18-pounders	245
For 12-pounders	150
For 6-pounders	70

It is estimated that an iron cannon will not safely bear more than 1,200 discharges with the service charge, after which it should be broken up.

The United States have no armories for the fabrication of cannon. The practice for some years has been to make contracts with the owners of the four founderies at Richmond, Georgetown, Pittsburg, and West Point, to the amount of the annual appropriation, allowing about an equal proportion to each, and paying such price as the Ordnance department, on the best information, judge reasonable.

This procedure has been repeatedly stated in the annual reports to Congress, together with the reasons which led to it. These are founded in the capital and experience required to conduct this business; in the necessity of depending, in some degree, upon the integrity and character of the manufacturers, as there may be defects in the piece not easily discoverable, owing to the necessity of mixing together iron of different qualities; and in the belief that, if a general competition for these supplies were excited, the existing establishments would be broken down, and others endeavor to take their places, which would either fail from similar causes or furnish cannon unfit for service, and thus leave the government, at some critical period, without the means of procuring this indispensable arm of defence. The provisions of the acts of Congress of March 3, 1809, seem, however, to present serious objections to this course; and I bring the subject before you at this time that it may be fully considered.

It appears to me that a public armory for the fabrication of cannon is required by obvious considerations. By forming such an establishment, the necessary experience and artisans would be provided, and such supplies of heavy ordnance manufactured as the government might direct. The actual value of the article would be ascertained, and contracts with individuals could be formed with a full knowledge of the circumstances. There would be no danger of combinations, nor would any injury result from fair competition. The supplies might be so controlled as to leave no fear of a deficiency in the quality or quantity of this essential arm of defence.

In the report of the Surgeon General will be found a review of the operations of the Medical department, and the propositions submitted by him for its better organization. Fourteen thousand dollars are annually expended for the employment of private physicians, because the corps is not sufficiently numerous to discharge the duties demanded of it. We have sixty-four military stations and recruiting rendezvous requiring surgeons, and we have in service but fifty-three surgeons and assistants. There is no economy in the present arrangement, nor is it advantageous to the public interest. An increase of the corps, as recommended by the Surgeon General, is evidently required.

The considerations urged by him for an addition to the pay of surgeons and assistants are certainly forcible. There is no portion of the army whose compensation is so inadequate, nor is there any which presents less prospects of reward. There are but two grades of rank in our medical service, and the emolument of the highest is but little superior to that of a captain.

It is due to the army that the subject of brevet commissions should be placed before you. So far as respects the services and compensation of officers holding those commissions, the present regulations are just, and well calculated to prevent any injury to the public service. No officer can receive the pay of his brevet rank unless serving in that capacity when on duty and having a command according to his brevet rank. There are twenty-nine officers in the army now drawing brevet pay.

These brevet commissions presuppose experience in the officer, and are founded upon the presumption that circumstances may arise when his services may be useful in a more extensive sphere than that in which, by his lineal commission, he is required to act; and these circumstances will oftener be found in our service than in any other. Our regular troops and militia must frequently act together. When thus co-operating, the officers of the regular army take rank of all militia officers of the same grade, whatever may be the date of their respective commissions. This rule is highly beneficial to the public interest, because, without creating invidious distinctions, it gives to experience its proper weight. By granting brevet commissions, after ten years' service in one grade, agreeably to the present rule, experienced officers will be provided for command upon detachment, or at posts where the objects are important or the danger imminent.

The construction which has been given to the law upon this subject has restricted the granting of brevet commissions upon prior ones to those cases only where ten years' services have been rendered under such prior commissions. There may be some doubt respecting the correctness of this view, and also the expediency of the restriction.

These commissions, except in the few instances stated, and those very proper, occasion no expense to the government. They are in their operation rewards for past good conduct, and incentives to future. They cannot be abused, for ten years' services certainly qualify an officer for a higher grade; and to attain by brevet promotion the rank of brigadier general from the commencement of the term of a captain requires a period of forty years. And if to this be added the necessary progress through the two lower grades of first and second lieutenant, the prospect of a young man, on entering our service, is not very flattering. Nor has he much to hope from his pay. It is barely sufficient to enable the officers, with rigid economy, to live respectably, and few of them leave for their children any inheritance but a good name.

It is important that a just pride of character, personal and professional, should be encouraged in a class of men whose usefulness depends essentially upon the cultivation of such a feeling. This system of promotion, so useful in war and economical in peace, offers honorable objects of ambition, and cannot fail to stimulate the exertions of the officers of the army.

The situation of the militia demands the attention of the government. Owing to defects in the system itself, or in the mode of its administration, public confidence has been impaired in the efficacy of that great branch of the national defence. This is to be regretted; for, although this force cannot be regarded as our most important means of safety in the event of war, it is still a valuable auxiliary, and one which the nature of our institutions, opposed as they are to a large standing army, renders indispensable. The power of organizing, arming, and disciplining the militia is granted by the Constitution to Congress; and if the laws upon this subject are inadequate, or inadequately executed, it is for the wisdom of that body to apply the remedy.

If this great defensive force be called out under proper circumstances, it may contribute essentially to the security of the country. In recurring to our own experience, we find many instances of the courage and devotedness of our militia; and the two battles that opened and closed our military history furnish practical illustrations of the value of this institution, and of its powerful effects in situations favorable to its operation. The National Guard of France, upon which the fate of that interesting country seems to depend, is but a local militia, constituted like our volunteer companies, but with a more efficient organization. By anticipating too much, however, from our militia force, we prepare the way for disappoint-

ment; and this was the error of the late war: in consequence of which, our attention has been probably withdrawn from the value of the system itself. A regular force is indispensable to the vigorous prosecution of any permanent military operations, offensive or defensive. But it may be aided by irregular troops, and its place also supplied, until measures for providing it can be adopted. We cannot expect that the militia drill, upon the present system, will give much instruction. The time and attention devoted to it are utterly insufficient for such a purpose. Nor is it probable that enough of either will be granted in time of peace to convey much military knowledge to the great body of our citizens. It is still important, however, that a due organization should be preserved, and a portion of time devoted to this duty. In the most unexpected and serious emergency, the national strength could not be called into action, unless individuals were assigned to particular classes, either local or personal, and knew their situation, and unless there were officers to direct the movements. And this arrangement has also a tendency to preserve and diffuse much military knowledge; for many will always direct their attention to the subject, led by inclination as well as duty to acquire information, and to qualify themselves for the various functions required to be performed. Our countrymen, generally, are accustomed to the use of firearms from early youth; and in the management of these they have little need of instruction. In devoting the field days, therefore, to the simpler evolutions, some knowledge will be gained, and the whole community will be practically reminded of the claim which may be made upon their services. They will feel that his civil relations are not the only ones which exist between the citizen and his country, but that he is bound by other obligations, and that the defence of all is intrusted to all.

In 1826 a board of officers, selected from the regular army and the militia, was convened at the seat of government, and instructed to take into consideration the militia system generally, and to suggest such alterations as might appear to them useful. This board combined much intelligence and experience, and their report is an able and interesting one. I advert to it in the hope that this subject may engage the attention of Congress, and in the conviction that the plan of organization recommended by that board is the only one which offers any real prospect of improvement or efficiency.

The condition and prospects of the aboriginal tribes within the limits of the United States are yet the subjects of anxious solicitude to the government. Circumstances have occurred within a few years which have produced important changes in the intercourse between them and us. In some of the States, they have been brought within the operation of the ordinary municipal laws, and their regulations have been abrogated by legislative enactments. This procedure renders most of the provisions of the various acts of Congress upon this subject inoperative, and a crisis in our Indian affairs has evidently arrived, which calls for the establishment of a system of policy adapted to the existing state of things, and calculated to fix upon a permanent basis the future destiny of the Indians. Whatever change may be contemplated in their condition or situation, no one will advocate the employment of force or improper influence in effecting it. It is due to the character of the government and the feelings of the country, not less than to the moral and physical imbecility of this unhappy race, that a spirit of kindness and forbearance should mark the whole course of our intercommunication with them. The great object, after satisfying ourselves what would best insure their permanent welfare, should be to satisfy them of the integrity of our views, and of the wisdom of the course recommended to them. There is enough in the retrospect for serious reflection on our part, and for unpleasant recollection on theirs; and it is only by a dispassionate examination of the subject, and by prudent and timely measures, that we can hope to repair the errors of the past by the exertions of the future.

The Indians who are placed in immediate contact with the settled portions of the United States, have now the alternative presented to them, of remaining in their present positions, or of migrating to the country west of the Misisssippi. If they are induced to prefer the former, their political condition becomes a subject of serious consideration. They must either retain all those institutions which constitute them a peculiar people both socially and politically, or they must become a portion of that great community which is gathering round them, responsible to its laws, and looking to it for protection.

Can they expect to maintain the *quasi* independence they have heretofore enjoyed? and could they so maintain it, would the privilege be beneficial to them?

The right to extend their laws over all persons living within their boundaries has been claimed and exercised by many of the States The Executive of the United States has, on full consideration, decided that there is no power in that department to interpose any obstacle to the assumption of this authority. As upon this co-ordinate branch of the government devolves the execution of the laws, and particularly many of the most important provisions in the various acts regulating intercourse with the Indians, it is difficult to conceive how these provisions can be enforced after the President has determined they have been abrogated by a state of things inconsistent with their obligations—how prosecutions can be conducted, trespassers removed by military power, and other acts performed which require the co-operation of the Executive, either in their initiation or progress.

I do not presume to discuss this question. I find it determined, and the settled policy of the government already in operation. Whatever diversity of opinion there may be upon the subject, those who are most opposed to these views will probably admit that the question is a doubtful one, complicated in its relations, and pregnant with serious consequences. The claim of exemption from the operation of the State laws, which is presented in favor of the Indians, must rest upon the Constitution of the United States, upon natural right, or upon conventional engagements. If upon the former, it may be doubted whether that instrument contains any grant of authority to the general government which necessarily divests the State legislatures of their jurisdiction over any class of people living within their respective limits. The two provisions which can alone bear upon the subject seem to have far different objects in view. If the claim rest upon natural right, it may be doubted whether the condition and institutions of this rude people do not give to the civilized communities around whom and among whom they live the right of guardianship over them, and whether this view is not fortified by the practice of all other civilized nations under similar circumstances—a practice which, in its extent and exercise, has varied from time to time, as the relative circumstances of the parties have varied, but of whose limitations the civilized communities have been and must be the judges. And, besides, if the Indian tribes are independent of the State authorities, on account of the natural and relative rights of both, these tribes are equally independent of the authorities of the United States. The claim upon this ground places the parties in the attitude of entire independence, for the question then is, not how we have divided our political power between the confederated government and its members, and to which we have intrusted the exercise of this supervisory authority, but whether the laws of nature give to either any authority upon the subject. But if the claim rest upon alleged conventional engagements, it may then be doubted whether in all our treaties with the

Indian tribes there is any stipulation incompatible with the exercise of the power of legislation over them. For if there were, the legislative power of Congress, as well as that of the respective States, would be annihilated, and the treaties alone would regulate the intercourse between the parties. But on a careful investigation, it will probably be found that in none of our treaties with the Indian tribes is there any guarantee of political rights incompatible with the exercise of the power of legislation. These instruments are generally either treaties of peace or of cession. The former restore and secure to the Indians interests of which they were deprived by conquest, and the latter define the boundaries of cessions or reservations, and prescribe the terms and consideration, and regulate generally the principles of the new compact. In both every sound rule of construction requires that the terms used should be expounded agreeably to the nature of the subject-matter, and to the relations previously subsisting between the parties. If general expressions are not controlled by these principles, then the term "their land," or, as it is elsewhere called, "their hunting grounds," instead of meaning what our own negotiators and the Indians themselves understood, that possessory right which they have heretofore enjoyed, would at once change our whole system of policy, and leave them as free to sell as it would individuals or nations to buy those large unappropriated districts which are rather visited than possessed by the Indians.

It may be remarked that all rights secured by treaty stipulations are wholly independent of this question of jurisdiction. If the Indians are subject to the legislative authority of the United States, that authority will no doubt be exercised so as not to contravene those rights. If they are subject to the respective States, such, too, will be the course of legislation over them. And if, unadvisedly, any right should be impaired, the Indians have the same resort as our own citizens to the tribunals of justice for redress; for the law, while it claims their obedience, provides for their security. The supremacy of the State governments is neither inconsistent with our obligations to the Indians, nor are these necessarily impaired by it. It may be difficult to define precisely the nature of their possessory right, but no one will contend that it gives them the absolute title to the land with all its attributes, and every one will probably concede that they are entitled to as much as is necessary to their comfortable subsistence. If we have entered into any stipulations with them (of which, however, I am not aware) inconsistent with the limited powers of the government, or interfering with paramount obligations, the remedy is obvious. Let ample compensation be made to them by the United States, in a spirit of good faith and liberality. The question would be one not of pecuniary amount, but of national character and national obligations.

That we may neither deceive ourselves nor the Indians, it becomes us to examine the actual state of things, and to view these as they are and as they are likely to be. Looking at the circumstances attending this claim of exemption on the one side, and of supremacy on the other, is it probable that the Indians can succeed in the establishment of their pretensions? The nature of the question—doubtful, to say the least of it; the opinion of the Executive, the practice of the older States, and the claims of the younger ones; the difficulties which would attend the introduction into our system of a third government, complicated in its relations and indefinite in its principles; public sentiment, naturally opposed to any reduction of territorial extent or political power, and the obvious difficulties inseparable from the consideration of such a great political question with regard to the tribunal and the trial, the judgment and the process, present obstacles which must all be overcome before this claim can be enforced.

But could the tribes and the remnants of tribes east of the Mississippi succeed in the prosecution of this claim, would the issue be beneficial to them, immediately or remotely?

We have every reason to believe it would not; and this conclusion is founded on the condition and character of the Indians, and on the result of the efforts which have been made by them, and for them, to resist the operation of the causes that yet threaten their destruction.

I need not stop to illustrate these positions. They are connected with the views which will be found in the sequel of this report; and it is not necessary to embarrass a subject already too comprehensive.

A change of residence, therefore, from their present positions to the regions west of the Mississippi, presents the only hope of permanent establishment and improvement. That it will be attended with inconveniences and sacrifices, no one can doubt. The associations which bind the Indians to the land of their forefathers are strong and enduring, and these must be broken by their migration. But they are also broken by our citizens, who every day encounter all the difficulties of similar changes in the pursuit of the means of support. And the experiments which have been made satisfactorily show that by proper precautions and liberal appropriations, the removal and establishment of the Indians can be effected with little comparative trouble to them or us. Why, then, should the policy of this measure be disputed, or its adoption opposed? The whole subject has materially changed, even within a few years, and the imposing considerations it now presents, and which are every day gaining new force, call upon the government and the country to determine what is required on our part, and what course shall be recommended to the Indians. If they remain they must decline, and eventually disappear. Such is the result of all experience. If they remove they may be comfortably established, and their moral and physical condition meliorated. It is certainly better for them to meet the difficulties of removal, with the probability of an adequate and final reward, than, yielding to their constitutional apathy, to sit still and perish.

The great moral debt we owe to this unhappy race is universally felt and acknowledged. Diversities of opinion exist respecting the proper mode of discharging this obligation, but its validity is not denied. And there certainly are difficulties which may well call for discussion and consideration.

For more than two centuries we have been placed in contact with the Indians. And if this long period has been fruitless in useful results, it has not been so in experiments having in view their improvement. Able men have been investigating their condition, and good men attempting to improve it. But all these labors have been as unsuccessful in the issue as many of them were laborious and expensive in their progress

The work has been aided by governments and communities, by public opinion, by the obligations of the law, and by the sanction of religion. But its history furnishes abundant evidence of entire failure, and everything around us upon the frontiers confirms its truth. The Indians have either receded as our settlements advanced, and united their fragments with some kindred tribe, or they have attempted to establish themselves upon reservations in the vain hope of resisting the pressure upon them, and of preserving their peculiar institutions. Those who are nearest to us have generally suffered most severely by the debasing effects of ardent spirits, and by the loss of their own principles of restraint, few as these are, without the acquisition of ours; and almost all of them have disappeared, crushed by the onward course of events or driven before them. Not one instance can be produced in the whole history of the intercourse between the Indians and the white men where the former have been able, in districts sur-

rounded by the latter, to withstand successfully the progress of those causes which have elevated one of these races and depressed the other. Such a monument of former successful exertion does not exist.

These remarks apply to the efforts which have been heretofore made and whose history and failure are known to us. But the subject has been lately revived with additional interest, and is now prosecuted with great zeal and exertion; whether with equal effect, time must show. That most of those engaged in this labor are actuated by pure and disinterested motives I do not question. And if in their estimate of success they place too high a value upon appearances, the error is natural to persons zealously engaged in a task calculated to enlist their sympathies and awaken their feelings, and has been common to all who have preceded them in this labor of philanthropy, and who, from time to time, have indulged in anticipations of the most signal success, only to be succeeded by disappointment and despondency.

That these exertions have recently been productive of some advantage may well be admitted. A few have probably been reclaimed from abandoned habits, and some, perhaps, have really appreciated the inestimable value of the doctrines which have been taught them. I can speak from personal observation only of the northern and northwestern tribes. Among them I am apprehensive the benefits will be found but few and temporary. Of the condition of the Cherokees, who are said to have made greater advances than any of their kindred race, I must judge from such information as I have been able to procure. Owing to the prevalence of slavery and other peculiar causes among them, a number of the half-breeds and their connexions, and perhaps a few others, have acquired property, and with it some education and information. But I believe the great mass of the tribe is living in ignorance and poverty, subject to the influence of the principal men, and submitting to a state of things with which they are dissatisfied, and which offers them no rational prospect of stability and improvement.

The failure which has attended the efforts heretofore made, and which will probably attend all conducted upon similar principles, may be attributed partly to the inherent difficulty of the undertaking, resulting from characteristics peculiar to the Indians, and partly from the mode in which the operations have been conducted.

Without entering into a question which opens a wide field for inquiry, it is sufficient to observe that our primitive people, as well in their habits and opinions as in their customs and pursuits, offer obstacles almost insurmountable to any considerable and immediate change. Indolent in his habits, the Indian is opposed to labor; improvident in his mode of life, he has little foresight in providing or care in preserving. Taught from infancy to reverence his own traditions and institutions, he is satisfied of their value, and dreads the anger of the Great Spirit if he should depart from the customs of his fathers. Devoted to the use of ardent spirits, he abandons himself to its indulgence without restraint. War and hunting are his only occupations. He can endure, without complaining, the extremity of human suffering, and if he cannot overcome the evils of his situation, he submits to them without repining. He attributes all the misfortunes of his race to the white man, and looks with suspicion upon the offers of assistance that are made to him. These traits of character, though not universal, are yet general; and the practical difficulty they present in changing the condition of such a people is to satisfy them of our sincerity and the value of the aid we offer; to hold out to them motives for exertion; to call into action some powerful feeling which shall counteract the tendency of previous impressions. It is under such circumstances, and with these difficulties in view, that the government has been called upon to determine what arrangements shall be made for the permanent establishment of the Indians. Shall they be advised to remain or remove? If the former, their fate is written in the annals of their race; if the latter, we may yet hope to see them renovated in character and condition by our example and instruction, and by their exertions.

But to accomplish this they must be first placed beyond the reach of our settlements, with such checks upon their disposition to hostilities as may be found necessary, and with such aid, moral, intellectual, and pecuniary, as may teach them the value of our improvements and the reality of our friendship. With these salutary precautions, much should be left to themselves to follow such occupations in the forest or the field as they may choose, without too much interference. Time and prosperity must be the great agents in their melioration. Nor have we any reason to doubt but that such a condition would be attended with its full share of happiness, nor that their exertions would be stimulated by the security of their position, and by the new prospects before them. By encouraging the severalty of soil, sufficient tracts might be assigned to all disposed to cultivate them; and by timely assistance the younger class might be brought to seek in their farms a less precarious subsistence than is furnished by the chase. Their physical comforts being increased, and the desire of acquisition brought into action, a moral stimulus would be felt by the youthful portion of the community. New wants would appear and new means of gratifying them; and the great work of improvement would thus commence, and commencing would go on.

To its aid the truths of religion, together with a knowledge of the simpler mechanic arts and the rudiments of science, should then be brought; but if our dependence be first placed upon these, we must fail, as all others have failed who have gone before us in this field of labor. And we have already fallen into this error of adapting our efforts to a state of society which is probably yet remote among the Indians, in withdrawing so many of the young men from their friends and educating them at our schools. They are there taught various branches of learning, and at some of these institutions a partial knowledge of the mechanic arts and of the principles of agriculture. But after this course of instruction is completed, what are these young men to do? If they remain among the whites they find themselves the members of a peculiar caste, and look round them in vain for employment and encouragement; if they return to their countrymen, their acquirements are useless: these are neither understood nor valued; and with the exception of a few articles of iron, which they procure from the traders, the common work of our mechanics is useless to them. I repeat, what is a young man who has been thus educated to do? He has no means of support, no instruments of agriculture, no domestic animals, no improved farm. Taken in early life from his own people, he is no hunter; he cannot find in the chase the means of support or exchange; and that under such circumstances he should abandon himself to a life of intemperance can scarcely excite our surprise, however it must our regret. I have been earnestly asked by these young men how they were to live; and I have felt that a satisfactory answer was beyond my reach. To the government only can they look for relief, and if this should be furnished, though in a moderate degree, they might still become useful and respectable; their example would be encouraging to others, and they would form the best instructors for their brethren.

The general details of a plan for the permanent establishment of the Indians west of the Mississippi, and for their proper security, would require much deliberation; but there are some fundamental principles obviously arising out of the nature of the subject which, when once adopted, would constitute the best foundation for our exertions and the hopes of the Indians.

1. A solemn declaration, similar to that already inserted in some of the treaties, that the country assigned to the Indians shall be theirs as long as they or their descendants may occupy it, and a corresponding determination that our settlements shall not spread over it; and every effort should be used to satisfy the Indians of our sincerity and of their security. Without this indispensable preliminary, and without full confidence on their part in our intentions, and in our abilities to give these effect, their change of position would bring no change of circumstances.

2. A determination to exclude all ardent spirits from their new country. This will no doubt be difficult; but a system of *surveillance* upon the borders, and of proper police and penalties, will do much towards the extermination of an evil which, where it exists to any considerable extent, is equally destructive of their present comfort and their future happiness.

3. The employment of an adequate force in their immediate vicinity, and a fixed determination to suppress, at all hazards, the slightest attempt at hostilities among themselves.

So long as a passion for war, fostered and encouraged as it is by their opinions and habits, is allowed free scope for exercise, it will prove the master spirit, controlling, if not absorbing, all other considerations. And if in checking this evil some examples should become necessary, they would be sacrifices to humanity and not to severity.

4. Encouragement to the severalty of property, and such provision for its security as their own regulations do not afford, and as may be necessary to its enjoyment.

5. Assistance to all who may require it in the opening of farms and in procuring domestic animals and instruments of agriculture.

6. Leaving them in the enjoyment of their peculiar institutions as far as may be compatible with their own safety and ours, and with the great objects of their prosperity and improvement.

7. The eventual employment of persons competent to instruct them as far and as fast as their progress may require, and in such manner as may be most useful to them.

Arrangements have been made upon fair and equitable terms with the Shawnee and Senecas of Lewistown, with the Shawnees of Wapaghkonetta, and with the Ottawas of Blanchard's Fork and the Maumee, all within the State of Ohio, for the cession of their reservations in that State, and for their migration to the region assigned for the permanent residence of the Indians. A similar arrangement was made with the Senecas in the early part of the year, and they are already upon their journey to their new country. A deputation from the Wyandots has gone to examine the district offered to them, and the general outlines of an arrangement for a cession have been agreed upon, to be formally executed, if the report of the exploring party should prove satisfactory.

It has been suggested that a considerable portion of the Cherokees in Georgia are desirous of availing themselves of the provisions of the treaty (May 6, 1828) for their removal. With a view to ascertain this fact, and to afford them the aid offered by that treaty, if they are inclined to accept it, a system of operations has been adopted, and persons appointed to carry it into effect. Sufficient time to form a judgment of the result of this measure has not yet elapsed.

But in all the efforts which may be made, the subject will be fully and fairly explained to the Indians, and they will be left to judge for themselves. The agents are prohibited from the exertion of any improper influence, but are directed to communicate to the Indians the views of the President, and his decided convictions that their speedy removal can only preserve them from the serious evils which environ them. It is to be hoped that they will accept this salutary advice, and proceed to join their countrymen in the district appropriated for their permanent residence.

If the seeds of improvement are sown among them, as many good men assert and believe, they will ripen into an abundant harvest, profitable to themselves in the enjoyment, and to all the members of this dispersed family in the example.

The details of an outrage committed by a party of Fox Indians upon a number of Menomonees at Prairie du Chien, while encamped under the protection of our flag, will be found in the report of the officer having charge of the Bureau of Indian Affairs. The alleged motive for this wanton aggression was some previous injury of a similar nature, stated to have been committed by the Menomonees upon the Fox Indians—a justification which can never be wanting where neither time nor treaties, as in this case, are permitted to cancel the offence.

This aggression, together with the difficulties at Rock Island with the Sac Indians, of which the same report furnishes the particulars, shows the necessity of employing upon the frontiers a corps of mounted men, to be stationed at the most exposed points, and to be always prepared to follow every party that may attempt to interrupt the peace of the border by attacking either our citizens or other Indians. These predatory bands strike a stroke and disappear. And there is in the institutions of the Indians such a strong tendency to war that we shall long be liable to these outrages. Military prowess and success form their principal road to distinction. And the interminable forests and prairies of the west offer them the means of shelter and escape. No infantry force can expect to overtake them; and if we are not provided with mounted troops who can prevent or punish these aggressions, we shall frequently be compelled to adopt measures more expensive and inconvenient to us, and more injurious to the Indians.

Very respectfully, sir, I have the honor to be your obedient servant,

LEWIS CASS.

The PRESIDENT *of the United States.*

REPORT OF THE MAJOR GENERAL FOR 1831.

HEADQUARTERS OF THE ARMY, *Washington, November*, 1831.

SIR: I have the honor to lay before you the following statements and returns:

1. A statement showing the organization of the army, marked A.

2. A return of the actual state of the army, marked B.

3. A return exhibiting the strength of the eastern department, designating the posts and garrisons, marked C.

4. A return exhibiting the strength of the western department, designating the posts and garrisons, marked D.

5. A general map of reference, exhibiting the relative situations of the military posts occupied by the troops, marked E.

6. A statement showing the number of recruits enlisted in the army from January 1 to September 30, 1831, marked F.

7. An estimate of the funds required for the recruiting service for the year 1832, marked G.

8. An estimate of the expenses of the headquarters of the army, including those of the office of the Adjutant General, for the year 1832, marked H.

9. A report on the subject of desertions, marked I.

During the year there have been some alterations made in the position of the troops and some movements.

The post of Chicago has been evacuated, and the garrison, consisting of two companies of the 5th regiment of infantry, removed to Fort Howard, Green Bay, relieving the four companies of the same regiment stationed at the latter post. The four companies of the 5th regiment thus relieved were marched to Fort Winnebago, at the portage of the Fox and Wisconsin rivers, and the garrison of that post ordered to the headquarters of the 1st regiment of infantry at the Prairie du Chien. This arrangement, while it strengthened the line between Green Bay and the Mississippi, along which the Indians had evinced among themselves a restless and quarrelsome disposition, it was also expected would have the effect of preventing them from proceeding to open hostilities, which were seriously threatened.

Pursuant to instructions from the War Department, the whole of the 7th regiment of infantry has been concentrated at Cantonment Gibson, on the Arkansas, and the 3d regiment of infantry has been ordered to occupy the posts on the Red river. A new post has been established on the latter river near the mouth of the Kiamichie, and garrisoned by four companies of the 3d regiment of infantry.

The positions of the 3d and 7th regiments are favorable to the affording of facilities to the Indians emigrating, under the provisions of the acts of Congress, to the country marked out for them west of the boundary of the Territory of Arkansas, and at the same time to the protection of them in their new abodes from the attacks of unfriendly tribes, and those wild hordes with whom they are as yet unacquainted. The troops there stationed will also, by their presence and force, exert a beneficial influence over the conduct of the various tribes, and be instrumental in maintaining harmony and peace among them.

In the month of June a communication was received from the commanding general of the western department, dated the 30th of May, stating that the Sac Indians, settled near Rock Island, on the Illinois side of the Mississippi river, who had for some years past been extremely restless and insolent, had recently become disorderly, and that he had learned from the governor of the State of Illinois that they had assumed the attitude of open hostility, and, as the governor conceived, had actually invaded the State; that the governor had ordered seven hundred mounted militia to be in readiness to march against those Indians; that a conference was had with the governor, which resulted in an understanding that the commanding general of the department should make an effort to repel the supposed invasion, and to remove the offenders to the right bank of the Mississippi, their proper residence; but that in the meantime the mounted men were not to be called out unless the general should find that the hostile band, sustained by any considerable number of the neighboring Indians, might render it necessary for him to avail himself of the assistance and co-operation offered by the governor of Illinois.

The general immediately after, as appears by subsequent reports, ordered six companies of infantry from Jefferson Barracks, with two six-pounders, with a supply of muskets and rifles and a suitable portion of ammunition, to embark on board a steamboat, and proceeded with them to Rock Island, at which place they arrived early in June; and on the 4th of that month he held a conference with the chiefs and warriors of the Sacs, who disavowed any intention of hostility, but expressed a determination to remain on the Rock River lands. The general notified them tha the would not permit them so to remain, and that they must move off as soon as practicable, as they held no right to the lands in question, having sold them to the United States. The general states that he was informed that the Sacs had invited their friends, the Prophet's band of Winnebagoes, with some Pottawatomies and Kickapoos, to join them, but that they were not so disposed; notwithstanding, conceiving it to be the safest course to be prepared against any emergency, he thought it most prudent to call for additional troops from Prairie du Chien, and for the Illinois mounted men. The Sacs having failed to obtain the assistance of the Winnebagoes and Pottawatomies, and having been abandoned by many of the friends of one of their principal chiefs, determined to listen to the advice of the commanding general, and entered into an agreement with him to abandon their position in Illinois and to recross the Mississippi, after which the general discharged the volunteers of Illinois, and ordered the regular troops to their respective stations.

Representations were made to the Department of War by the authorities of Louisiana that a disposition was manifested by the people of color in that State to revolt, and that the presence of a military force in New Orleans was, in their opinion, necessary to insure order and to allay the apprehensions of the inhabitants. The commanding officer of the troops at Baton Rouge was instructed to proceed to the city of New Orleans and confer with the governor of the State and the authorities of the city in reference to the subject, and to adopt such measures as would be proper and satisfactory. Orders were given to the troops at the contiguous posts to be held in readiness in case of necessity, and two companies of infantry were stationed in the city with an extra quantity of arms.

In the month of August a partial but sudden insurrection of the negroes in the county of Southampton, Virginia, took place, the intelligence of which being communicated by the mayor of Norfolk to the commandant of Fortress Monroe, a detachment of that garrison, consisting of three companies of artillery, under a field officer, was forthwith ordered to the seat of the disturbances, where they arrived in the course of twenty-four hours, a distance of sixty miles. The insurrection having been quelled the detachment returned to its quarters at Fortress Monroe.

On the application of the authorities of Newbern, in North Carolina, under the excitement which prevailed after the late disturbances in Southampton, a company was detailed from Fortress Monroe to guard that city and its vicinity, and to quiet the apprehensions of the citizens of that quarter generally. The necessity of their remaining any longer at that position having ceased, the company was ordered to Bellona arsenal, where it relieved the company of the first regiment of artillery, which had been long stationed there. The relieved company was ordered to Fortress Monroe.

During the excitement which prevailed in consequence of the disorderly conduct evinced by the colored population in the States of Delaware, Maryland, Virginia, and North Carolina, the garrison of Fortress Monroe was augmented by five companies, drawn from the northern posts on the seaboard, with a view of having at hand a disposable force to afford protection to such parts of the country as might

require it, that fortress being so situated as to possess all the requisite facilities for promptly entering into any part of the country where there was any probability that the presence of a military force might be necessary. The concentration of so large a portion of the artillery at Fortress Monroe afforded, at the same time, the advantage of practising their appropriate duties on an enlarged scale, that post being the established school of artillery.

During the year the troops have been inspected by the inspectors general.

The reports, as far as they have been received, represent the troops in an improving condition. It could not be expected that they could arrive at any great proficiency in general tactics in their present dispersed state, as scarcely a complete regiment has been together during the year, still the elements of instruction are not neglected, and a concentration of any considerable portion of the army would readily bring into practice a harmonious combination of movements according to the established system of tactics. The appearance of the troops under arms is creditable. They are well dressed, armed, and accoutred, neat in their persons, clean and comfortable in their quarters, and well supplied with everything allowed them by the goverment. Notwithstanding these favorable appearances, it is with regret that I have to report the continuance of desertion from the rank and file to an unusul extent. This evil can only be attributed to the great prosperity which pervades every class of our citizens. Although the soldier is well paid, fed, clothed, quartered, and treated with kindness by his officers, yet the apparent small amount paid to him in money, as allowed by law, does not offer sufficient inducement to the steady and active citizen to engage in the pubiic service in time of peace; but the unsteady and idle, and frequently the profligate, are willing, for the sake of the bounty in hand, to enlist, with a view of remaining until the first payment, and then desert, perhaps to practice again the same fraud on the government; and this they are induced to do from their knowledge of the fact that no adequate punishment awaits the crime of desertion in time of peace.

The only preventive to desertion that strikes me at this time is to offer, apparently, a larger sum a month for the service of a soldier; that is, instead of *five* dollars in money, and the clothing, rations, and other allowances which are made in hand, and which amount in all to about *fifteen* dollars a month, it would be better to make the pay of the soldier *fifteen* dollars in money a month, and supply him at the contract prices with clothing, rations, &c., and to deduct the cost of the articles so supplied out of the *fifteen* dollars; besides, to retain in hand a certain portion of his pay, say one-half, until the termination of his enlistment, when his accounts should be finally closed, and the difference paid him. By this arrangement it is to be expected that none but good and faithful men will enter the service—such as may intend to fulfil their engagements. The money in hand will be a guarantee to that effect, and will secure the government against loss in case of destruction of arms or other property intrusted to the soldier; and, moreover, the fines which may be imposed by the sentences of courts-martial for derelictions of duty will, according to our mild system of discipline, be probably the best mode of inflicting punishment. Independently of these advantages, by interesting the soldier in the careful use and proper application of the articles supplied him by the government, for which he knows he is to pay in cash, or otherwise to suffer a deduction from his pay to the amount of their value, it will induce to economy on his part, and, at the same time, interest him in the service; for a soldier cannot be expected under the present system, where he is supplied by the government with a regulated allowance, whether he require it or not, to possess the same inducements to economise. The bounty which is now offered to a recruit on his enlistment, and which probably has been the sole object of the worthless to grasp, might, with advantage, be deferred until the close of the period of his enlistment, when its payment will operate as a reward for faithful services.

In connexion with this subject, and with a view to the improvement of the condition of the non-commissioned officers, on whose exertions the discipline and well-being of the rank and file in a great measure depend, I would urge, as a matter of great importance, an augmentation of the pay of the sergeants and corporals, and a distinction, as regards pay, in favor of the first sergeants of companies, on whom the details of duty devolve, and whose responsibility is greater than that of the other non-commissioned officers.

The order abolishing the whiskey ration has been in operation since December last, and has, in a degree, fulfilled the favorable anticipations which were indulged in relation to its results. It now only remains, in order to accomplish what has been so much desired in reference to the health and moral condition of the army, to prohibit entirely the sale of ardent spirits to the troops.

The various movements made by the troops during the present year have tested, to a certain extent, the state of their discipline, as well as their capacity for active service, and, at the same time, have afforded to the several staff departments a practical application of their respective functions. The promptitude and regularity observed in the execution of their instructions have furnished, both on the part of the line and the staff, satisfactory evidences of their efficiency.

I have the honor to be, very respectfully, sir, your most obedient servant,

ALEX. MACOMB, *Major General Commanding the Army.*

The Hon. Secretary of War.

A.

At ordnance depots		9
In the detachment of orderlies, Washington		8
Total number enlisted		1,511

Amount of funds advanced from the 1st of January to the 30th of September, 1831	$25,335 54
Amount of the above accounted for within the same period	22,149 97
Balance in the hands of recruiting officers on the 30th of September last	3,185 57

Respectfully submitted.

R. JONES, *Adjutant General.*

Major General MACOMB, *Commander-in-Chief United States Army.*

I.

ADJUTANT GENERAL'S OFFICE, *Washington, November* 30, 1831.

SIR: The information you have requested me to furnish on the subject of desertions is herewith respectfully submitted in the tables hereunto annexed.

TABLE No. 1.

Statement of the annual number of desertions from the army since the year 1823, specifying the number of soldiers who have deserted after joining companies, and the year of enlistment in which the desertion may have occurred; the number of recruits who have deserted from the rendezvous, or on their march to join their regiments; and also the probable amount of the annual loss in money in consequence of the crime of desertion.

Year.	No. of recruits who deserted from the rendezvous, or before joining companies.	Number and period of desertions after joining companies.							Total number of enlistments	Estimated loss in money by desertion.		
		First year of enlistment.	Second year of enlistment.	Third year of enlistment.	Fourth year of enlistment.	Fifth year of enlistment.	Total from companies.	Aggregate number of desertions, exclusive of convicts.		By recruits from rendezvous.	By soldiers from companies.	Total loss in money.
1823	159	366	75	36	18	14	509	668	2,664	$7,506	$51,171	$58,677
1824	208	432	86	43	22	20	603	811	2,539	9,960	60,435	70,395
1825	249	402	76	41	20	15	554	803	1,731	11,550	55,938	67,488
1826	179	330	66	32	16	13	457	636	1,277	8,354	46,039	54,393
1827	187	303	125	120	72	41	661	848	1,416	8,754	52,590	61,344
1828	176	343	113	71	70	47	644	820	2,054	8,264	54,873	63,137
1829	185	618	172	60	43	37	930	1,115	2,907	8,742	89,603	98,345
1830	188	577	310	98	43	35	1,063	1,251	1,849	8,880	93,207	102,087
	1,531	3,371	1,023	501	304	222	5,421	6,952	16,437	72,010	503,856	575,866
1831	.....	.....	.....	.....	.....	.....	1,225	1,450	.....	10,910	107,411	[o]118,321

[o] Probably.

The foregoing analysis contains all the information called for on this important subject, except so much as is embraced in the fourth interrogatory, to wit: "*If the sum lost by desertion were divided among the soldiers, what would it give to each?*"

To exhibit this result analytically and in the most perspicuous manner, I submit two other tables:

TABLE No. 2.

Monthly and annual allowance of pay to non-commissioned officers and privates under existing laws.

	Rate of monthly pay of each class.	Aggreg'te monthly pay of each class.	Annual amount of each class.
11 sergeant majors	$9 00	$99 00	$1,188 00
11 quartermaster sergeants	9 00	99 00	1,188 00
354 sergeants	8 00	2,832 00	33,984 00
424 corporals	7 00	2,968 00	35,616 00
14 principal musicians	8 00	112 00	1,344 00
212 musicians	6 00	1,272 00	15,264 00
108 artificers	10 00	1,080 00	12,960 00
4,452 privates	5 00	22,260 00	267,120 00
Total	62 00	30,722 00	368,664 00

TABLE No. 3.

Supposed application of the sum annually lost by desertion to the monthly and annual increase of pay of the rank and file of the army.

	Rate of monthly pay of each class.	Aggreg'te monthly pay of each class.	Annual amount of each class.
11 sergeant majors	$18 00	$198 00	$2,376 00
11 quartermaster sergeants	18 00	198 00	2,376 00
106 first sergeants	15 00	1,590 00	19,080 00
248 sergeants	12 00	2,976 00	35,712 00
424 corporals	8 00	3,392 00	40,704 00
14 principal musicians	18 00	252 00	3,024 00
212 musicians	7 00	1,484 00	17,808 00
108 artificers	10 00	1,080 00	12,960 00
4,452 privates	6 00	26,712 00	320,544 00
Total amount of proposed pay	112 00	37,882 00	454,584 00
Total amount of pay under existing laws	62 00	30,722 00	368,664 00
Difference	50 00	7,160 00	85,920 00

Remarks.

On referring to table No. 1 it will be seen that the aggregate amount lost by *desertion* for the eight years, inclusive of December 31, 1830, amounts to the sum of $575,866; that the loss in 1829 is $98,345, and in 1830, $102,087. It may be also seen that the average loss by desertion for the last two years is rather upwards of $100,000; the loss during the present year (1831) will considerably exceed any previous year.

If $85,920 of the average annual amount lost by desertion were distributed to the enlisted men of the army by way of additional *pay*, (see table No. 3,) it would be an annual expenditure *less* by $15,000 than the sum now annually lost to the government by desertion. I respectfully refer you to my report on this subject of January 25, 1830, (Doc. No. 62, H. of R., page 9,) and also to another report from this office, addressed to you, of January 25, 1831.

If the sum lost by desertion in 1830 ($102,087) be divided among the non-commissioned officers and privates of the army, (5,642,) it will give to each $1 50 per month, or $18 *per annum*.

The average loss by each desertion for the year 1830 is estimated to be $81 60.

I am, sir, very respectfully, your obedient servant,

R. JONES, *Adjutant General.*

Major General ALEXANDER MACOMB, *Commanding United States Army.*

REPORT OF THE CHIEF ENGINEER.

ENGINEER DEPARTMENT, *Washington, November* 4, 1831.

SIR: Agreeably to your instructions I have the honor to submit a report of the operations of this department during the year ending on the 30th ultimo, accompanied by the fiscal statements required by your letter of the 20th of August last.

1. FORTIFICATIONS.

The construction of the following works has been continued during the past year:

1. *Fort Adams, Newport, Rhode Island.*—The operations on this fort have been continued in the active and efficient manner which has heretofore reflected so much credit on the officer charged with the superintendence of them, and as great an advance has been made towards their completion as the means afforded would admit of. The supplies of materials have been abundant, and the contractors have (with a single exception, from which no injury has resulted) complied with their engagements.

2. *Fort Hamilton, Narrows, New York.*—As anticipated in my last report, this fort has been completed. An inspection of it was made, as required by the regulations, by officers of the corps of engineers, whose report bestows unqualified praise on the manner in which the work has been executed They recommend some additional work, principally with a view of preparing it immediately to receive its armament, for which purpose a provision is proposed in the estimate for next year.

3. *Fort Lafayette, Narrows, New York,* has been thoroughly repaired, and the report of the officers who inspected this work as well as the preceding, states that "the repairs have been applied with judgment, skill, and effect, the materials and the style of execution indicating the same careful supervision which has produced so fine a result at Fort Hamilton."

4. *Governor's island, New York.*—An appropriation was made this year for repairing the fortifications on this island, but in consequence of the arrangements necessary for removing the garrison, nothing has been done except to obtain some materials and machinery.

5. *Fort Monroe, Hampton Roads, Virginia.*—The operations on this work during the past year have been directed to the formation of the ramparts, the excavation of the ditch, and embankment of the glacis; the construction of a counterscarp wall, requisite for the protection of a part of the ditch which is liable to be filled by the encroachment of the tides in Mill creek, the pointing of the masonry, and fitting up of the casemates of the fort for occupancy Materials have also been purchased for completing the advanced water battery on the eastern side of the fort.

6. *Fort Calhoun, Hampton Roads, Va.*—When the walls and piers of this fort had been carried up to the level of the second battery it was found that the additional weight caused a subsidence of the foundations, which made it prudent to suspend the construction of the masonry and confine the operations of the past year to the reception of materials, which have been so distributed as to equalize the pressure on the bottom as much as possible and produce a uniform settling; as this still continues, it is judged best to pursue the same course next year, and to continue it until a weight of materials equal to that which the foundations must finally bear shall have been accumulated on them, after which the construction may with safety be completed.

7. *Fort Macon, Beaufort, North Carolina.*—The operations on this work have been satisfactorily continued during the past year, and there is every reason to expect that they will be completed in 1832. It is found that the encroachments of the sea threaten the safety of the fort, and require the immediate adoption of measures to arrest their further progress; this is the principal object to which the funds applied for in my estimate are to be devoted.

8. *Fort at Oak island, Cape Fear river, North Carolina.*—This fort will also be completed next year, the unfinished work being chiefly a portion of the exterior embankment, the construction of traverses for the guns, of furnaces for heating shot, of a lock to command the water in the ditch, and of drawbridges, doors, and gates.

9. *Fortifications at Charleston, South Carolina.*—The vicinity of Charleston affording no supplies of stone, the material used in forming the foundations of the fort projected to occupy a shoal opposite to Fort Moultrie, it has been necessary to procure that material from a distance, and a contract was made for the delivery of 30,000 tons of stone. The contractor has, however, failed to comply with his engagements, and the active and more profitable employment of coasting vessels in other trade has prevented the superintending engineer from effecting satisfactory arrangements to obtain stone from other quarters without too great an advance of price. In consequence of these circumstances only 7,000 tons of stone

have been added to the pile during the past year. It is therefore recommended that the privilege granted to the contractor, of continuing the deliveries under his contract, be rescinded, and the superintending engineer left untrammelled in adopting the necessary measures for obtaining adequate supplies. The pile, so far as formed, appears to have the requisite stability.

Castle Pinckney, near the city of Charleston, has been thoroughly repaired, and is ready to receive a garrison. Measures are also in progress to check the encroachments of the sea on the site of Fort Moultrie, an important position in the defence of this harbor.

10. *Fortifications at Savannah, Georgia.*—But little progress has been made since my last report in the construction of the fort on Cockspur island, the operations having been as yet confined to making the preliminary arrangements and excavating for the foundations. In the course of these excavations it became evident that the plan first projected was not adapted to the nature of the site, and it was therefore necessary to suspend the work until a new project could be prepared, which has been done, and the work will be immediately resumed.

11. *Fortifications at Pensacola, Florida.*—The judicious arrangements for supplies and for workmanship, made by the superintending engineer at Pensacola harbor, combined with the advantages of a mild climate and healthful position, have effected so great a progress in the construction of the fort on Santa Rosa island that it might be completed during the next year. The local engineer's estimate of $150,500 for the prosecution of the work is accordingly based on its completion, as the funds may be much more economically and advantageously applied in one season than by being divided between two several appropriations.

With the same view of consulting economy and securing on the best terms the services of the manufacturers of bricks, and of other persons who have been induced to establish themselves in the vicinity of the works, and whose establishments will probably be broken up and their force dispersed on the suspension of the operations, it is proposed to make arrangements for procuring materials to commence the other fortifications requisite for the defence of Pensacola harbor, and an estimate for the necessary funds will be submitted in time to be laid before Congress, if it should be thought proper, at the next session.

12. *Fort at Mobile Point, Alabama.*—Satisfactory progress has been made towards the completion of this fort, which will likewise be accomplished next year, should the means be afforded, agreeably to the estimate of the local engineer, which has been submitted, amounting to $128,000. The difficulty and cost of making the embankments of the rampart are very much enhanced by the sandy nature of the site, which causes the necessity of covering the embankments with clay in order to secure them from the action of the winds.

13. *Fort Jackson, Plaquemine Bend, Louisiana*, has been completed, and is occupied by a garrison. Some slight injuries have been caused by recent floods, orders for the repairs of which have been given.

The repairs of Fort Wood and of the battery at Bayou Bienvenue, Louisiana, for which small appropriations were made at the last session of Congress, will be attended to during the ensuing winter; at which time will also be constructed a battery in advance of the tower at Bayou Dupré that will aid in securing the tower against inundations, by which it has already received some injury.

The wall and embankment designed to preserve the Peapatch island (the site of Fort Delaware) have been completed. Their cost has exceeded the amount of the appropriation by the sum of about $2,000, included in my estimate for next year.

The appropriation of this year for a breakwater to preserve George's island, in Boston harbor, (the site of a projected fort of the first importance,) being found insufficient to complete the object, an additional sum is required also for this purpose, as shown by the general estimate.

The condition of Fort Independence, in Boston harbor, and of the island on which it is situated, is such as to require repair, for which purpose an estimate is therefore presented.

The funds drawn from the appropriation for contingencies of fortifications have been applied chiefly to repairs at Fort Delaware, Fort McHenry, Fort Washington, Fort Moultrie, Fort Wood, and to the construction of cisterns and of a road at Fort Monroe, necessary to keep up the communication with the main land.

Since the date of my last annual report the woodwork about Fort Delaware has been consumed by fire, and very extensive injury thereby caused to the other parts of the work. An inspection has been made by a board of officers of the corps of engineers, whose report, hereto annexed, recommends rebuilding the whole work; concurring in this recommendation, I shall have the honor to submit an estimate for that purpose. Should an appropriation be made, it is thought that such modifications of the plan may be effected, without impairing the efficiency of the work, as to reduce the cost of its reconstruction below that of rebuilding it on the present plan.

The approaching completion of several of the fortifications above mentioned renders it expedient to provide for the continuing the system of defence by commencing new works; and, with that view, it is suggested that appropriations be recommended for commencing the forts projected for Throg's Point, New York; Sollers's Point flats, Maryland; Bald Head, North Carolina; and Grand Terre, Louisiana, in addition to the new work in Pensacola harbor above alluded to. Estimates of the sums that will be required for each of these objects shall be duly submitted.

I cannot conclude this part of my report without representing to you the expediency of suggesting the benefits which would result from the appropriations for fortifications being made at an early period of the session of Congress. If even partial appropriations could be obtained at the commencement of the year much time, and consequently expense, would be saved to the United States. In northern latitudes, where the severity of the winters shortens the period for active operations, the engineer should know what means are to be placed at his disposal, in order that during the unavoidable suspension of work he may be able to make all his arrangements for its prosecution as soon as the season opens. And in the south funds cannot, under present circumstances, be obtained during the best season for work, but must be applied chiefly in the summer, when even in healthful situations the same degree of activity is seldom attainable.

2. INTERNAL IMPROVEMENTS.

Under this head I have to report the progress of operations at the following places, viz:

1. *La Plaisance bay, Michigan.*—The piers for protecting this bay were completed in 1829, but those built by contract in 1828, and not faithfully executed, have been so much injured by a storm about the 4th of October as to require repairs, for which an estimate has accordingly been presented.

2. *Huron river, Ohio.*—The extension of the eastern pier, for which an appropriation was made this year, has been effected, and a sufficient depth of water thereby insured. The estimate for next year is intended to be applied to the repair of a part of this pier, which was built before the work was taken in charge by the United States.

3. *Black river, Ohio.*—The construction of 100 yards of pier work will complete the proposed plan for improving the channel of entrance into this river, which has already a depth of 8 feet.

4. *Cleveland harbor, Ohio.*—The effect of the works for improving the entrance of Cuyahoga river has been in the highest degree satisfactory, the channel having a depth of not less than 10 feet. Its great importance and usefulness fully justify the expenditure already made, as well as that proposed for completing the work by strengthening the dam across the former outlet of the river, and removing a small spit of sand which projects into it at its junction with the artificial channel. At the request of the Secretary of the Treasury a beacon has been constructed on the east pier, under the direction of this department.

5. *Grand river, Ohio.*—All that remains to be done at the piers at the mouth of this river is to raise a part of one of them which has settled, and to complete the beacon commenced at the request of the Treasury Department.

6. *Cunningham creek, Ohio.*—Nothing has been done to the pier at this point during the past year, in consequence of the failure to obtain an appropriation for constructing a pier-head, the estimate for which is now repeated.

7. *Ashtabula creek, Ohio.*—The piers at this place have been completed, and further operations will be confined to dredging the channel, a work now in progress.

8. *Conneaut creek, Ohio.*—The depth of water at the mouth of this creek has continued to increase with the extension of the piers, and is now 8 feet.

9. *Presque Isle, Pennsylvania.*—The funds appropriated at the last session of Congress have been well applied to the repairs of the piers at the entrance of this harbor, but a further sum is required for that object, as stated in my estimate. The appropriation for constructing a beacon on one of the piers has also been applied, under the direction of this department, and the object accomplished at a cost, however, a little exceeding the sum appropriated.

10. *Dunkirk harbor, New York.*—Under the appropriation made at the last session of Congress a new pier for the protection of this harbor was commenced and extended 280 yards. An estimate for its completion has been presented.

11. *Buffalo, New York.*—The funds available for the works at this harbor during the present year have been applied to the extension and security of the southern pier and to the construction of a foundation for a light-house at its extremity. The raising of the tower has been deferred to give time for the foundation to settle.

12. *Black Rock, New York.*—No appropriation having been made for continuing the works in this harbor, nothing has been done to them this year; and the protection afforded by them in the state in which they were left being imperfect, a part of the mole on Bird island, at the head of the harbor, has been overthrown. An estimate for its repair and completion is presented.

With regard to the above-mentioned works, which are all on Lake Erie, I have to remark that the estimates which have been submitted to you are intended to cover the expense of completing all that is now proposed to be done at the several harbors, and that I do not anticipate the necessity of asking for any further appropriations for those objects. It is confidently believed that the benefits conferred by these artificial harbors on the navigating interests of the lake have been more than commensurate with the expense of their construction.

13. *Genesee river, New York.*—Very satisfactory progress has been made during the past year in the execution of the plan adopted for improving the entrance into this river. About 150 yards have been added to the piers, which now extend to the distance of 403 yards from the shore, being about three-fifths of the proposed extent. Measures have also been taken to secure them against the effects of storms and ice, which they have heretofore withstood in safety. The artificial channel continues to deepen

14. *Big Sodus bay, New York.*—The piers designed to form a safe harbor at this point have been extended about 400 yards, the eastern pier being now 556 yards long, and the western 620 yards. These works have produced no effect in deepening the channel, nor was it expected that they would do so, the bottom of the lake at this place being so hard as to make an artificial excavation necessary, a circumstance which at the same time gives assurance of a permanent benefit when the operations shall have been completed.

15. *Oswego, New York.*—The piers for protecting this harbor have been built by contract, which was completed this year. A pier-head and mole of stone for their security have also been constructed. It is thought that the safety of the navigation requires that the piers should be raised somewhat higher; and believing that the great importance of the harbor to the navigation of Lake Ontario, and to the interior commerce of New York, justifies the additional expenditure proposed, I have submitted an estimate accordingly.

16. *Kennebec river, at Lovejoy's Narrows, Maine.*—A very considerable rise of water in this river has prevented the contractor from fulfilling his engagement to remove the obstructions to its navigation during the season which has just past; and the time for accomplishing the work has therefore been extended, from which it is believed no other injury than the unavoidable delay will result. The unexpended balance of appropriation for this object would be sufficient to complete it, but a portion of the funds, having been appropriated more than two years, has been passed to the surplus fund, and a reappropriation of the amount stated in my estimate is therefore required.

17. *Piers at the mouth of Kennebunk river, Maine.*—The new piers at this place have had the desired effect of protecting the channel of entrance into the river. Some additional work is required for the greater security and permanency of this object, by repairing a pier built by the United States many years ago.

18. *Berwick branch of Piscataqua river, Maine.*—The death of the agent who has heretofore so well directed the work for deepening the channel of this river at the Quamplegan rapids caused a temporary suspension of the operations, and the approach of cold weather impeding the work in the water makes it necessary to defer until the next year the little which remains to be done for completing the work.

19. *Merrimack river, Massachusetts.*—The pier which has been constructed for the purpose of deepening the channel at the mouth of this river by directing a greater body of water into it, and which was undermined in the first instance, has been repaired and strengthened, and it is confidently expected that the desired effect will be produced by the contemplated works when completed. Before extending the work

any further, time will be allowed to test the strength of the part already executed in resisting the storms to which it is liable.

20. *Deer island, Boston harbor, Massachusetts.*—Owing to the very exposed situation of this island, which forms the outer barrier to the harbor of Boston, great difficulty has been experienced in constructing a wall sufficiently strong to protect it from the effect of storms; and the operations of the past year have been chiefly confined to the repair of injuries sustained last winter, and much remains yet to be done to secure the proposed object.

21. *Plymouth beach, Massachusetts.*—The fascine work, and the planting of grass for the preservation of this beach, have been in constant progress, as dictated by the circumstances of the case. The beneficial effects of what has been done can be fully shown and secured only by the lapse of time, and by constant attention to the repairs of the work, which now affords a perfect shelter to the harbor.

22. *Provincetown harbor, Massachusetts.*—The agents to whom the operations for preserving this harbor were confided have continued to give great satisfaction by their activity and attention. Colonel Totten, the inspecting engineer, stated in May last that the complete success of what had been done satisfied him of the expediency of pursuing the operation until the naked sands above high water shall be covered with grass. "A pressing necessity," he adds, "is found in the otherwise certain ruin of a most valuable harbor." An estimate is therefore presented of the further prosecution of the work.

23. *Hyannis harbor, Massachusetts.*—During the year ending the 30th September there have been added to the breakwater designed to protect this harbor about 9,000 tons of stone, and the length of the mole is now 552 feet. A further extension of both its length and breadth is yet requisite, and is considered to be justified by the benefit derived from the part already constructed.

24. *Nantucket harbor, Massachusetts.*—A full report of the condition, on the 30th September last, of the work for deepening the channel into this harbor has not yet been received. With such interruptions as are unavoidable for repairing machinery, and on account of the weather, the dredging machine has been kept in operation during the season, and the prospect of a permanent improvement continues to be flattering.

25. *Stonington harbor, Connecticut.*—The work on the breakwater for the protection of this harbor has been judiciously and successfully continued, and will probably be completed this month, there being sufficient funds on hand for that purpose.

26. *Mill river, Connecticut.*—As anticipated in my last report, the work for improving this harbor has been completed.

27. *Harbors of Newcastle, Marcus Hook, Chester, and Port Penn, Delaware river.*—The operations for improving these harbors have been confined, during the past year, to working a dredging machine for deepening them, as contemplated in my report of last year. For want of a report from the local engineer, I am unable to state the exact condition of these harbors on the 30th September.

28. *Ocracoke inlet, North Carolina.*—The dredging machinery designed to improve the channel of this inlet has been applied to that object, on the part called the Flounderslue, during all the favorable weather since the beginning of August, 1830, and about 10,600 cubic yards have been excavated. The engineer reports that, so far as a conclusion may be drawn from observation during so short a period, it is in favor of the final success of the experiment. It is found that, in consequence of the exposed situation of the place of operations, not more than about 150 working days in a year can be counted on, and, at the present rate, ten years would be required to complete the proposed excavation. In order to afford in this case an opportunity of making as fair an experiment as practicable, it is intended to apply another dredging machine of greater power in aid of the one now employed, and its construction is in a state of forwardness, an appropriation for the purpose having been made at the last session of Congress.

29. *Cape Fear river, North Carolina.*—The operations for improving the navigation of this river below the town of Wilmington have been confined, during the past year, to the repair of injuries sustained by the jettees from the effects of a gale last August, and to the working of a dredging machine, which has been employed with success in deepening the channel on the Bulkhead shoal.

30. *St. Mark's river and harbor, Florida.*—The removal of logs and trees from the channel and shores of this river has been continued this year, though at some disadvantage, from the prevalence of sickness among the laborers. The operations for deepening Pass au Heron, in Alabama, having been suspended in consequence of the balance of appropriation passing to the surplus fund, the dredging machine employed there has been transferred to the harbor of St. Mark's, but was not received in time to be put in operation before the 30th of September last.

31. *Apalachicola river, Florida.*—An experiment was made this year to improve the navigation of this river, by cutting off the points forming some of the most difficult bends, with the expectation that the water would thus find a new and more direct channel; but the experiment was not successful, and further operations will be confined to the removal of obstructions, formed by trees and drift wood, from the present bed of the river.

32. *Harbor of Mobile, Alabama.*—The engagements of the contractor for deepening the channel through Choctaw Pass, in this harbor, have not been complied with; and although considerable excavations have been made, yet, as the depth does not correspond with that required by the contract, no payments have become due. An entire suspension of the work was caused by the sinking of the dredging boat, in a gale, last August. It is proposed to annul the present contract, and to adopt measures for carrying on the work more efficiently hereafter.

33. *Pass au Heron, Alabama.*—The balance of appropriations for deepening this Pass, which remained in the treasury on the first of this year, having been passed to the surplus fund, the operations have been entirely suspended this year, and the machinery transferred, as above stated, to the harbor of St. Mark's.

34. *Pascagoula river Mississippi.*—For a similar reason to that just mentioned with regard to Pass au Heron, the work at this point has likewise been suspended, and the machinery laid up for use in case of a reappropriation being made, for which an estimate has been presented.

35. *Red river, Louisiana.*—On this river, also, the work in progress for improving its navigation, about the Great Raft, has been suspended in consequence of the balance of appropriation having passed to the surplus fund. Previously to the suspension of operations, the improvement of about fifty miles in extent had been effected, and it is believed that great benefit will result from a continuance of the work, for which an estimate has therefore been made.

36. *Mississippi and Ohio rivers.*—In order to give a full view of the progress of the important operations for improving the navigation of these rivers, I subjoin a copy of the superintendent's report for the year ending the 30th September. On the 9th of that month the inspecting engineer, appointed under an act of the last session of Congress, reports: "Thus far Captain Shreve's views and my own fully

coincide, leaving no room to exercise the authority of the law for suspending the operation of any work, or payment of any account."

37. *Cumberland road, in Ohio.*—The progress made in the construction of this road since my last report has not been satisfactory, the operations having been confined to those parts previously contracted for, viz: twenty-six miles west of Zanesville, and fourteen miles west of Columbus. The delay in forming new contracts has been chiefly owing to the deference paid to the wishes of some residents near the adopted route, who desired that the construction of the road might be deferred until measures could be taken to procure the substitution of what they considered a more eligible location. In pursuance, however, of your instructions, orders were given to the superintendent in August last to contract for the prosecution of the work between Zanesville and Columbus to the extent which the actual means would allow, and arrangements for that purpose have accordingly been made.

A conditional agreement was entered into last spring for the purchase of the toll-bridge over the Scioto river, provided the measure should receive the sanction of Congress, with which view an estimate of the cost has been submitted to you.

38. *Cumberland road, in Indiana.*—The construction of this part of the Cumberland road was, previously to the present year, directed,agreeably to the act of 2d March, 1829, by two superintendents acting jointly. Under their superintendence the road was opened, and the trees removed from the whole line within the State, and subsequently contracts were made for grading and bridging fifteen miles east of Indianapolis, and eleven miles west of that place. Under the act of the last session of Congress, for continuing this road, the duties of the superintendents were divided, and the portions east and west of Indianapolis assigned to each of them, independently of the other. Since this separation of their duties, contracts have been made for grading and bridging ten additional miles east of Indianapolis, and twelve west, at an average cost of about $3,000 a mile, exclusive of a bridge over White river; the construction of which is specially provided for by the act of the last session, and which will cost about $19,000. These contracts are to be completed by the first of next July.

39. *Cumberland road, in Illinois, east of Vandalia.*—The operations of this road have been managed by the superintendent in a manner entirely satisfactory to the department. The contracts for opening and grubbing the road between Vandalia and the east boundary of the State have been completed, and new ones entered into for the construction of 16 of the principal bridges, 110 culverts, and some parts of the grading, which work is to be finished by the first of June next. It is proposed to contract next year for the construction of the remaining bridges, and for the grading of such parts as most require it, in order to make the road useful as soon as practicable.

It is proper to call your attention here to the fact that, although experimental surveys have been made with a view to selecting a route for the continuation of this road beyond Vandalia, its location is established only to that point; and is deferred for a decision of the question which has been submitted to Congress, as to the point of crossing the Mississippi river.

40. *Road from Detroit to Chicago, Michigan.*—The work contracted for last year, to complete this road as far as the 87th mile from Detroit, has, with some small exceptions, been accomplished; and contracts have been made for the construction of 18¼ additional miles, to be finished by the beginning of next May.

41. *Road from Detroit to Saginaw, Michigan.*—The contracts made for this road provide for its continuation to the distance of 47¼ miles from Detroit; of which 27 miles are completed, and the remainder in fair progress.

42. *Road from Detroit to Fort Gratiot.*—This road has been completed about the same distance as the preceding, viz: 26 miles from Detroit, and contracts made for its continuation as far as the first quarter of the thirty-ninth mile. At this point it was thought advisable to suspend the operations for a short time, in order to have a survey made of a route which the superintendent thought would prove more eligible than the adopted one—an anticipation which is confirmed by the result of the survey; and it is therefore recommended that authority of law to make the proposed change of location be requested. The construction of the road on the new route will be attended with less expense, and will open access to a finer country than that bordering on the adopted route.

3. SURVEYS.

The Topographical bureau of this department having been established as a distinct bureau of the War Department, in pursuance of a regulation dated the 21st June, 1831, the direction of the surveys previously assigned to this department has been transferred to the Topographical bureau. Presuming that a report from that bureau will state the progress made on them during the year, it is thought unnecessary to detail what had been done with regard to them before the transfer took place.

4. BOARD OF ENGINEERS.

The only business which has been before the board of engineers, for fortifications, since the date of my last report, is the revision of the project for the defence of Savannah river, before alluded to under the head of "fortifications."

In pursuance of an act of Congress of the 12th of February, 1831, the board of internal improvements made some modifications in the plan for improving the navigation of the Tennessee river at the Muscle shoals. The amended plan was approved by the President of the United States, and duly transmitted to the board of commissioners of the State of Alabama.

5. MILITARY ACADEMY.

The report of the board of visitors who attended the last general examination (which is hereto annexed) gives the most satisfactory assurances that this institution continues to prosper under the excellent guidance of the officer who has so long and so ably superintended it. The report is confirmed by my own observation during my visits as inspector of the academy. The number of cadets graduated within the year ending 30th September, 1831, is 33, and the number attached to the academy at the close of that year was 254. No exertion is spared to perfect its details and extend its usefulness as far as its present organization and the means afforded by government will admit, but some modifications by which the system may be materially improved can be introduced only by the aid and authority of legislative enactment. Many, if not all, of these modifications have been repeatedly and earnestly recommended in

the reports of the boards of visitors. Those which are considered most urgent are the establishment of a professorship of chemistry, and the regulation of the pay of the professors and teachers in such a manner as to insure greater permanence in the corps of instructors. The character and extent of the proposed changes are fully shown in my report to the Secretary of War, which is printed with the documents accompanying the President's message in 1829. Valuable additions have been gradually made to the collection of models and apparatus belonging to the academy, especially to that of the department of philosophy, so essential for proper instruction in all the branches of experimental philosophy and in practical astronomy. Much, however, remains to be done to perfect this collection of instruments and apparatus, for the preservation and useful application of which it is of the first importance that a proper building be provided.

The philosophical apparatus is now crowded into a small room, which is also necessarily used as a recitation room, and one valuable instrument (a large telescope) has to be kept in a temporary wooden shed.

The construction of a suitable place for divine worship—with which may be combined a fire-proof room for the reception and preservation of a valuable and increasing library—ought also to receive early attention, as, likewise, that of a gymnasium or building for military and athletic exercises during the winter season.

6. OFFICE OF THE CHIEF ENGINEER.

The change that was made by the regulation adopted by the War Department in June last, by which the Topographical bureau was established as a distinct bureau of the War Department, renders necessary some corresponding changes in the regulations of this department, by which its duties may be more distinctly defined, and means provided for the execution of such of them as were formerly discharged through the medium of the Topographical bureau.

The regulations of this department, including those of the Military Academy, will be duly submitted, with such modifications as it is thought expedient to recommend for your approval and the sanction of the President.

I take occasion to recommend to your favorable notice a measure which is called for by the wants of this department, and which has been approved by your predecessors for many years past. I allude to the proposed increase of the corps of engineers. The reasons for the measure it is not deemed necessary to recapitulate at this time, as they are to be found in several of the printed reports to Congress, and are embodied in general terms in the report to the House of Representatives, made by the Secretary of War in January last, to which I respectfully refer.

To facilitate the transaction of business in this office, and diminish its contingent expenses, I would also suggest that a provision be recommended for obtaining the franking privilege for the Chief Engineer.

The lithographic press of the War Department, which is placed under charge of this office, has been used in preparing copies of such drawings and circulars as have been required for the use of the several bureaus. I do not, however, consider its present utility commensurate with its expense.

Statements A and B (annexed) exhibit the condition of the fiscal concerns of the Engineer department, and statement C shows the fortifications remaining to be constructed to complete the system of defence as now projected.

All of which is respectfully submitted.

C. GRATIOT, *Brigadier General, Chief Engineer.*

Hon. LEWIS CASS, *Secretary of War.*

REPORT ON THE SUBJECT OF FORT DELAWARE.

SEPTEMBER 8, 1831.

SIR: Under your instructions of the 16th of May, that we should make "an inspection and survey of Fort Delaware, with a view to ascertain the expediency and best mode of repairing it," we have made the necessary examination, and have now the honor to submit the following report:

In order the better to understand the extent to which the fort was subjected to the action of fire, it is proper to state that the platform of the second tier of guns was of three-inch planks, resting on joists twelve inches by six inches, separated some inches from each other. These joists were supported by large girders. The platform extended inward about six feet further than the rear of the casemates, and on this extension was found a gallery running round the whole interior of the work. Perhaps about half the casemate rooms of this tier were fitted for barracks, quarters, &c. Most of the timbers and planks were of southern pine, rich in turpentine. Here was, therefore, a vast amount of combustible matter, which, being inflamed, would act upon the walls, piers, and arches as upon the walls and arch of an oven. The rush of cold air into the large rear opening of the casemate would cause the flame to follow with eagerness all such smaller issues through the exterior walls, as the flues of the embrasures. The piers were enveloped in flame, and the scarp was exposed on the inner side to its full action and to the passage of flame (by the openings just mentioned) through its heart. The soffit of the arch was the reverberating surface of the oven.

The platform of the third tier was of wood, (planks and joists of about the same dimensions as above,) resting on an offset of the wall on the one hand, and an interior wall, carried up from the inner ends of the arches, on the other; between the platform and the extrados of the arches was a void, neither earth nor masonry having been put on the brickwork of the arches. Over this platform was a roof, raised by woodwork, about eight feet to the eaves, and having double pitched shingle slopes. Here was, therefore, even a greater amount of fuel than below. The fire, acting first on the inner surface of the upper part of the scarp, fell upon and between the arches as the structure crumbled.

The action of the fire upon the first or lowest tier seems to have been scarcely less than upon the second.

As to effects, the fire appears to have been chiefly hurtful in destroying the coherency of the stone and mortar. The bricks, in general, have resisted its action. The sand-stone, universally, has lost all its strength. The deterioration of the stones in the piers is evident, not only from the ease with which it

can, in very numerous instances, be broken even by the fingers, but also from the scales which are separating, transversely to the laminæ of structure, under the pressure of the casemate arches. These piers are now hourly crumbling under the superincumbent weight. The piers of the recess arches of both the lower tiers are in like condition. The lintle stones of the tongue holes are crumbling, split, or broken. The stones on the inner side of the scarp wall, except a proportion of a more compact texture, give equal evidences of the disintegrating action of the fire. The mortar has, of course, for a certain unknown depth, lost coherency, and become incapable of further indurations. As to the brickwork, that has suffered less. As before mentioned, the bricks have generally resisted well; the mortar has, however, suffered like that in the stonework, and, consequently, the integrity of the mass must have been impaired to a degree which must render it inadequate to its office. The outside of the scarp presents few or no marks of injury from the flame.

It must, we think, be obvious from the above statement that the piers of the casemates must be taken down. If it were possible to rebuild the piers without removing the arches, still we think that, from the intense and long-continued heat to which they were exposed on both sides, the casemate arches are utterly unworthy of trust.

All the interior face of the scarp, including recess arches, should be removed, both within and without the recesses. The work about the tongue holes must be taken down, and, of course, the soles and inner cheeks and inner arches of the embrasures. Making the preparation for repairs, nothing would be left standing of the present fort but the outer part of the scarp, a part of each pier at the magazines, and possibly a part near the stairs.

The materials used in the construction are, however, especially in the scarp, of such small dimensions, and the workmanship so bad, that it would be in vain to attempt to tie new work to the old; and if this were possible, we doubt if the thin remaining mass of the old work would have any stability; whether, indeed, it would not be kept from falling, after some years, entirely by the ties of the newer work.

The foundations of the fort have not, of course, been injured by the fire. The small size of the stones used therein and the bad workmanship lead us, however, to the opinion that it would be highly injudicious to place new and substantial work upon them. At every ebb of the tide, water, which on the flood had found its way into the numerous voids, escapes through the wall in certain places in torrents. In addition to this, owing to the small size of the materials, the bearing has never been uniform upon the breadth of the grillage; the middle, while sinking with the weight, has left the outer steps of the foundation (and probably the inner) not far from their original height, thus showing that the outer piles (and probably the inner) take no part of the weight of the superstructure.

Under these circumstances, we are decidedly of opinion that Fort Delaware is irreparable. We are also of opinion that it would be improper to put new work upon the masonry of the old foundations. The piles of the foundation are doubtless all the better prepared for new work in consequence of the great weight that for years has been bearing upon them; but owing to the unequal pressure to which they have been subject, we think, before rebuilding, they should be again tried with the driver.

We do not consider it a part of our duty, under our instructions, to give an opinion on the subject of rebuilding this work. The government, no doubt, fully understands the value of the position, and that it is the only proper one for the defence of the Delaware. We take occasion, however, to say that in the course of the operation for reclaiming the island and protecting it from the action of the sea, an embankment of some height has been thrown up all around, which might easily be converted into a battery, and be substituted for the lower tier of the fort. Under such an arrangement, it might be necessary to give to the fort a height of two tiers only, instead of three.

We have the honor to be, with great respect, your most obedient,

JOS. G. TOTTEN, *Lieut. Colonel Engineers, Brevet Colonel.*
WM. A. ELIASON, *Lieutenant of Engineers.*
A. MORDECAI, *Lieutenant of Engineers.*

Brigadier General CHARLES GRATIOT, *Chief Engineer.*

DEPARTMENT OF WAR, *January* 13, 1831.

SIR: In obedience to a resolution adopted by the House of Representatives, of the 7th instant, calling on the Secretary of War "to inform the House whether any, and if any, what, additions are necessary to be made to the corps of military and topographical engineers, exclusively for military purposes," I have the honor to report:

With regards to the corps of engineers:

In my report to the President accompanying his message to Congress in 1829, I expressed a concurrence in the opinion, which has been urged for years past by this department, of the necessity for increasing the number of officers in this corps. The advantages which might result from such an increase in the construction of fortifications and other works of general improvement were not lost sight of. The recommendation, however, had reference mainly to such an organization as it was believed would tend to greater economy and efficiency in the discharge of the military duties of the corps in time of peace.

The necessity of an increase of their number is illustrated by the fact that whilst every officer of the corps is now on duty, and but three of them employed in other than military duties, there are only four of the fortifications under construction, in the direction of which the superintending engineer is assisted by any officer of the corps. The necessity for such assistance in preparing detailed plans and superintending their proper execution, must be obvious to any who reflect on the varied and often complicated nature of those works. This deficiency in officers is imperfectly supplied, in a few cases, by an occasional and temporary detail from other corps of the army, or by the employment of citizens at high rates of compensation.

The number of officers which should be added to the corps will be regulated by considering the number of fortifications that will probably be under construction at any one time, with other duties to which the officers are liable. The table of "works projected," which accompanies the annual report from this department, will show that, in addition to those already commenced, forty-three have been planned for the Atlantic and Gulf of Mexico frontier; besides which, it will be remembered that no defences are yet projected for the extensive frontier bordering on Canada.

Referring, for the present, to the works required for the defence of the seaboard alone, we may suppose that about twelve or fourteen of them will be under construction or repair at one and the same time, and the number of officers requisite for their superintendence may be estimated as follows:

	Field officers.	Captains.	Lieutenants.
On the eastern Atlantic frontier, say	1	2	4
On the middle	1	4	8
On the southern	1	2	3
On the Gulf of Mexico	1	2	4
To which add—			
At the seat of government	1	0	1
Military Academy	1	1	2
Board of engineers for fortifications, and to meet contingencies of service	1	2	2
Making a total of	7	12	24

By such an arrangement there would be in each great division of the maritime frontier one field officer, who, besides having the immediate charge of a particular work, could act as a general inspector, and whose experience would enable him, in cases of need, to aid by his advice other officers within his district.

It is in accordance with these views that the project for an increase of the corps, heretofore presented to Congress, has been prepared, the details of which are contained in a bill reported at the last session by the Committee of the House of Representatives on Military Affairs.

On the subject of the topographical engineers, to which the resolution also refers, I shall have the honor to report in a few days.

I am, &c.,

JOHN H. EATON.

Hon. A. STEVENSON, *Speaker of the House of Representatives.*

Annual report of work done in improving the navigation of the Ohio and Mississippi rivers in the present year ending September 30, 1831.

From the 1st of October, 1830, to the 9th of March, 1831, the steamboat Helepolis removed from the channel of the Mississippi river 1,334 snags or trees, taken from the whole line of the river between island No. 10, sixty miles below the mouth of the Ohio river, and the mouth of Bayou Plaquemine, twenty-one miles below Baton Rouge, a distance of 830 miles. During the same time that boat cut a channel through a neck of land near the mouth of Red river, through which the whole channel of the Mississippi river was turned, shortening the distance to the navigators of the Mississippi river eighteen miles; and to those navigating the Red and Mississippi rivers, between the Red River settlements and New Orleans, the distance has been shortened six miles. The distance from the new channel down the old bed of the Mississippi to the mouth of Red river is six miles, and from Red river, by the old bed down it, is twelve miles; consequently, by cutting the channel through, the water from the Red river now finds its way up the old bed of the Mississippi, and passes down through the new channel.

In October, November, and December of last year, I had the timber cut from off the falling-in banks of the Mississippi river, a distance of about 538 miles; at the same time all the timber was cut from under the banks and out of the island chutes for the same distance.

A channel was also cut through the bend of the river at a point called Burch's Bend. It has been navigated by twenty or thirty steamboats nearly all the high-water season of the last spring and summer. It will be the main channel of the river next spring, and shorten the distance from 24 to 28 miles. The effect produced during the extreme rise of water has been very important at Red river, as it will dry at least 200,000 acres of pine land lying on the Bayou Chaffilio and Red and Black rivers. The difference of the rise last year has been ascertained to be at least two feet at the mouth of Red river; the same effect will be felt at least sixty miles up that river, and about forty miles up the Black river. On the Bayou Chaffilio the effect produced has been great in proportion to the extent of country; the lands on its banks for many miles down are now above the highest floods.

The steamboat "Helepolis" was repaired in April and May last; left New Albany, Indiana, on the 8th of June, and commenced operations in the Mississippi river, between the Ohio and Missouri rivers, where she continued until the water was too low for her to work in that part of the river to advantage: she then commenced work below the Ohio. Up to the 30th of September last she has removed from the main channel of the Mississippi river 727 snags, making together 2,061 snags removed this year by the steamboat "Helepolis." On the 10th of September last the new steamboat "Archimedes" commenced work at the mouth of the Ohio, and worked up the Mississippi river. From that time to the 30th of September she has removed from the low-water channels of that river 204 snags, added to those removed by the steamboat Helepolis, making an aggregate of 2,265 snags removed this year from the bed of the Mississippi river. That boat is quite as efficient as the Helepolis in every particular, except in running down a planter. In that operation the Helepolis has the advantage of nearly double the weight, which adds greatly to the effect when moving at the same velocity. By reference to the last of the two boats, it will be perceived that the Archimedes has cost about $12,000 less than the Helepolis.

About the first of October last year the improvement of the Ohio river was commenced at the mouth of the Louisville and Portland canal, by removing logs, roots, &c., from the bottom of the channel of that river. For the first two miles below the place of commencement the number of logs was greater than at any point in the Ohio river. They were taken out, cut, and split in pieces in such manner as to enable the laborers to pile them along the shores; in November they were set on fire and all consumed. Many gentlemen of good judgment, who examined them at the time they were piled, estimated the quantity at 1,200 cords in the distance of two miles. That work was continued down to Rockport, a distance of 150 miles, and all the most dangerous logs and roots removed from the channel in that distance. On the 6th

day of December the men were discharged, the river being too high to work. That work was commenced again on the 22d of September, and is now in progress.

On the 5th of November last the improvement of the Ohio river, at the Grand Chain, near its mouth, was completed, agreeably to the act of Congress providing for that particular object. The rocks formerly situated at that point have all been removed, so as to make an entire safe navigation at that place. For a particular description of the work done there, I beg leave to refer you to my letter to the department dated the 13th of November last. By the different operations alluded to, the navigation of both rivers has been very much improved in the last year, notwithstanding some losses have occurred charged to snags. During the last year the steamboats Crusader, Neptune, Daniel Boon, Fairy, and Union, have been sunk in the Mississippi river. The Crusader, by striking a root or log lying on the bottom of the river in the extreme low water in October last. The Neptune, by swinging off from the shore with her stern made fast with a line to the shore, being heavily laden with pig lead, broke and filled immediately; the engine was not started. The Daniel Boon, running close along shore, struck a log, was stove, and sunk. The Fairy struck a snag directly opposite the mouth of the Missouri river, and sunk in a few minutes. These four boats were all old and in a state of decay. The Union was a new boat, built of plank without a frame to support them, and, being a flat bottom and wall-sided, was very weak. She struck a snag that must have been loose, and have stopped or lodged there during the last spring freshets. At the place where the accident occurred the Helepolis had taken every description of snag out in the month of November last, when the water was at least ten feet below the stage when the boat struck. I am of the opinion that a principal cause of the loss of the whole five boats was from the weakness and insufficiency of their hulls. One keel-boat and three flat boats were lost during the extreme low water in October and November of last year; not one that has come within my knowledge since the rise of the water in December last. When those losses took place, the Mississippi was several feet lower than it had been for ten years previous. The snags on which the above-mentioned steamboat Crusader was stove, the keel-boat, and one of the flat boats, have since been removed. Flat boats navigating the Mississippi river from the mouth of the Missouri to New Orleans now float at night with as much safety as they do in the Ohio river, by which means their passage is now made in one-half the time it was three years ago. I have no hesitation in stating, without the fear of contradiction from any well-informed gentleman, that the amount of property saved by the improvement already made far exceeds the whole amount of expenditure on all the work since 1824. For a proof of this statement, I will refer the department to the western members of Congress who travel on those rivers. Some of those gentlemen are familiar with the former and present situation of the obstructions in the river, particularly the Mississippi river, and the Ohio river at the Grand Chain.

The improvement of the Ohio river, under the act of Congress of the 2d March last, has unavoidably been delayed on account of the high stage of water in that river during the whole summer and fall of this year. I have made the necessary preparations for carrying into effect the instructions from the department, and have now at work from 500 to 600 men. Those men are employed quarrying stone at different places for the purpose of forming the required wing dams. Their labor will be advantageously applied at that part of the work; and should the water fall sufficiently low, a number of the most difficult and shoal bars in the river will be improved this fall.

I am, sir, very respectfully, your obedient servant,

HENRY M. SHREVE, *Superintendent.*

Brig. Gen. C. GRATIOT, *Chief Engineer, Washington.*

LOUISVILLE, *Kentucky, October* 13, 1831.

UNITED STATES MILITARY ACADEMY, *West Point, June* 21, 1831.

SIR: The board of visitors invited by a circular from the War Department, of the 31st March, "to attend the general examination of the cadets of the United States Military Academy," in the discharge of the duty devolved on them have directed their inquiries to a full and free investigation of the course of instruction, military and scientific, and to the internal police, discipline, and fiscal concerns of the institution. This investigation, the results of which we propose in a succinct form to present to you, has impressed the board with a full conviction that the institution has substantially accomplished the leading objects of its establishment, and that, regarded in any light in which it may be viewed, whether in its connexion with the primary means of national defence, the cardinal design of its creation, or with the more remote but no less important concerns of our internal civil polity, to the success of which it is a valuable auxiliary, its claims upon the continued support and fostering patronage of the government are many and commanding.

The whole number of cadets upon the examination roll furnished to the board is two hundred and twenty-two. These are divided into four classes: *the first* consisting of thirty-three members, whose course of instruction has now been completed; *the second* of fifty-two, who have been three years in the institution; *the third* of sixty-two of two years' standing; and *the fourth* of seventy-five, admitted since the period of the examination of the last year. These classes have been severally divided into convenient sections arranged agreeably to the relative merits of the cadets composing them, their grade being settled by the academic board, at short stated intervals, by an impartial recurrence to well-ascertained and fixed rules.

The course of instruction prescribed for each class will be shown by the synopsis herewith communicated, marked A. It is the purpose of the report to detail the observations of the board upon the examinations of the several departments in their order.

The studies of the first class are directed to engineering and the science of war, to ethics, rhetoric, national and constitutional law, to infantry tactics and artillery. Upon each of these branches of science the class have undergone a thorough examination, and it affords the board pleasure to state that its result has been as satisfactory as its process has been searching and laborious.

To engineering, both military and civil, the attention of the class has been minutely and profitably directed. In the whole course of military engineering, comprising field and permanent fortifications, attack and defence of places, and military communications, as well as in that of civil engineering, comprehending the important subjects of land and water communications by navigable rivers, canals,

common roads, bridges, and railroads; of hydraulic constructions and buildings, of nautical constructions, of carpentry, stone cutting, and civil architecture, the class have acquitted themselves in a manner meriting the most unqualified commendation. The most involved and difficult problems have been solved and demonstrated with a readiness evincive of the thorough familiarity of the class with those important branches of science, and reflecting upon the accomplished officer charged with this department of instruction the highest credit.

That these subjects have not engaged an undue share of the time and attention of the cadets the board are fully satisfied. The science of military engineering is intimately connected with that of war, and with every well-devised system of national defence. The primary and leading object of this instruction is to train up a portion of our youth for this indispensable branch of the public service, to fit them for the intelligent discharge of the high duties of superintending and directing the defences and commanding the armies of the nation. All experience teaches that these qualifications are not the acquirements of a day; that the emergency which calls for their exercise is not always sufficient for their creation. The principle of the art of war, comprehending in its present advanced stage of improvement all the exact and many of the physical sciences, with various incidental and collateral branches of learning, like all other knowledge, can only be attained by the application of the mind, aided and directed by competent and skilful instructors. That the duty of this application has been enforced, and thus assistance and instruction afforded here, the examination of this class has abundantly evidenced.

The science of civil engineering, as taught at this academy, the board regard as a branch of education fundamentally important. This may emphatically be styled the age of improvement. At a time when the energies of a discerning and patriotic public spirit are everywhere directed to the purposes of practical improvement; when in every portion of this wide-spread confederacy we are daily furnished with the manifestations of a desire by means of canals and railroads to connect the remotest portions of the Union, and through their agency to develop the resources and improve the condition of our country, the value of the knowledge imparted in this course cannot be overrated. That this branch of science can be taught in this academy with advantage experience has shown. That in the ordinary literary institutions of the country an attention sufficient to qualify for the discharge of the practical duties already indicated has not been bestowed may be safely inferred from the multiplied and pressing demand upon the War Department for aid, preferred by those engaged in the interesting works of improvement contemplated and in progress. It has been a subject of general and of just regret that the means of assistance thus invoked have not been within the competency of the government to afford. To meet these continually recurring applications for the services of persons skilled in this branch of science, no mode within the knowledge of the board is so likely to prove efficient as that of giving to the distinguished professor in this department the means of increased usefulness by a liberal enlargement of the stock of models, now very inconsiderable.

In aid of his instructions in the first branch of this science the model of a fortification, with all its parts complete, is regarded as indispensable. The expenditures of the government upon the permanent fortifications are liberal and recurring, and yet, in an institution designed to fit its students for this important branch of the public service there is not a single model by which they may be taught the mechanical construction of a work of this kind. A small sum appropriated to this object would insure an improvement in this branch of science which would be beneficially felt in the construction of the public works necessary to the defence of our extensive inland and maritime frontier.

The model of a stone bridge, with its centering, and the caisson used in founding piers where the water is deep, and the foundation of rock; of a lock upon the most approved plan, and of a dry dock, the board think, would be found useful. To these might be advantageously added models in the department of architecture calculated to improve the taste in building. These would serve not only as the means of instruction to the students of this institution, but of extensive general improvement; to the increased comfort of our private dwellings, and the embellishment and economy of our public edifices.

For these objects, the board would respectfully suggest, the employment of a modeller would be calculated most effectually and economically to accomplish.

In the science of war the class acquitted themselves upon their examination satisfactorily to the board. In the knowledge of the principles of infantry tactics and artillery they appear to be well-grounded. The examinations on these subjects in the recitation room have prepared the board to express a full concurrence in the favorable opinions indicated by former boards of visitors in relation to the modes of instruction pursued in this department, and of the merit of the professors directing them.

In the practical duties of the soldier the cadets of all the classes have been thoroughly instructed. The board are at a loss for terms in which to express their admiration of the manly gracefulness of carriage and the steadiness of position maintained by them in the field, of the ease, promptitude, and precision with which their various evolutions in battalion performance, and of the skill and accuracy with which their artillery is exercised and manœuvered.

For the maintenance of this admirable system of discipline, of which the flattering results above indicated are the fruits, and for the preservation of the health of the cadets, by furnishing them with the means of salutary exercise, the board earnestly recommend that a suitable building be erected, to be used during the inclement seasons of the year, when the students of this institution cannot with safety be exposed.

The board cannot take leave of this branch of the subject committed to their inquiry without a decided expression of the satisfaction they have received from the evidence furnished by the cadets of their proficiency in the exercise of the piece, in target firing, and in the preparation of ammunition, rockets, &c. It has been to the board a subject of surprise and regret that this post is without the horses necessary for the ordinary artillery service, and they feel it to be their incumbent duty to press upon the government the necessity of a provision to meet this object. Twenty horses might be usefully employed, not only in the manner above-mentioned, but with great benefit to the cadets, in allowing them an opportunity of acquiring some knowledge of horsemanship, which in after life may prove to them valuable and important.

In the branches of ethics, rhetoric, national and constitutional law, the class acquitted themselves with great credit, evincing by their answers a familiarity with the principles of their text-books acquired and retained not so much by the mere effort of memory as by the application of the mind to their thorough investigation.

In this department much inconvenience has been experienced for the want of the books necessary to carry on the course of instruction, in which the library, although liberally supplied on other subjects, is

lamentably deficient. The board respectfully recommend that a specific appropriation be asked to supply this deficiency.

The studies comprehended in the course of the second class are natural philosophy, chemistry, and drawing.

In the first of these branches, comprising magnetism, electricity, mechanics, optics, and astronomy, the class gave proofs of considerable attainment. In the solution of the most difficult problems their demonstrations at the black-board were neat, clear, and conclusive, and executed with a promptness and coolness which nothing short of a full confidence in their own attainments could inspire. The board have no hesitation in expressing their belief that no class of equal numbers can be found in any university in the Union more thoroughly conversant with the subjects upon which they have been examined.

The philosophical apparatus has been much enlarged within the last two years, and is principally of French manufacture, of exquisite workmanship and beauty, and of the most modern and approved construction. For the purposes of a course of experimental philosophy it is, nevertheless, inadequate. The board would therefore recommend that a small annual appropriation be asked for its extension.

The examination of the class in chemistry gave much satisfaction to the board, and furnished evidence of the zeal and industry with which the acting professor and his assistant have devoted themselves to the discharge of their respective duties. In this department, and in that of natural philosophy, great inconvenience has been experienced for the want of suitable rooms for lectures, recitations, and experiments. At present the rooms in which the apparatus is kept are used for these purposes. This exposes the instruments to great injury, as the experiments and preparations cannot be made near them without prejudice. A building to contain apartments would conduce to the convenience of the institution. Under this impression the board recommend that an appropriation be asked for its erection.

In drawing, the cadets of this and of the third class have made surprising progress. In topography, landscapes, and the delineation of the human figure, their performances are excellent, and in a high degree creditable to themselves and to the accomplished artist from whom they have received their instructions.

The course of instruction pursued by the third class embraces mathematics, French, and drawing. That of the fourth class is confined to mathematics and French.

In mathematics, instruction is afforded to the third class in analytical geometry, perspective shades and shadows, spherical projections, surveying, the differential and integral calculus, descriptive geometry, and plane and spherical trigonometry. And to the fourth in algebra, geometry, plane and spherical analytical trigonometry, and descriptive geometry. To say that in their thorough examination on these subjects the classes acquitted themselves well, would be but a feeble expression of the opinions of the board. They believe that, for accuracy and skill in the construction of the diagrams necessary for the demonstration of the problems proposed to them for solution, and the quickness, ease, and precision with which the results were attained, these classes have never been excelled.

The examination of the third class in mathematics commenced in the afternoon of the 10th instant, and was continued on the 11th, resumed on the 13th, and concluded about noon on the 14th. The examination of the fourth class, on the same subject, was commenced on the evening of the 16th, continued on the 17th and 18th, and resumed and concluded on the morning of the 20th. The examination throughout was creditable to the cadets and their instructors. The use which was made of the black-board at the examinations deserves to be known. There were two black-boards in different parts of the room; four cadets were called up at the same time, two to each board, and each cadet was told by the examining professor what he wished him to do; they then constructed the diagrams and wrote out their demonstrations and solutions on the board. While they were occupied, questions were put to one or more members of the class until one of those first called up was ready at the black-board. He then read his demonstration or solution; but this was done with a readiness which showed that it was fully understood. He was then questioned in relation to the demonstration or solution, and the examination continued until the cadet next to him was ready. By this means the student had time to reflect and to work out his demonstration or solution; he was free from embarrassment whilst thus engaged, because he knew that all present were attending to the person under examination. Besides the able professor who presides over this department, seven assistants are necessary to enable him to do justice to his classes, while the law provides but for one. This deficiency was formerly supplied by the selection of the most distinguished cadets; but it was found that the cadets thus selected were unable to progress with their class, and at the same time give useful instruction to others. Subsequently officers have been detailed from the army and assigned to the discharge of the duty; but as no compensation is allowed by law for this extra service, the officers detailed have no inducement to retain their places in the institution. The consequence is, that this most important department is continually subjected to the evils of frequent changes in the instructors. At the close of the present term, as the board are informed, every assistant except the one provided for by law leaves the institution, strikingly illustrating the necessity of some provision to guard against this great inconvenience. It is believed that the provisions of an act reported at the last session of Congress, (a manuscript copy of which is herewith communicated, marked B,) would, if adopted, correct this evil and many others to which the institution is exposed. The professor in this department has felt the want of a large theodolite, with Hassler's improvement, the purchase of which the board would respectfully recommend.

In French the attainments of these classes are respectable, and the examinations in this department were very satisfactory to the board.

With regard to the police of the institution, the board have found much to commend, and nothing which, in their opinion, requires alteration. An admirable system has been matured, which is fully understood and vigilantly enforced. Everything which can conduce to the health and comfort of the cadets, consistently with a due attention to study and the performance of their military duties, has received attention.

The discipline established by the regulations of the academy is favorably illustrated in the personal appearance and manly deportment of the cadets, the neatness and uniformity of their dress and accoutrements, and their strict and willing obedience to the orders of their superiors. The seeming rigor of the requirements prescribed has had the most salutary operation in engendering a spirit of manly and honorable emulation, the distinguishing characteristic of the students of this institution.

The relations subsisting between the superintendent and instructors, and the cadets, are in strict harmony with their respective duties, and calculated to inspire the latter with a strong feeling of self-respect. Every motive which can be addressed to their pride and judgment to influence a devotion to science is here presented; and it affords the board unqualified pleasure to state that they have not been

unmindful of the advantages they enjoy, nor lost sight of the high destinies to which in the future concerns of their government they may reasonably aspire.

The books and accounts of the quartermaster, and of the treasurer and paymaster have been examined, and found to be correct. A strict system of accountability has been established in regard to the receipt and disbursement of the public money, sufficiently guarded to prevent its misapplication; the accounts of the cadets are regularly and accurately kept; their clothing and other necessary articles are so furnished as to avoid all imposition, and at prices, if not below, certainly not above the ordinary rates.

The board likewise examined the food served up at the meals of the cadets, which they found of excellent quality, and prepared with a cleanliness and regard to comfort worthy of all praise. To the many inquiries proposed to the cadets themselves, the reply has uniformly been that their food was not only good, but abundant.

The medical department has also engaged the attention of the board. The hospital erected within a few years is convenient in its arrangement, airy, and comfortable. The concerns of this department are exceedingly well directed by the distinguished surgeon under whose supervision it has been placed.

The fiscal concerns of the institution appear to have been conducted with great ability, and the appropriations of the government to have been expended judiciously and faithfully. By the practice of a judicious economy a considerable fund was not long since accumulated, which has been chiefly expended in the erection of useful buildings, embracing a commodious hotel for the accommodation of the parents and friends of the cadets and of other persons visiting the academy.

In connexion with the subject of the public buildings, the board feel it to be their duty to reiterate the recommendation heretofore repeatedly made, that a competent appropriation for the erection of a house of worship be asked of Congress. The room now used for the purpose never was designed to be so appropriated. It is too small to accommodate the cadets and others who frequent it, and is in all other respects inconvenient.

The library of the academy has been procured with much trouble and at considerable expense. It is valuable, and should be preserved. To provide for its security, the board would respectfully recommend that a fire-proof room to receive it be connected with the chapel which they propose should be erected. The room now occupied as a library, should this recommendation be effected, may be advantageously used as a lecture or recitation room.

A reference to the reports of former and successive boards of visitors will show that a strong conviction of the inadequacy of the existing rank and pay of the superintendent of this academy has long obtained. In this conviction, and the recommendations founded on it, the board entirely concur. The services required of and diligently performed by him are extremely laborious, the responsibility of his station is great, and the expense to which he is necessarily subjected very considerable. The zeal, talent, and industry which have been so long and conspicuously displayed by him in the faithful discharge of his important and arduous duties entitle him, in the judgment of the board, to the favorable consideration of the government.

The board forbear to multiply suggestions in relation to the wants of the institution already brought to the view of the government by boards of visitors who have preceded them. They believe that the prompt and full gratification of these wants would eminently promote the public welfare, by giving increased efficiency to an institution whose interests are bound up with those of the nation.

Every facility has been afforded to the board in aid of their investigations by the superintendent and those connected with him in the administration of the affairs of the academy. To the merits of *all*, the board take pleasure in bearing testimony; in their capacity and devotion to science the national confidence may be safely reposed, in the assurance that the interests committed to their charge will be faithfully guarded and zealously advanced.

We have the honor to be, sir, your obedient servants,

WINFIELD SCOTT, *Major General U. S. A., President of the Board.*

B.

A BILL making further provision for the Military Academy at West Point.

Section 1. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the President of the United States be, and he is hereby, authorized to appoint a professor of chemistry and mineralogy in the United States Military Academy.

Sec. 2. *And be it further enacted,* That the professors of the Military Academy, from and after the passage of this act, shall receive each the pay and emoluments allowed to the professor of natural and experimental philosophy.

Sec. 3. *And be it further enacted,* That the teacher of the French language and teacher of drawing shall each receive the pay and emoluments of a major of infantry.

Sec. 4. *And be it further enacted,* That the President of the United States be, and he is hereby, authorized to appoint two other teachers of the French language, who shall each receive the pay and emoluments of a captain of infantry.

Sec. 5. *And be it further enacted,* That the President of the United States be, and he is hereby, authorized to appoint an assistant professor of chemistry and mineralogy, who, together with the

assistant professors already provided, shall, if an officer of the army, receive so much in addition to his pay and emoluments as shall equal those of a captain of infantry; and if not taken from the army, shall receive the pay and emoluments allowed to a captain of light dragoons by an act entitled "An act to raise, for a limited time, an additional military force," passed the 12th day of April, 1808.

SEC. 6. *And be it further enacted*, That all lieutenants who shall, under the direction of the President of the United States, be detailed from the army to act as instructors, assistant professors, or assistant teachers in the Military Academy, shall, after the first year while so employed, be allowed each ten dollars per month in addition to his pay in the line.

SEC. 7. *And be it further enacted*, That each officer of the army in the actual command of a company of cadets shall be entitled to receive the same additional compensation as is allowed every officer in the actual command of a company in the army by the second section of an act entitled "An act giving further compensation to the captains and subalterns of the army of the United States in certain cases," passed the 2d day of March, 1827.

SEC. 8. *And be it further enacted*, That so much of the act entitled "An act making further provision for the corps of engineers," passed the 29th day of April, 1812, as confines the selection of assistant professors to the corps of engineers and cadets shall be, and is hereby, repealed.

SEC. 9. *And be it further enacted*. That the professors and officers attached to the Military Academy who by law are entitled to forage shall receive in lieu thereof an equivalent in money at the rate allowed to officers of the army, although they may not actually keep the horses for which they are entitled to forage.

SEC. 10. *And be it further enacted*, That all officers, professors, teachers, and their assistants, and all other persons authorized to be employed for the Military Academy, shall be subject to the rules and articles of war which are now, or which hereafter may be, established.

A.

Synopsis of the course of studies at the Military Academy.

Class.	Department.	Section.	Names of instructors.	Class books and subjects of study.
1	Engineering and Science of War.	1	D. H. Mahan, professor.	Science of War and Fortification, by Gay de Vernan; Programme d' un Cours de Construction, par Syanzier; &c.
		2	Lieut. Mason, assistant professor	
	Rhetoric and Moral Philosophy.	1	Rev. Thomas Warner, professor, and	Murray's large Grammar, Blair's Rhetoric, and Paley's Moral Philosophy,
		2	Lieuts. Tillinghast and J. A. Smith, assistant professors.	Kent's Lectures on the Law of Nations and Constitution of the United States.
	Infantry Tactics	1	Capt. Hitchcock, instructor.	Regulations for the Exercises and Manœuvres of Infantry.
		2	do.	Do. do.
	Artillery	1	Lieut. Kinsley, instructor	Lallemand's Treatise on Artillery; a part of Hutton's Tracts, &c.
		2	do.	Do. do.
2	Natural Philosophy	1	E. H. Courtenay, professor	Francœur's Traité de Mecanique Analytique; Farrar's Treatise of Optics, Electricity and Magnetism, and Astronomy.
		2	Lieut. Cram, assistant professor	Bridge's Mechanics; Farrar's Treatise on Mechanics, Optics, Electricity, and Magnetism, and Astronomy.
		3	Lieut. Buckingham, assist. professor.	Do. do.
	Chemistry	1	Lieut. Hopkins, act'g professor, and Lieut. Mather, assistant professor.	Turner's Chemistry.
		2		Do.
		3		Do.
		4		Do.
	Drawing	Whole class.	M. Gimbrede, teacher, and Lieut. T. B. Brown, assistant teacher.	Landscape and topography.
				Do.
3	Mathematics	1	Charles Davies, professor.	Essai de Geometrie Analytique, par Biot; Perspective Shades and Shadows; Spherical Projections; Davies' Surveying, &c.; Traité de Calcul, Differential et Integral, par Lacroix.
		2	Lieut. Church, assistant professor	Essai de Geometrie Analytique, par Biot; Perspective Shades and Shadows; Spherical Projections; Davies' Surveying, &c.; Traité de Calcul, Differential et Integral, par Bouchartat.
		3	Lieut. J. B. Smith, assist. professor.	Davies' Descriptive Geometry; Plane and Spherical Trigonometry, (Analytical;) Perspective Shades and Shadows; Spherical Projections; Davies' Surveying; Traité de Geometrie Analytique, par Bouchartat; Traité de Calcul, Differential et Integral, par Bouchartat.
	French	1	M. Berard, first teacher	Third and fourth volumes of Gil Blas; Charles XII.
		2	do.	Do. do.
		3	M. Malinard, second teacher	Do. do.
		4	do.	Do. do.
		5	do.	Do. do.
		6	do.	Do. do.
	Drawing	1	M. Gimbrede, teacher	Human figure.
		2	Lieut. T. B. Brown, assist. teacher.	Do.
4	Mathematics	1	Lieut. Ross, assistant professor	Lacroix's Algebra; Legendre's Geometry; Plane and Spherical Analytical Trigonometry; Davies' Descriptive Geometry.
		2	Lieut. Hackley, assistant professor.	Do. do.
		3	Lieut. Mitchell assistant professor.	Lacroix's Algebra; Legendre's Geometry; Plane and Spherical Analytical Trigonometry.
		4	Lieut. Knowlton, assistant professor.	Lacroix's Algebra; Legendre's Geometry; Plane and Spherical Analytical Trigonometry; a part of Davies' Descriptive Geometry.
	French	1	M. Berard, first teacher	Berard's French Grammar; Berard's Leçons Françaises; first vol. GilBlas.
		2	do.	Do. do.
		3	M. Malinard, second teacher	Do. do.
		4	Cadet Clay, assistant teacher	Do. do.
		5	Cadet Norton, assistant teacher.	Do. do.

C. F. SMITH, *Acting Adjutant.*

A.—*Table exhibiting the fiscal concerns of the Engineer department for the year ending September 30, 1831, in which the funds which had accrued within that period, and the manner of their accruing, are stated and accounted for by showing their application; and showing, also, the amounts expended upon the several works under construction.*

Designation of the appropriations and the objects to which they are applicable.	Funds available for the service of 1831, and whence derived.			Amount available accounted for.				Cost of the several works on October 1, 1831.	Remarks.
	From appropriations for 1831.	From balances of appropriations undrawn from the treasury, and those remaining in the hands of agents, September 30, 1830, and amounts refunded, &c.	Aggregate available.	Amount applied, corresponding with accounts rendered to September 30, 1831.	Amount undrawn from the treasury on October 1, 1831.	Balances in the hands of agents on October 1, 1831.	Aggregate accounted for, and corresponding with the aggregate available.

C.

Statement exhibiting the works projected by the Board of Engineers, which have not been commenced, and the estimate of their cost.

FIRST CLASS—TO BE COMMENCED AS SOON AS POSSIBLE.

Designation of the works.	Estimate of cost.
Fort St. Philip, Louisiana	$77, 810 79
Fort Soller's Point Flats, Patapsco river	673, 205 44
Fort Tompkins, New York	420, 826 14
Redout in advance of ditto	65, 162 44
Fort at Wilkins's Point, New York	456, 845 51
Fort at Throg's Point, New York	471, 181 53
Fort at Dumpling's Point, Rhode Island	759, 946 57
Fort at Rose island, Rhode Island	82, 411 74
Dikes across west passage, Narraganset roads	205, 000 00
For the defence of Boston harbor:	
Fort on George's island	458, 800 00
Fort on Nantasket Head	539, 000 00
Lunette in advance of ditto	79, 000 00
Redout No. 2, in advance of ditto	32, 000 00
Redout No. 1, (on Hog island,) in advance of ditto	29, 000 00
Dike across Broad Sound passage	140, 000 00
Cutting off the summit of Gallop island	2, 429 00
Works for the defence of Connanicut island, Narraganset bay, Rhode Island	220, 053 43
	4, 531, 873 10

SECOND CLASS—TO BE COMMENCED AT A LATER PERIOD.

Designation of the works.	Estimate of cost.
Fort at Grand Terre, in Louisiana	$264, 517 52
Tower at Pass-au Heron, Mobile bay	16, 677 41
Fort at Hawkins's Point, Patapsco river	244, 337 14
Fort at St. Mary's, Potomac river	205, 602 33
Fort opposite the Pea Patch, Delaware river	347, 257 71
Fort at the Middle Ground, outer harbor of New York	1, 681, 411 66
Fort at East bank ..... do ..... do	1, 681, 411 66
Fort Hale, Connecticut	31, 815 83
Fort Wooster	27, 793 34
Fort Trumbull	77, 445 21
Fort Griswold	132, 230 41
Fort at Fort Preble Point, Portland harbor, Maine	103, 000 00

SECOND CLASS—Continued.

Designation of the works.	Estimate of cost.
Fort at House island, Portland harbor, Maine	$32,000 00
Fort Pickering, Salem	116,000 00
Fort for Nangus Head	35,000 00
Fort Seawell, Marblehead	116,000 00
Fort for Jack's Point, Marblehead	96,000 00
Fort on Bald Head, North Carolina	120,000 00
Fort on Federal Point, North Carolina	12,000 00
	5,340,500 22

THIRD CLASS—TO BE COMMENCED AT A REMOTE PERIOD.

Designation of the works.	Estimate of cost.
The rafts to obstruct the channel between—	
Forts Monroe and Calhoun	$240,568 00
Fort at Crany Island flats	258,465 14
Fort at Newport News	244,337 44
Fort on Naseway shoal	673,205 00
For the defence of Patuxent river:	
Fort on Thomas's Point	173,000 00
Fort on Point Patience	164,000 00
Fort on the Narrows of Penobscot river, Maine	101,000 00
	1,854,575 58

RECAPITULATION.

First class of works, (17)	$4,531,873 10
Second class of works, (19)	5,340,500 22
Third class of works, (7)	1,854,575 58
	11,726,948 90

REMARKS.

The classification of this statement, distinguishing three periods, exhibits the works enumerated in the order of their efficiency to meet the earliest possible emergency.

REPORT OF THE QUARTERMASTER GENERAL.

QUARTERMASTER GENERAL'S OFFICE, *Washington City, November* 2, 1831.

SIR: In obedience to your order dated the 20th of August, I have the honor of reporting the operations of this department from the 1st of January to the 30th of September of the present year; and with a view of presenting the operations of the entire period, not heretofore reported, I take the liberty of adding the 4th quarter of last year.

The balance remaining to be accounted for by the several officers of the department, at the date of the last annual report, amounted to		$62,679 35
To which is to be added—		
1. The amount of remittances in the 4th quarter of 1830	$168,941 50	
The amount of remittances in the 1st quarter of 1831	100,500 00	
The amount of remittances in the 2d quarter of 1831	184,817 40	
The amount of remittances in the 3d quarter of 1831	190,372 74	
		644,631 64
2. Proceeds of the sales of public property, which had become damaged and unfit for use, and of the rents of lands and public buildings not required for military purposes		6,522 94
Making the whole to be accounted for		713,833 93
Of which there was accounted for by the accounts of the 3d quarter of 1830, received at this office after the date of the last annual report, including $63 36 omitted in that report	$6,531 63	
By accounts of the 4th quarter of 1830	200,287 25	
By accounts of the 1st quarter of 1831	109,499 52	
By accounts of the 2d quarter of 1831	156,236 36	
By accounts of the 3d quarter of 1831	202,289 74	
	674,844 50	
Deposited during the year ending the 30th of September to the credit of the Treasurer of the United States	4,498 72	
		679,343 22
Leaving to be accounted for		34,490 71

The accounts of fourteen officers remain to be received, which will probably reduce the balance reported about $10,000. The remainder will be applicable to the service of the present quarter; and the whole of it, I have no doubt, will be faithfully accounted for at the termination of the quarter.

The large amount of public property under the administration of the department, whether in the hands of its officers or those of companies, is promply and faithfully accounted for.

The balance remaining in the treasury of the appropriation for the Quartermaster's department proper will, it is believed, be sufficient for the wants of the service to the end of the year.

Of the works under the direction of the department, the road from Alagua to Marianna, in Florida, which was in progress at the date of my last annual report, has been completed as far as the appropriation would permit. It has not been practicable, however, with the limited means at the disposal of the department, to bestow any labor on the section lying between Oak Hill and Marianna, a distance of sixteen miles. The estimate submitted for the repair of the road from Pensacola to Tallahassee embraces an item for the completion of this section.

The amount appropriated for repairs on the road from Jacksonville to Alachua Court-House, in Florida, has been applied to that object as far as it would go, but it was found altogether inadequate to the completion of the work. The section lying between Jacksonville and Black creek has been put in good repair, but nothing has been done on that between Black creek and Alachua, a distance of about fifty-five miles. I have submitted an estimate for its completion.

The road authorized at the last session of Congress from Washington to Jackson, in Arkansas Territory, has been put under contract within the amount appropriated for that object, and will be completed early in the next year.

There was reason to believe that the military road in the State of Maine would have been finished during the present year, but the unusual wetness of the season has so retarded the operations of the contractors as to prevent the completion of this work. It is, however, so far advanced as to answer every purpose of a winter road to the military post at Houlton, and materially reduce the expense of transporting supplies.

In consequence of the reduction of the force at Green Bay, and the employment of the garrison at Fort Winnebago in the erection of barracks, the road authorized between those places has not been commenced. The necessary arrangements will be completed during the winter, and this object will receive early attention on the opening of the next season.

The barracks authorized at Fortress Monroe and Fort Gratiot have been completed during the present year. Those at Fort Crawford and Fort Winnebago, which were in progress at the date of my last annual report, have been advanced as far as the available means would permit, but further appropriations will be required to complete them on the enlarged plan necessary to accommodate the increased garrisons which have been assigned to those posts.

The barracks authorized at Green Bay and Key West are in progress. The appropriation made for the former will, it is believed, be sufficient for their completion. For the latter a further appropriation will be required. The island being entirely destitute of military resources, every article of supply is necessarily obtained from abroad, which materially increases the ordinary expenses of such operations. Besides, the extreme heat of the climate, and the apprehended unhealthiness of the position, render more extensive accommodations necessary than are provided under ordinary circumstances.

Operations were resumed at the Delaware breakwater early in April, and on the 30th of September 81,791 perches of stone had been deposited, which, added to 135,079 perches deposited in the years 1829 and 1830, makes the quantity deposited to that date 216,870 perches.

The work was estimated by the commissioners who located it to cost $2,216,950.

The appropriations already made amount to $620,000, viz:

Amount of appropriations 22d of May, 1828		$250,000 00
Do 23d of April, 1830,	for the year 1830	100,000 00
	for the first quarter of 1831	62,000 00
Do 2d of March, 1831		208,000 00
		620,000 00
Of which there was expended by the Navy Department previous to the transfer to this department	$13,768 76	
From which is to be deducted the proceeds of property sold, which had been purchased previous to the transfer	2,964 40	
	10,804 36	
Disbursements by the Quartermaster's department in 1829	64,229 43	
Do do in 1830	274,170 15	
Do do in 1831 to 30th September	175,315 32	
		524,519 26
Leaving a balance on the 30th September of		95,480 74
Of that balance there was in the hands of the quartermaster at Philadelphia		$4,512 24
And in the treasury		90,968 50
		95,480 74

The whole of which will be required to meet the engagements of the department in the 4th quarter of the year.

For the next year I have estimated for $270,000, and it is extremely desirable that that sum be obtained; for the contingent expenses of the work are heavy, and are about the same whether we have a large or a small appropriation.

Our operations have been confined during the whole of the present season to that branch of the work called the breakwater, in contradistinction of the ice-breaker; from its western extremity for a distance of more than two hundred feet it has been raised nearly to its destined height; the material used above

the plane of the lowest water, as well as on the outward slope, is of the largest class received, and has been put up in the most compact manner.

For more than six hundred feet in addition this branch of the work has been raised above the plane of low water, and stone has been deposited on a base extending — feet further.

A large quantity of stone in blocks, weighing from one to five tons each, will be required next year for the sea slope and the summit of the work, and we ought to deposit at least 70,000 perches of the ordinary stone If the contract system were abandoned, and individuals owning quarries could be assured that all the stone they should deliver at the breakwater another season would be received at a fair price, as much as we could deposit would be readily obtained.

Notice should be given early in December, so that those disposed to furnish stone might have time to engage vessels and make the other preparations necessary to commence business early in the spring.

The want of quarters at the work, sufficient for the laborers and other persons employed, has been a serious inconvenience. One or two vessels anchored near it, and used as quarters, would be the means of saving much time, and would place the men more immediately under the control of the officers. Such a measure would not have been advisable heretofore from the uncertainty of adequate protection to the vessels in the event of storms; but the work is now so far advanced that no fears are entertained for the future.

So far as the experience of the two last seasons can be relied on as a test of the stability of the work, there is abundant reason for believing that it will have sufficient strength to resist the action of the ocean even when agitated by the severest tempests; and its advantages as a harbor may be inferred from the shelter it has already afforded during storms to vessels employed in transporting stone, as well as those engaged in commerce. Instances have occurred of vessels after parting their cables at their usual anchoring ground having been moored behind the breakwater, where they remained in perfect security during the most violent gales.

The work in its present condition, without permanent lights, presents some danger to vessels approaching it at night. There are several lighted vessels in the Delaware, under the direction of the Treasury Department, which are removed to Philadelphia during the winter. It would be a great accommodation to the commercial community if one of them were moored behind the breakwater during that season. In addition to the security which it would afford to vessels as a signal, it would answer the valuable purpose of demonstrating the advantages of the work.

I have the honor to be, sir, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War.*

REPORT OF THE PAYMASTER GENERAL.

PAYMASTER GENERAL'S OFFICE, *Washington City, November* 30, 1831.

SIR: I have the honor, herewith, to submit a tabular statement of funds advanced to the several paymasters between the 1st of October, 1830, and the 30th of September, 1831, amounting to one million one hundred and seventy-three thousand six hundred and sixty-one dollars and fifty cents. Of this sum $1,147,879 87 have been accounted for, leaving $25,781 63 to be accounted for hereafter.

The order of the War Department of the 4th of April last, altering the districts and changing the stations of paymasters, has produced delay in the payment of some distant posts, as was foreseen and pointed out in my letter to the Secretary of War of the 8th of April. The order was repealed on the 16th of June following, too late to change the arrangements the department was required to make on the 1st of that month to carry it into operation. Owing to this, and to the death of Paymaster Biddle, the troops at Forts Howard and Winnebago are reported to have pay due from the 1st of May. As soon as it was ascertained that the arrangements to pay at these posts had failed, Paymaster Phillips was ordered to perform that service. He reports his intention to leave St. Louis on the 13th instant, and if it be possible to perform the journey at this inclement season, will pay to the 1st of this month, before the year closes.

With the exception of the two posts just named, the troops are paid to as late a period as could be expected; and I have every reason to believe that all funds advanced prior to the 1st of October will be accounted for before the close of the year without loss to the government.

In printing the report made to Congress last session by the late Secretary of War, a typographical error was committed, by which the transportation for the payment of one post is represented to cost the government $8,000. As this is given as data to calculate what might be saved in that article by the proposed change in the organization of this department, it is important that the error be corrected. I have therefore obtained from the Third Auditor a statement of what was actually paid for the entire transportation of the department in the year 1830, amounting to $6,041 66, or $111 88 for each post, including arsenals. This may be considered a fair average of the annual cost. In connexion with this subject, it may not be improper to state the following facts, to show how far the present organization has answered the object for which the department was created.

Within the last eight years upwards of nine millions of dollars have been disbursed by the department, in small sums, without the loss of one cent to the government, and without having to resort to a single coercive measure to compel a more prompt settlement of accounts. This service has cost the government but little more than the minimum per cent. (allowed for accountability alone) on all other military disbursements, in addition to the pay, emoluments, and expenses of the officers.

Respectfully, your obedient servant.

N. TOWSON, *Paymaster General.*

Hon. LEWIS CASS, *Secretary of War.*

Statement of the moneys drawn from the appropriations for the pay department and remitted to the disbursing officers on account of payments for the fourth quarter of the year 1830, *and the first three quarters of* 1831; *the amount unexpended and forming part of their estimates for the fourth quarter of* 1831; *the balances to be accounted for; the periods to which the troops have been paid, and accounts rendered.*

PAYMASTER GENERAL'S OFFICE, *Washington, November* 30, 1831.

N. TOWSON, *Paymaster General.*

REPORT FROM THE ORDNANCE DEPARTMENT.

ORDNANCE OFFICE, *Washington, November* 21, 1831.

SIR: In compliance with your instructions of the 20th August last, I have the honor to submit herewith a general report of the operations of this department.

Statement A exhibits an account of all public moneys remitted from the treasury through this office to disbursing officers and contractors in the year 1830, the amount expended and accounted for by these officers, and the balances unexpended and remaining in their hands on the 31st December, 1830.

It will appear from this statement that the remittances during the year 1830, amounted to .	$938,727 56
That during the same period the accounts rendered and settled amounted to	893,877 30
And that the balances remaining unexpended in the hands of disbursing officers on the 31st December, 1830, amounted to	44,850 26

Statement B exhibits the total amount of funds remitted to disbursing officers of this department and to contractors during the three first quarters of the present year. It will therein appear that the amount remitted during that period was	625,123 10
And that the accounts rendered amounted to	568,500 01
Leaving an unexpended balance in the hands of disbursing officers on the 30th September, 1831, of	56,623 09

Statement C exhibits an account of some of the principal articles manufactured and repaired at the several arsenals and armories in the year ending with the 30th of September, 1831. By this it will be seen that 110 gun carriages and equipments, 997 holsters, and about 850 sets of accoutrements for small arms, have been made at the arsenal; that 16,741 small arms have been cleaned and repaired; and that 26,481 muskets, and their appendages, have been manufactured at the national armories.

Statement D exhibits an account of the artillery, small arms, accoutrements, and other ordnance stores, issued by this department to the army and marine corps of the United States during the year ending with the 30th September, 1831. In this it will appear that 34 field gun-carriages, 33 field guns, 2,209 muskets, complete, and about 700 sets of accoutrements for small arms, are among the principal articles issued.

Statement E exhibits an account of the arms, accoutrements, artillery, artillery equipments procured, and of the expenditures made under the act of 1808, for arming and equipping the militia during the year ending with the 30th September, 1831.

By which it will appear, among other articles, that the artillery procured amounted to 58 6-pounder cannon, 103 field carriages, with equipments complete, 150 sets of timber for gun-carriages, and that the number of small arms procured amounted to 10,230 stands of muskets and rifles. The amount expended for this object being $181,940 20.

Statement F is an apportionment of arms to the militia of the several States and Territories and of the District of Columbia for the year 1830; showing also the quantity of arms and military equipments distributed to the militia from the 1st of October, 1830, to the 30th September, 1831.

Statement G exhibits a general account of the public lead mines from 1821 to the 30th September, 1831, a period embracing the whole time during which they have been in charge of this department. It will appear by this statement that the whole productive amount of the lead mines while in charge of this department up to the 30th September, 1831, has been 51,622,072 pounds.

Statement H exhibits a detailed account of the operations of the lead mines during the year ending with the 30th of September, 1831, by which it will be seen that the total amount of lead manufactured during that period has been 6,449,080 pounds.

I have the honor to be, sir, respectfully, your obedient servant,

G. BOMFORD, *Brevet Colonel, on Ordnance service.*

Hon. LEWIS CASS, *Secretary of War.*

A.

Statement of the money expended through the Ordnance department in the year 1830.

Officers' names.	Stations.	AMOUNT OF SUMS REMITTED, INCLUDING THE BALANCES IN THE HANDS OF AGENTS JANUARY 1, 1830. Appropriations. National armories.	Current expenses of the ordnance service. GEO. BOMFORD, *Brevet Colonel, on Ordnance Service.*

ORDNANCE OFFICE, *Washington, November* 21, 1831.

ORDNANCE OFFICE, *Washington, October* 28, 1831.

SIR: I beg leave respectfully to submit to your consideration the propriety of a reorganization of this department at some period during the approaching session of Congress. The facts and reasons going to show the importance and necessity of this measure have been communicated to your predecessors on various occasions since the year 1827, and have as constantly received the attentive and favorable consideration of the Executive and of the various military committees of the Senate and of the House of Representatives, to whom the subject has been referred.

Nor have the views of this department, as to the necessity of a more efficient organization, undergone any change since the date of my last report on this subject to your immediate predecessor, a copy of which is herewith transmitted, accompanying the bill reported at the last session of Congress by the Military Committee of the House of Representatives, and which is therein referred to as embodying the views of this department on the subject of the proposed reorganization.

Appended to the report herewith forwarded is a statement of the additional expense which would arise under the provisions of the bill herein referred to, should it pass into a law; also a memorandum of the arsenals, depots, and other posts where officers are employed on ordnance service, accompanied by a statement of the number and grades of officers now serving in this department.

I have the honor to be, sir, respectfully, your obedient servant,

GEO. BOMFORD, *Brevet Colonel, on Ordnance Service.*

Hon. LEWIS CASS, *Secretary of War.*

ORDNANCE OFFICE, *Washington, November* 30, 1830.

SIR: In compliance with your instructions to report on the resolution of the House of Representatives, dated April 26, 1830, I have the honor to submit the following remarks:

The propositions contained in the resolution refer to the line of the army, and to all the several departments of the military service. It has, however, been considered proper to limit this report to such matters as concern the Ordnance department alone, for the reason that the officers who are charged with the direction of the other branches of service are much better prepared, by experience and merited distinction, to report on all those points which concern their respective departments.

In reference to the question, "whether any reduction in the number of officers in the army of the United States can be made without injury to the public service," I have the honor to state that, by the present laws, no more than *four* officers are specially provided for the performance of ordnance duties, viz: the four supernumerary captains of the artillery regiments. For any additional officers which the ordnance service may require, a contingent provision is made in the law, by giving to the President of the United States authority to detach from the regiments of artillery such number as may be necessary for this service.

The officers who serve in the Ordnance department, and who may be considered as composing it, consist of the four captains provided by law, and such others as may, from time to time, be detailed from the artillery. The number of the latter is not prescribed by law or by regulation, and is not constant, but varying, according to the necessities of the service, and is generally about thirty. But whether this number be large or small, it has no effect to increase or diminish the whole number in service, as the change is effected by a mere transfer from one branch of service to another.

The entire abolition of the department would, therefore, make the military establishment consist of only four officers less than at present.

In order that an opinion may be formed of the number of officers required for the performance of ordnance duties, it appears to be proper that the character, extent, and responsibility of those duties should be briefly stated.

The duties are defined by law, and consist in providing, preserving, distributing, and accounting for every description of artillery, small arms, and all the munitions which may be required for the fortresses

of the country, the armies in the field, and for the whole body of the militia of the Union. In these duties are comprised that of determining the general principles of construction, and of prescribing in detail the models and forms of all military weapons employed in war. They comprise, also, the duty of prescribing the regulations for the proof and inspection of all these weapons, for maintaining uniformity and economy in their fabrication, for insuring their good quality, and for their preservation and distribution.

The extent of these duties may be perceived by referring to the fact that, for carrying into effect the general purposes here stated, Congress has appropriated, for many years past, nearly one million of dollars per annum; and that, in order to fulfil these purposes, extensive operations are conducted at the following establishments, viz: two national armories, nine private armories, four cannon founderies, fourteen national arsenals, four ordnance depots, and an extensive region of public lead mines. These establishments are situated in the different parts of the Union, and they employ more than one thousand men, consisting chiefly of artificers and mechanics. They are all conducted under the general supervision, and (with the exception of the private armories,) under the immediate and special direction of the Ordnance department.

To this brief outline of the character and extent of ordnance duties, it seems proper to add a few remarks on the responsibilities which are involved in their proper discharge. These are, in some material respects, peculiar to this branch of service alone, and do not exist in any other branch of the military service. The appropriations for the ordnance service are applied to the productions of arms and other military supplies of a durable character, which are stored in depot for future service, and are reserved to meet the future exigencies and defence of the country. They are not consumed and extinguished in the current service of the day, like most of those which are obtained by the expenditures of other branches of the military establishment. The value of ordnance supplies now in depot which have been accumulated under former appropriations exceeds eleven million dollars, and the value is constantly augmenting at the rate of nearly one million dollars per annum. This branch of service is, therefore, responsible that all the various munitions of war are provided in due proportion to the wants of the service, and are constructed on the most approved models and of suitable quality; that the whole body of the militia be efficiently armed and equipped to the fullest extent of the means appropriated to that object; that large annual disbursements be faithfully made and promptly accounted for; that they be applied to authorized purposes, and no other; and that they produce a just and substantial equivalent in military supplies of enduring value to the country, and that the accumulating product of these expenditures be securely preserved and duly accounted for.

From this brief statement of ordnance duties, it will be perceived that a greater number than four officers is necessary for the performance of them; and as this number is all which the ordnance service adds to the aggregate of the whole military establishment, it follows that it cannot be reduced without injury to the service. A reduction of the number of officers serving in the Ordnance department by details from the regiments would not lessen, in any degree, the aggregate of the army, and is, therefore, considered as not being within the scope of the inquiry contained in the resolution.

But as it is necessary that a considerable number of officers should always be detached from their regiments for ordnance service, it is also necessary that those regiments should possess an excess in order to be able to supply this demand without deranging the regimental service. The regiments of artillery from which alone officers for ordnance service can now be drawn are provided with *five* officers for each company, while the infantry companies, consisting of nearly the same number of men, are provided with *three* only. This excess in the artillery regiments was provided expressly for the purpose of enabling them to furnish the details for ordnance service, as appears by the plan reported by the Secretary of War on the 12th of December, 1820, in pursuance of an order of the House of Representatives. This report is published in State Papers, vol. 1, 2d session 16th Congress, Document No. 21. It stated that the number of officers allotted to each company of artillery was greater than the regimental service required.

A reduction in the artillery regiments to an extent equal to the number usually detached from them for ordnance service, and a permanent assignment to the latter of an equal number, it is believed, would be advantageous to both branches of service. A measure of this kind would leave four officers in each company for regimental duties, and would provide a sufficient number for ordnance service.

In reference to that clause of the resolution which calls for "a plan of the most efficient organization of the army" I beg leave to state that so much of the present organization of the army as provides for the ordnance service is considered defective, and the public interests require that a more efficient system should be provided for this branch of service.

The principle on which the present system rests, that of furnishing officers for ordnance service by temporary details from the regiments, is inapplicable to duties of that character, more especially to such of them as are performed by senior officers who direct and control the most important part of them. From the general character of these duties, as described in a former part of this report, it may be readily perceived that experienced officers are necessary for their proper performance. They differ from those which are practiced in other branches of service. No other department is charged with the duty of devising and determining the plans and models of military weapons, nor with the supervision of extensive mechanical operations and fabricating establishments. No other performs any duties in immediate connexion with, or for promoting the efficiency of, the whole body of the militia, and none other is charged with the care and preservation of a vast amount of munitions of war; the responsibility of the ordnance, in this respect, being greater than that of all the other departments united. It is, besides, the only department, except the Engineer, whose duties are but little affected by any change from peace to war, or from war to peace, whose services have no immediate connexion with the line of the army, and whose duties would remain the same whether the peace establishment be large or small, or be entirely abolished. From the peculiarities of this service the experience acquired in other branches can be of little avail in this; yet, by the present system, its duties are required to be performed solely by officers detached for short periods from the regiments. And, since 1821, when this system was adopted, these duties, which include the disbursement of more than seven million of dollars, have been distributed among one hundred and sixty different officers, a large portion of whom were necessarily without previous experience in them.

The embarrassments incident to these fluctuating changes may be exemplified by relating those which occurred at a single post in one quarter of a year. Soon after the commencement of a quarter the proper commander transferred to his successor the balance of public funds, and the military stores on hand, and left the arsenal. Funds for the current service of the quarter were transmitted to the second commander, but did not reach him until he also had departed and was four hundred miles distant. The third commander also left the post and placed it under the surgeon, who, in his turn, was relieved by a

fifth. Funds were again transmitted, the former having been repaid into the treasury; but before they reached the post, the fifth commander to whom they were sent had been superseded by a sixth, and the quarter had expired, leaving the workmen employed at the post unpaid. These changes were all unknown to the department which is charged with directing the services of the post and is responsible for them until after each had occurred.

The several departments for subsisting, clothing, paying, healing, quartering, and transporting the army, and for constructing the military defences of the country, have each a separate and stable organization. The department for *arming* them alone remains subject to the fluctuations and embarrassments of an unstable system. Experience has fully demonstrated the wisdom of the laws which gave stability to the other departments, and an extension of the same principle to the ordnance service would doubtless prove alike beneficial.

Plans for a more efficient organization of the ordnance on a basis similar to that of other departments have at different times been submitted, and have received the consideration of the proper committees of Congress, who have uniformly sanctioned them by reporting bills for carrying them into effect. One of the bills thus reported passed one house, but was laid over at the close of the session in the other, for want of time to act upon it.

The bill reported by the Committee on Military Affairs of the House of Representatives at the last session (No. 77) contains all the provisions which are considered essential for giving to this branch of service an efficient organization. It is believed, however, that some additional provisions would be found useful. I beg leave, therefore, respectfully to suggest that provision be made for appointing one sergeant for each military post, whose duty it should be to receive and preserve the ordnance, arms, ammunition, and other military stores at the post; and, under the direction of the commander, to issue and account for the same under such rules as shall be prescribed by the Secretary of War. It is suggested, also, that the appointments be made by the Secretary of War from among those sergeants who have served in the army eight years at least, four of which to have been served in the grade of non-commissioned officer, and who shall produce certificates of faithful service and good moral character from their regimental and company commanders. It is also proposed that the sergeants thus appointed shall receive five dollars per month in addition to the pay which is or may be allowed to any company sergeant.

In reference to this proposition, it appears proper to state, by the 3d section of the act of March 30, 1814, provision was made for appointing a junior lieutenant of each company of artillery, a *conductor of artillery*, whose duty it was made to receive and account for all military stores furnished for the use of the company, for which service he was to be allowed ten dollars extra per month. The act of March, 1815, fixing the peace establishment, continued the provision. It was also continued in the act of April 20, 1818, which remodelled the artillery. But as no such provision was contained in the act of March, 1821, which reduced the peace establishment, the office of conductor of artillery then ceased. And as the law was silent as to the performance of this duty, the Army Regulations have since confided it to the respective commanders of posts. This, however, has been found inconvenient in practice. It obliges the commanders to devote much of their time to the care and preservation of the military stores of the posts, and to making up the quarterly returns of them. This requires attention to numerous little details, which, in reference to the other and appropriate duties of a commander, are comparatively of minor importance. By relieving the commanders of posts from this duty, and confiding it specially to a subordinate, (subject, however, to the directions of the former,) whose attention would not be diverted from it by more important avocations, more personal attention could be given to the care and preservation of valuable military stores, and it is believed the duty would be better performed.

The plan suggested, that of appointing experienced and faithful sergeants to this duty, would present to the meritorious of that grade an incentive to good conduct, and at the same time afford the means of rewarding it; and it is believed that the measure would have a beneficial influence upon the rank and file of the army.

It should be observed that this measure is proposed to be applicable to the forts or posts which are garrisoned by the troops, and not to extend to the arsenals. The care of the public stores at the latter is confided to ordnance officers, but no ordnance officers are stationed at garrisoned posts, nor do they exercise any immediate control of the military stores there deposited.

Respectfully submitted.

GEO. BOMFORD, *Brevet Colonel, on Ordnance Service.*

Hon. J. H. Eaton, *Secretary of War.*

A copy.

GEO. BOMFORD, *Brevet Colonel, on Ordnance Service.*

October 28, 1831.

TWENTY-FIRST CONGRESS, FIRST SESSION, H. R. 77.

January 6, 1830.—Read twice, and committed to a Committee of the Whole House to-morrow.

Mr. Drayton, from the Committee on Military Affairs, reported:

A BILL providing for the organization of the Ordnance department.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the passage of this act, the Ordnance department shall consist of one colonel, one lieutenant colonel, two majors, and ten captains, and as many enlisted men as the public service may require, not exceeding two hundred and fifty.

Sec. 2. *And be it further enacted*, That the first section of the act, passed on the 8th of February, 1815, entitled "An act for the better regulation of the Ordnance department," and so much of the second section of the act entitled "An act to reduce and fix the military peace establishment of the United States," passed the 2d of March, 1821, as provides for one supernumerary captain to each regiment of artillery to perform ordnance duty, and so much of the 4th section of the same act as merges the Ordnance department in the artillery, and reduces the number of enlisted men, be, and the same are hereby, repealed: *Provided*, That

nothing contained in this act shall be so construed as to divest the President of the United States of authority to select from the regiments of artillery such a number of lieutenants as may be necessary for the performance of the duties of the Ordnance department.

SEC. 3. *And be it further enacted*, That all officers and enlisted men authorized by this act shall be subject to the Rules and Articles of War; and that the officers shall receive the pay and emoluments now allowed to officers who perform ordnance duties.

Pay and emoluments of artillery and ordnance officers, exclusive of double rations.

Artillery.	Colonel.	Lieutenant colonel.	Major.	Captain.	First lieutenant.	Second lieutenant.
Pay per month	$75 00	$60 00	$50 00	$40 00	$30 00	$25 00
Subsistence	36 50	30 41⅔	24 33⅓	24 33⅓	24 33⅓	24 33⅓

Estimate of the additional expense which would be occasioned by the enactment of the bill herewith submitted.

The whole expense which would be created by the enactment of the bill, viz:

For the pay of 1 colonel, per annum	$2, 228 00
For the pay of 1 lieutenant colonel, per annum	1, 879 00
For the pay of 2 majors, (each $1,626,) per annum	3, 252 00
For the pay of 10 captains, (each $1,055,) per annum	10, 550 00
Total... 14 officers. Total expense	17, 909 00

Actual expense of fourteen officers on account of service in the Ordnance department.

For the pay of four captains of ordnance, (authorized by the law of March 2, 1821, fixing the military peace establishment,) each $1,055 per annum	$4, 220 00
For the pay of ten officers of the line on account of ordnance service, and whose regular pay would not be affected by the bill, viz:	
One lieutenant colonel, per annum	180 00
Two majors, (each $120,) per annum	240 00
Three captains, (each $120,) per annum	360 00
Two first lieutenants, (each $40,) per annum	80 00
Two second lieutenants, (each $100,) per annum	200 00
Actual expense of these 14 officers on account of ordnance service	5, 280 00
Whole expense which would be created by the provisions of the bill	17, 909 00
Additional expense which would be created by the provisions of the bill	12, 629 00

Memorandum of arsenals and other posts where officers are employed on ordnance service.

REPORT OF THE COMMISSARY GENERAL OF SUBSISTENCE.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, *Washington, November* 30, 1831.

SIR: In conformity with your instructions of 20th August ultimo, I have the honor to present to your view a statement in duplicate of the moneys remitted and charged to contractors and the disbursing officers of the department in the 1st, 2d, and 3d quarters of the year, amounting to $252,443 31
To which is added the amount due them on the settlement of their accounts 735 51

Making an aggregate of 253,178 82
The sum accounted for is 232,257 31

Leaving an outstanding balance of 20,921 51
From which is to be deducted the sum charged to contractors, not as remittances out of the annual appropriation, but as the difference in the prices of provisions contracted for, and purchases made by agents of the department, and totally unconnected with the fiscal operations of 1831 ..... 426 83

Leaving 20,494 64

Actually in the hands of the disbursing officers of the commissariat at the expiration of the third, applicable to the expenditures of the fourth quarter of the year.

It is a source of great pleasure to state, that of the moneys charged and remitted during the period embraced, no loss whatever has been sustained by government; and of eighty-nine officers disbursing in the department, only three accounts from the most remote posts have not been received. There is no doubt, however, of their reaching the office in a few days; but it is believed that if received the result of the statement would not be materially affected.

Very respectfully, your most obedient servant,

GEO. GIBSON, *Commissary General of Subsistence.*

Hon. LEWIS CASS, *Secretary of War.*

Statement exhibiting the moneys remitted to contractors from January 1 *to September* 30, 1831; *the sums charged to them on account of failures, and the amounts accounted for by them; the balances in the hands of the disbursing officers of the department December* 31, 1830; *the moneys remitted to them in the first, second, and third quarters of* 1831; *the sums charged to them on account of sales to officers on the frontier posts, sale of empty boxes, barrels, &c.; and the amounts accounted for by them for the same period; together with the balances in their possession at the expiration of the third quarter of the year.*

GEO. GIBSON, *Commissary General of Subsistence.*

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, *Washington, November* 30, 1831.

REPORT OF THE COMMISSARY GENERAL OF PURCHASES.

COMMISSARY GENERAL'S OFFICE, *Philadelphia, October* 24, 1831.

SIR: I enclose four statements prepared by order of the War Department, as follows, viz:

No. 1. Statement of moneys drawn from the appropriation for the Purchasing department for 1831, during the first three quarters of 1831, amounting to $102,511 42.

No. 2. Statement of moneys disbursed during the first three quarters of 1831, on account of the Purchasing department, and amounting (after deducting $15,302 20 belonging to the appropriation for 1830) to $97,369 14.

No. 3. Comparative statement of the cost of clothing for the army of the United States during the years 1830, 1831, and 1832.

No. 4. Statement of the cost of clothing for the army of the United States during the year 1832.

The foregoing statements will, I hope, meet your approbation, and be received in good time.

With great respect, I have the honor to be, sir, your obedient servant,

C. IRVINE, *Commissary General of Purchases.*

Hon. LEWIS CASS, *Secretary of War.*

COMMISSARY GENERAL'S OFFICE, *Philadelphia, October* 24, 1831.

C. IRVINE, *Commissary General of Purchases.*

Hon. LEWIS CASS, *Secretary of War.*

SURGEON GENERAL'S OFFICE, *October* 20, 1831.

SIR: In compliance with an order of August 20th, I herewith enclose estimates of the expenses of the medical department of the army and of the Surgeon General's office for the year 1832. Accounts against the department being transmitted to this office for examination, and paid by warrant on the treasury, but $1,550 have been advanced during the year, of which $808 51 were unexpended on the 30th ultimo and the remainder has been accounted for. The expenses of the department for supplies has not materially varied since the reduction of the army in 1821, being at the rate of $2 50 per man; the present estimate is therefore the same as heretofore. That for private physicians has increased in consequence of the deficiency in the number of medical officers, as the army has been distributed for some years past. The amount expended in 1829 and 1830, including the recruiting service, was $28,966.

On the reduction of the army in 1821 it was distributed to 40 military posts and arsenals, including West Point. In January last there were 51; on the 30th ultimo there were 64 stations, including the recruiting rendezvous, requiring a surgeon, and at the same period there were three surgeons absent in consequence of sickness and one on furlough, leaving but 49 for duty. If every officer of the department were constantly on duty, and but one assigned to a full regiment, instead of three as heretofore allowed by law, there would still be a deficiency of eleven. On this subject I beg leave to refer to a report to the department of August 1, 1830, relative to a reduction of the officers of the army, contained in the third volume of the Executive Documents of the last session of Congress.

Allow me also to call the attention of the department to the several memorials presented and the several reports made in relation to graduating the pay of surgeons of the army in proportion to their term of service, and especially as they are now the only subordinate officers of either army or navy whose pay has not been increased. In 1816 an additional ration was allowed to all lieutenants of the army, and subsequently an additional ration to both captains and lieutenants, with $10 per month to the former while on duty with their companies. In 1828 an addition of $10 per month and one ration per day was made to the pay of lieutenants of the navy, and in the same year the pay of the surgeons and assistant surgeons of the navy was increased after the periods of five and ten years service. The senior surgeons after ten years, and "while in actual service at sea," receive $85 per month more than the junior assistants, and $37 per month more than the full pay and emoluments of the army surgeon when on actual duty with his regiment, while the latter can at no period and under no circumstances receive above $11 per month more than the junior assistant or than he did at his first appointment.

As stated above, all the officers of the department are on duty except four, three from sickness and one on furlough for a short period. The reports and returns required by the regulations have been duly received. They show the hospitals to be well supplied and all public property under the charge of the surgeons has been satisfactorily accounted for. The total number of deaths reported in hospital during the year ending June 30 has been 126; of these 22 were from intemperance and 21 from consumption, leaving but 83 from all other causes.

Very respectfully, your obedient servant,

JOS. LOVELL, *Surgeon General.*

Hon. LEWIS CASS, *Secretary of War.*

REPORT FROM THE TOPOGRAPHICAL BUREAU.

TOPOGRAPHICAL BUREAU, *November* 7, 1831.

SIR: In obedience to your instructions of the 20th of August last, I have the honor to submit to you:

1. A statement marked A, exhibiting the amount drawn from the Treasury Department and remitted to the disbursing officers under this office from the 1st of October, 1830, to the 30th of September, 1831, inclusive, and also the amount of accounts rendered.

2. A statement marked B, exhibiting the number of the individuals employed under the class of civil engineers and agents, under this bureau, and of the amounts paid to each for the same period.

3. A statement marked C, exhibiting the amount drawn from the treasury for the expenses of surveys and examinations in relation to the summit level of the contemplated canal across the Isthmus of Florida.

The application of the funds appropriated for surveys and the employment of the topographical engineers for the year 1831, have been as follows:

1. In making a survey of a route for the Michigan and Illinois canal, and in examinations and surveys of the Rock river and Des Moines rapids of the Mississippi, with a view to the improvement of the navigation of those rapids.

2. In making a survey of part of the Hudson river, with a view to the improvement of the navigation of that river near Albany.

3. In completing the drawings and reports of the surveys for the purpose of connecting by a canal the waters of Lakes Erie and Michigan with those of the Wabash.

4. In making surveys and examinations in relation to the contemplated Weymouth and Taunton canal.

5. In making surveys and examinations in relation to the improvement of the Big Sandy river in Kentucky, and in relation to a road from Pikesville, on the Big Sandy, to the boundary of North Carolina, and from thence to the boundary of South Carolina.

6. In making examinations and surveys in order to ascertain the practicability of a railroad from Winchester, Virginia, to Harper's Ferry.

7. In completing the drawings and reports of surveys of parts of the rivers Raritan and Delaware.

8. In making an examination of a route for a railroad from the Portage summit of the Ohio canal to the Hudson river.

9. In making examinations and surveys in relation to the contemplated canal to connect the waters of the Atlantic with those of the Gulf of Mexico across the Isthmus of Florida.

10. In completing the drawings of a reconnoissance of the sounds of North Carolina.

11. In completing the drawings of a survey in order to ascertain the military defences of the St. Mary's river, Maryland.

12. In completing the drawings of a survey of the Ohio, Beaver, and Chenango route of the Ohio and Erie canal from Pittsburg to Elk creek on Lake Erie, and to the harbor of Erie.

13. In completing the drawings of a survey of the Alleghany river from Pittsburg to French creek, of French creek to Le Bœuf, and of a route of a canal from thence to the harbor of Erie.

14. In completing the drawings of a survey of the Pennsylvania and Ohio canal from Big Beaver river to Akron, in Ohio.

15. In completing the drawings of a survey of a canal route from the Connecticut river to Lake Winnipisseogee, New Hampshire, by way of the valleys of the Oliverian and Baker's rivers.

16. In completing the drawings of a survey of a canal route to unite the waters of Lake Champlain with those of the Connecticut, by way of the valleys of Onion and Wells' rivers, in the State of Vermont.

17. In completing the drawings of a survey to connect the Savannah and Tennessee rivers by means of a canal or railroad.

18. In superintending the construction of the Baltimore and Susquehannah railroad, the Patterson and Hudson river railroad, and Catskill and Conajoharie railroad.

19. In paying the civil engineers and agents employed on several of the foregoing items of duties, the employ of whom was made necessary from the small number of topographical officers.

The subject of an increase and better organization of the corps of topographical engineers, and of the inconveniences resulting from their present condition, has been so frequently alluded to in executive communications that I shall now only bring to your consideration such views as have not been previously presented. The able report on this subject from your predecessor, Mr. Eaton, fully exposes the military considerations of the case, and also the number and organization required by the present wants of the country. To this I have only to add that the views therein unfolded are strengthened by every day's experience, and that the inconvenience resulting from a want of the organization proposed are continually increasing.

The reasons which may be alleged in favor of the proposed increase, in addition to those in the report alluded to, are such as apply to the survey of the coast.

The law of the 14th of April, 1818, commits that duty to the army and navy; and that part of the army to which this duty properly belongs is the topographical engineers. But owing to the few officers of this corps, and the pressing demand for their labors on other subjects, we have as yet done nothing under that law, except in such detail surveys of our harbors and bays as were made with a view to their military defences, but are highly valuable matter for purposes of filling up the cartoons of the general survey contemplated.

The scientific education derived at our Military Academy furnishes the necessary elementary knowledge for this duty; and the military education acquired there and in the army establishes those habits of order, attention to duty, and subordination necessary in every vocation of life, and without which no extensive operations can be judiciously or economically conducted. The government, therefore, has at its command valuable materials for filling up the proposed corps in the officers of the present corps, and those graduates of the academy who have been on duty with it, and others from that institution in the several corps of the army, with officers capable at once of entering upon its duties, and of rendering efficient services.

In those services which would have to be performed in a survey of our coast, not only is mathematical knowledge requisite, but also a knowledge of and a habit of accurately using the fine and delicate instruments required in the necessary observations. This last and valuable knowledge can be obtained by

those only who possess the mathematical and mechanical information involved in the use and construction of the instruments; and with the elementary knowledge which, it is but fair to suppose, is already possessed by the class of individuals before alluded to, there would only remain to be acquired a habit of accurately using the instruments.

It is but just to state that the ability to use fine instruments, and to observe correctly with them, is a work of time and of careful attention. But if we are not adequately organized, we cannot have officers to appropriate to that duty, and, of course, cannot say when the result of that time and careful attention will be possessed. If we have not, therefore, the necessary means, we must continue defective in a correct knowledge of our own coast, and also defective in the practical skill of a branch of our profession, the importance of which cannot be too highly estimated; in fact, everything depends upon it It furnishes all the data for the calculations; and if defective, all the calculations are but authentications of error.

The requisite instruments have already been procured by the government, at a great cost, and under the personal supervision of a gentleman highly gifted in those matters, and are now in deposit under the care of this office. It needs only means and time to apply them to their intended uses, and to reap from them the valuable results which they are so well adapted to yield.

It appears to me entirely unnecessary to urge upon your notice the various commercial advantages which will result from an accurate knowledge of our maritime frontier, nor the value of this knowledge to its military defences. These considerations are self-evident, and need no argument to maintain them. But it may be urged that there is something due to our national character, which requires that we should be no longer entirely indebted to the imperfect efforts of other nations for information of our own coast, and that we should, by our own labors, add something to the general mass of scientific knowledge by, at least, correct determinations of the geography of our own country. The present effort may also be the origin of a school which may hereafter furnish individuals adequate, as well by their capacity to observe as to calculate the results of observations, to enter into fair and honorable competition with the distinguished astronomers of Europe, some of whom made their first essays while officers of a similar corps.

The duties of a corps of topographical engineers are essentially military and scientific; hence the advantages of having military habits and education added to the scientific knowledge of its members.

Its duties also benefit all the great interests of society, and eminently qualify its members for operations which might be considered as the peculiar province of the civil engineer. For instance, the survey of a country for military purposes furnishes also a good geographical map; the survey and construction of a road for military purposes, or for the transportation of the mail, is an equally good road for the merchant, the farmer, or the traveller; a canal for military purposes will serve equally well the wants of agriculture and commerce; and a survey of a bay or river, or harbor, in order to ascertain the military defences of either, furnishes also that precise knowledge of its shoals, bars, channels, tides, and currents, so valuable to the navigator. While a topographical officer, therefore, is collecting in his military operations the knowledge necessary for the military defences of the country, he also collects matter improving its geography, and bearing essentially upon its commercial and agricultural prosperity.

From the character of the duties of such a corps it may be seen with what facility and advantage it may have its attention, when necessary, turned to objects purely civil; and that even while pursuing these purely civil objects, from its military knowledge, its labors will be enriched by all the military considerations which the operations may develop; so that the labors of the corps, if judiciously directed, cannot fail to furnish the government with the most correct knowledge of the resources of the country—civil and military; of its agricultural, commercial, mechanical, and mineralogical advantages, and of its military means of defence; as all these are subjects of the investigations of a topographical engineer.

Respectfully submitted.

JOHN J. ABERT, *Lieutenant Colonel and Topographical Engineer.*

Hon. LEWIS CASS, *Secretary of War.*

APPLICATION OF MASSACHUSETTS FOR A MORE PERFECT ORGANIZATION OF THE MILITIA OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 12, 1831.

COMMONWEALTH OF MASSACHUSETTS.

Resolved by the senate and house of representatives, That the senators of this Commonwealth in the Congress of the United States be instructed, and the representatives requested, to use their exertions to procure the passage of a law for the more perfect organization of the militia of the several States.

Resolved, That his excellency the governor be requested to transmit copies of these resolutions to the senators and representatives of this Commonwealth in Congress, and also to the governors of the other States, in order that the same may be submitted to the legislatures thereof for their consideration.

IN SENATE, *March* 4, 1831.

Read twice and passed. Sent down for concurrence.

SAML. LATHROP, *President.*

IN HOUSE OF REPRESENTATIVES, *March* 7, 1831.

LEVI LINCOLN

22d Congress.] No. 487. [1st Session.

ON CLAIM OF SOUTH CAROLINA FOR REIMBURSEMENT OF MONEY PAID FOR THE SUPPORT OF THE MILITIA OF THAT STATE DURING THE WAR OF 1812-'15.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 15, 1831.

Mr. Drayton, from the Committee on Military Affairs, to whom was referred the memorial of the State of South Carolina, by Alexander Speer, comptroller general, reported:

That the object of the memorial, as therein set forth, is to obtain payment from the United States of the sums of money expended by the State of South Carolina upon her militia whilst in the service of the general government, together with interest thereon. As the claims of South Carolina depend upon the existence of the facts that her militia were in the service of the United States during the late war under such circumstances as constitutionally entitled her to reimbursement for the expenditures which she made upon them, and that these expenditures were appropriated for the purposes to which they were applied, the committee will state the substance of the evidence by which, in their judgment, these facts are fully and conclusively proved.

Before the commencement of the war with Great Britain, and for a long time afterwards, the State of South Carolina was almost destitute of any of the means of military protection, excepting such as could be furnished by her own resources. In the harbor of Charleston alone were there any forts, and these were in so feeble a condition that, at a period when a British squadron was engaged in sounding the depth of water off the bar, and its commander apparently meditating an attack upon the forts, the quantity of gunpowder in the harbor belonging to the United States was not more than sufficient to have enabled the garrison to fire a single round. Although this state of things was earnestly and repeatedly represented to the Department of War, only two small and very inadequate supplies of the requisite articles were obtained. The national government being unable to supply either cannon or ammunition for the security of the maritime frontier of South Carolina, to put muskets into the hands of the militia called out for that purpose, or to furnish the pecuniary funds to pay and feed those who were actually engaged in its service, the legislature of the State, prompt in the discharge of the duties which she owed to her citizens and to the Union, *unanimously* resolved "cordially to support the general government in the vigorous prosecution of the war until a peace could be obtained on honorable terms, and cheerfully to submit to every privation that might be required to accomplish that great object." Influenced by the spirit of this resolution, the State established manufactories of arms and of cannon balls; purchased every munition of war necessary for her troops; appropriated half a million of dollars for the defence of her maritime frontier; ordered a brigade of State troops to be enlisted, clothed, and equipped, and then to be offered to the general government; and, at her own expense, called out the militia at various times to protect the points which were menaced by the enemy. The State furnished with arms that portion of her militia which was mustered into the service of the United States, and in some instances supplied them with provisions and blankets; she had deposited in the arsenals in Charleston large quantities of cannon balls for the defence of the harbor, and for her quota of the direct tax, long before it was imposed, she advanced the sum of $————, which was paid to Major General Thomas Pinckney, and applied by him to the pressing wants of the regular soldiers in the service of the United States. In making disbursements under the direction of inexperienced State officers, it unavoidably occurred that many of the regulations prescribed by the Department of War were not observed. They were, in numerous instances, unknown; and had they been known, under the circumstances in which the State was placed, they could not have been strictly attended to. South Carolina steadily persevered in her patriotic exertions as long as the war continued. Before the restoration of peace she sent an agent to Washington to settle her accounts with the United States, whose officers rejected a very large proportion of them, amounting, with interest, to nearly $200,000. To obtain from Congress the payment of the items which were disallowed by the officers of the treasury is the object of the memorial now presented by the State of South Carolina. These items the committee will proceed to consider in their order.

1st. The first claim is for *interest* on so much of the advances of the State during the war as have been or may be recognized and paid by the United States On this point, it appears that, at the time these advances were made, the State, being unable to meet the various demands on the treasury by taxes upon her citizens, drew the whole amount from a fund which she had previously invested in an incorporated bank, and on which she was then receiving an average interest of nearly 12 per cent. Interest has heretofore been allowed by special acts of Congress to several States on similar advances, where the money was borrowed from banks, or where a previous promise to pay interest was made by an officer of the general government. The committee are clearly of opinion that the principle involved in the former class of cases applies to the advances by South Carolina, and they can conceive no substantial difference between the payment of interest and the loss of interest by a State on moneys applied to the service of the United States. In the case before us the claim is rendered still stronger by the amount of the loss having greatly exceeded the usual interest of money, which alone, however, is now claimed by South Carolina. With respect to the claim of some of the States, arising from a previous promise to pay interest, the committee, while they, of course, admit the obligation arising from such a promise, can by no means admit that advances, under circumstances equally meritorious, are less entitled to favor, because made without any previous stipulation whatever. In every view of the subject, therefore, the committee are of opinion that the State of South Carolina is entitled to the usual interest for these advances.

2d. The next claim is for the *arms* furnished by the State to the militia in the service of the United States This account has been adjusted at the Ordnance department, and the number and character of the arms due to the State is duly certified by the proper officer. The State, however, claims to be paid the value of the arms *in money*, while the War Department, having no funds at its disposal applicable to that object, can only discharge the debt in *kind*. It appears that the State of South Carolina caused the arms in question to be manufactured, or purchased at an expense of from $15 to $17 per stand; that the present contract price is $12; and that the State, though at the time the arms were furnished

she stood greatly in need of them, has now no use for them whatever. As the State is willing to receive payment for those arms at the present contract price, the committee can see no possible objection to their receiving the money in lieu of the arms, especially as this arrangement will cost the government nothing—it only being necessary to lessen, to an equal amount, the number hereafter to be manufactured.

3d. The next claim is for *cannon balls* manufactured by the State, in consequence of no supplies being furnished by the United States, and when essential to the defence of Charleston. Those cannon balls were, it appears, rejected by the Ordnance department, in consequence of their not being exactly conformable to a standard established by that department. The evidence before the committee being conclusive to show that, at the time these balls were manufactured by the State, the United States had not furnished, and were unable to furnish them, and that the harbor of Charleston was almost defenceless; and it further appearing that the State used the best means within its power at the time to procure them of a suitable kind and proper quality, it is deemed just and reasonable that the State should be refunded the amount paid for said cannon balls.

4th. The next item of the claim is for *transportation*. On this point, it appears that, in marching troops to the places of rendezvous, it was often found necessary to employ a greater number of wagons than is allowed by the regulations of the army. In some instances ten or twelve wagons have been found necessary to enable a regiment to reach its place of destination; and it is stated that the number actually found necessary, and no more, were paid for by the State; while she has been allowed, in the settlement of her accounts, only eight to each regiment. The committee are of opinion that, under the circumstances of the case, the State of South Carolina ought to be remunerated for the expenses thus necessarily incurred for transportation.

5th. The next item of the claim is for the amount of compensation actually paid by the State to the paymaster general, commissary general, and other staff officers of the militia, employed by the State in making the expenditures which have been or may be recognized as chargeable to the United States. It appears that the State of South Carolina, thrown in a great measure on her own resources, and compelled to call out her militia, and to provide transportation, arms, and munitions of war of every description, had no alternative but to use the officers of her own staff for these purposes. Compensation was allowed to these officers by the State as a matter of course, and, under the peculiar circumstances of the case, it appears to the committee reasonable that the expenses thus incurred for the benefit of the United States should be refunded.

6th. The next item taken into consideration by the committee was for *blankets*, which, it appears, were furnished by the State to a regiment of militia actually in the service of the United States. It appears that the officers of the regiment united in a memorial to the legislature of South Carolina, representing that many of the men under their command were entirely destitute of blankets, and were therefore exposed not only to great suffering, but to the loss of health, and even of life itself. The legislature humanely interposed, and appropriated the sum of $7,500, which was applied to supply those men with blankets who were destitute of that necessary article. The account for the blankets thus furnished has been rejected by the United States, on the ground that the troops, in the case in question, having been called out only for *six months*, were not entitled to blankets by the regulations of the army.

Although the issue of these blankets was not authorized by the regulations of the Department of War, yet, as they were furnished under the exigencies of such pressing want, the committee feel no hesitation in deciding that this item ought to be allowed.

The last item submitted was for the payment of interest upon the sums advanced by South Carolina, for which she has not been reimbursed, and which were rejected by the officers of the treasury, for the reasons already specified. As the claim for interest upon these advances is founded upon the same principle as upon the advances which have been already refunded, the committee are, therefore, of opinion that it ought to be admitted. South Carolina expended large sums on account of her militia in the service of the United States, the repayment of which she has never asked for. These expenditures were requisite for the uses to which they were dedicated; but it being supposed that they would not have been incurred by the United States, however flourishing her finances and resources might have been, no demand was made for remuneration. Other demands have not been preferred, in consequence of the inability of the State to procure vouchers to establish them, which is to be attributed to the inexperience or negligence of officers, or to the hurry and confusion in which many purchases were made and distributed. From these causes, the loss which has been suffered by the State exceeds fifty-nine thousand dollars, exclusive of interest.

All the items for which payment is required by South Carolina from the general government, as well those which have been allowed as those which have been disallowed, have been examined by the committee. The evidence to substantiate the latter was acknowledged by the proper officers of the treasury to be ample and satisfactory; they were rejected solely because they were inadmissible according to the regulations of the Department of War. Being inadmissible by these regulations, relief can only be afforded to the memorialists by the federal legislature. As the committee are of opinion that relief ought to be granted, they therefore report a bill.

IN THE HOUSE OF REPRESENTATIVES, *May* 5, 1828.

Mr. McCOY, from the Committee of Claims, to whom was referred a bill from the Senate for adjusting the claims of the State of South Carolina against the United States, reported:

That they have examined this bill, as also the items reported by the Committee on Military Affairs of the Senate, on which the bill is predicated, and do not concur in the opinion expressed by that committee, that the State of South Carolina is entitled to the remuneration asked for, and of consequence this committee think the bill ought not to pass.

The first item in the bill is for interest on advances in money made by the State of South Carolina, for defence of that State, during the late war, in procuring arms and munitions of war, and for pay and provisions, and transportation for the militia called into service during said war for defence of the State. This committee cannot better illustrate their views on the subject-matter of this bill than by a comparison of what was done by the State of South Carolina during that war with what was done by other States during the same period, and stating what has been done by special acts of legislation since the war in

favor of other States of the confederacy, and the rules of settlement applied to all the States in the settlement of their accounts against the United States.

It will be seen by the report of the Committee on Military Affairs of the Senate that the memorial of Alexander Speer, comptroller general for the State of South Carolina, on behalf of that State, is referred to, as enumerating the claims of that State against the United States. This document is not among the papers referred to this committee; therefore, they can only have reference to the report of the committee above referred to for the subject-matter which induced the passage of this bill by the Senate. By the report referred to it appears that, at the commencement of the late war, the State of South Carolina had the funds of that State invested in stock of a bank called the State Bank of South Carolina, from which she drew the whole of the advances made during said war, and on which she now claims interest on such portions of her accounts as have been allowed heretofore, or may hereafter be allowed by the United States. Several special acts have been passed since the close of the late war, directing interest to be paid to certain States and corporations for advances of money made to prosecute that war, to wit: Virginia, Maryland, Pennsylvania, Delaware, and New York, and the city of Baltimore; but in all those acts the amount of interest directed to be paid was confined to such part of the advances made as had been actually borrowed by those States, &c., and on which those States had paid interest up to the time the sums so borrowed had been refunded to such States; and in those cases the States were bound to show that such loans were actually expended for the use and benefit of the United States, as evidenced by the sums allowed and repaid to those respective States by the accounting officers of the United States. Virginia was the first State which asked of the United States payment of interest on moneys advanced and expended for the use and benefit of the United States during that war. That State had advanced largely, upwards of $2,000,000, during the war; first, out of her treasury; second, by borrowing from banks; and third, by additional taxes levied on her citizens. Of the sum stated above, only $100,000 had been refunded to her at the close of the war, and that sum near the close of the war. When Virginia resorted to loans, she, at the same time, resorted directly to taxes on her people to repay the money obtained by loans. The annual taxes of that State, for State purposes, were, at the commencement of the war, about $300,000, and, at the close of said war, were but little short of $1,000,000; yet Virginia has received no interest on her advances, except that portion which she borrowed, and on which she paid interest. This committee are unable to see any difference in principle between the advances made by South Carolina and those made by Virginia. The first took the funds of her citizens invested in bank, and the latter took, first from her treasury, and the balance directly from the pockets of her citizens, by taxes; and surely, if one is entitled to interest, the other is equally entitled.

A considerable portion of the advances made by the State of Virginia has been disallowed by the accounting officers of the United States, as has been those made by South Carolina; and more or less has been disallowed in nearly all the claims of States who made advances and incurred expenditures during that war, in the settlement of their claims, and for like reasons; and the same rule of settlement has extended to all. These disallowances will be found in all the State claims: in some instances, claims are made for payments made to State officers for services rendered, where it cannot be shown that they were in the service of the United States; in others, greater sums have been paid than the laws of the United States, or the rules and regulations for the army of the United States, authorized; in others, a want of vouchers to show that the money had been expended for the use and benefit of the United States, and if so, to whom, and for what. Those claims are all in progress of settlement, and are paid when vouchers are produced which will justify their allowance. This committee will here take occasion to say that it has not been the practice of this government to pay interest on accounts, and they think it would be highly inexpedient to do so, except in peculiar cases. Nor can this committee see any just reason why the officers and soldiers of the United States army, or of the militia whose monthly pay (as is notoriously the fact) was withheld from them months, and in many instances in the militia, for years are not equally entitled to interest with the States who made advances of money; nor is the reasoning less weak in favor of every individual, on the final settlement of whose account a balance shall appear to be due, who should not have interest from the date of the advance made, which caused such balance in his favor. Hence, Congress, in passing the laws heretofore referred to, directing interest to be paid to the States before named, restricted it to the sums actually borrowed and expended for the use and benefit of the United States, and to the interest actually paid; and, in the case of Virginia, not that much, because Virginia, in some instances, paid more than the legal interest, and only received legal interest from the United States.

The second item in this bill is for arms furnished to the militia while in service during the late war, under the plea "that, at the commencement of the late war, South Carolina was nearly destitute of all means of defence except such as were furnished by the State herself; that the United States had not provided, and were unable to provide, cannon balls, muskets, powder, &c.; that during the said war that State purchased muskets, rifles, cannon balls, &c.," for which payment is asked, whether the articles were delivered to the United States or retained by the State, on an assumed principle that in war the United States are bound to furnish all arms and munitions of war for defence of the several States. This committee think this assumption not warranted by either the law of the United States or the practice by the several States under the law of the United States. As early as May 8, 1792, Congress, in compliance with the provisions of the Constitution, provided by law for arming the militia of the several States by obliging each militiaman to furnish himself with a stand of arms.—(See chap. 134, vol. 2, United States Laws.) In many of the States this law, if not literally, has been substantially complied with: 1st, by obliging the militiamen to procure arms at their own expense, so far as practicable; and 2d, by applying the funds of the State to the purchase or manufacture of arms of all descriptions, to such extent as to enable the State, in that respect, to meet any emergency that might happen. Take the State of Virginia again for contrast. That State commenced as early as the year 1795, by purchasing arms, and 2dly, erected a manufactory and foundery at great expense, and carried on this manufactory until she had on hand arms both great and small, say muskets, rifles, pistols, swords, with all the apparatus thereto belonging to make the article complete for use, as also a large park af artillery, *including largely of cannon ball.* At this time that State has in her arsenals 60,000 muskets and rifles over and above what she has distributed among her militia. At the commencement of the late war that State had arms in abundance, and to loan to the United States. This committee can see no reason for paying to South Carolina, to the extent asked, for muskets, rifles, and cannon ball, when other States which have incurred much greater expense are left unnoticed, unless the United States propose to break down all former practice of this government in relation to arms and other munitions of war, and compensate all the other States for moneys expended in procuring like articles. This committee still adhere to the old-fashioned notion that each State owes something to itself, and that each is bound, so far as relates to the militia, to incur expend-

tures, and may have use for arms for State purposes. It will be seen that the agent of the State of South Carolina has insisted on the settlement of this war account for arms, and to have money in lieu of that portion of arms due the State, procured by the United States under the appropriation of $200,000 annually in aid of arming the militia; and the committee who reported this bill urged the same view, recommending, as South Carolina does not want the arms due her in settlement of the war account, that money should be paid in lieu. It will be seen, on examining this claim, that a certain number of arms belonging to the State of South Carolina, on discharging detachments of militia, were given over into the care and keeping of the officers of the United States; that others were carried off by the militia, or otherwise lost to the State, as was the case in many others of the States. To that extent the United States have considered claims just, and to be repaid in arms. On settlement of these accounts, where the United States had loaned arms to *States*, or where United States arms had been delivered into the care of State officers, the same rule of settlement has been applied to all the States, and the committee see no cause why it should be relaxed in favor of South Carolina. Communications from Lieutenant Colonel Bomford, of the Ordnance department, to the committee, numbered 1, 2, 3, and 4, and the printed statement of the account in the pamphlet, will show the extent of the claim for arms, and the balance in arms due to South Carolina, and document marked A will show the rules by which all those accounts for arms have been settled—that there is, as per final settlement, due to South Carolina 2,489 muskets, ready to be delivered to order of the governor of that State when he shall designate the place for delivery. The printed pamphlet will show that, in relation to the cannon ball and shot, they are of little value to South Carolina or the United States, being unfit for use; and if otherwise, they are not a proper charge against the United States, further than what was used of them, if any.

The fourth item being for transportation, in this particular the committee of the Senate are mistaken when they say "that South Carolina has only been allowed pay for eight wagons and teams to a regiment in the settlement of her accounts." A letter from the Third Auditor, marked B, will show that payment has been made by the late Secretary of War for eighteen wagons and teams for transportation of Colonel Tucker's regiment, which consisted of only 550 men, on his certificate of their necessity, and no doubt, with like evidence, others will be paid, if any such necessity existed; and if there be no other evidence to that point, it is *assumed* that in all other cases like causes existed.

The fourth item is for payment to certain staff officers of the State for their services in expending or disbursing money for those arms and accoutrements procured by that State during the war, but not in the service of the United States. The committee will only say, in reply to this item, that such claim may be made in favor of every State for all persons, either in peace or war, who are employed by such State to purchase arms and munitions of war, and that in no case is it a proper charge against the United States.

The committee recommend that the bill be rejected.

IN SENATE OF THE UNITED STATES, *January* 22, 1828.

Mr. HARRISON, from the Committee on Military Affairs, to whom was referred the memorial of Alexander Speer, comptroller general of South Carolina, praying, for and in behalf of the said State, for interest on her advances during the war, and also for the payment of certain accounts which have been heretofore disallowed, reported:

That the memorial of the comptroller general, for and in behalf of the State of South Carolina, sets forth that, for several years past, that State has made continual application at the proper departments of the national government for the adjustment of those claims which result from her disbursements for national defence during the late war; that in those applications she has been, in a great measure, unsuccessful; and that a large portion of her accounts remain unsettled, which cannot be adjusted otherwise than by the intervention of Congress; and that the State has therefore determined to bring the subject before that body, relying with confidence on being refunded the money which she advanced at the hour of the country's utmost need.

The claims of South Carolina, as set forth in the memorial, embrace, 1st, and principally, interest on her advances during the war; and, 2dly, sundry items of expenditure which have been disallowed by the proper officer of the Treasury Department, for reasons set forth by him on the account itself, and to which the committee will presently advert. In investigating these claims, the committee have received the testimony of gentlemen well acquainted with the situation of South Carolina during the war, and with all the circumstances under which the advances were made; and they will now proceed to state, as briefly as possible, all the facts established before them, and which they deem necessary to a clear understanding of the merits of the claim in question.

It appears that at the time, and for a long time after the war was declared, the State of South Carolina was nearly destitute of all means of defence except such as were furnished by the State herself. Except in the harbor of Charleston, there were no fortifications; and even there the forts were in bad condition, and unprovided with the munitions of war. The United States had not provided, and, as it appears, were unable to provide, powder, cannon balls, muskets, or any of the materials essential to the successful defence of that important point. So complete was the destitution in all these respects, that it was proved to the committee by the United States officer who for two years commanded all the troops in the harbor of Charleston that, at one period, while a British naval force was actually in sight of the forts, the whole of the supplies on that station were found to be insufficient to have enabled the garrison to fire a single round; and that, though these matters were earnestly represented to the proper officers, but two small supplies (and those wholly inadequate to the object) were ever received. It was further proved to the committee that the national government being unable to supply arms and ammunition adequate to the defence of the maritime frontier of South Carolina, having no muskets to put into the hands of the militia called out for that purpose, and being, moreover, unable to furnish the necessary funds to maintain the troops in the actual service of the United States, the State (made acquainted with these facts) found herself called upon to supply those deficiencies. The State of South Carolina, faithful to her own honor, and zealous in the discharge of her duty as a member of the Union, did not hesitate a moment on the course to be pursued in such an emergency; and it appears that the legislature unanimously "*resolved*

cordially to support the general government in the vigorous prosecution of the war until a peace could be obtained on honorable terms, and cheerfully to submit to every privation that might be required to accomplish that great object."

In the spirit of that resolution the State proceeded to establish manufactories of arms and of cannon balls, and made purchases of all the munitions of war. She appropriated half a million of dollars for the defence of the maritime frontiers; ordered a brigade of State troops to be enlisted, clothed, and equipped, and to be then offered to the federal government; and, at her own expense, called out the militia from time to time, and marched them to the various points menaced by the enemy. To that portion of the militia actually mustered into the service of the United States the State furnished arms, and, in some instances, provisions and blankets, and she caused to be deposited in the arsenals at Charleston large supplies of cannon balls for the defence of that harbor; and it is proved that the State went so far as to advance, as her quota of the direct tax, a large sum of money long before the tax was imposed by Congress, which was paid over to General Pinckney, and applied to the support of the troops in the service of the United States. In making these expenditures under the superintendence of State officers, (all of whom were necessarily without experience,) it of course happened that the rules prescribed by the United States on such subjects were often overlooked or violated; indeed, they were in many cases unknown, and, under the circumstances in which the State was placed, could not have been strictly adhered to. In this patriotic course of conduct the State of South Carolina steadily persevered up to the conclusion of peace. At the termination of hostilities she made up her accounts, and sent an agent to Washington to come to a settlement with the United States. It is proper to be here observed that, of the various expenditures by the State for military purposes during the war, it appears that a considerable proportion thereof has been exclusively borne by the State, and that remuneration therefor has not been demanded of the United States. In making this discrimination, the State seems to have taken entirely upon herself that portion of her expenditures which she supposed might, perhaps, not have been incurred by the United States, even if the funds of the general government had been adequate to the exigency, and to have charged to the federal government only those which that government was clearly bound to supply, and which they had altogether failed to furnish. Of the claims presented against the United States, large sums have been rejected, amounting to upwards of one hundred thousand dollars, which it is the object of the memorialist to obtain through the intervention of Congress. The accounts allowed by the proper officers of the Treasury Department, as well as those disallowed, with the reasons therefor, have been carefully examined by the committee. Many of the items are comparatively of small amount; and, in relation to most of them, it is believed that, by the aid of additional vouchers, they may be adjusted at the treasury; but in relation to several large items which have been disallowed, not for want of proper vouchers, but from their being considered inadmissible charges, under the existing rules of the department, redress can only be obtained from an act of the national legislature. These items the committee will now proceed to consider in their order.

1. The first claim is for *interest* on so much of the advances of the State during the war as have been or may be recognized and paid by the United States. On this point, it appears that, at the time these advances were made, the State, being unable to meet the various demands on the treasury by taxes upon her citizens, drew the whole amount from a fund which she had previously invested in an incorporated bank, and on which she was then receiving an average interest of nearly twelve per cent. Interest has heretofore been allowed by special acts of Congress to several States on similar advances, where the money was borrowed from banks, or where a previous promise to pay interest was made by an officer of the general government. The committee are clearly of opinion that the principle involved in the former class of cases applies to the advances by South Carolina, and they can conceive no substantial difference between the payment of interest and the loss of interest by a State on moneys applied to the service of the United States. In the case before us the claim is rendered still stronger by the amount of the loss having greatly exceeded the usual interest of money, which alone, however, is now claimed by South Carolina. With respect to the claim of some of the States, arising from a previous promise to pay interest, the committee, while they, of course, admit the obligation arising from such a promise, can by no means admit that advances, under circumstances equally meritorious, are less entitled to favor because made without any previous stipulation whatever. In every view of the subject, therefore, the committee are of opinion that the State of South Carolina is clearly entitled to the usual interest for these advances.

2. The next claim is for the *arms* furnished by the State to the militia in the service of the United States. This account has been adjusted at the Ordnance department, and the number and character of the arms due to the State are duly certified by the proper officer. The State, however, claims to be paid the value of the arms *in money*, while the War Department, having no funds at its disposal applicable to that object, can only discharge the debt in *kind*. It appears that the State of South Carolina caused the arms in question to be manufactured or purchased, at an expense of from fifteen to seventeen dollars per stand; that the present contract price is twelve dollars; and that the State, though at the time the arms were furnished she stood greatly in need of them, has now no use for them whatever. As the State is willing to receive payment for those arms at the present contract price, the committee can see no possible objection to their receiving the money in lieu of the arms, especially as this arrangement will cost the government nothing—it only being necessary to lessen to an equal amount the number hereafter to be manufactured.

3. The next claim is for *cannon balls* manufactured by the State, in consequence of no supplies being furnished by the United States, and when essential to the defence of Charleston. These cannon balls were, it appears, rejected by the Ordnance department, in consequence of their not being exactly conformable to a standard established by that department. The evidence before the committee being conclusive to show that, at the time these balls were manufactured by the State, the United States had not furnished and were unable to furnish them, and that the harbor of Charleston was almost defenceless; and it further appearing that the State used the best means within its power at the time to procure them of a suitable kind and proper quality, it is deemed just and reasonable that the State should be refunded the amount paid for said cannon balls.

4. The next item of the claim is for *transportation*. On this point, it appears that, in marching troops to the places of rendezvous, it was often found necessary to employ a greater number of wagons than is allowed by the regulations of the army. In some instances ten or twelve wagons have been found necessary to enable a regiment to reach its place of destination; and it is stated that the number actually found necessary, and no more, were paid for by the State, while she has been allowed, in the settlement of her accounts, only eight to each regiment. The committee are of opinion that, under the circumstances

of the case, the State of South Carolina ought to be remunerated for the expenses thus necessarily incurred for transportation.

5. The next item of the claim is for the amount of compensation actually paid by the State to the paymaster general, commissary general, and other staff officers of the militia employed by the State in making the expenditures which have been or may be recognized as chargeable to the United States. It appears that the State of South Carolina, thrown in a great measure on her own resources, and compelled to call out her militia and to provide transportation, arms, and munitions of war of every description, had no alternative but to use the officers of its own staff for these purposes. Compensation was allowed to these officers by the State as a matter of course, and, under the peculiar circumstances of the case, it appears to the committee reasonable that the expenses thus incurred for the benefit of the United States should be refunded.

6. The last item taken into consideration by the committee was for *blankets*, which, it appears, were furnished by the State to a regiment of militia actually in the service of the United States. It appears that the officers of the regiment united in a memorial to the legislature of South Carolina, representing that many of the men under their command were entirely destitute of blankets, and were therefore exposed, not only to great suffering, but to the loss of health, and even of life itself. The legislature humanely interposed and appropriated $7,500, which was applied to supply those men with blankets who were destitute of that necessary article. The account for the blankets thus furnished has been rejected by the United States, on the ground that the troops in the case in question having been called out only for *six months*, were not entitled to blankets by the regulations of the army. Though the conduct of the legislature of South Carolina in this instance is certainly worthy of high commendation, yet, as blankets have in no instance been allowed to troops in the service of the United States called out for six months only, the committee feel constrained to decide against the claim.

Having gone through all the items of the claim which it was supposed could be properly investigated by the committee, they beg leave to report a bill (in conformity with the principles herein set forth) for the payment of interest to the State of South Carolina, and for other purposes.

DOCUMENTS.

PART I.

Statements and letters showing the circumstances under which the advances were made, for which reimbursement is claimed by the State of South Carolina.

1st. Extracts from the message of Governor Alston to the legislature, with the accompanying papers, marked A, B, C, D.

2d. Report of committee of foreign relations.

3d. Statement of Colonel William Drayton, late a colonel in the army of the United States, then commanding the troops in the harbor of Charleston.

4th. Statement of General Tucker, now a member of the House of Representatives of the United States.

5th. Statement of Colonel Robert Y. Hayne, now a senator of the United States, quartermaster general of South Carolina during the late war.

PART II.

Statement of the drafts on the banks by the State of South Carolina, out of which the advances were paid.

PART III.

Documents in support of the claim for arms and cannon ball, numbered from 1 to 6.

PART IV.

Documents in support of the claim for blankets.

PART V.

1st. The rejected items of the account presented by the State of South Carolina, with the reasons for such rejection—E.

2d. The account acknowledged and paid by the United States—F.

3d. Summary of the claims of the State—G.

PART I.

Extracts from a message (No. 1) of his excellency the governor of South Carolina, delivered to both branches of the legislature, September 16, 1813.

"FELLOW-CITIZENS: Sensible of the inconveniences to which many of you would be subjected by a meeting at this season, it was with unaffected concern that I found myself constrained to exercise the constitutional power of convening you. But while a just regard to the duties devolved upon me rendered the exercise of that power unavoidable, I had too much confidence in your patriotism not to feel assured that all private considerations would be lost in your devotion to the public service. The period in which we live is a period of sacrifices, and it becomes men, worthy of the splendid destiny allotted to our beloved and favored country, not only to make them, but to make them with cheerfulness.

"From these ravages, so essentially disgraceful to those who have committed them, South Carolina has hitherto been happily exempt; nor is it probable, from the nature of her sea-coast, that she will at any time be much exposed to them. Accessible at two or three points only by the larger vessels of the enemy, the judicious application of a very moderate force would place us beyond the reach of any serious injury. But while our coast is thus unfriendly to the operations of ships of the line, or even frigates; indented with numerous bays and inlets, it leaves us vulnerable at many points by the light cruisers of the enemy. Of this, advantage has not failed to be taken. While the blockading squadrons, generally stationed before our ports, rendered all outward communications imminently hazardous, if not impracticable, privateers and armed barges fitted out for the occasion have, at different intervals, infested every sound and inlet from the Savannah to Winyaw. At one time all water communication with Charleston, whether from the northern or southern districts, was completely cut off—not the smallest craft could pass without risk of capture. The inconveniences to which our fellow-citizens generally, and the serious losses to which many of them were thus subjected, could not fail to excite a proper interest. Sensible of the importance of preserving safe, at least, the inland coasting trade, and justly apprehensive that these inroads, if permitted with impunity, would be extended from our waters to our shores, I felt it incumbent upon me to lose no time in adopting measures for repressing them. To effect this, a suitable number of cannon, adapted to the purpose, were directed to be mounted on travelling carriages, and detachments from the militia, under the command of Lieutenant Colonel Youngblood, ordered to take post at the most exposed points. Considering the co-operation of a certain naval force indispensable to the full attainment of the object in view, application (of which A is a copy) was at the same time made at the Navy Department for such number of gunboats and barges as were deemed adequate to the purpose. To this application no official answer has yet been returned, but informal assurance has been received that the naval force allotted to this State will be increased as soon as circumstances shall permit. Believing it incumbent upon the general government to provide for the defence of each member of the Union, representations (marked B) were also addressed to the War Department, in the hope of inducing such an addition to the regular troops here as might obviate alike the inconvenience and expense of calling out the militia, unless in the event of a serious descent. The answer of Mr. Secretary Armstrong (marked C) will sufficiently impress upon you the expediency of providing from our own resources such means as shall be deemed requisite to our better security.

"There is another subject intimately connected with the business of defence which I avail myself of this occasion to bring to your view. It is the want of a manufactory of arms in this State. During a time of peace there was little difficulty in procuring arms either from the other States or from Europe; at present the difficulty amounts almost to an impracticability. It is suggested to you how far it may be prudent either to establish such a manufactory at the expense and under the direction of the State, or to extend to them such patronage as may induce a similar establishment by individuals.

"Aware of the general solicitude at this season for an early return to your families and friends, and as another opportunity of communicating with you will so soon present itself, I forbear to offer for your consideration any other subjects, by the short postponement of which the public service will sustain no injury.

"I beseech the merciful and Almighty Disposer of Events to have you under His protection, and to direct your deliberations to the honor, the happiness, and the true interests of our beloved country.

"JOSEPH ALSTON.

"COLUMBIA, *September* 16, 1813."

A.

Letter from Governor Alston to the Secretary of the Navy, dated May 30, 1813.

SIR: The frequent representations made by my predecessor to the department over which you preside cannot have left you unapprised of the very defenceless condition of the sea-coast of this State. The policy and necessity of extending to us the aid of the general government were so obvious that it was not unreasonably expected they would before this have obtained for us your consideration. As other matters, however, doubtless more urgent, if not more important, seem to have occasioned our situation to be overlooked, I beg leave very respectfully, but very earnestly, to invite your attention to it.

From the nature of our coast it is only at one or two points that anything is to be apprehended, except the predatory attacks of light vessels. Aided by the local facilities of defence, the judicious distribution of a few gunboats and barges would have rendered us secure. The utmost vigilance of the enemy's squadrons could only have intercepted our foreign and outward coasting trade. The inland navigation from North Carolina to Georgia would have been carried on without interruption. The advantages of preserving the inland navigation thus open and free from annoyance are too apparent to require comment; they are, nevertheless, under the present state of things, completely lost to us. Encouraged by the strange apathy exhibited on this interesting subject, and fully apprised *that not a single measure of defence has been adopted*, the enemy have gradually extended their depredations to almost every creek and inlet on the coast. The smallest barge can no longer pass from Georgetown to Charleston, or from Charleston to Beaufort or Savannah, without imminent danger of capture. In a little time there is every reason to apprehend these depredations will be extended still further. Georgetown, the *entrepot* of the finest and richest part of South Carolina, which receives for exportation all the productions of the Waccamaw, Little Pee Dee, Great Pee Dee, Black river, and Sampit, may at this moment be burnt or laid under contribution by a privateer of a single gun. Bull's bay, which completely commands the inland navigation to this city from the northern parts of the State and North Carolina, is at present entered by the most inconsiderable barges of the enemy with impunity; indeed, it is but a few days since that the squadron of light vessels blockading our harbor very leisurely watered and obtained supplies of fresh provisions on Bull's island. Apprised in time of their intention, a plan was immediately formed for intercepting them, which there is every reason to believe would have eventuated not only in making prisoners of the watering parties, but in the capture of two brigs. On consulting, however, with Commodore Dent, I had the mortification to find that under late instructions from you the loan to the State of even a single barge was peremptorily interdicted. I need not add that the contemplated enterprise was necessarily abandoned.

Stono inlet, which commands the rear of Charleston, through which the enemy in four hours after entering it might fire the city without the smallest risk to himself, is at present open to the most contemptible invader.

North Edisto inlet, a few miles only more remote from Charleston, is similarly situated. Surrounded with valuable and highly-improved settlements, the smallest privateer might run up, and in the course of six or eight hours destroy property to the amount of $100,000.

St. Helena sound, which receives Pon Pon, Ashepoo, and Combahee rivers, has been, and, without some more efficient exertions, will doubtless continue to be, the scene of frequent and considerable depredations. One or two small schooners of the United States are occasionally on this station; but as it is well known to the enemy that they are frequently obliged to visit Beaufort and Charleston, their movements are watched, and the moment of departure is the signal for some new capture.

The constant danger to which Beaufort is exposed is scarcely less than that of Georgetown. At each of these places there is a thing *called a fort*, but at neither have the United States *a single cannon ball or a pound of powder*. Were these forts, however, even properly constructed and properly provided with the munitions of war, they would still afford a very incompetent protection. The one at Georgetown, from its situation, could only bring its guns to bear upon the enemy for a moment; the one near Beaufort could only be engaged with an enemy who should encounter it from choice, for the navigation of Broad river is even better than that of Port Royal river, and an enemy by ascending the former might effect a landing at about a mile from the town without the slighest possible interruption from the fort.

This, sir, is a short sketch of our situation. Under the expectation that it would before this have engaged the attention of the general government, I have hitherto forborne to avail myself of the resources of the State; but the late frequent depredations of the enemy, and the just apprehension that these depredations will become still more serious and extensive, render more decisive measures, in my opinion, indispensable. I have ordered out, therefore, to the most exposed points of our coast detachments of State troops, which preparations are made to increase as occasion shall require. To give complete efficiency to this force, however, either as regards the defence of the coast, or especially the protection of the inland navigation, it is essential to obtain for it the co-operation of a certain number of gunboats and barges. From the local circumstances which distinguish most of the inlets I have mentioned, fixed batteries could not be rendered of much avail, without an expense so enormous that it would not be expedient to incur it. A comparatively trivial sum, on the other hand, appropriated to the species of defence suggested, would afford an ample security. With ten or twelve gunboats (attended each by a barge or two) and as many hundred men judiciously distributed on our coast, Charleston would be the only point of any solicitude to us. Requiring so little, will it be too much, sir, for the State of South Carolina to expect that that little will not be withheld. Addressing myself to your department, I allude, of course, only to the gunboats and barges. I beg leave merely to add that should circumstances render it impracticable at present to allot more to this quarter, even two gunboats stationed in Winyaw, two in Bull's bay, as many at the junction of Broad and Port Royal rivers, and the two schooners now in that neighborhood constantly stationed in St. Helena's sound, would constitute an auxiliary force not a little to be desired.

I have the honor to be, sir, with great respect and consideration, your obedient, &c.

B.

CHARLESTON, *May* 31, 1813.

SIR: The copies I have the honor to enclose of my communications to Major General Pinckney and Colonel Drayton, commanding the United States troops at this station, will explain to you the measures I have deemed it expedient to adopt for the better defence of our coast. Relying upon the protection of the general government, I have hitherto considered it unnecessary to avail myself of the resources of the State; *existing circumstances, however, have rendered a resort to those resources indispensable.* A reference to my letter to General Pinckney will show the situation in which the important posts of Georgetown and Beaufort had been left. In the four forts defending the harbor of Charleston, which no military man would consider properly garrisoned with less than 2,500 men, there are not at this moment more than 400; of which number, I am officially informed, there are 180 fit for duty. With the enemy almost daily on our coast, and, as hourly occurrences demonstrate, perfectly informed of our situation, it is only matter of astonishment that the outward posts of Fort Moultrie and Fort Johnson, which are totally unprotected in their rear, have not before this been carried by assault and the cannon spiked.

Except at this place and Port Royal, the nature of our coast affords sufficient protection against the larger vessels of the enemy; but it is so indented with bays and inlets that it is assailable at almost every point by light cruisers and privateers. This description of vessels have already commenced their depredations, and, there is every reason to believe, will extend them, if not repressed, still further. To afford protection to the most exposed parts of the coast, and to preserve the inland navigation as far as shall be practicable free from interruption, a detachment of State troops has been ordered out who will form a chain of posts between Charleston and Beaufort. Another detachment will be stationed on Bull's island, which, completely commanding the inland coasting trade from the northern parts of this State and North Carolina to Charleston, it is of the utmost consequence should be closed against the enemy. Aided by ten or twelve gunboats, with a suitable number of barges, 1,000 or 1,200 men, judiciously posted, will leave us nothing to apprehend. Should the representations made to the Secretary of the Navy obtain for us the small naval force desired, Charleston will be the only point about which any solicitude will be felt. This solicitude, which is general and well founded, compels me earnestly to invite your attention to the very inefficient number of regular troops allotted to the defence of our capital. The propriety of protecting the coast generally by other troops than militia is also respectfully submitted to your consideration

I have the honor to be, sir, with high respect and consideration, your obedient servant,

JOS. ALSTON.

HON. J. ARMSTRONG, *Secretary of War.*

C.

The Secretary of War to the governor of South Carolina.

WAR DEPARTMENT, *June* 21, 1813.

SIR: I have the honor to acknowledge your excellency's letter of May 31, and to inform you that the subject of seaboard defence generally is now *before Congress*. When the means are granted by that body I shall have the pleasure to communicate with your excellency relative to measures for the further protection of South Carolina.

I beg you to accept the assurances of the great respect and consideration with which I have the honor to be your excellency's most obedient, humble servant,

J. ARMSTRONG.

His Excellency the GOVERNOR *of South Carolina.*

D.

Letters from Governor Alston to Colonel Drayton and General Pinckney.

HEADQUARTERS, *Charleston, May* 31, 1813.

SIR: In consequence of the removal from this harbor of so many of the United States troops, I have deemed it expedient to order out a detachment of the militia, under the command of Major Howard, consisting of two companies of artillery, two companies of infantry, one rifle company, and one troop of cavalry. These troops, intended as a reinforcement to your command, are now ready to march, and will assume any position you shall point out. Major Howard has instructions to place himself under your command, and conform on all occasions to your orders.

Colonel DRAYTON, *of the United States Army.*

HEADQUARTERS, *Charleston, May* 29, 1813.

SIR: Having been informed by Colonel Drayton of the *very exposed situation of the forts in this harbor, in neither of which there are forty men fit for duty,* and as the cruisers of the enemy are daily on the coast, sometimes *sounding the bar,* I have deemed it expedient, and conformable to the spirit of the communication I had the honor of receiving from you just before your departure from this place, to issue the enclosed general order. Colonel Drayton, who, in the obvious facility with which either Fort Moultrie or Fort Johnson might be carried by a handful of the enemy, perceives how much both his reputation as an officer and the safety of the city are involved, and is therefore anxious to be reinforced, informs me, nevertheless, that he has no orders on the subject, and has neither been vested with authority to receive the detached militia into the service of the United States, nor even to provide them while on duty with rations. Presuming that Colonel Drayton's not having been apprised of your communication to me, so far at least as related to his co-operation, nor furnished with corresponding orders, was merely the result of the pressure of other business which must have occupied your attention; and believing it essential that the reinforcement detached should not be delayed, I have not hesitated to direct the commissary general of this State to provide for the detachment the same supplies as are provided for troops of the United States. Reimbursement for the advances thus ordered on account of the general government can be made on your return. It is desirable, however, that orders should be issued for supplying the detachment through the ordinary agents of the United States as early as shall be convenient. In detaching these troops from *Charleston,* I have acted from what was conceived the urgency of the occasion. Should the aid of the militia be required for any length of time, it is intended to relieve them by ordering down such troops as you may judge necessary of that part of the quota of this State organized in the upper division. I pray you have the goodness to communicate to me your wishes on this subject. A memorial which I understand has been transmitted to you by the intendant of Georgetown will have apprised you of the danger of that post. The frequent approach of the enemy to that harbor, and the accurate and constant information which it is perfectly ascertained they regularly receive of our situation and movements, render it by no means improbable that the condition of what is *called* the *fort* might invite the visit of a marauding party. To repress, as far as practicable, attempts of that kind, Captain Brittain, who stated *that he had not a single cannon ball or a pound of powder, was furnished before my departure with an order on the State arsenal, in that vicinity, for any articles he may require on loan for the United States service.* He has accordingly mounted some twelve and nine-pounders, the only cannon there for which we had ball, which he will keep till a supply of ball and powder is received for the larger pieces belonging to the United States. In consequence of representations from Beaufort, stating that the United States troops in that quarter were still literally *destitute of every kind of ammunition,* and the alarm excited by the capture of certain vessels on the inland voyage to that place, within a very short distance of it, I have directed the keeper of the State arsenal there, likewise, *to loan to the United States officer commanding the fort any articles he might require. In supplying these deficiences in the appointments of the United States troops, it is with the same spirit with which I shall always co-operate with them for the common defence;* but I think it right to observe that the military equipments of the State are too inconsiderable to be relied on. You will, of course, take such order as you shall deem proper for the more certain and regular supplies from the general government. As your instructions were stated to relate merely to the defence of our *fortifications,* and no hope was entertained that the aid of the United States would be extended to other points, I have been induced, as you will perceive by the enclosed general order to General Cuthbert, to order out a detachment of State troops, as well for the protection of our maritime frontier as to prevent the interruption lately suffered by

our inland coasting trade. The troops for this purpose will be increased as occasion shall require; but it is considered essential to the complete attainment of their object that they be aided by a naval force. Confident, from your accurate knowledge of our local situation, that your opinion will coincide with mine, it would be highly gratifying to me to have the weight of your representations to the Navy Department added to my own.

I have, &c.,

Hon. Major General PINCKNEY.

HOUSE OF REPRESENTATIVES OF SOUTH CAROLINA, DECEMBER 17, 1814.

Mr. HAYNE submitted the following report:

The committee of foreign relations, to whom was referred so much of the governor's message, No. 1, as relates to our foreign affairs, report:

That the history of the war in which the United States is now engaged must swell the bosom of every patriot with honest pride. Remote from the convulsions and free from the vices which it is the nature of despotic governments to create, America, in the full enjoyment of rational liberty, cultivated the arts of peace. In the struggle for power which tore asunder the nations of the Old World, America took no part; happy at home, she looked abroad only to extend the hand of friendship to all the nations of the earth. It was the monstrous injustice of Great Britain, her long-continued injuries, unprovoked aggressions, and unheard-of insults that overcame the patience of the American people, and roused them to determined and manly resistance. As in the origin, so in the progress of this war, the most earnest desire for peace has been manifested by the American government. Such, however, has not been the disposition displayed by the enemy. Deaf to the calls of justice, he has waged a most cruel and sanguinary war, in violation of all the maxims held sacred by civilized nations, of the voice of humanity, and the mandate of heaven. In devastating our fields, burning our cities, and devoting to the scalping-knife the helpless and the innocent, Britain has "shut the gates of mercy on mankind," and taught the American people that they have nothing to expect but what they can acquire by the sword. To these *injuries* has now been added the *insult* of demanding, as the price of peace, terms the most degrading to the American people; terms "which would inflict the most vital injury on the United States by dismembering their territory, leaving their frontier exposed to British invasion and Indian aggression—by the loss of their territory—a portion of their citizens, and the admission of a foreign interference in their domestic concerns;" terms which should only be offered to a conquered country, and (to use the language of the American commissioners) "will only be a fit subject for deliberation when it becomes necessary to decide upon the expediency of an absolute surrender of national independence." The spirit, however, which has met and subdued the enemy on the ocean, on the lakes, at Plattsburg, and at Chippewa, still exists in our country, and that spirit assures us that America can have no peace on such conditions. Whatever political differences may exist among the people of these United States, no true American will desert his country in such a struggle. We have asked for peace, and have met with insult. What, then, remains for a free and magnanimous people, but to call into action all the energies of the nation, and, by one great effort, to speak to the interests, if we cannot speak to the justice of the enemy. Every patriot is now required to rally around the standard of liberty, to support the Constitution of his country, and to aid the government in every measure for the vigorous prosecution of the war. Impressed with these sentiments, the legislature of South Carolina do adopt the following resolutions:

1. *Resolved*, That we consider the present war as founded in justice, and forced upon the United States by the aggressions of Great Britain.

2. *Resolved*, That we regard the terms offered by the British commissioners at Ghent as an insult to the American people, and we do highly approve of the "unanimous and decided negative" of the American commissioners.

3. *Resolved*, That we will cordially support the government in the vigorous prosecution of the war until a peace can be obtained on honorable terms, and we will cheerfully submit to every privation that may be required of us by our government for the accomplishment of this great object.

IN THE HOUSE OF REPRESENTATIVES, *December* 20, 1814.

Resolved, That this house do unanimously agree to the within report.
Ordered, That the same be sent to the senate for their concurrence.

By order of the house:

R. GANNT, *C. H. R.*

IN THE SENATE, *December* 21, 1814.

Resolved, That this house do concur with the house of representatives in the foregoing report.
Ordered, That the same be returned to the house of representatives.

By order of the senate:

J. MURPHY, *C. S.*

Colonel Drayton's statement.

In May, 1812, being then lieutenant colonel of the 18th regiment of the United States infantry, I was ordered to the command of Charleston harbor, within which were three forts, partly garrisoned by regular artillerists and partly by militia of the State. In the neighborhood of Charleston a detachment of militia infantry was posted, also subject to my orders. Shortly after entering upon my duties, and shortly before the declaration of war, I ascertained that there was almost an absolute destitution of ammunition and military stores of every description. To the best of my memory there was not a sufficient quantity of

powder and ball for one discharge of the artillery in the different forts, which I made the subject of a communication to the Secretary of War, who replied to me that the wants I had pointed out would be remedied as soon as practicable. Some small supplies of articles needed were furnished, within what space of time I do not recollect.

Upon the appearance of a British squadron within a few miles of the forts, I again addressed a letter to the Secretary of War, stating to him the appearance of the British squadron, our expectation of an attack being made by it upon the forts, and that we had not a sufficiency of powder and ball for our defence, even should it be necessary for us to keep up a fire but for a short time. I cannot say precisely what was the answer I received from the Secretary, but my impression is that it was similar to that which had before been given.

I continued in the command of the harbor of Charleston, and of the troops in its vicinity, from May, 1812, until May or June, 1814, when I left the State and proceeded to the north, where I remained until the peace. During the whole time that I was in this command there never was such a supply of powder, ammunition, and military stores, belonging to the United States, as was nearly adequate, during a war, for the troops in the forts in the harbor. Had a requisition been made by the State authorities upon the officers of the United States for arms or other military stores for the militia of the State in the service of the general government, for the reason which I have stated, such a requisition could not have been complied with.

WILLIAM DRAYTON.

WASHINGTON, *January* 18, 1828.

Statement of General Tucker.

Starling Tucker, a member of Congress from South Carolina, appeared before the committee and stated that he commanded during the late war one of the regiments called into actual service, and whose service has been since recognized and paid for by the United States. My regiment, when called out, was ordered to march to the seaboard, a distance of about two hundred miles. Neither baggage nor provisions being provided by the United States, it became absolutely necessary for the commanding officer to provide wagons for the transportation of the necessary baggage and rations to the place of destination; and, for this purpose, as well as I now recollect, I think about nineteen wagons were employed, and I well recollect that not one was employed beyond what was absolutely necessary. The rations were not only for the use of the regiment on the march, but for its subsistence after it arrived at the place of destination, at which place no rations were provided, except some damaged flour, not fit for use, and some spirits which had been furnished by the State.

STARLING TUCKER.

Statement of Colonel Robert Y. Hayne.

On the 16th June, 1812, I accompanied (as a lieutenant) a detachment of militia, composed of volunteers and drafted men from Charleston, South Carolina, to Fort Moultrie, where we were mustered into the service of the United States. A few weeks after the war was declared the detachment joined the regiment to which it belonged, consisting of ten full companies, at Haddrell's Point, in the harbor of Charleston. While at that station, in consequence of the destitute condition of many of the men, the officers united in a memorial to the legislature praying for a supply of blankets, which was furnished accordingly. I believe all the facts stated in that memorial to be strictly true. In the progress of the war, and throughout the most trying period of it, I was quartermaster general of the State, and at the same time a member of the legislature, and chairman of the committee of military affairs. In these situations I became thoroughly acquainted with the condition of the State in relation to its pecuniary resources and means of defence. It became my duty, as quartermaster general, (according to the organization of the quartermaster general's department under the laws of the State,) to inspect the arsenals, take an accurate account of the arms and munitions of war of every description, and, to a certain extent, to superintend the execution of the measures adopted for the general defence. As chairman of the military committee, every question which related to the means of carrying on the war (so far as the State of South Carolina was concerned) fell necessarily under my examination. From these sources I became, of course, well acquainted with all the proceedings of the State touching military affairs. Without attempting, after so great a lapse of time, to speak accurately as to dates, or the order of events, I think I cannot be mistaken in any of the material facts which have any bearing on the claim of the State now before the committee. It is very certain that the federal government *did not provide* (and I presume they were unable to provide) an adequate defence for the State at any period during the war. I always understood that the United States troops within the limits of the State were altogether insufficient in number; and that cannon, small arms, and indeed all the munitions of war, were either wholly wanting or so insignificant in amount as to leave the sea-coast almost defenceless. I well remember that on making a rigid examination of the military resources of the State, for the express purpose of ascertaining *how far she should aid the federal government in the defence of the country*, I discovered, and so reported, that our means of defence were in no one respect adequate to the emergency; and yet at that time much had been already done by the State to put her citizens in a condition to repel any sudden incursion. I know that when it was discovered that the federal government was *unable* to protect the State of South Carolina, (for in the most trying period of the war it was never believed that they were *unwilling* to do so,) the resolution was firmly and unanimously taken by the legislature and the people of the State to defend themselves to the whole extent of their resources. This resolution was steadily adhered to up to the termination of the contest; and, from the spirit then manifested, I have no doubt that, had the war continued, the State would have borne the whole expense of its own defence, at least so long as she possessed either funds or credit. I well remember two facts strongly illustrative of the spirit which then animated the whole of South Carolina. The officers of the bank in which the State had invested all its funds (and from which during the whole war it was drawing an interest) were required to state how long and to what extent the bank

could continue to furnish money, as the public exigencies might require, before its capital as well as its credit should be utterly exhausted; and I also remember that, on a communication being received from General Pinckney informing the governor of the want of funds on the part of the federal government, even to sustain the troops then in their service, the legislature immediately directed a large sum (I think upwards of two hundred thousand dollars) to be advanced to the officers of the United States, to be refunded or accounted for at some future period. About this time a brigade of regular troops were ordered to be raised, and $500,000 appropriated for the defence of the maritime frontier. It was under such circumstances that the State of South Carolina made nearly the whole of the expenditures for which reimbursement has been claimed of the United States. Muskets, rifles, pistols, swords, cannon balls, and indeed all the munitions of war, were manufactured or purchased, because the United States had not supplied them, and, as we understood and believed, were unable to supply them. The militia were called out from time to time and furnished with provisions and transportation by the State, as the exigencies of the country required, and the arsenals of the State, as well as its treasury, were freely thrown open to the officers of the federal government. The State did not stop to consider what portion of these expenditures might be justly chargeable to the United States, much less in what form the accounts were to be kept or the requisitions to be made in order to entitle herself hereafter to remuneration. She went on to do what was deemed necessary to sustain the war and defend the country, without inquiring when or how her claims were to be adjusted. When, after the peace, this question came to be considered, commissioners were appointed to determine what portion of the expenditures of the State during the war ought to be charged against the United States. A very large proportion of these expenditures (probably more than half) were considered as a fair contribution by the State towards her own defence, and the balance only has, it appears, been claimed of the United States, of which upwards of one hundred thousand dollars have been *disallowed*, for the reasons stated on the account itself. On looking over these *rejected items*, I can only say, from the general knowledge I possess in relation to them, that it is very certain that the amounts claimed by the State were necessarily expended in consequence of the failure of the United States to furnish articles essential to her defence, and that those articles were obtained on the best terms and in the only mode in which it was then possible to procure them; and that the officers employed by the State were the only agents then under her control through whom it was possible to carry on her military operations.

ROBERT Y. HAYNE.

WASHINGTON, *January* 18, 1828.

PART II.

Sums drawn from banks out of which the advances were made by the State of South Carolina for the United States.

STATE BANK OF SOUTH CAROLINA, *Charleston, January* 15, 1827.

I hereby certify that the twelve first items on the first page of this sheet were paid to checks from the treasury office of this State on this bank, for the sums there stated, on the days on which they were severally charged, excepting the first item, which was paid on the 13th June, 1812, and the fifth item, which was paid on the 14th January, 1814.

SAMUEL WRAG, *Cashier.*

BANK OF THE STATE OF SOUTH CAROLINA, *Charleston, January* 15, 1827.

I hereby certify that the items charged in this account, from August 14, 1813, to January 6, 1818, inclusive, were paid to checks from the treasury office of this State on this bank, for the sums charged; and the credits, from November 14, 1814, to December 23, 1816, were passed to the credit of the treasury at the dates expressed.

S. ELLIOTT, *President.*
A. HENRY, *Cashier.*

STATE TREASURY OFFICE, *Charleston, January* 15, 1827.

I hereby certify that it appears from the books of this office that of the payments mentioned in the annexed account the first twelve were made by checks upon the "State Bank," and the remainder by checks upon the "Bank of the State of South Carolina."

CHARLES M. FURMAN, *Treasurer.*

TREASURY OFFICE, *Charleston.*

I further certify that the payments made by the State Bank in the year 1814, specified in the annexed statement, were from a fund which the legislature had directed to be deposited in the Bank of the State of South Carolina, to be held by the said bank for the benefit of the State, in the same manner and on the same terms with which they held the funds from which they paid the remaining items in the above account.

CHARLES M. FURMAN, *State Treasurer.*

I do certify that the sums drawn out of the Bank of the State, as within mentioned, were advanced by the said bank to the said State, whereby the State was deprived of the interest which would otherwise have been received on said sums. The bank, during that period, has paid interest to the State on other sums in the possession of the said bank, at the following rate, viz:

For the year ending on the 1st October,		1814,	1.85 per cent.
Do.	do.	1815,	16.08 "
Do.	do.	1816,	13.16 "
Do.	do.	1817,	11.92 "
Do.	do.	1818,	8.38 "
Do.	do.	1819,	7.23 "

STEPHEN ELLIOTT, *President of the Bank of the State of South Carolina.*

Payments made from the treasury office in Charleston, in consequence of sundry appropriations made by the legislature since the declaration of war against Great Britain in June, 1812.

No. of voucher.	Date.	To whom paid.	Amount.
	1812.		
15	June 12	Paid Governor Middleton appropriation in 1811, to defray expense of the quota of militia of this State	$7,000 00
12	September 14	Paid James Carson, commissary general, on account of munitions of war granted in August, 1812	10,000 00
12	October 16	Paid James Carson ---do---do---do---do	8,155 00
17	November 14	Paid James Carson ---do---do---do---do	10,000 00
	1813.		
28	January 13	Paid Governor Middleton appropriation in August session, 1812, for mounting cannon	2,000 00
5	March 5	Paid on account of barracks erected at Haddrell's Point to Major Phelon, per appropriation of the legislature in 1812	700 00
6	June 2	Paid on account of militia called into actual service to C. J. Steedman, W. M., general appropriation, 1812	2,000 00
7	June 8	Paid ---do---do---do---do	1,000 00
8	June 8	Paid to Simon Magwood on account of militia called into actual service	2,000 00
9	June 9	Paid on account of barracks at Haddrell's Point, per appropriation in 1812	500 00
21	July 20	Paid on account of militia called into actual service to Thomas Lehre, commissary of issues, per Governor Alston's order	1,500 00
2	August 2	Paid on account of militia called into actual service to Colonel James Carson, commissary of purchases	10,000 00
12	August 14	Paid on account of militia called into actual service to Colonel Cochran, paymaster general	2,000 00
21	August 23	Paid on account of militia called into actual service, per governor's order	3,500 00
25	August 26	Paid on account of militia called into actual service to Colonel Thomas Lehre, per governor's order	2,000 00
7	September 8	Paid on account of munitions of war to Colonel James Carson, commissary of purchases	10,000 00
8	September 8	Paid on account of militia called into actual service to Colonel J. Carson	10,000 00
2	November 2	Paid on account of militia called into actual service to Colonel Magwood	500 00
3	November 6	Paid on account of militia called into actual service to Colonel Lehre	150 00
9	November 10	Paid on account of munitions of war to Colonel James Carson, commissary general of purchases	10,000 00
11	November 12	Paid on account of militia called into actual service to Colonel William Boone Mitchell	2,000 00
18	November 17	Paid on account of militia called into actual service to Colonel Cochran	1,000 00
	1814.		
17	January 7	Paid on account of militia called into actual service to Colonel Magwood	2,000 00
19	January 7	Paid on account of militia called into actual service to Colonel Steedman	2,000 00
34	January 18	Paid on account of munitions of war to Colonel J. Carson	10,000 00
37	January 14	Paid on account of militia called into actual service to Colonel Thomas Lehre	10,000 00
53	January 24	Paid on account of militia called into actual service to C. B. Cochran	10,000 00
15	February 8	Paid on account of militia called into actual service to J. B. White, deputy quartermaster general	3,000 00
19	February 12	Paid on account of militia called into actual service to Colonel Lehre	12,000 00
20	February 14	Paid on account of militia called into actual service to Colonel James Carson	10,000 00
6	March 3	Paid on account of militia called into actual service to J. B. White, deputy quartermaster general	2,000 00
21	March 12	Paid on account of militia called into actual service to J. B. White	2,000 00
36	March 21	Paid on account of militia called into actual service to Colonel C. B Cochran	18,000 00
16	April 20	Paid on account of munitions of war to Colonel J. Carson	10,000 00
31	June 27	Paid on account of militia called into service to Colonel Cochran	800 00
15	July 15	Paid on account of militia called into service, per Governor Alston's draft	6,000 00
3	July 1	Paid on account of militia called into service to Colonel Carson	4,000 00
17	July 16	Paid on account of munitions of war to Colonel Carson	10,000 00
14	September 24	Paid on account of munitions of war to Colonel Carson	4,345 00
	1815.		
54	January 13	Paid on account of munitions of war to Colonel Carson	3,000 00
67	January 20	Paid on account of detachment of troops under Colonel Tucker to R. Y. Hayne	1,985 25
78	January 23	Paid on account of rifles, appropriated in 1814, to Colonel Carson	2,500 00
1	February 1	Paid on account of munitions of war to Colonel Carson	10,000 00
2	February 1	Paid for brigade of State troops to be raised under act of 1814, per governor's order, to Major McKibben	2,000 00
3	February 1	Paid for brigade of State troops to Major Hasell	2,000 00
5	February 4	Paid for defence of the maritime frontier and coasting trade to Mr. Wilson, per governor's order	2,000 00

NOTE.—The whole of the expenditures of the State of South Carolina for which remuneration has been claimed of the United States were taken from the sums drawn out of the bank as above stated.

ALEXANDER SPEER, *Comptroller General.*

PART III.

No. 1.

Colonel Bomford to C. J. Steedman, esq.

ORDNANCE DEPARTMENT, *October* 15, 1821.

It has been directed on the part of the honorable the Secretary of War that such of the cannon shot remaining from the purchases made by the State of South Carolina during the late war for the troops called into the service of the United States as may conform to the calibre adopted for the ordnance of the United States, and shall pass the regular inspection to be made by an officer appointed by the Ordnance department, will be received and accounted for by the United States at the present contract prices.

GEO. BOMFORD, *Lieutenant Colonel, on Ordnance Duty.*

C. J. STEEDMAN, Esq., *Agent for State of South Carolina, &c.*

No. 2.

Lieutenant Williams to Colonel Bomford.

WASHINGTON CITY, *May* 6, 1822.

SIR: Upon my arrival at Charleston, South Carolina, I commenced the inspection of the shot at the State arsenal, agreeably to my instructions. After inspecting two thousand of the eighteen-pounders, and finding but one hundred and twelve of the proper dimensions, which were much deficient in weight, I concluded that if the shot of the other calibres were as defective as the eighteen-pounders, it would be unnecessary to inspect the whole quantity. I therefore examined 500 of each calibre, which gave the following results, viz:

Of 500 24-pounders 43 were of the proper dimensions, the average weight of which was 21 lbs. 5 oz.

Of 500 18-pounders 28 were of the proper dimensions, the average weight of which was 16 lbs. 10½ oz.

Of 500 12-pounders 184 were of the proper dimensions, the average weight of which was 11 lbs. 3½ oz.

Of 500 6-pounders 48 were of the proper dimensions, the average weight of which was 5 lbs. 8 oz.

The diameter of the 24 and 6-pounders generally fell short, and the 18 and 12-pounders exceeded the established dimensions, and all were quite rough; the 12 and 6-pounders in particular were defective in this respect.

Finding the shot so generally defective both in dimensions and weight, I considered it unnecessary to proceed further in the inspection, unless it should be desired by the agent of the State. The agent was at this time absent from Charleston. Upon his return I addressed him a letter, communicating the result of the inspection, as above stated, and requesting him to inform me if it was his wish that I should proceed. To which I received the following answer:

"CHARLESTON, *March* 12, 1822.

"SIR: I have the honor to acknowledge the receipt of your letter of the 9th instant, communicating the result of your inspection of a part of the shot purchased by the State of South Carolina during the late war, and that you had discontinued (owing to but few of the balls being of proper dimensions or weight) until you could learn my "wish and desire." I beg leave to request that you will continue until the whole are inspected, to enable me to make a proper representation or report on this subject, either to the War Department or the executive of the State, as circumstances may hereafter determine.

"I have the honor to be, &c.,

"CHARLES J. STEEDMAN, *Agent for State of South Carolina.*

"Lieutenant W. E. WILLIAMS."

I therefore resumed the inspection, and, in addition to those formerly examined, I inspected 2,322 24-pounders and 1,608 6-pounders, of which 94 of the former and 17 of the latter were of the proper dimensions. When I had proceeded thus far I received the following communication from Colonel Steedman, upon which I discontinued the inspection altogether:

"CHARLESTON, *April* 25.

"SIR: Since I last had the honor of addressing you I have submitted your letter of the 9th of March to his excellency the governor, who has instructed me to inform you it is considered unnecessary for you to proceed any further in the inspection of the cannon balls in the arsenal at Charleston, as he does not consider the claim of the State to rest upon the quantity that may pass inspection, but that the United States is bound for the whole.

"I am, respectfully, &c.,

"CHARLES J. STEEDMAN, *Agent for State of South Carolina.*

"Lieutenant W. E. WILLIAMS."

I examined the canister shot mentioned in my instructions. The 6-pounder canisters were much too small; they were filled with musket bullets. The 18-pounder canisters were too large and defective in quality; they were filled with cast-iron balls of various sizes, from $\frac{1}{2}$ to $1\frac{1}{2}$ inch, and of irregular shape and very rough casting.

I have therefore to report, that I did not approve nor receive any of the shot submitted to my inspection.

I am, very respectfully, your obedient servant,

W. E. WILLIAMS, *Lieutenant U. S. Artillery, on Ordnance Duty*

Lieutenant Colonel G. BOMFORD, *on Ordnance Duty.*

NOTE.—The diameters of the 6 and 24-pounder shot are from 1-20th to 1-10th of an inch less than the smallest established limit.

Comparison with English shot.

24-pounder.	6-pounder.
5.547	3.498 English.
5.477	3.417 at Charleston.
.70	.91

No. 3.

From Captain Wade to Colonel Steedman.

ORDNANCE DEPARTMENT, *May* 23, 1822.

SIR: All arms, &c., which have been delivered by the State to the United States troops, or to militia called into service by the United States, and which shall not have been returned by the general government, shall be credited to the State.

Where arms have been delivered by the State to militia called into service by State authority, and subsequently recognized by the United States, the government to be responsible only for such arms as were captured by the enemy, or otherwise lost or destroyed while said militia were in the service of the United States. Satisfactory vouchers for the delivery, return, capture, or loss of arms, to be produced by the party claiming credit therefor.

With regard to the charges for the repairs of arms, those only can be allowed where it is clearly established that the arms were delivered to a particular body of militia in good order, and those same arms subsequently returned in bad order, and the degree of damage ascertained at the time of their return.

Respectfully, I am, sir, your obedient servant,

W. WADE, *Captain, on Ordnance Duty.*

By order of Lieutenant Colonel Bomford.

No. 4.

ORDNANCE DEPARTMENT, *Washington, January* 17, 1827.

SIR: I have received your notes of the 16th and 17th instant, and, in compliance with your request, I communicate herewith an account in which the balance due from the State of South Carolina to the United States, as stated on the books of the Third Auditor, has been carried to the account of arms due to the State, on the settlement made by this department in May, 1822.

By this arrangement, which has been approved by the Secretary of War, the number of muskets due to the State has been reduced from three thousand two hundred and sixty-seven, to two thousand four

hundred and eighty-nine. This balance, together with that of other arms and accoutrements now due to the State, will be paid by this department in arms of the same, or of different kinds, whenever desired.

I have the honor to be, respectfully, your obedient servant,

G. BOMFORD, *Brevet Colonel, on Ordnance Service.*

ALEXANDER SPEER, Esq., *Comptroller General of South Carolina.*

P. S.—The Secretary of War wishes it to be understood that his approval of the arrangement above mentioned must be considered as subject to the established usages of the treasury; and the measure cannot, therefore, be considered as final until it receives the sanction of the Treasury Department.

G. B.

No. 5.

DR. *The State of South Carolina in account for arms with the United States.* CR.

Dec. 6, 1826	To balance due the United States, on settlement made at the Treasury Department, (Third Auditor's office,) on the war account of this date	$9,333 71	May 22, 1822	By 3,267 muskets, balance due the State on the war account, as per settlement made this day between Colonel Steedman, its agent, and the Ordnance department, at $12 each	$39,204 00
	Balance due the State, carried down, being equivalent to 2,489 muskets	29,870 29			
		39,204 00			39,204 00
			Dec. 6, 1826	By balance due the State, brought down, equal to 2,489 muskets	29,870 29

E. E.

GEO. BOMFORD, *Brevet Colonel, on Ordnance Service.*

ORDNANCE DEPARTMENT, *Washington, January* 17, 1827.

No. 6.

ORDNANCE DEPARTMENT, *Washington, February* 6, 1827.

SIR: I have now to acknowledge the receipt of your letter to this department of the 16th ultimo, and to state in answer that in the settlement of May, 1822, of the accounts between the State of South Carolina and the United States for arms and accoutrements, the following articles having been charged and sufficiently vouched for on the part of the State, were admitted to its credit, viz:

3,267 muskets; 40 pistols; 3,244 cartouch boxes and belts; 3,014 bayonet scabbards and belts; 1,582 brushes and wires; 210 screw-drivers; 140 ball-screws; 115 gun worms.

An additional claim was made at the same time for the following arms and accoutrements, stated to have been delivered by the State of South Carolina to Sergeant John McCord and Quartermaster Tandy Moss, of the militia, under General Moore; but the vouchers for which not being satisfactory were withdrawn, and consequently the State received no credit on account of them, viz:

750 muskets; 750 cartouch boxes and belts; 175 brushes and wires; 12 gun worms.

It is also understood that the State has a further claim for a number of cannon balls, which has not been settled. The difficulty in regard to this item appears to be that they were of inferior quality, and remained on hand unexpended at the close of the war, and that the State required that the United States should receive them, such as they were, and to allow for them in the general account of supplies charged against the United States the current contract price To this it was agreed on the part of the United States, so far as to receive and account as above for any and all of the ball which should be found, on inspection, to be suitable for the public service; and an officer of this department was accordingly instructed on the 5th of February, 1822, to proceed to make the inspection preparatory to a settlement upon that basis. The officer, however, had not proceeded far in his inspections before, upon the request of the governor of the State, he discontinued his inspections; and so the matter has remained ever since.

It may be proper to add in conclusion, that the same vouchers which sustain that portion of the account first above mentioned embrace other articles also, which not being considered ordnance stores, or as appertaining to this department, were not included in any settlement made by it. The articles referred to are as follows, viz:

1,432 canteens; 740 camp kettles; 605 common tents; 60 officers' tents; 17,956 flints; 16 mess pans; 164 knapsacks.

Thus you have all the articles which have been claimed by the State of South Carolina, as well those which have as those which have not been allowed or decided on by this department.

Very respectfully, I am, sir, your most obedient,

GEORGE BOMFORD, *Brevet Colonel, on Ordnance Service.*

ALEXANDER SPEER, Esq., *Comptroller General of South Carolina, Columbia, S. C.*

PART IV.

To the governor of the State of South Carolina:

The officers of the third regiment of State troops, in the service of the United States, stationed in the harbor of Charleston, beg leave to submit to the consideration of your excellency the following representation:

The troops under our command were called into service under very peculiar circumstances. Those who inhabited the interior parts of the State—"who earned their daily bread by the sweat of their brows"—were, at the shortest notice, (many of them at a moment's warning,) taken from their homes without being able to make any provision for their own wants or those of their families. Destitute of every convenience—without blankets, almost without clothes—many of these men laid down their ploughs when their corn most needed them, and marched to this post without any prospect of supplying these necessary articles. Deprived of the fruits of their industry, they are prevented from making that provision for their wants which they are accustomed to do at home. In addition to the shortness of the notice, there was another reason why these men came into service in an unprovided condition. They were in almost every instance led to believe that when they arrived here they would be supplied by the United States with every article necessary for their health and their comfort. So strongly was this idea impressed on their minds, that many arrived here without a single change of clothes. The United States do not, under existing laws, allow clothing to troops engaged in their service for a shorter period than twelve months; and as the pay of a soldier is not sufficient to be of any consequence in the purchase of such articles, the men under our command have no prospect of being relieved from their present lamentable situation. The present season of the year does not make a blanket an indispensable article, but as our term of service embraces nearly two months of the winter, it is difficult for us to conceive how our men can exist without blankets when almost destitute of clothing.

We represent also to your excellency that our soldiers have no shelter from the heavy rains that fall at this season, being compelled to live in tents, which are by no means water proof. Their sufferings from this cause have already been great, and they must daily increase. We trust that this plain representation of facts must be sufficient to bring to your view the destitute condition of many of the men under our command. Yet, under all these circumstances, under every privation, no murmur has escaped their lips, though the abundant supplies by the United States to the regular troops in this harbor was calculated, by contrast, to excite discontent. That the national government will hereafter make such provision for the militia in their service as to remove these evils, we cannot doubt; but in the meantime they press heavily upon those who compose the first quota.

In bringing these things to the view of your excellency, we have no consideration for ourselves. We feel ourselves, however, bound by every principle of humanity and duty to make this representation to you in behalf of those men whose lives and whose happiness are in a great measure intrusted to our care. To see those brave men who, by coming forward at this time in the service of their country, have sacrificed their private interest and manifested at least an inclination to do their utmost in the defence of her rights and the promotion of her honor, without shoes, without hats, and almost destitute of blankets and of clothes, must be painful to our feelings as officers and men, more particularly as they generally manifest a disposition to do their duty with alacrity and zeal.

With regard to the inconveniences arising from living in tents, we have understood that they are about to be remedied by the erection of temporary barracks by the patriotic citizens of Charleston. You will be better enabled to judge than we can be how far this plan will afford the desired relief in this respect. With respect to the other subjects of complaint, we bring them before you in the most perfect confidence that whatever is proper to be done in this respect will be done by you. Whatever may be done by this State on this subject may, perhaps, be sanctioned by the United States, so far as to make it a proper subject of charge against them; and it is more than probable that such provision will be made for the future as will render unnecessary any other application to the State authorities.

JOHN RUTLEDGE, *Lieut. Colonel 3d Regiment State troops.*
THOMAS PINCKNEY, JR., *Major.*

Report of the committee of the whole on the representation of the officers of the third regiment of the quota of militia of this State.

The committee of the whole, to whom was referred the memorial of the colonel and officers of the third regiment of State troops, report:

That the committee have had the same under their consideration, and recommend that the following resolution be adopted:

Resolved, That $7,500 be appropriated for the purpose of purchasing blankets for the quota of the militia now in service. Adopted.

PART V.

Deductions from the accounts of the State of South Carolina on the settlement thereof, with the reasons for making them. Settlement dated September 21, 1826.

Account.	Voucher.	To whom and for what paid.	Amount.
		COLONEL J. CARSON'S ACCOUNTS.	
A	11	Jacob Lazarus, for blankets	$1,800 00
B	20	Blair, Napier & Co, for blankets	2,890 00
	23	Lewis Ogier, for blankets	557 00
	24	Simon Mairs, for blankets	408 00
		Disallowed; the foregoing are not proper charges against the United States.

	19 and 20	Wilson Nisbett, for cannon balls, (referred to the Ordnance department)	2,174 25
	21	John Thomas, sorting and piling cannon shot, (referred to the Ordnance department)	8 50
	22 and 23	Negro, for carting balls, (referred to the Ordnance department)	13 00
	24	John Thomas, piling shot; referred to the Ordnance department)	3 50
	25	Wilson Nisbett, for cannon balls, (referred to the Ordnance department)	557 31
	26 and 27	Adam Caruth, for rifles, (referred to the Ordnance department)	5,000 00
	29	Wilson Nisbett, for cannon balls and grape-shot, (referred to the Ordnance department)	5,425 44
	28	Archibald Bryson, for gunpowder, disallowed; (the powder is stated in his receipts to have been sold *February* 27, 1816, and its cost therefore not properly chargeable to the United States)	543 20
			66,154 99
		Colonel Carson's commissions, at 2½ per cent. on the foregoing sum of $66,154 99, is disallowed	1,653 88
		Total amount deducted from Colonel Carson's account	67,308 86
		Total amount of Colonel Carson's account, as charged by South Carolina	114,965 07
		Amount of Col. Carson's disbursements admitted to the credit of South Carolina.	47,156 21

PART V.—*Deductions from the accounts of the State of South Carolina, &c.*—Continued.

Account.	Voucher.	To whom and for what paid.		Amount.
		ACCOUNTS OF GOVERNOR MIDDLETON.		
No. 9	1, 6 and 7	J. B. Earle, advances, suspended, (voucher for his disbursements wanted)		$208 00
	5	Colonel Richard Moore, advance, disallowed; (charge No. 27 of Governor Middleton's account is for the entire amount of Colonel Moore's disbursements)		50 00
	19	William House, brigade quartermaster, for rations for militia commanded by Captains Hodge, Williamson, and McNeill, on the march to Haddrell's Point, in June and July, 1812, (including officers,) Captain Hodge appearing to have received from Paymaster Bay payment for all his subsistence, a deduction is requisite of		6 00
	20	Quartermaster Wm. House, for forage for Major Evans's horse, disallowed—(Major Evans received payment for forage from the time his pay commenced)		3 66
	21	Wm. Youngblood, lieutenant colonel, for disbursements, suspended as to an advance to Captain Walker, (vouchers for the disbursement of the money by him wanting)		25 00
		General Alston, advance	$200	
		Colonel Walker, advance	100	
		Colonel Rowe	50	
				350 00
		Suspended: their vouchers for the expenditure of the sums charged must be produced.		
		Total amount deducted from Governor Middleton's account		642 66
		Total amount of Governor Middleton's account, as charged by the State of South Carolina		2,705 15
		Amount admitted to the credit of South Carolina on Governor Middleton's account.		2,062 49
		ACCOUNTS OF COLONEL THOMAS LEHRE.		
No. 1	3	James Roddy, for rations for Captain Prioleau's company, disallowed; (the company was part of Major Howard's detachment, and a larger number of rations are charged for, in voucher No. 2 of Colonel Lehre's account for that detachment, than it was entitled to for the full period of its service)		11 15
	14	James Roddy, for rations for Major Howard's detachment, (see note No. 3)		30 00
	18	Wm Clements, treasurer, amount refunded to the State treasury by Colonel Lehre, erroneously charged to the United States		314 52
No. 2	4 and 5	Sundry persons, for provisions purchased for the regiment commanded by Colonels Carter and Youngblood, in service from December, 1813, to March, 1814, $18,681 96.		
		On examination of the rolls of the regiment it has been found that the number of complete rations all the officers and men were entitled to for the full period of service, and for travelling allowance, (after deducting the rations paid for by the paymaster,) is $79,860; which, at 20 cents per ration, amounts to	$15,972 00	
		It appearing by the receipt of the quartermaster of Colonel Tucker's regiment that there were turned over to him by Tandy Moss, the quartermaster of Colonel Youngblood's regiment, 37 barrels of flour, 1 barrel of pork, 4 barrels of vinegar, and 272 bushels of salt, and allowance is made for the same of	420 50	
			16,392 50	
		Difference between $18,681 96 and $16,392 50, disallowed		2,289 46
No. 4	49	Richard G. Waring, for rations, for guarding specie, suspended for further explanation		44 80
No. 2	2 and 3	G. R. White and Richard Wall, for wood and candles for magazine guard, near the jail, in November, 1813, disallowed		25 25
		Total amount deducted from Colonel Lehre's accounts		2,715 18
		Total amount of Colonel Lehre's account, as charged by South Carolina		23,964 68
		Amount admitted to the credit of South Carolina on Colonel Lehre's account.		21,249 50
		ACCOUNT OF COLONEL COCHRAN, PAYMASTER GENERAL.		
		The charges made by the State are—		
		For this sum paid by him, as per his account current, dated April 2, 1814	$34,174 14	
		For this sum paid per his account current, dated January, 1816, and book of accounts, pages 35–42	13,413 93	
		Amounting to	47,588 07	
		The foregoing charges are presumed to be founded principally on vouchers for Colonel Cochran's advances to enable them to pay off the militia and magazine guards.		
		The fact as to the first of them cannot be ascertained for want of the account current; that the second charge was of this description appears by the pages referred to. It is not on receipts for advances that any allowance can be made by the United States, but on the vouchers of the several paymasters for their payments to the militia, &c.		
		If, from Colonel Cochran's accounts, be deducted for pay, &c., of militia and magazine guards, which are separately charged for by the State, (see letters F, I, K, L,) there will remain to be charged, in respect of his accounts, only the following sums, viz:		
		For pay, &c., of the regiments commanded by Lieut. Cols. Carter and Youngblood, (see Colonel Cochran's book, pages 28, 30, 32, and 40)	$26,678 66	
		For pay of Major Howard's detachment, (see page 33 of same book)	1,438 80	
		For pay of magazine guards, of which James Scott was paymaster	283 84	

PART V.—*Deductions from the accounts of the State of South Carolina, &c.*—Continued.

Account.	Voucher.	To whom and for what paid.		Amount.
No. 2	2 and 3	For pay, &c., of Lieut. Col. Youngblood, as engineer	$119 40	
		For pay, &c., of Patrick Noble, while paying off Colonel Youngblood's regiment	238 00	
		For pay of Colonel Cochran, as paymaster general	945 00	
		For stationery and blank forms	24 00	
			29,727 76	
		Total amount of Colonel Cochran's account brought forward	47,588 07	
		Leaving an overcharge of		$17,860 31
		To which add for sundry overpayments, &c., as follows, viz:		
	5	Lieut. Col. Youngblood's regiment:		
		Captain P. B. Rodgers, pay overcharged	$0 08	
		Six rations twice charged	1 20	
				1 28
	7	Captain Wm. Ware, his pay and subsistence while marching from home to the place of rendezvous, sixty miles, are charged for four instead of three days, and his pay is otherwise overcharged sixteen cents		2 05
	10	Captain Samuel Scott, pay and subsistence charged from December 6, 1813, to January, 1814; he is stated on the muster-roll to have left home on the 8th of December—two days therefore overcharged		3 78
	12	Adjutant George McMurphy, subsistence charged at three rations per day instead of two	$6 20	
		Forage undercharged	2 00	
				4 20
	22	Lieutenant J. T. Coleman, account overcharged		8
	24	Lieutenant J. C. Watson, account overcharged		7
	27	Lieutenant John Gray:		
		Pay and subsistence charged from December 6, 1813, and he is stated on the muster-roll to have left home on the 8th		2 73
	36	Ensign Lindsay Harper, pay and subsistence charged from December 6, 1813; and he is stated on the muster-roll to have left home on the 8th		2 09
	38	Ensign John Stevenson:		
		One day's pay and subsistence overcharged while marching from home to place of rendezvous		1 04
	39	Captain Samuel Scott's company:		
		For pay from December 6, 1813. Each individual is stated on the muster-roll to have left home on the 8th December.		
		Deductions requisite:		
		4 sergeants, at 76 cents	$3 04	
		4 corporals, at 69 cents	2 76	
		2 musicians, at 62 cents	1 24	
		47 privates, at 55½ cents	25 97	
			33 01	
		Amount of roll $541 50		
		Amount charged 536 35		
			5 15	
				27 86
	40	Henry Wood, private of Captain Cheatham's company:		
		His pay is not receipted for, and Paymaster Noble has credited the sum as not paid by him		1 86
	41	Captain P. Halloway's company:		
		Overpayments as follows, arising from errors in calculation, viz:		
		Sergeant Hazell	$0 04	
		Corporal McMahon	9	
		Private Burnett	19	
		Private Malone	37	
		Residue of the company (except Wm. Little) one cent each	74	
			1 43	
		William Little underpaid	10	
			1 33	
		Amount of roll as charged $670 35		
		Its amount is only 665 09		
			5 26	
				6 59
	42	Captain John Miller's company:		
		Overpayments arising from errors in calculating the pay at thirty days to a month, instead of thirty-one, for services in December and January.		
		3 sergeants	$0 06⅔	
		3 corporals	5½	
		25 privates, at 1⅔	41⅔	
		27 privates, at 2⅓	62	
		1 private	15⅓	
			1 32	
		Amount of roll $624 40		
		Amount charged 623 86		
			54	
				78

PART V.—*Deductions from the accounts of the State of South Carolina, &c.*—Continued.

Account.	Voucher.	To whom and for what paid.		Amount.
No. 2	43	Captain Samuel Perrin's company:		
		Similar overpayments.		
		4 sergeants, at 3 cents	$0 12	
		63 corporals, privates, and musicians, at 2 cents	1 26	
		1 private	12	
			1 50	
		Amount of the roll	$597 63	
		Amount charged	596 96	
			67	
				$0 83
		Captain B. Hatter's company:		
		Similar overpayments.		
		4 sergeants, at $3\frac{1}{3}$	$13\frac{1}{3}$	
		4 corporals, at $2\frac{2}{3}$	$10\frac{2}{3}$	
		1 musician	2	
		63 privates, at $2\frac{1}{3}$	1 47	
			1 73	
		Amount charged	$646 40	
		Amount of the roll	636 80	
			9 60	
				11 33
	45	Captain Frazier's company:		
		Pay of Jesse Bettis, who served 19 days as sergeant and 13 days as ensign, is over-calculated	$2 61	
		His pay as ensign is before charged, (see voucher 28)	8 39	
		Amount charged in respect of roll	$554 88	
		Its amount is only	553 93	
			95	
				11 95
	48	Captain John Key's company:		
		Overpayments occasioned by calculating the pay at thirty instead of thirty-one days to a month, for services in December and January.		
		4 sergeants, at $1\frac{2}{3}$ cent	$0 $06\frac{2}{3}$	
		4 corporals, at $1\frac{1}{3}$ cent	$5\frac{1}{3}$	
		66 privates, at $1\frac{2}{3}$ cent	1 10	
				1 22
	49	Lieut Col. William Youngblood:		
		Transportation of baggage charged for at 15 instead of 12 cents per mile, overpayment		2 35
	57	Major John Hodges:		
		Pay and forage overcharged	$5 70	
		Subsistence undercharged	20	
				5 50
	5	Adjutant George McMurphy:		
		He has charged for pay, subsistence, forage, and servant, for 9 days, while returning home after discharge, 135 miles; the distance entitled him to an allowance of only 7 days' pay and subsistence, and there is no law authorizing any allowance for forage or for pay and subsistence of a servant after discharge. The pay is, besides, overcalculated. Deduct, therefore, for—		
		His pay	$3 18	
		Servant's pay	2 44	
		Subsistence of both	2 60	
			8 22	
		Forage charged for, at $6 per month, $8 allowed by law—2 months and five days	$17 29	
		Sum charged	14 80	
			2 49	
		Account undercharged in paymaster's book	10	
			2 59	
				5 63
	55	Tandy Moss, quartermaster:		
		Overpayment		94
	56	Paymaster Pat. Noble:		
		He has been paid for 3 days' pay and subsistence, whilst returning home, more than he was entitled to, and for pay of a servant, and for forage for 12 days after discharge, (not allowed by law,) and his charges are otherwise wrong calculated.		
		Requisite deductions from his pay	$4 60	
		servant's pay	3 24	
		subsistence of both	3 48	
			11 32	
		Forage charged at $6 instead of $8 per month, allow the difference for two months and five days	1 83	
				9 49
	57	Captain Samuel Perrin:		
		Pay and subsistence charged for 3 days more than he was entitled to while returning home, and otherwise wrong calculated; deduct for pay, $3 26; subsistence, 60 cents		3 86
	58	Captain John Cheatham:		
		Pay erroneously calculated, and travelling pay and subsistence overcharged.		
		Requisite deduction		2 45

PART V.—*Deductions from the accounts of the State of South Carolina, &c.*—Continued.

Account.	Voucher.	To whom and for what paid.		Amount.
No. 2	59	Captain Peter B. Rogers:		
		Overpayment for pay, (like cause)	$4 52	
		Subsistence undercharged	40	
				$4 12
	60	Captain Samuel Scott:		
		Pay wrong calculated, and charged for three days more than he was entitled to, while travelling home	4 64	
		Subsistence undercharged	60	
				4 04
	61	Captain John Miller:		
		Travelling pay and subsistence overcharged two days; his and his servant's pay prior to his discharge, short-charged one day.		
		Deduct for his pay	1 85	
		Deduct for his subsistence	1 20	
		Pay of servant after discharge	$2 38½	
		Allow for one day prior thereto, short-charged	25	
			2 13½	
				5 18½
	62	Captain Benjamin Hatter:		
		Travelling allowance charged at 15 instead of 20 miles per day, and pay and subsistence over-calculated.		
		Deductions requisite for pay	3 26	
		Deductions requisite for subsistence	1 80	
		Deductions requisite for forage, (to any allowance for which infantry officers are not entitled)	35 32	
				40 38
	64	Captain John Key:		
		Travelling allowance charged at 15 instead of 20 miles per day, and his charges wrong calculated.		
		Deduct for his pay	1 94	
		Deduct for his subsistence	1 20	
			3 14	
		Allow for undercharge in servant's pay prior to discharge	21	
			2 93	
		Servant's pay after discharge, inadmissible	2 67	
				5 60
	65	Captain William Ware:		
		Pay wrong calculated, and travelling allowance overcharged.		
		Overpayments: pay	3 75	
		subsistence	1 60	
				4 95

	35	Agrippa Cooper ...do... do		170 00
	36	Jeremiah Mobley ...do... do		165 00
	52	...do... do... do		170 00
		The foregoing five charges for team hire are disallowed under a decision of the Secretary of War allowing only eight teams for the transportation of the baggage, &c., of Lieutenant Colonels Carter and Youngblood's regiments.		

PART V.—*Deductions from the accounts of the State of South Carolina, &c.*—Continued.

Account.	Voucher.	To whom and for what paid.		Amount.
No. 2	53	J. B. White, for services as deputy quartermaster general, from the 1st to the 31st of March, 1814; (suspended for further explanation)		$98 00
	58	Francis Baker, for keeping horses of the State: (suspended for further explanation)		24 00
	59	William Joyner, carting and storing corn for the State horses, &c.; (suspended for further explanation)		25 00
	60	Samuel Hall, for superintending and delivering wagons and horses belonging to the State; (suspended for further explanation)		17 00
	61	Isaiah Wright, corn for the horses belonging to the State; (suspended for further explanation)		40 00
	63 and 65	John Thomas, services in the arsenal; (suspended for further explanation)		38 50
	66	John Spring, for a frame building in the arsenal yard; (suspended for further explanation)		188 41
	70	John Schriver, for stocking muskets, &c., disallowed; (the charge not being a proper one against the United States)		508 00
	72 and 76	John Thomas, for services in the arsenal; (suspended for further explanation)		10 00
	74, 75, 80	William D. Brown, for work at the magazine guard-house; A. Beckman, for sashes for magazine guard-house; John Stent, for posts for magazine guard-house; (suspended for further explanation)		180 00
	82	Jeremiah Bulfinch, for transportation of ammunition from Charleston to Coosawatchie, January 31, 1815; (suspended for explanation; charges for transportation of stores from one arsenal or place of deposit to another are not proper charges against the United States, unless the articles were for militia actually in service, or the transportation ordered by a United States officer)		40 00
	84	M. Kelly, for knives, inadmissible		6 00
		Quartermaster general's account overadded		10
		Charge for munitions of war loaned by the State to the United States disallowed; the articles having been already paid for to the State by the United States, as appears by the receipt of Colonel James Carson, commissary general of the State, being voucher No. 8 of the account of Major Champlain for the third quarter of 1814		3,516 70
		Total amount deducted from W. B. Mitchell's account		8,457 61
		Total amount of his disbursements, as charged by South Carolina		13,856 04
		Amount admitted to the credit of South Carolina on said Mitchell's accounts		5,398 43
		ACCOUNT OF SIMON MAGWOOD.		
	1 to 5	Charges for forage for Major Howard's detachment, $888 48. Major Howard's requisitions are for thirteen days' forage for 100 horses; the hay charged for exceeds by 1,367 pounds the quantity allowed by regulations for 100 horses for thirteen days, and by two bundles the quantity receipted for by Major Howard's quartermaster; and his receipts are also for five bushels of corn less than charged for; therefore,		
		Deduct for 1,367 pounds of hay, at 2½ cents per pound	$30 75½	
		Deduct for 5 bushels of corn, at 87½ cents per bushel	4 37½	
				35 13
	6 to 41	Charges for forage for horses belonging to the State, June to November, 1813; (suspended for explanation)		1,436 86
	42	John Gell, for stabling and feed for horses of Captain Dangerfield's company of cavalry, at 75 cents per day for each horse, disallowed; the company was part of Major Howard's detachment, and there is no proof that the forage for these horses was not included in his requisitions.—(See note No 1)		120 00
		Simon Magwood, for services as foragemaster general, May 31 to November, 1813; (suspended for explanation; no provision by any law of the United States for an officer of this description)		412 50
	2	Simon Magwood, for services in same capacity from November, 1813, to April, 1814		375 00
	1 to 34	Forage for horses belonging to the State, November, 1813, to April, 1814		864 33
No. 4		Forage for horses belonging to the State, April, May, and June, 1814; (suspended for explanation)		40 18
		R. G. Waring, for forage for horses of a detachment guarding ammunition from Charleston to Camden, Oct., 1814. (See note No. 82, quartermaster general's account)		55 66
		Total amount deducted from S. Magwood's account		3,339 66
		Total amount of his disbursements, as charged by South Carolina		4,384 63
		Amount admitted to the credit of South Carolina on said Magwood's accounts		1,044 97
		ACCOUNTS OF COLONEL TUCKER.		
		Lieutenant Colonel Starling Tucker:		
No. 3	1	There are no muster-rolls; by the pay-rolls of the respective companies it appears that the regiment commenced its services on the 1st and was discharged on the 31st of March, 1814.		
		Colonel Tucker's pay, exclusive of travelling allowances, being charged so as to include the 1st of April, a deduction is requisite of	$2 00	
		His pay while travelling from home to the place of rendezvous, and from the place of discharge home, together 250 miles, amounts to only $26 28, and $33 33 being charged, a further deduction is necessary of	7 05	
		Forage overcharged	20	
				9 25
		Major Samuel Cannon:		
	2	Charge for pay while travelling 172 miles	20 00	
		Amount to which he was entitled	15 11	
			4 89	
		Subsistence while travelling, twice charged	9 60	
		Forage while travelling, inadmissible	4 00	
				15 49

PART V.—*Deductions from the accounts of the State of South Carolina, &c.*—Continued.

Account.	Voucher.	To whom and for what paid.			Amount.
No. 3	3	Major Robert Woods:			
		Charge for travelling pay, 230 miles		$25 54	
		He was entitled to only		20 23	
				5 31	
		Charge for servant's pay	$12 00		
		Entitled thereto only from the time and arrival at the place of rendezvous to the day of discharge, one month	8 00		
				4 00	
		Forage overcharged		16	
					$9 47
	4	Joshua Miller, wagonmaster:			
		He has charged for 100 rations of forage, at 20 cents		20 00	
		Allowed for forage for the same period as pay is charged for, (1st March to 19th April, longer by several days than other officers charged for,) at $8 per month		13 06	
					6 94
	5	J. B. O'Neal, judge advocate:			
		Travelling pay and subsistence, charged at 15 instead of 20 miles per day, making a difference of 3 days; forage charged for 2 horses, at $6 per month each, for 43 days, (after deducting for 10 days' forage drawn,) which period includes the time he was travelling, he can be allowed only for forage prior to discharge, at $8 per month for each horse.			
		Deduct for pay		5 00	
		Subsistence		2 40	
		Forage		1 97	
					9 37
	6	Daniel Long, surgeon:			
		He has charged for 1 month and 24 days	$18 00		
		Deduct for 3 days drawn	60		
				17 40	
		He states that he was detained 8 days after the discharge of the regiment to take care of the sick. The regiment appears by the rolls to have entered on service on the 1st, and to have been discharged on the 21st March, 1814, for which period, and for the 8 days he was detained, (after deducting for 3 days' forage drawn,) an allowance is made at $8 per month		9 33	
					8 07
	8	John Fowle, foragemaster: Pay, calculated at $40 instead of $30 per month, and 11 instead of 8 days, while travelling home after discharge, 160 miles, overpayment			11 79
	9	Quartermaster Sergeant A. Durhee: Pay, overcharged			35
	14	Paymaster William Cowan:			
		Charge for forage	$13 60		
		Entitled to an allowance for forage for one month	8 00		
				$5 60	
		Charge for expense of himself and horse while travelling home	11 81		
		Entitled to an allowance for 11 days' subsistence	6 60		
				5 21	
				10 81	
		Allow for 2 days' pay while travelling to place of rendezvous		2 85	
					7 96
	16	James Barnes, drum-major: Pay, calculated at $12 instead of $11 per month			1 41
	17	Moses Cole, fife-major: Pay, calculated at $12 instead of $11 per month			1 41
		COMPANY OFFICERS.			
	1	Captain Samuel Parsons: Travelling pay, charged at 15 instead of 20 miles per day, overpayment			5 10
	2	Lieutenant Aaron Jones: Travelling pay, twice charged, and calculated at 15 instead of 20 miles per day, overpayment			15 86
	3	Ensign John Moseley: Pay for 17 instead of 13 days, charged for travelling 250 miles, overpayment			2 58
		Captain Lewis Hogg:			
	4	Pay for travelling 195 miles, charged for 13 instead of 10 days, overpayment		$3 91	
		Rations, overcharged		40	
					4 31
	6	Benjamin Duckett, ensign 19 days, and afterwards lieutenant: Pay while travelling 203 miles, charged for 13 instead of 10 days, and otherwise wrongly calculated, overpayment			4 09
	8	Captain Benjamin Lewis: Pay, overcalculated			4 21
	9	Lieutenant Nicholas Harding:			
		Travelling pay, twice charged and erroneously calculated, overpayment		$14 18	
		Subsistence short-charged		1 60	
					12 58
	10	Elisha Adier:			
		For services in Captain Lewis's company, 15 days as lieutenant and 16 as ensign. Lieutenant Harding having been paid as lieutenant from the 8th March, E. Adair can be allowed as such only up to that day. His pay besides, erroneously calculated, and charged for 13 instead of 10 days, while travelling 200 miles, overpayment		4 64	
		Subsistence overcharged		6	
					4 70
	12	Lieutenant Joseph Lever: His travelling pay is included in his first charge, (27th February to 12th April,) and afterwards separately charged, and for 12 instead of 9 days, the distance being 180 miles, overpayment			14 86

PART V.—*Deductions from the accounts of the State of South Carolina, &c.*—Continued.

Account.	Voucher.	To whom and for what paid.		Amount.
No. 3	13	Ensign Daniel Dewalt: Similar overpayment		$9 21
	14	Captain Geo. McCreless:		
		Pay, charged for 13 instead of 10 days, while travelling 195 miles, overpayment	$4 00	
		Subsistence overcharged	60	
				4 60
	15	Lieutenant George Schoppert: Pay for 12 and subsistence for 11 days instead of for 9 days, charged for travelling allowance 180 miles, overpayment		3 80
	16	Lieutenant Robert Nance: Similar overpayment		3 30
	21	Captain Charles Gillam:		
		Pay for 12 instead of 9 days, charged for travelling 180 miles, overpayment	$4 00	
		Allow for a day's pay while marching from home to place of rendezvous	1 42	
				2 58
	22	Lieutenant Abraham Dyson: His travelling pay is charged twice, and for 3 days more than he was entitled to, overpayment		14 93
	23	Ensign William Johnson: Like overpayment		8 49
	24	Captain James Vaughan: Travelling pay charged for 14 days; the pay-roll of his company states the distance to the place of rendezvous to be 30 miles, and from the place of discharge home, 180 miles; pay for 11 days is all that can be allowed; overpayment		3 81
	25	Lieutenant Wiet Chandler: Like overpayment, (except that the charge is for 15 days)		3 86
	26	Ensign Lewis Ball: Pay charged for a longer period while travelling than allowed by law, and also wrong calculated; overpayment		1 58
	27	Captain John Smyly: Pay for travelling 180 miles; charged for 12 instead of 9 days; overpayment		4 00
	28	Lieutenant Thomas Ridlesperger: Like overpayment		3 00
	29	Ensign William Cannon: His travelling pay is twice charged, and the first charge is for two days more than he was entitled to; overpayment		8 78
	30	Captain Reuben Powell: Travelling allowance (255 miles) charged for 17 instead of 13 days—overpayment		7 50
		Ensign William Osborn: Travelling pay overcharged		2 09
		Lieutenant Joseph Davenport and six others: For services as paymaster's guard from Camp Alston to Charleston, and thence home; out 19 days from 31st March, 1814; suspended for explanation. The persons composing the guard (except two, one of whom was the foragemaster) were part of Captain Caldwell's company of cavalry; and the period here charged for is included in that for which they were paid on the rolls for travelling allowance		70 00
		Captain Smyly's company: Overpayments to five privates discharged March 17, 22 cents each		1 10
	5	Wagoner's accounts:		
		March Duncan, overaddition	$10 00	
		One item short charged	5 00	
				5 00
	6	William Gillam: $65 instead of $69, charged for hire whilst going to Camp Alston, 180 miles, at $5 for every 15 miles		5 00
		ACCOUNT OF COLONEL TUCKER, FOR PROVISIONS, ETC., PURCHASED.		
		Isaac Cohen & Co.: Charge for 25 bushels corn furnished March 17, 1814, disallowed; Messrs. Cohen having been paid for the same by Simon Magwood, foragemaster general, per order of the wagonwaster of Colonel Tucker's regiment, and the amount charged in S. Magwood's account, No. 2		25 00
		Charge for interest on the balance due from the State to Colonel Tucker; not admissible against the United States		34 61
		Total amount deducted from Colonel Tucker's accounts		375 04
		Total amount of Col. Tucker's accounts, as charged by the State of South Carolina		13,779 12
		Amount admitted to credit of the State of South Carolina on Col. Tucker's accounts		13,404 08
		ACCOUNTS OF WILLIAM SINGLETON.		
		Amount charged by the State, (see general account and paymaster general's book, page 22)		5,779 55

		Total amount of Wm. Singleton's accounts, as charged by South Carolina			5,779 55
		Amount admitted to credit of South Carolina on W. Singleton's account			4,645 07
		ACCOUNTS OF MAJOR JOHN WILSON.			
		The charges for pay, &c., of Major Wilson and Thaddeus Sobieski, his assistant, disallowed; Major Wilson having been paid by the commissioners on fortifications, for the defence of Charleston, as chief engineer, at $93 per month, from October 5, 1814, to March 11, 1815, inclusive, and Thaddeus Sobieski having been paid by the same commissioners for services as assistant engineer, at $58 per month, from October 1, 1814, to December 31, 1815; which payments have been allowed by the United States on settlement of the account of the commissioners			456 00
		Total amount deducted from Major Wilson's account			456 00
		Total amount of Major Wilson's account, as charged by South Carolina			688 32
		Amount admitted to credit of South Carolina on his accounts			232 32
		ACCOUNTS OF R. Y. HAYNE, QUARTERMASTER GENERAL.			
	1	William Sims, for cutting, welding, and putting on the tire to the wheels of tumbrels, in December, 1814; suspended for explanation; no evidence that the work was rendered necessary by use of the tumbrels in the public service			46 77
	8	Aaron Richardson, for four days' hire of a team, transporting baggage of a detachment to the Sister's Ferry, in January, 1815; suspended for further explanation. It cannot be found that either Quartermaster Gillison or General Cuthbert, by whom the account is certified, was in service. The militia in service at this time were called out by United States authority; they were paid and subsisted by the United States; and payments to a very large amount for the transportation of their baggage were made by Major Champlain; whether or not he provided transportation in this case cannot be ascertained, the name of the officer who commanded the detachment not being stated			20 00
	9	William Givens, for quartering Sergeant Cole and eleven dragoons who were ordered to Beaufort to escort and guard arms to Coosawatchie, October 14, 1814; disallowed (It appears by the draft of J. B. White's letter to General Cuthbert, by whom W. Givens's account is certified, dated September 22, 1814, that an order was issued "for arming such companies of General Cuthbert's brigade as were within supporting distance of the sea-coast," and that they were to be supplied from the arsenal at Beaufort; there is no evidence that any of these companies had been then called into service, and the expense is not therefore properly chargeable to the United States)			34 50
	11	John Rogers, for hire of his team from Camp Alston to his house, 165 miles; this is presumed to be embraced in voucher 19 of Colonel Hayne's account; but if it is not, it is then disallowable under the Secretary of War's decision, allowing only eight teams for Colonel Youngblood's regiment			55 00
	13	Auppe Cooper, for team hire			220 00
	14	Gab. Long, for team hire			220 00
		The two foregoing charges disallowed under the Secretary of War's decision, allowing only eight teams for Colonels Carter and Youngblood's regiments.			
	18	Artemas B Darey, quartermaster 22d regiment militia, for hire of a team for the transportation of Captain Utsey's company to the Two Sisters' Ferry, in February, 1815; suspended for explanation; no such company can be found to have been in service —(See note on voucher No 8)			75 00
	20	George I. Strother, for hire of his team from Camp Alston, home, in March, 1814; disallowed; before charged.—(See his account in voucher 52 of J. W. White's account)			50 00

PART V.—*Deductions from the accounts of the State of South Carolina, &c.*—Continued.

Account.	Voucher.	To whom and for what paid.	Amount.
	21	Samuel McConahay, for services of his team transporting baggage of Major Meadows's detachment to Georgetown, in November, 1814. Major Meadows was an officer of Lieutenant Colonel Alston's regiment, which appears to have been called out and marched to Georgetown, in November, 1814, to relieve Major Gasque's detachment. The regiment was in the United States service, and consisted of only five companies. Major Meadows states in a certificate that the other wagons could not have the above baggage. The United States officer in the quartermaster's department at Georgetown, B. S. Hart, paid for the hire of five teams, and Major Champlain for the hire of a sixth team; on Major Meadows's certificate $910 appears to have been paid for the hire of these six teams. This account also, it is evident, was presented to Major Champlain, and it is presumed he considered it an improper one, and refused to discharge it	$140 00
	23	Captain Zachariah Meriwether, for a payment to Isaac Logan, for the transportation of the baggage, &c., of Captain Meriwether's company, in February, 1815; disallowed. Major Champlain paid for the hire of nine teams, on account of Colonel Austin's regiment, of which this company was a part	25 00
		Total amount deducted from R. Y. Hayne's accounts	886 25
		Total amount of R. Y. Hayne's accounts, as charged by South Carolina	2,888 39
		Amount admitted to the credit of South Carolina on Col. Hayne's accounts	2,002 14

Accounts allowed by the legislature of the State of South Carolina.

Murdoch Murchison, for nine days' services as quartermaster, in conveying the 27th regiment of drafted militia from Marion Court-House to Georgetown, in November, 1814; nine days' services of his wagon and team, and for 254 rations, stated to have been furnished to the militia during the march on the 26th, 27th, 28th, and 29th November, 1814. The regiment which then marched to Georgetown was that commanded by Lieutenant Colonel Alston, and F. M. Baxter was mustered and paid as the quartermaster thereof. With respect to the charge for team hire, see the remark on Samuel McConahay's account, voucher 21, of Quartermaster General R. Y. Hayne's account. Colonel Alston's first requisition on the contract includes subsistence for the days charged in the above account for 430 men, and which have been paid for by the United States. Major Champlain paid for marching subsistence of a detachment of 209 men of the regiment, at one ration per day each, including the same days. The regiment, as appears by Colonel Alston's ration returns, had not more than 540 men, after they were all assembled. Quartermaster Murchison's account is not supported by any other testimony than his own, and the proof of the payment of it by the State is wanting	$86 22
Dr. James H. Davidson :—his charges for services are overcalculated	2 83
Reuben Roberts, for 1,080 pounds of bacon furnished to a detachment under command of Lieutenant Colonel Alston, in February, 1815. He states in his petition that Mr. Roddy, (who was the United States contractor) admitted the justice of his claim, but objected to the form of the certificate he had taken, and which has since been lost. It appears by Major Champlain's accounts that in January, 1815, he entered into a contract with John Ling, (who, as Colonel Steedman states, was a clerk of Roddy) for the supply of rations to a regiment of South Carolina militia, on its march to the Two Sisters' Ferry, on the Savannah river; and on returns certified by Lieutenant Colonel Austin, whose regiment entered the service on the 1st and 4th of February, 1815, payments were made to Mr. Ling, for complete rations for the regiment from the 2d to the 18th of February, 1815, by Major Champlain. From the 18th of February the regiment was subsisted by Mr. Roddy, as appears by Lieutenant Colonel Austin's returns, with Roddy's accounts. It is Mr. Roddy, therefore, and not the United States, who is properly chargeable for the bacon; and the proof of the State having paid for it is wanting	202 50
Dr. Charles Drayton, for cattle, &c., impressed for the use of men under command of Captains Singleton and Jenkins, 27th and 29th of May, 1813. There is no proof that these officers were then in service, nor of the value of the cattle, &c., impressed. The legislature appropriated only $30, and of the payment of that sum the proof is wanting	30 00
Captain Samuel Bingham, seven months' interest charged on his disbursements. Not admissible	14 21
Artemas B. Darby, for rations furnished Captain John Utsey's company of South Carolina militia, on its march to the Two Sisters' Ferry, in February, 1815. No evidence can be found of the service of this company.—(See remark on voucher 18 of Quartermaster General Hayne's account)	93 80
Total amount deducted from accounts allowed by legislature	429 56
Total amount of said accounts, as charged by South Carolina	1,571 60
Amount admitted to the credit of South Carolina on said accounts	1,142 04

RECAPITULATION OF DEDUCTIONS.

Total amount suspended for further proof, &c.	$6,027 01
Total amount wholly disallowed	42,331 15
Total amount referred to Ordnance department	57,413 60
Total amount deducted from South Carolina accounts	105,771 76

TREASURY DEPARTMENT, *Third Auditor's Office, January* 13, 1827.

SIR: Agreeably to the request made of me by you, I have had prepared, and now enclose, a copy of all the deductions made from the accounts of the State of South Carolina for military expenditures during the late war, together with a copy of the official statement thereof, as adjusted at this office during the past year. After stating the reasons for each respective deduction, you will find at the end of the list, that—

The whole amount suspended for further proof is	$6,027 01
The whole amount wholly deducted is	42,331 15
The whole amount referred to the Ordnance department	57,413 60
Making an aggregate amount of deductions	105,771 76

I am, very respectfully, your most obedient servant,

PETER HAGNER, *Auditor.*

ALEXANDER SPEER, Esq., *Comptroller General of the State of South Carolina.*

F.

DR. *The State of South Carolina in account with the United States.*

Date.	To general account of moneys advanced.	Balances due to certain States.
Oct. 24, 1821	For warrant No. 8552, on account	$114,000 00
30, 1821	For warrant No. 8580, on account	15,000 00
June 15, 1822	For warrant No. 9458, on account	26,090 00
	For this sum, being the value of 7,000 flints, 25 spades, 9 axes and 5 slings, 4 officers' tents, 58 common tents, 132 knapsacks, 279 cartouch-boxes and belts, and 279 bayonet scabbards and belts, 680 brushes and prickers, 1 drum and 2 drum-sticks, 4 fifes, and 59 sets of tent-poles, presumed to have been charged and allowed (as greater quantities of the same kind of articles were charged and allowed) in the accounts of Colonel James Carson, commissary general of purchases of the State of South Carolina, and which sum (being the value of the aforesaid articles) was paid to Colonel Carson on the 31st July, 1814, by Major Samuel Champlain, United States deputy quartermaster general, (see voucher 8 of said Champlain's accounts,) quarter ending September 30, 1814	3,081 70
	For this sum, credited in the account current of Robert Y. Hayne, State quartermaster general, as the proceeds of perishable articles sold by order of the Governor of South Carolina, the cost of which articles is supposed to be charged and allowed in the State accounts	552 68
		158,634 38
	Balance due the United States	9,333 71

TREASURY DEPARTMENT, *Second Comptroller's Office, December* 5, 1826.

Examined by J. SEAVER, *Clerk.*

The State of South Carolina in account with the United States. Cr.

By general account of moneys advanced.			Balances due to certain States.
For disbursements made by Colonel James Carson, commissary general of purchases, on account of the late war, per his accounts current, lettered A and B, and numbered from 1 to 9, and vouchers filed therewith; also, see his book of accounts, labelled "Colonel James Carson, commissary general of purchases," and books of receipts in favor of Colonel Carson			$47, 156 21
For disbursements made by Governor Middleton, per his account current, and vouchers filed therewith			2, 062 49
For disbursements made by Colonel Thomas Lehre, commissary general of issues, per his accounts current, numbered from 1 to 5, and vouchers filed therewith			21, 249 50
For disbursements made by Colonel Charles B. Cochran, paymaster general, and his deputies, per book of "Accounts of the different paymasters, officers, &c., &c.," and vouchers filed therewith, numbered from 1 to 102, being principally for payments to Colonels Carter and Youngblood's regiments, and vouchers from 1 to 8, being payments to Major Howard's detachment			28, 061 61
For disbursements made by William B. Mitchell, quartermaster general, and his assistant, J. B. White, per accounts current, and vouchers filed therewith			5, 393 43
For disbursements made by Colonel Simon Magwood, foragemaster general, per his accounts current, numbered 1, 2, and 3, and vouchers filed therewith			1, 044 97
For disbursements made by Colonel Starling Tucker, on account of his regiment, per receipt rolls and other vouchers filed therewith			13, 404 08
For this sum, deducted by Colonel Tucker from one of his abstracts of payments as so much received of General Elmore, to whom the same was advanced by the State through J. B. Earle.—(See Colonel Tucker's accounts, and also voucher 24 of Quartermaster General W. B. Mitchell's account. Had this sum not been deducted, the State would, of course, have been entitled to a credit for a like sum on account of Colonel Tucker's disbursements)			940 62
For the subsistence of Colonel Tucker's regiment, according to the decision of the Secretary of War. The regiment, after deducting the rations paid for on the rolls, was entitled to 18,424 rations, which, at 18 cents each, is equal to		$3, 316 32	
From the foregoing deduct the amount paid by Colonel Tucker for subsistence of his regiment, and allowed in his accounts	$871 31		
Deduct also the value of the provisions turned over to the quartermaster of Colonel Tucker's regiment by Tandy Moss, quartermaster of Colonel Youngblood's regiment, which was allowed in Colonel Lehre's accounts	420 50		
Deduct also the sum of three dollars, credited by Colonel Tucker in his accounts, as received by him for a steer's hide	3 00		
		1, 294 81	
			2, 021 51
For the pay of the guard of the magazine at Charleston Neck, as per pay-roll			533 15
For disbursements made by William Singleton, paymaster of the 1st regiment of South Carolina militia, as per index to the accounts of the State, and his vouchers filed			4, 645 07
For disbursements made by Major John Jenkins for Fort DeKalb, on the island of St. Helena, and the Beaufort artillery, as per index to the accounts of the State, and Major Jenkins's vouchers filed			555 35
For disbursements made by John Wilson, State engineer, as per index to the accounts of the State and Major Wilson's vouchers			232 32
For disbursements made by Colonel Robert Y. Hayne, as quartermaster general, per his account current, and vouchers filed therewith			2, 002 14
For sundry accounts allowed by the legislature of the State of South Carolina for losses sustained and services rendered by individuals, and also for articles supplied the troops, per statement and vouchers filed therewith			1, 142 04
For this sum, allowed by the Secretary of War for wipers, bullet-drawers, bullet-moulds, and screw-drivers, purchased by John Vaughan, per statement, and vouchers filed therewith			635 24
For this sum, allowed by the President of the United States for buildings destroyed and damages done to the land across which the fortifications on Charleston Neck passed, per decision and documents filed therewith			18, 215 94
By balance due the United States			9, 333 71
			158, 634 38

Treasury Department, *Third Auditor's Office, September* 21, 1826.

Stated by ROBERT READ, *Clerk.*

G.

Summary of the claims of the State of South Carolina.

1st. *Interest* on advances to the United States during the war, the sums so advanced having been drawn out of the Bank of the State of South Carolina, from a fund then drawing an average interest of about twelve per cent., which interest was lost by the State, though only six per cent. is now claimed.

2d. *Arms* purchased by the State at about $17, and furnished to the United States, who have disposed of them as their own. This account has been adjusted at the proper department, and the question is, if the State shall be paid in arms or in money. The State is willing to receive payment at $12 a stand, and this can be made without costing the government a dollar, by merely keeping the arms in lieu of having the same number manufactured.

3d. *Cannon balls* manufactured by the State in consequence of no supplies being furnished by the United States, and when essential to aid them in defence of Charleston; rejected by the United States after the peace, in consequence of their not being *exactly* conformable to the standard *prescribed after they were made.*

4th. *Blankets* furnished to a small portion of the militia in the actual service of the United States in consequence of their entire destitution, as proved by the memorial of the officers. Those men only were furnished who were totally destitute.

5th. *Transportation*—no more wagons were ever used than the situation of the troops rendered absolutely necessary; but in the settlement of our claims, only eight have been allowed to any regiment of 1,000 men. The claim is for the number actually paid for by the State, and without which the troops could not have been marched to the place of *rendezvous.*

6th. Commissions and other compensations necessarily paid by the State to the commissary general, paymaster general, and *other heads of departments*, under whom these expenditures were made, all of which are rejected because these officers were not considered in the service of the United States.

7th. There are various other items included in the claim which, either from their nature or the smallness of their amounts, are not now brought before the committee, some of which, it is believed, can be adjusted with officers of the proper department.

REMARKS.

1st Only a portion (it is believed less than half) of the amount actually expended by the State for military defence during the war has been claimed of the United States, and this claim has been confined to troops actually received into the service of the United States, or recognized by them, and for arms, &c., furnished *to supply what the United States did not and could not furnish.*

2d. Of the amount claimed, a large sum has been rejected for irregularity, and $——— in addition, for the reasons before stated.

3d. The State made these advances to the federal government in consequence of being given to understand that the means of the federal government were inadequate, and under a resolution unanimously passed by the legislature to aid the government to the whole extent of the resources of the State, and to look to a period of peace for the settlement of her claims.

22D CONGRESS.] **No. 488.** [1ST SESSION.

ON REGULATING THE PAY, EMOLUMENTS, AND ALLOWANCES OF THE OFFICERS OF THE ARMY OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 20, 1831.

Mr. DRAYTON, from the Committee on Military Affairs, to whom was referred the bill "to regulate the pay and emoluments and allowances of the officers of the army of the United States," reported:

The objections to the compensation which is made to the officers in the army of the United States, under the existing laws, are:

1st. That some officers receive a greater compensation than they ought to receive, whilst the compensation of others is less than it ought to be.

2d. That many officers of the same grades, and performing duties of correspondent importance and responsibility, receive different rates of compensation.

3d. That several officers receive the pay and emoluments of their brevet rank when not performing duties adequate to their brevet rank.

4th. That the regulations relating to the allowance of forage are liable to abuse, and operate unequally, as under them officers entitled to the same commutation, on that account, receive different amounts.

The foregoing objections will be considered in their order, with the alterations which are proposed for the purpose of obviating them.

First objection.—A major general now receives monthly, for pay, $200; for rations, (fifteen per day,) $91; for forage, (seven horses,) $56; for servants, (four,) $54; total per month, $401; per year, $4,812. This, compared with the salaries of civil officers, is deemed too much, and it is also too high when compared with the compensation of grades immediately below that of a major general. For pay, rations, forage, and servants, a brigadier general receives $3,084 a year, and a colonel in the staff, $2,316 a year. It is,

therefore, proposed to allow to a major general monthly, for pay, $160; for rations, (twelve per day,) $72; for forage, (three horses,) $24; for servants, (three,) $40; being $296 per month, and $3,552 per annum.

A brigadier general now receives for pay, rations, forage, and servants, $257 a month, or $3,084 a year. The bill has reduced his monthly pay and emoluments to $228 per month, or $2,736 per annum, upon the same principles as it has those of the major general.

By this bill the pay and emoluments of a major are allowed to a surgeon, and those of a captain to an assistant surgeon, with eight dollars a month for the forage of one horse, and double their daily rations to each of them, after they have served ten years in their respective grades.

The importance of the duties of the surgeons, upon which the comfort, the health, and the efficiency of the army so essentially depend, are manifest and notorious; and yet the pay and subsistence of a surgeon amount to only $63 a month, or $756 a year; less by $132 a year than those of a captain, which are $888; and the pay and subsistence of an assistant surgeon amount to no more than $52 a month, or $624 a year; whilst a first lieutenant receives $648 a year, and when he commands a company, which is very common, $768 a year.

However long the surgeons continue in the service, their compensation remains the same, as they can rise no higher; neither can any lucrative employment be conferred upon them, unlike the military officers, who may be transferred to the staff, be ordered on extra duties, or obtain separate commands, with the allowance of double rations.

From a statement of the Surgeon General made during the last session of Congress, it appeared that there were then in the army eight surgeons and forty-five assistant surgeons; that of the surgeons, one of them had been in the service seventeen years, two sixteen, one twelve, and one ten years; and that of the assistant surgeons, five had been in the service fourteen years, eight twelve years, five ten, and the rest from nine years to a recent date. For the whole of these periods their emoluments have been stationary, whilst in the ten years ending in 1830, fifteen captains have been promoted to majorities, nineteen to colonelcies and lieutenant colonelcies, besides numerous promotions from the inferior grades.

From causes doubtless accidental, but operating with peculiar hardship upon the medical staff, whilst the condition of every officer in the army below the rank of major has been improved, theirs has been unchanged. Nor is this the only injurious comparison of which they have a right to complain. Formerly the pay and emoluments of a surgeon and of an assistant surgeon in the army, were the same as those of a surgeon and of a surgeon's mate in the navy. By an act of Congress passed May 24, 1828, the pay and subsistence of a surgeon in the navy were raised to $75 a month; after he had served five years, they were raised to $87 a month; after ten years' service, to $90 a month; and after twenty years' service, to $100 a month. By the same act, the pay and subsistence of a surgeon's mate, after he has served five years, are $57 a month; and after ten years' service, they are increased to $69 a month. Thus a surgeon in the navy may now receive for his pay and subsistence $100 a month, whilst a surgeon in the army can receive no more than $63; and a surgeon's mate in the navy may receive for his pay and subsistence $69 a month, whilst an assistant surgeon in the army is entitled to no more than $52 a month. It ought also to be noticed that the promotion of a surgeon's mate is necessarily much more rapid than that of an assistant surgeon, there being in the navy 37 surgeons and 46 surgeon's mates, and in the army but eight surgeons, with 45 assistant surgeons. It should likewise be recollected that the military officers are educated by the government at West Point, by which they are exempt from the heavy expenses of a professional education, which are defrayed by the medical staff from their private resources. Influenced by the facts and reasons which they have adduced, the Committee on Military Affairs propose to put the surgeons upon an equality with the majors, and the assistant surgeons upon an equality with the captains, with a provision, as surgeons cannot be promoted at all, and assistant surgeons but very slowly, that they shall, as an equivalent for these disadvantages, be entitled to double rations after they shall, respectively, have served ten years.

Second objection.—As the law now stands, officers in the staff and in the Ordnance department are entitled to higher pay and emoluments than officers of similar rank in the engineer, the artillery, and the infantry. In foreign nations these distinctions in the emoluments attached to particular corps or regiments are almost wholly founded upon aristocratical privileges, or favoritism, or arbitrary classification, none of which motives were ever intended to prevail in our country. It is believed that the duties of officers in the engineer, artillery, and infantry, involve as much individual responsibility, and require as much labor and time as those of officers of the same rank in the staff and the ordnance. This bill, therefore, makes no distinction between them.

Some differences, though not considerable, now exist between the emoluments of the Adjutant General, and of the Inspectors General, the Commissary General of Subsistence, the Chief of the Ordnance department, and the Chief of the Corps of Engineers. The rank of these officers being the same, the bill grants to them the same pay and emoluments. As the Chief of the Engineers, though a brevet brigadier general, performs no more than the duties of a colonel, the highest officer in the corps of engineers, he is not regarded under the act of the 16th of April, 1818, to be entitled to a compensation beyond an officer of that rank. By limiting him, therefore, to it, no injustice is done to him.

Third objection.—By an act passed on 16th April, 1818, "officers of the army who have brevet commissions shall receive the pay and emoluments of their brevet rank, *when on duty, and having a command according to their brevet rank, and at no other time.*" By the act of the 2d March, 1821, the army was reduced to about twelve regiments, under a specified number of regimental and staff officers, and three general officers, viz: one major general and two brigadier generals. This organization shows it to have been the intention of Congress that a major general, under the President, should command the whole military establishment, and that each of the brigadiers, under the major general, should command one-half of it. Had there been no brevet officers, this must have been the regular distribution of the generals; and the circumstance of the existence of such officers cannot affect the principle of a system which was so framed as to be carried into execution without their intervention. Upon comparing together the acts of 1818 and 1821, it is apparent to the committee that an officer is not entitled to additional pay and emoluments by virtue of a brevet commission, unless he exercise under it a greater command than is annexed to the rank which he holds in the line of the army. A brigadier, therefore, with the brevet of a major general, under the present peace establishment, can never be entitled to the pay and emoluments of his brevet, unless a command should be devolved upon him, exceeding that of a department, or one-half of the troops. In ordinary military language, a brigade means two regiments under a brigadier; a division, two brigades under a major general; a corps d'armée, two divisions under a lieutenant general, &c.; but by the act of 1821, different extents of command than those which are usual, are given to a major general and to a

brigadier general, (the two highest grades in our service,) and in construing their duties and rights, we ought to be governed by the letter and spirit of our own legislation, and not by technical phraseology. The same act which has increased the ordinary commands of the major general and of a brigadier general has left those of regimental officers as they have always existed in the United States. The committee have applied the same rule to all brevet officers, in opposition to the practice which prevails in some instances, conceiving that in doing so they have conformed to the intent and meaning of the laws of the United States which they have cited.

Fourth objection.—Complaints have been made that the regulations respecting forage have sometimes been evaded, and that officers entitled to the same compensation for forage receive different amounts. To prevent any irregularities or inequalities, the officers, by the bill, are allowed a fixed sum for forage, which cannot be increased under any circumstances. The number of horses which they are entitled to keep has been reduced in many cases, and increased in none. They are permitted, at their option, to draw forage in kind because, sometimes, when in remote situations, or when travelling upon duty, on horseback, they either cannot purchase forage or they are obliged to pay extravagant prices for it.

No other part of the bill is considered to require explanation, excepting so much of it as relates to the allowance of quarters and fuel to the Paymaster General and the Surgeon General. By the 3d section of an act of Congress of the 24th April, 1818, the Paymaster General is to receive a salary of $2,500 per annum. By an act of the 14th April, 1818, some change is made in the Medical department of the army, and by its second section the annual salary of the Surgeon General is fixed at $2,500. The tenth section of the act of Congress of 2d March, 1821, enacts that there shall be one Paymaster General, with the present compensation, and its 11th section declares that there shall be one Surgeon General, saying nothing about his compensation; but by the following section, "officers, &c., retained by this act, excepting those specially provided for, shall have the same rank, pay, and emoluments, as are provided in like cases by existing laws."

The 9th section of an act passed on the 24th April, 1816, says, "that the regulations in force before the reduction of the army," (which was on the 3d March, 1815,) shall "be recognized as far as the same shall be found applicable to the service, subject, however, to such alterations as the Secretary of War may adopt, with the approbation of the President." Anterior to the passage of this act, quarters and fuel were allowed, by the regulations, to the Paymaster and Surgeon General; and subsequently to its date, the same quarters and fuel were continued to them, by regulations founded upon the authority of the act of 24th April, 1816. It may, perhaps, be proper to remark that no act of Congress expressly grants quarters and fuel to an officer. From the major general to the lowest subaltern, the right to these allowances is derived exclusively from the regulations of the War Department, when approved of by the President, which, it has been shown, are sanctioned by law. Although the committee entertain no doubts as to the rights of the Paymaster and Surgeon General to quarters and fuel, yet, as doubts have been elsewhere expressed, they have thought proper to examine the question, and to express their opinion.

The paper marked A, exhibits a statement of the existing and of the proposed pay and emoluments of the officers.

The paper marked B, shows the gain and loss of the government by the alterations proposed in the bill.

22D CONGRESS.] No. 489. [1ST SESSION.

ON THE SUBJECT OF DESERTION IN THE ARMY AND PROPOSED REMEDIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 27, 1831.

Mr. DRAYTON, from the Committee on Military Affairs, to whom the subject of desertions in the army had been referred, reported:

The committee have seriously reflected upon the importance of devising some remedy for an evil so injurious to the reputation and utility of the army and so detrimental to the public interests as desertion, and they have arrived at the conclusion that it is necessary to recur to rewards and punishments—the motives by which the mass of mankind is ordinarily influenced—to effect the object which is desired. The condition of the non-commissioned officer and soldier ought to be ameliorated, so as to induce those who are in respectable situations to enlist, with the prospect of deriving as much profit from their pay and other allowances as they could earn by their labor in civil occupations, and with the certainty of being taken care of and furnished with medicines and medical aid when disabled by wounds or sickness. The length of the term of service, which is five years, is also an objection against enlistment with many who would not be unwilling to serve for a shorter period, whilst of those who engage themselves for five years a large proportion desert after receiving their bounty, clothing, and pay for two or three months. It is, therefore, proposed to reduce the term of enlistment from five to three years; and, as a soldier who has acquired a knowledge of his duties and becomes habituated to the performance of them is more useful and efficient than a recruit, it is deemed politic to stimulate him to re-enlist, by moderate bounty and other advantages, by which not only the benefit of obtaining a better soldier will be secured, but the expense of transporting the recruit to the headquarters of his regiment be saved.

The committee believe that by adopting the few alterations which they have suggested, by abolishing the issues of spirits to non-commissioned officers and privates, and by preventing sutlers from selling any spirits, (regulations already within the power of the Executive and of the Department of War,) the rank and file of the army would gradually be composed of individuals so reputable that desertion, if not totally discontinued, would be comparatively rare.

But soldiers now in the army have entered it under circumstances different from those which it is desired should exist, and the fact is notorious that numbers of them are guilty of desertion. Whilst for

that crime sentence of death might legally have been pronounced by a general court-martial, the feelings of the community, as well as those of the members of the court and of the President, were so repugnant to the execution of the law in time of peace that it remained almost obsolete upon the statute book, and during the last session of Congress it was formally repealed. Since then desertions have increased to so great an extent that in a recent report of the Secretary of War it is estimated that they will amount in the year 1831 to 1,450, which exceeds one-fourth of the rank and file of the whole regular army. It is evident, unless a check be interposed to the progress of this evil, that the purposes for which the military peace establishment was organized will be utterly frustrated; and the committee can devise no check which, in their opinions, will be so salutary and effective as to authorize the infliction of corporal punishment upon deserters. Should this be regarded as a degrading punishment, it should be recollected that it is limited to those who have degraded themselves by fraud and perjury, and no fouler stain ought to attach to the meritorious soldier, on account of the delinquencies and chastisement of those who are members of the body in which he is enrolled, than to the virtuous citizen who is the member of a society in which certain crimes, when committed, are visited by the laws with disgraceful punishments. For the preservation of discipline in the navy this species of punishment is allowed, without the character of the sailors, as a class, being tarnished by it. The necessity which justifies its practice in the naval service for a variety of offences, would surely justify it in the land service in the particular case to which alone it is intended to be applied.

The committee, entertaining confident hopes that the respectability and physical strength of the army will be improved by the adoption of the measures which they have recommended, and by other provisions contained in their bill, and that the crime of desertion will be rendered incomparatively less frequent by the partial repeal of the law which interdicts the infliction of stripes upon the deserter, have reported the following bill to accomplish their objects. They also annex a letter from the Adjutant General, marked A, by which it is shown that the passage of the bill which they propose, so far from occasioning an additional expense, will be attended with a considerable saving to the government.

A.

ADJUTANT GENERAL'S OFFICE, *Washington, November* 9, 1831.

SIR: The information you have requested me to furnish on the subject of desertions, is herewith respectfully submitted in the tables hereunto annexed.

TABLE No. 1.

Statement of the annual number of desertions from the army since the year 1823, *specifying the number of soldiers who have deserted after joining companies, and the year of enlistment in which the desertion may have occurred; the number of recruits who have deserted from the rendezvous, or on their march to join their regiments; and also the probable amount of the annual loss in money in consequence of the crime of desertion.*

Year.	Number of recruits who deserted from the rendezvous, or before joining companies.	Number and period of desertions after joining companies.							Total number of enlistments.	Estimated loss in money by desertion.		
		First year of enlistment.	Second year of enlistment.	Third year of enlistment.	Fourth year of enlistment.	Fifth year of enlistment.	Total from companies.	Aggregate number of desertions exclusive of convicts.		By recruits from rendezvous.	By soldiers from companies.	Total loss in money.
1823	159	306	75	36	18	14	509	668	2,664	$7,506	$51,171	$58,677
1824	208	432	86	43	22	20	603	811	2,539	9,960	60,435	70,395
1825	249	402	76	41	20	15	554	803	1,731	11,550	55,938	67,488
1826	179	330	66	32	16	13	457	636	1,977	8,354	46,039	54,393

* Estimated.

The foregoing analysis contains all the information called for on this important subject, except so much as is embraced in the fourth interrogatory, to wit: "*If the sum lost by desertion were divided among the soldiers, what would it give to each?*"

To exhibit this result analytically, and in the most perspicuous manner, I submit two other tables.

TABLE No. 2.

Monthly and annual allowance of pay to non-commissioned officers and privates under existing laws.

Rank.	Rate of monthly pay of each class.	Aggregate of monthly pay of each class.	Annual amount of each class.
11 sergeant majors	$9	$99	$1,188
11 quartermaster sergeants	9	99	1,188
354 sergeants	8	2,832	33,984
424 corporals	7	2,968	35,616
14 principal musicians	8	112	1,344
212 musicians	5	1,272	15,264
108 artificers	10	1,080	12,960
4,452 privates	5	22,260	267,120
Total	62	30,722	368,664

TABLE No. 3.

Supposed application of the sum annually lost by desertion to the monthly and annual increase of pay of the rank and file of the army, according to a bill intended to be reported by the Committee on Military Affairs of the House of Representatives.

Rank.	Rate of monthly pay of each class.	Aggregate of monthly pay of each class.	Annual amount of pay of each class.
11 sergeant majors	$16	$176	$2,112
11 quartermaster sergeants	16	176	2,112
106 first sergeants	15	1,590	19,080
248 sergeants	12	2,976	35,712
424 corporals	8	3,392	40,704
14 principal musicians	16	224	2,688
212 musicians	6	1,272	15,264
108 artificers, (artillery)	10	1,080	12,960
4,452 privates	6	26,712	320,544
Total amount of proposed pay	105	37,598	451,176
Total amount of pay under existing laws	62	30,722	368,664
Difference	43	6,876	82,512

REMARKS.—On referring to table No. 1, it will be seen that the aggregate amount lost by *desertion* for the eight years, inclusive of December 31, 1830, amounts to the sum of $575,866; that the loss in 1829 is $98,345, and, in 1830, $102,087. It may be also seen that the average loss by desertion for the last two years is rather upwards of $100,000; the loss during the present year (1831) will considerably exceed any previous year.

If $82,512 of this average annual amount lost by desertion were distributed to the enlisted men of the army by way of additional *pay*, (see table No. 3,) it would be an annual expenditure *less* by $17,000 than the sum now annually lost to the government by desertion—a pecuniary loss the most ungracious which the country can possibly sustain. I respectfully refer you to my report on this subject of January 25, 1830, Doc. No. 62, H. of R., page 9; and also to another report from this office, to the general-in-chief, of January 25, 1831.

If the sum lost by desertion in 1830 ($102,087) be divided among the non-commissioned officers and privates of the army, (5,642,) it will give to each $1 50 per month, or $18 *per annum*.

The average loss by each desertion for the year 1830 is estimated to be $81 60.

I am, sir, with great respect, your obedient servant,

R. JONES, *Adjutant General.*

22D CONGRESS.] No. 490. [1ST SESSION.

ON THE REGULATION OF THE ORDNANCE DEPARTMENT.

COMMUNICATED TO THE SENATE DECEMBER 29, 1831.

WASHINGTON, *December* 29, 1831.

DEAR SIR: I have read the bill regulating the Ordnance department, which you were good enough to send me, and its general features appear to me to be salutary. If passed, I have no doubt but that the ordnance service would be greatly promoted by it.

I would venture to suggest whether it would not be best to make the pay of ordnance officers the same as that of the other corps of the army generally, and whether it would not be expedient to give to the chief of the Ordnance department the privilege of franking.

With great respect, I am, dear sir, your obedient servant,

LEWIS CASS.

Hon. THOMAS H. BENTON, *Chairman of the Military Committee of the Senate.*

IN THE SENATE OF THE UNITED STATES, DECEMBER 15, 1831.

Agreeably to notice given, Mr. SMITH asked and obtained leave to bring in the following bill; which was read twice and referred to the Committee on Military Affairs.

JANUARY 4, 1832.—Reported without amendment..

A BILL providing for the organization of the Ordnance department.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the passage of this act the Ordnance department shall consist of one colonel, one lieutenant colonel, two majors, and ten captans, and as many enlisted men as the public service may require, not exceeding two hundred and fifty.

SEC. 2. *And be it further enacted*, That the Secretary of War be authorized to select from the sergeants of the line of the army, who shall have faithfully served eight years in the service, (four of which in the grade of non-commissioned officer,) as many ordnance sergeants as the service may require, not exceeding one for each military post, whose duty it shall be to receive and preserve the ordnance, arms, ammunition, and other military stores at the post, under the direction of the commanding officer of the same, and under such regulations as shall be prescribed by the Secretary of War, and who shall receive for their services five dollars per month in addition to their pay in the line.

SEC. 3. *And be it further enacted*, That the first section of the act passed on the 3th February, 1815, entitled "An act for the better regulation of the Ordnance department," and so much of the second section of the act, entitled "An act to reduce and fix the military peace establishment of the United States," passed the 2d March, 1821, as provides for one supernumerary captain to each regiment of artillery to perform ordnance duty, and so much of the fourth section of the same act as merges the Ordnance department in the artillery, and reduces the number of enlisted men, be, and the same are hereby, repealed: *Provided*, That nothing contained in this act shall be so construed as to divest the President of the United States of authority to select from the regiments of artillery such number of lieutenants as may be necessary for the performance of the duties of the Ordnance department.

SEC. 4. *And be it further enacted*, That all officers and enlisted men authorized by this act shall be subject to the rules and articles of war, and that the officers shall receive the pay and emoluments now allowed to officers who perform ordnance duties.

22D CONGRESS.] No. 491. [1ST SESSION.

APPLICATION OF VERMONT FOR A MORE PERFECT ORGANIZATION OF THE MILITIA OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 8, 1832.

STATE OF VERMONT.

Resolved, (the governor and council concurring herein,) That the senators of this State in the Congress of the United States be instructed, and the representatives be requested, to use their exertions to procure the passage of a law for the more perfect organization of the militia of the several States.

In general assembly, October 25, 1831. Read and passed.

CHARLES DAVIS, *Clerk.*

In council, October 31, 1831. Read and resolved to concur.

E. D. BARBER, *Secretary.*

22D CONGRESS.] No. 492. [1ST SESSION.

ON THE APPLICATION OF AN ASSISTANT SURGEON OF THE ARMY TO BE REIMBURSED FOR EXPENSES OF QUARTERS PAID BY HIM.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 3, 1832.

Mr. DRAYTON, from the Committee on Military Affairs, to whom was referred the memorial of Joseph Eaton, an assistant surgeon in the army of the United States, reported:

That the memorialist was ordered upon duty at Fort Preble, in Maine, and as there were no quarters at the post fit for his accommodation, he was for a certain period furnished with a room in the town of Portland; that he subsequently received an order to repair to the fort, but from the cause already stated he was under the necessity of hiring a room for his quarters. He therefore asks to be reimbursed the sums which he has expended in paying for quarters out of his private funds, which the government was bound to furnish him with.

The fact that there was no room at Fort Preble which was fitted for the accommodation of the memorialist is certified by the Inspectors General Archer, Wool, and Croghan; by the commanding officer of the post; the assistant quartermaster; by Major General Scott, when on a tour of inspection, and by a number of officers in the service of the United States. The committee, therefore, have reported a bill, granting to the memorialist the sum of seven hundred and eighty-five dollars and twenty-one cents, being at the rate of $140 a year from September 1, 1821, to July 2, 1827—the memorialist having paid that amount for the hire of quarters, and having charged only what he has paid, which is less than he is entitled to under the regulations of the War Department.

22D CONGRESS.] No. 493. [1ST SESSION.

APPLICATION OF CONNECTICUT FOR A MORE PERFECT ORGANIZATION OF THE MILITIA OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 4, 1832.

At a general assembly of the State of Connecticut, holden at Hartford, in said State, on the first Wednesday of May, in the year of our Lord one thousand eight hundred and thirty-one:

Resolved by this assembly, That the senators of this State in the Congress of the United States be instructed, and the representatives requested, to use their exertions to procure the passage of a law for the more perfect organization of the militia of the several States.

A true copy of record. Examined by—

THOMAS DAY, *Secretary.*

Hon. RALPH J. INGERSOLL.

22D CONGRESS.] No 494. [1ST SESSION.

REPORT, PLAN, AND ESTIMATE FOR THE CONSTRUCTION OF FORT GRISWOLD, IN THE STATE OF CONNECTICUT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 4, 1832.

DEPARTMENT OF WAR, *January* 3, 1832.

SIR: In compliance with a resolution of the House of Representatives of the 19th ultimo, directing the Secretary of War to report to that House "the plan and estimate for Fort Griswold, on Groton Heights, in the State of Connecticut," I have the honor to enclose a report of the chief engineer, which contains the information required.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives.*

ENGINEER DEPARTMENT, *Washington, December* 29, 1831.

SIR: In obedience to the call of the House of Representatives of the 19th instant, which you have referred to this office, I have the honor to hand you herewith a copy of "the plan and estimate for Fort Griswold, on Groton Heights, in the State of Connecticut."

I am, very respectfully, sir, your obedient servant,

C. GRATIOT, *Brigadier General.*

Hon. LEWIS CASS, *Secretary of War.*

Extract from the report of the board of engineers on the sea-coast fortifications.

Fort Griswold, New London, Connecticut, consists altogether, 1st, of a casemated redoubt serving as a keep; 2d, of a coverface, convering the masonry on the land side; 3d, of an advanced work and lower battery. 1st. The casemated redoubt is a square with rounded angles; its development, measured on the cordon, is 220 yards; its casemates can lodge the troops and also receive artillery and furnish a fire of musketry. One of its faces can cannonade across Thames river: the three others look towards the land; their casemates can furnish a direct fire upon the enemy, if lodged upon the terreplein of the coverface, and project vertical fires against his approaches. 2d. The coverface is bastioned; it is a kind of crown work, whose three capitals are each commanded by one of the faces of the redoubt, on which they fall perpendicularly. The side of each front of the coverface, measured between the flanked angles on the interior crest of the parapet, is 164 yards; its whole development, measured on the crest, is 510 yards. 3d. The advanced work is a small regular hexagonal tower of 54 yards in circuit, measured on the cordon; it is covered by a glacis of the same form, whose total development, measured on the interior crest, is 152 yards; the upper portion of the parapet of the tower which is not concealed by the glacis must be built in wood. The tower is rendered bomb-pr with timber and earth, and covered with a light roof, which might be occasionally taken off. The portion of the tower which is marked by the glacis bears fires of artillery and musketry on the terreplein of the covert-way, and projects vertical fires against the approaches of the enemy. This advanced work not only looks over the ground which the principal work cannot command, but bears on the fort reverse fires, which must oblige the enemy to attack the advanced work before they can besiege the principal fort. 4th. The lower battery R is destined to command over Thames river more closely than the fort; it communicates with it by a caponniere S; and another work V, commanded by one of the faces of the redoubt, commands, in its turn, the interior of the battery, and prevents the enemy from establishing himself in it, and even from holding it an instant if he should succeed in storming it. The salient of this work is connected with the extremity of the branch of the battery R, by a parados, covering the interior of the battery on the land side. The whole development of the battery, measured on the interior crest of the parapet, is 138 yards in length.

Summary estimate for the fort projected for the position now occupied by Fort Griswold, harbor of New London, Connecticut.

22D CONGRESS.] No. 495. [1ST SESSION.

ON ALLOWING A PENSION TO A PROFESSOR OF THE MILITARY ACADEMY WHO BECAME BLIND IN THE SERVICE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 4, 1832.

Mr. DRAYTON, from the Committee on Military Affairs, to whom the petition of Joseph du Commun was referred, reported:

By law no provision is expressly made for more than one teacher of the French language at the Military Academy of the United States; but, shortly after that institution went into full operation, it being found that one French teacher was not sufficient for the instruction of the cadets, the then President directed a second teacher to be employed, with the pay and emoluments of a captain in the army, and Congress sanctioned this executive act, by making the necessary appropriation, which they have continued for fourteen years, viz: from 1817 to 1831. During the whole of this period, the petitioner has been the second teacher of the French language at the Military Academy, and, as appears by the most authentic and respectable testimony, "has discharged his duties with distinguished ability, and with great advantage to the institution." He is now totally deprived of his sight, a calamity which not only prevents him from performing his official functions, but which utterly incapacitates him from making any kind of exertion by which he might provide himself with the necessaries of life. Under these afflicting circumstances, he asks Congress to allow to him the pension which is granted to a captain in the army, who has been totally disabled in the service.

The sole question for the consideration of the committee, is, whether the case of M. du Commun comes within the provisions of the pension laws, which enact, that "if any officer, non-commissioned officer, musician, or private, in the army of the United States, shall be disabled by wounds, or otherwise, while in the line of his duty in public service, he shall be placed on the list of invalids of the United States, at such rate of pension, and under such regulations, as are or may be directed by law." According to strict technical construction, perhaps the petitioner would not be regarded as an "officer in the army of the United States;" but as he did, in fact, perform all the duties of such an officer—as he was appointed to that situation by the Executive—as the act of the Executive was confirmed by the legislation of Congress—and as he was disabled while in the military service of the United States, the committee are of opinion that he is embraced within the spirit and meaning of the pension laws, and therefore they report a bill for his relief.

22D CONGRESS.] No. 496. [1ST SESSION.

ON THE EXPEDIENCY AND COST OF THE ERECTION OF BARRACKS AT NEW ORLEANS.

COMMUNICATED TO THE SENATE JANUARY 4, 1832.

Documents laid on the table by the chairman of the Committee on Military Affairs, relating to Senate bill No. 44, "for the erection of barracks, quarters, and storehouses, and the purchase of a site in the vicinity of New Orleans."

DEPARTMENT OF WAR, *December* 30, 1831.

Your note of the 28th instant, enclosing a resolution of the Senate, directing "the Committee on Military Affairs to inquire into the expediency of erecting barracks, stores, and other necessary buildings for the accommodation of the troops at New Orleans," and requesting my opinion upon the matter, has been received.

The enclosed report of the Quartermaster General, in favor of the object contemplated by the resolution, expresses the views of this department, and I have the honor respectfully to recommend the subject to the favorable consideration of the committee over which you preside.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

Hon. THOMAS H. BENTON, *Chairman Military Committee, Senate.*

QUARTERMASTER GENERAL'S OFFICE, *December* 29, 1831.

SIR: In answer to your inquiry relative to the expediency of erecting barracks, &c., at New Orleans, I have the honor to hand you enclosed a copy of a report made to one of your predecessors on that subject on the 22d of January, 1828, together with an estimate of the probable expense of such as were then deemed necessary.

I am not aware of any change of circumstances which would alter the views expressed at that time.

Very respectfully, I am, sir, your obedient servant,

T. CROSS, *Major and Acting Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War.*

QUARTERMASTER GENERAL'S OFFICE, *January* 22, 1828.

SIR: In compliance with your orders, I have the honor to submit an estimate for barracks, quarters, and other buildings for a garrison of four companies of men, with their officers, in the vicinity of New Orleans; and I earnestly recommend, should it be determined by the government to continue the troops at that city, that the work be immediately commenced. In addition to this estimate, about fifteen thousand dollars will be required to erect storehouses in the city of New Orleans, to replace those sold by the register of the land office during the last year.

In consequence of the sale of the barracks and storehouses at New Orleans, we are now compelled to pay rents in that city equal to the interest on one hundred and seventy thousand dollars; it is, therefore, obvious, that the public would be benefitted, in a pecuniary point of view, by constructing the work proposed, independently of the advantage to the discipline, police, and health of the troops.

In the estimate submitted I have not calculated on the labor of the troops, for experience has sufficiently demonstrated that nothing is gained by using them in a climate so far south.

I have the honor to be, sir, your obedient servant,

THOMAS S. JESUP, *Quartermaster General.*

Hon. SECRETARY OF WAR, *Washington.*

Estimate of the expense which would be incurred in the purchase of a site in the vicinity of New Orleans, and the erection of barracks, quarters, storehouses, &c., thereon, for a garrison of four companies of United States troops.

1. Soldiers' barracks:		
Materials of all kinds	$14,039 55	
Workmanship and labor	18,719 41	
		$32,758 96
2. Officers' quarters:		
Materials of all kinds	13,389 50	
Workmanship and labor	17,852 66	
		31,242 16
3. Storehouses for quartermaster's and commissary's department, and shop for sutler:		
Materials of all kinds	1,485 90	
Workmanship and labor	1,981 21	
		3,467 11
4. Hospital:		
Materials of all kinds	1,650 00	
Workmanship and labor	2,350 00	
		4,000 00
5. Guard-house, office, stables and privies:		
Materials of all kinds	1,550 00	
Workmanship and labor	1,950 00	
		3,500 00
6. Materials, workmanship and labor for erecting a brick wall enclosure around the establishment		3,000
For the necessary buildings		77,968 23
7. For the purchase of a lot of five acres front on the river, running back the usual number of acres, according to the local custom		10,000 00
Total		87,968 23

QUARTERMASTER GENERAL'S OFFICE, *January* 22, 1828.

I certify that the navy arsenal, in the city of New Orleans, sold for the sum of $126,310—one hundred and twenty-six thousand three hundred and ten dollars.

JNO. M. MOORE, *Chief Clerk.*

GENERAL LAND OFFICE, *January* 4, 1832.

22D CONGRESS.] **No. 497.** [1ST SESSION.

APPLICATION OF AN OFFICER OF THE ARMY TO BE INDEMNIFIED FOR LIABILITIES INCURRED IN OBEDIENCE TO ORDERS IN THE COMMAND OF AMELIA ISLAND IN THE WAR OF 1812-'15.

COMMUNICATED TO THE SENATE JANUARY 4, 1832.

To the honorable the President and members of the Senate of the United States of America, now met and sitting:

The memorial of Major A. A. Massias respectfully showeth:

That some time in the years 1822 and 1824 suits were brought by Thomas Backhouse and C. W. Clark against your memorialist to recover damages for false imprisonment (*as they alleged*) during the time your memorialist was in command at Amelia; that on representation thereof to the War Department, the

United States attorneys were directed to defend the aforesaid suits; that they were so defended and carried up, by appeal, to the United States Supreme Court, but owing to a deficiency in point of form, (from the impracticability of taking up the appeal within ten days,) judgments were had against the sureties of your memorialist; that your memorialist hath so become (or rather hath been made and held) liable in a sum which, including payments already made and the balance to be liquidated, with all incidental costs and charges, will amount to $2,704 47, as will more fully appear by reference to the account accompanying this memorial.

And now, hereupon, your memorialist respectfully submits that he ought not to be or to be held responsible, of his own proper goods and chattels, for any matters in the premises aforesaid contained, for that because your memorialist was acting under the authority and by virtue of the commands of his superior officers, duly appointed and fully recognized, and clearly within the scope of the large discretionary powers to them (and thence to himself) delegated and decreed.

And your memorialist, for further cause, showeth that, under the powers aforesaid, the actings and orders by him had and issued were justifiable and necessary, by reason of the then state of insubordination of the island and due regard had to the safety and well-being of the post, with the peace and good order of the citizen and soldier. And for that the foregoing may not want confirmatory testimonials, your memorialist cometh and craveth reference generally to the vouchers, documents, and orders herewith transmitted, and more specially to the order No. 3, under date of July 12, 1812, and to letter No. 2, dated Milledgeville, September 4, 1812, confirmed in letter No. 3 from his excellency Governor David B. Mitchell, then commissioner for the United States; also the order from Lieutenant Colonel Thomas A. Smith, under whose orders your memorialist then was, and which order is on the record accompanying this memorial; also the orders contained in orderly book No. 4; also Nos. 5, 6, 7, and 8—the orders of General Flournoy sanctioning the course and confirming the powers of your memorialist; also No. 9—the deposition of Archibald Clark, now collector at St. Mary's; also No. 10—the deposition of James Ferguson, aide to General Thomas Pinckney, who succeeded Governor Mitchell, and who *continued* the authority vested in your memorialist by Governor Mitchell; also papers numbered 11, 12, 13, 14, 15, and 16, directory to the United States attorneys.

And your memorialist lastly submits that, under the foregoing authorities, he ought of right to be reimbursed the aforesaid sum of $2,704 47; and for the reasons aforesaid he respectfully soliciteth relief in this behalf at the hands of your honorable body. And your memorialist, as in duty bound, will ever pray, &c.

A. A. MASSIAS.

DEPARTMENT OF WAR, *April* 13, 1832.

SIR: I beg leave to enclose to you a copy of my note of the 27th of January last, in answer to yours of the 18th, enclosing the memorial of Major Massias, which I presume has miscarried or been overlooked by you.

Having just received a communication from Mr. Maxey, Solicitor of the Treasury, containing a letter from Judge Smith relative to the case of Backhouse against Massias, and the notes of the evidence in the case, I have thought it proper to submit a copy of these to your consideration, which are herewith enclosed, and also to return the memorial transmitted by you to this department.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

Hon. THOMAS H. BENTON, *Chairman of the Military Committee, Senate.*

WASHINGTON, *April* 3, 1832.

SIR: I enclose herewith a copy of the minutes of the trial, and evidence taken in the case of Backhouse and Massias by the judge at the time thereof.

From these minutes the substance of the whole testimony exhibited in the case may be perceived, as well as the course of defence which was open to Massias at this trial by decision of the court.

It cannot but be remarked that not the slightest testimony was offered, or even attempted, to disprove, excuse, palliate, or show cause for the arrest of a simple, inoffensive non-combatant, on his way to St. Augustine; the bringing him back a prisoner to Fernandina, chaining him there in an open guard-house to an iron bolt, in common with negro slaves, and so confining him, refusing his friends access to him, for sixteen days; and finally, when induced to liberate him from the guard-house and from his chains, still restraining him by bonds to the limits of the village of Fernandina.

These facts are stated to show that no new trial could have benefitted the defendant or the United States, if it be possible that government can take on itself the responsibility of Massias's conduct in this transaction, and, as it is understood he has made complaints, also to show he was not severely dealt with by the court or jury.

Very respectfully, sir, your obedient servant,

JOSEPH L. SMITH.

VIRGIL MAXEY, Esq., *Solicitor of the Treasury.*

OFFICE OF THE SOLICITOR OF THE TREASURY, *April* 12, 1832.

SIR: The claim of Major A. A. Massias for reimbursement of damages recovered against him being before another department of the government, I have thought it proper that I should transmit to you a letter received from Judge Smith, of East Florida, who presided at the trial of Massias, together with a minute of the evidence exhibited before the court.

I have the honor, &c.,

VIRGIL MAXEY, *Solicitor of the Treasury.*

Hon. LEWIS CASS, *Secretary of War.*

THE UNITED STATES to A. A. MASSIAS, DR.

Dec. 31, 1831.	For damages and costs in the case of Thomas Backhouse *vs.* Waters Smith and Richard Weightman as sureties in the case, (the appeal to the Supreme Court of the United States having been disregarded by the court at St. Augustine,) as per voucher A		$1,262 09
	For interest on this amount, four months, at seven per cent		29 44
	For costs paid by me at St. Augustine before the cases could be carried up to Tallahassee		38 62½
	For two complete copies of record in Clark and Backhouse cases for the use of the United States attorney at Charleston, South Carolina		21 54
	For postages of letters and documents to and from Florida		27 50
	Fees to counsel.		
	For this sum to C. Gater, retained in Clark's case	$10 00	
	For this sum to George Murray, employed in both Clark and Backhouse's case	50 00	
	For this sum to Isaac D. Cox (in the absence of Murray)	50 00	
	For this sum to Archiles Murat, who attended the court of appeals at Tallahassee	25 00	
			135 00
	For my own attendance at court and services generally, 91 days, at $5 00 per day		455 00
			1,969 19½

I certify on honor that the within statement is, to the best of my knowledge and recollection, correct and true.

A. A. MASSIAS, *Paymaster United States Army.*

THE UNITED STATES to A. A. MASSIAS, DR.

For damages in the case of C. W. Clark, which are not yet paid		$500 00
For costs, interest, and other charges, which are presumed to be the same as those in the case of Backhouse		200 00
For fee bill to Jas. S. Linn, clerk of the court of appeals, as per voucher B		35 28
		735 28

I certify on honor that the within statement is, to the best of my knowledge and recollection, correct and true.

A. A. MASSIAS, *Paymaster United States Army.*

Copy of the judge's notes taken on the trial of the suit of—

THOMAS BACKHOUSE *vs* ABRAHAM A. MASSIAS. } *Assault and battery and false imprisonment.*

Defendant's counsel move and inform the court that the question of the *validity* and *legality* of suits brought in the old county courts, called "General Jackson's courts," will be *contested*, and request that the question may be reserved.

Question reserved.

Plaintiff's testimony.

Deposition of M. Arnau.—Swears that in 1812 *Backhouse* was taken from a gun-boat by a sergeant and two soldiers and taken with witness and two negroes to Massias, who ordered them in irons and so detained them together in the guard-house—an old building without a floor. Says he (Backhouse) was kept so chained to a bolt, with witness and two negroes, for sixteen days, with rations of one pound of flour and one pound of pork and one gill of whiskey; that no persons from without were allowed to have access or to communicate with him. When he left the guard-house he was accompanied by armed soldiers.

Michael Malbrita deposes to the same effect, but that he (Backhouse) was so chained, he thinks, about a month. When released, security was required from him that he would not leave the town.

George Atkinson deposes that some time in 1812 plaintiff was brought to Fernandina in a gun-boat and taken by defendant and confined in a guard-house there, with negroes and others, in irons, and denied, a part of the time, communication with his friends. When liberated, it was upon giving security, by deponent and Phillip R. Yonge, that he would be of good behavior.

His provisions, while in the guard-house, were the same as a common soldier's.

C. W. Clarke knows plaintiff was imprisoned in August or July. He had been brought back in an attempt to reach St. Augustine; was brought back by a gun-boat of the United States. Plaintiff was kept in the guard-house fifteen or sixteen days. No person was permitted to speak to him or approach nearer than fifteen or twenty steps.

Defence.

Documents offered, including a letter from the Secretary of State, dated May 27, 1812, to Governor Matthews, and a letter from Colonel Smith. *Objected to and excluded.* Defendant excepts, and has leave to file his bill.

Defendant authorized to show that he was commanding officer at Fernandina; that he was there by order of a superior officer; and the state of the country, for the purpose of proving the necessity of his conduct towards the plaintiff, if in his power; not for the purpose of *justification* but to mitigate damages.

George J. F. Clarke thinks that Massias did not act from malicious and personal motives, but that his conduct towards plaintiff was very flagrant.

SUPERIOR COURT, EAST FLORIDA.

I hereby certify that I have carefully compared the above and the foregoing with the notes of the judge taken at the trial, and that they are a correct copy of the same.

GEORGE GIBBS, *Clerk.*
Per B. GIBBS, *Deputy Clerk.*

ST. AUGUSTINE, *January* 6, 1832.

22D CONGRESS.] **No. 498.** [1ST SESSION.

ON THE CONSTRUCTION OF A MILITARY ROAD BETWEEN GREEN BAY AND PRAIRIE DU CHIEN, IN MICHIGAN.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 6, 1832.

DEPARTMENT OF WAR, *January* 4, 1832.

SIR: In obedience to a resolution of the House of Representatives of the 22d ultimo, I have the honor to enclose copies of all the communications which have been made to this department on the subject of a road between Green Bay and Prairie du Chien.

And in further conformity with that resolution, I beg leave to state that I am personally acquainted with the route between those places, and that I concur in the general views taken in the communications.

The posts of Fort Howard at Green Bay, of Fort Winnebago at the portage of the Fox and Wisconsin rivers, and of Fort Crawford at Prairie du Chien, hold in check the numerous and restless Indians of that region. These posts command the important line of communication between the lakes and the Mississippi. It is desirable that there should be the means of an easy and more rapid intercourse between them than is afforded by the Fox and Wisconsin rivers. The former of these is very crooked in its course, and the length of the route by water probably exceeds by one-third a practicable route by land. They are at times so shallow as to be navigated with great difficulty, and during five months of the year they are closed by the ice. Should circumstances occur, as they did four years since, to render an immediate concentration of troops necessary upon any part of this line, at a season of the year unfavorable to a movement by water, it would then become necessary to open a road. The subject has already engaged the attention of Congress, and an appropriation of two thousand dollars was made the 31st of May, 1830, for opening a road from Green Bay to Winnebago lake, and thence to Fort Winnebago. Directions have recently been given to carry this provision into effect. From the nature of the country most of the route may be rendered passable with little labor, and it is only detached portions which would require any considerable work.

I have the honor to be, very repectfully, your obedient servant,

LEWIS CASS.

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives.*

INSPECTOR GENERAL'S OFFICE, *Washington City, December* 23, 1831.

SIR: In answer to your inquiries, I would remark that a road from Prairie du Chien to the Portage, and from thence to Green Bay, whether considered in relation to the general interest of that country or the transmission of military supplies from one station to another, would be equally important.

The distance by water is about 300 miles, and by land not exceeding 200. The navigation of the Wisconsin and Fox rivers is closed from about the middle of November to the 1st of April, and at all times difficult on account of rapids in the one and sand bars in the other. It is not uncommon for boats, when the streams are low, to be detained several weeks in their passage from Fort Howard to Fort Crawford. Under these circumstances, and as the country is inhabited by tribes of savages who have ever been, and still are, hostile in their feelings and disposition toward the people of the United States, a road which would afford, at all seasons of the year, a free communication from one post to the other, appears not only necessary as it regards the transportation of troops and military stores, but to the protection of the white population. The Indians are unwilling to leave the country of their nativity, and, under the impression that the white inhabitants are determined to dispossess them of it, are constantly kept in a state of excitement; and but for the troops stationed amongst them, would not hesitate to raise the tomahawk and exterminate the whites. They might, however, in an evil moment, be induced to attempt the execution of their designs, and at a time when the navigation of the rivers might be closed, when it would be extremely difficult to concentrate your troops or furnish supplies from one post to another; and, consequently, the results might be no less fatal than the destruction of the white inhabitants.

Hence I would recommend a road from Prairie du Chien to the Portage, and from thence to Green Bay, which, I am informed, can be easily made, and at a comparatively small expense. Besides the protection it might afford to the white population, it would, undoubtedly, encourage the settling of the country whenever the lands should be brought into market.

I have the honor to be, sir, with considerations of the highest respect, your obedient servant,

JOHN E. WOOL, *Brigadier General United States Army.*

Hon. LEWIS CASS, *Secretary of War.*

WASHINGTON CITY, *December* 15, 1831.

SIR: I have been requested by Mr. Wing, the delegate from Michigan, to communicate to the War Department my views as to the importance (in a military point of view) of opening a road from Fort Howard to Fort Crawford, by the way of Fort Winnebago.

From a knowledge of the country, acquired by a residence of several years at the two extreme points, I am enabled to give it as my opinion that such a road as is contemplated would not only facilitate and expedite the transportation of public stores between those points, but would, at all seasons of the year, insure a speedy co-operation of the troops in any military movement which might be ordered.

The distance by water is computed to be 360 miles, and such is the difficulty of navigation, that a loaded boat is not unfrequently twenty days in making the voyage; whereas a road judiciously laid out would insure the performance of the trip within eight days at any season of the year, and reduce the distance to 220 miles.

I have the honor, &c.,

JNO. GARLAND, *Major and Acting Quartermaster U. S. Army.*

Hon. LEWIS CASS, *Secretary of War.*

Extract of a letter from Henry B. Brevoort and James B. Doty to Major General Macomb, dated Green Bay township, January 20, 1829.

"Your own accurate knowldege of the country lying between Lake Michigan and the Mississippi, renders it unnecessary for us to speak otherwise than in general terms of its geography. The prairies which commence on the Mississippi and Wisconsin rivers extend to the head of Winnebago lake, with the exception of occasional belts of woods along the water-courses and in other places of clusters or islands of open woods. It is confidently asserted that wheel carriages can even now pass from the lead mines to the Calmut village on Winnebago lake, which is not more than thirty-eight miles from this place. The head of this lake is on the most direct route to Chicago and Fort Winnebago.

"You will readily perceive, therefore, how important it is that the road should be opened from that point to the bay, and we take the liberty of soliciting the aid of the troops to effect this object, which we esteem of equal advantage and convenience to the government and the citizens.

"One of the undersigned (Judge D.) has just returned from that part of the country, having personally examined it with a view to obtain the best ground for a road; a sketch of which he respectfully transmits herewith.

"He feels confident that twelve men in one month can open this road to the Calmut village, passing, as it does, upon a high ridge of beach and maple land. If the road constructed by the citizens to the Grand Kan Rannoh should be followed as far as Plum creek, the distance for the new road would be diminished to twenty-three miles.

"It is hoped that some gentleman duly qualified may be ordered to make the necessary surveys of these routes, and to ascertain, by a particular examination of the country, the practicability of so improving the communication between the lead mines and Lake Michigan, by the way of the Ford lakes and Winnebago lake, either by a road or canal, as to open new sources of wealth to New York, and to the people inhabiting the borders of the great lakes. The object is also of so great magnitude to the government that we cannot doubt of your giving it an attentive consideration."

22D CONGRESS.] **No. 499.** [1ST SESSION.

ON CLAIM OF AN OFFICER OF THE ARMY TO INDEMNITY FOR LIABILITIES INCURRED IN THE EXECUTION OF ORDERS AS COMMANDING OFFICER AT AMELIA ISLAND, IN FLORIDA, IN 1812–'13.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 12, 1832.

Mr. WARD, from the Committee on Military Affairs, to whom was referred the petition of Major Abraham A. Massias, reported:

That it appears from the petition and documents referred to the committee, that in 1812 Major Massias, who was at that time a captain in the United States army, was, by an order of Lieutenant Colonel Thomas A. Smith, placed in the command of the troops stationed at Amelia island, after that island had been taken possession of by our government; that whilst he was so in command, and *acting under* the *orders of his superior officers*, Thomas Backhouse, a British subject, claiming to be a Spanish one, having

left the post of Fernandina, against the orders of the day, was taken a prisoner by Commodore Campbell, of the United States navy, and was confined at the island until the general's pleasure was known, when he was discharged upon his giving security not to violate said orders again; it also appears that C. W. Clark had been confined on said island by the predecessor of Major Massias, for disorderly conduct, and was confined in the guard-house at the time the major took the command at Fernandina, where he was kept until he gave security, in compliance with the order of the general, for his good conduct; it also appears that Clark and Backhouse each commenced an action of assault and battery and false imprisonment against Major Massias in the county court in the eastern district of Florida; that in the action brought by Backhouse, issues in fact and in law were joined; that the issue in fact was first tried by a jury, and a judgment of $1,000 was rendered against Massias; and that afterwards a judgment was rendered in favor of Backhouse on the issue of law. The Secretary of War directed Massias to take the cause up to the highest tribunal, and the United States attorneys were at the same time directed to attend to the suit in behalf of the government, and other counsel was also employed by the government to assist in the trial of said cause.

The cause was accordingly carried, first, from the superior court in the eastern district in Florida, and from that court, by writ of error, to the Supreme Court of the United States, where it is now pending and undetermined.

That when the case was taken to the court of appeals of Florida, Massias executed an appeal bond with sureties, but as the writ of error was not taken out in ten days, it could not operate as a supersedeas; whereupon Backhouse instituted a suit on the appeal bond, and recovered a judgment against the securities of Massias, amounting to $1,262 09 damages and costs. The United States attorney in Florida was instructed by the solicitor general to take every step which the law authorized for the protection of Massias and his sureties, which instructions were faithfully attended to. But these efforts proved unavailing, for the execution was ordered against the securities of Massias, in St. Augustine, and the judgment was paid by a draft upon Massias.

The case is fully supported by the following documents:

1st. Lieutenant Colonel Smith's order to Major Massias, to take command of Amelia island, and report himself to Governor Mitchell, a commissioner for the United States, with full powers to order and direct the concerns in Florida, both civil and military.

2d. *Governor Mitchell's* orders relating to the police and command of the island of Amelia.

3d. General Flournoy's orders and letters relating to the same, particularly in the case of those confined on the island.

4th. Certified copies of Major Massias's orderly book.

5th. Major General Pinckney's orders, as approved by his aide-de-camp.

6th. The affidavits of Archibald Clarke, now collector of St. Mary's; and—

7th. The deposition of Js. Ferguson, aide-de-camp to Major General Pinckney.

The petitioner states that he has been made liable not only for the payments already made, but for the balances to be paid in the two suits of Backhouse and Clark, together with the incidental expenses, amounting to $2,704 47.

This being a case in which an American officer, acting under the orders of his government in a foreign country, having done an act necessary to the maintenance of his authority, for which he has been made individually and personally responsible for the sum stated; and the government, in all similar cases, having provided indemnity, there are, in the opinion of the committee, the strongest reasons why it should be done in this case.

The committee cannot therefore refuse relief in this case without disregarding numerous examples arising out of the late war; without danger of preventing others from risking personal responsibility, when required by the exigency of the times, and withholding justice from the petitioner.

The committee therefore report a bill for his relief.

The Secretary of State to D. B. Mitchell, esq., Governor of Georgia.

DEPARTMENT OF STATE, *May* 27, 1812

SIR: I have had the honor to receive your letter of the 2d instant, from St. Mary's, where you had arrived in discharge of the trust reposed in you by the President, in relation to East Florida. My letter by Mr. Isaacs has, I presume, substantially answered the most important of the queries submitted in your letter, but I will give to each a more distinct answer. By the law, of which a copy was forwarded to you, it is made the duty of the President to prevent the occupation of East Florida by any foreign power. It follows that you are authorized to consider the entrance, or attempt to enter, especially under existing circumstances, of British troops of any description as the case contemplated by the law, and to use the proper means to defeat it. An instruction will be immediately forwarded to the commander of the naval force of the United States, in the neighborhood of East Florida, to give you any assistance, in case of emergency, which you may think necessary and require. It is not expected, if you find it proper to withdraw the troops, that you should interfere to compel the patriots to surrender the country, or any part of it, to the Spanish authorities. The United States are responsible for their own conduct only, not for that of the inhabitants of East Florida; indeed, in consequence of the compromitment of the United States to the inhabitants, you have been already instructed not to withdraw the troops, unless you find that it may be done consistently with their safety, and to report to the government the result of your conferences with the Spanish authorities, with your opinion of their views, holding, in the mean time, the ground occupied. In the present state of our affairs with Great Britain, the course above pointed out is the more justifiable and proper.

I have the honor, &c.,

JAMES MONROE.

To all to whom these presents shall come, greeting:

I certify that the annexed writings have been compared with the record in this office and that they are true copies thereof.

In testimony whereof I, Henry Clay, Secretary of State of the United States, have hereunto subscribed my name and caused the seal of the Department of State to be affixed. Done at the city of [SEAL.] Washington, this 3d day of October, anno Domini 1827, and of the independence of the United States the fifty-second.

H. CLAY.

DEPARTMENT OF STATE, *October* 13, 1827.

SIR: I have had the honor to receive your letter of the 19th ultimo from Milledgeville, acknowledging the receipt of mine of the 6th of July, and communicating the state of our affairs with the Spanish authorities in East Florida at the time you left Savannah.

The President finds, with regret, that the governor of East Florida has declined entering into any engagements with you to secure from molestation or harm such of the inhabitants as had been encouraged by Governor Mathews, in a mistaken view of his powers, to engage in certain revolutionary measures there; and also that, at the time when a fair and just provision in their favor was under discussion, he had made an attack upon the troops of the United States under the command of Colonel Smith, who had been necessarily advanced for the safety and protection of these people. It appears also that, in the same spirit, the governor of East Florida had excited the Indians to commit acts of hostility against the United States, and that there was serious cause to apprehend that, under his influence, the incursions of the Indian tribes against us would be increased, and the aggressions be proportionally more extensive and injurious. The conduct of the governor of East Florida has excited much surprise, more especially when the liberal and friendly conduct of this government towards Spain is taken into consideration. As soon as it was known that *General Mathews had transcended his powers*, the President revoked them and committed them to you, with authority to restore the territory to the governor of the province, on the condition that satisfactory assurance should be given you that the people who had acted at his instance, on the faith of the United States, should not be punished nor molested for it. It was hoped and presumed that this condition would have been promptly acceded to, or rather that a just policy would have anticipated it. It was impossible to foresee that the frank and liberal proposal of the United States to restore the territory to the Spanish authorities, after disavowing the conduct of their own officer and displacing him, would by the authority of Spain have been met by acts of direct and open hostility.

The wrongs heretofore received from Spain, with which you are well acquainted, independent of other considerations of sufficient weight in themselves, would have justified the United States in taking possession of that province as an indemnity to our citizens. These wrongs have been borne in the expectation that the motive could not be mistaken, and that the period was not remote when the Spanish authorities, by whomsoever wielded, reciprocating a similar sentiment towards the country, would make ample reparation for them. To abandon the people who had relied on the faith of the country, however improperly pledged, to the resentments of the Spanish authorities, which evidently awaited them, while the government of Spain made no recompense to the United States for losses or atonements for insults, would have been equally unjust in itself and inconsistent with the sympathies due to their situations. To do it after the outrages more recently received, which you have communicated, without a satisfactory arrangement, would be still more reprehensible. On a full view of your conduct in this important and delicate transaction, I am happy to communicate to you the entire approbation and the thanks of the President. In accepting the trust you gave a proof of patriotism, and the discharge of its duties has been distinguished by the abilities and judgment which the nature of the case required. That more precise instructions were not given you for the reinforcement of the troops under the command of Colonel Smith, in case the Spanish authorities should refuse to give you the satisfactory assurance desired in favor of the people of East Florida, to whom the public faith had been pledged, proceeded from a hope and belief that contingencies would not happen, and a confidence, if they did, that your judgment, looking distinctly to the nature of your trust and its duties, would supply the omission.

The President is aware that your duties in the office of chief magistrate of Georgia, which will now become more active, will render it difficult, if not impossible, for you in future to execute those with which you have been charged in regard to East Florida. Willing to relieve you from the burden, he proposes to transfer the powers lately committed to you to Major General Pinckney, with whose situation and functions they have a convenient relation. I have therefore to request that you will have the goodness to communicate with him on that subject, and furnish him such information as may be useful to him.

I have the honor to be, &c.,

JAMES MONROE.

His Excellency DAVID B. MITCHELL, *&c., &c., &c.*

CAMP BEFORE ST. AUGUSTINE, *July* 6, 1812.

SIR: You will proceed with a non-commissioned officer and nine privates of your company to Amelia island and relieve Captain Ridgeway in the command. He is to proceed to this place agreeably to the tenor of the order herewith, which you will deliver to him. You will be governed in all respects by such orders as his excellency Governor Mitchell has given Captains Ridgeway and Williams, and such others as he may give you. You will examine the seventeen boxes of fixed ammunition stored in St. Mary's, and retain four, two of round and two of cannister; the others to be shipped to Thomas Bourke, esq., United States agent, Savannah.

I am, sir, with high respect, your obedient servant,

T. A. SMITH, *Lieutenant Colonel commanding.*

Captain A. A. MASSIAS.

ABRAHAM A. MASSIAS *ads.* THOMAS BACKHOUSE.

The evidence of Joseph Woodruff, taken in behalf of the defendant, and to be read in evidence on the trial of this cause by consent of the parties:

Personally appeared before Elias B. Gould, a justice of the peace for the county of St. John, Joseph Woodruff, who being duly sworn says: That he is well acquainted with the signature of Thomas A. Smith, late lieutenant colonel commanding the United States troops in Florida; that the letter now shown him, dated "Camp before St. Augustine, July 6, 1812," and marked "A. E. B. G.," is signed by the said Thomas A. Smith in his own proper handwriting, to the best of his knowledge and belief; that he knows his handwriting, and has often seen him write; and further saith not.

JOSEPH WOODRUFF.

Sworn to before me, the 12th day of November, 1827.

ELIAS B. GOULD, *Justice of the Peace.*

Letters and orders from Governor Mitchell, commissioner for the United States, relating to the affairs on Amelia Island.

ST. MARY'S, *July* 12, 1812.

SIR: When you arrive at Amelia you will furnish Captain Williams with a boat for the transportation of a detachment of his marines to the camp before St. Augustine; the remainder will remain with you under the command of one of their own sergeants until the boat returns for them, or some other opportunity offers for their conveyance to the same destination. Captain Ridgeway will go in the boat with Captain Williams, and the recruits from Savannah and the few men who were taken from Point Petre will remain until another apportunity is afforded for their transportation to the camp before St. Augustine. You will maintain strict discipline and subordination, and admit of no outrage or violence amongst the inhabitants of the place; you will not permit any one whom you are not satisfied is an American to have or use fire-arms or other offensive weapons; neither will you permit any negroes to remain there who cannot satisfy you of their general good behavior, and who have an owner in the place. All those pretending to claim their freedom, who cannot satisfy you of their being so in reality by the laws of the province, without any claim attaching to them by any citizen of the United States, you will secure and send to this place for safe-keeping, in case you are deficient in the means of securing them in Amelia.

You will not permit any property, particularly British property, to be taken from the island, nor will you admit of any provisions leaving the island upon any pretence, unless for the actual use and supply of such persons as may have leave to depart.

Yours, very respectfully,

D. B. MITCHELL.

Captain MASSIAS, *Commanding United States troops on Amelia.*

From D. B. Mitchell to A. A. Massias.

MILLEDGEVILLE, *September* 14, 1812.

SIR: I assure you my long silence has not proceeded from any wilful neglect or contempt of your correspondence, or of the subject matter of it, but from a long confinement by a violent attack of bilious fever, and at this moment it is with difficulty I can write.

I am surprised at the importunities of Mr. McIntosh on the subject of duties collected at Fernandina. He has had repeated conversations with me upon the subject, and I have uniformly told him I could not and would not assume any authority over them. When Mr. Lewis, of St. Mary's, acted as collector there, under the authority of General Mathews, all his collections and payments were at his own risk after my arrival, and of this I informed him and Mr. McIntosh both. That the people might not be wholly without law, I consented that you should enforce the customs and modes of proceeding used by the Spanish authority in the place before the transfer to the United States, but I can give no order for the payment of the money in your hands. It must await the fate of the province.

Should any future attempt be made to raise contributions by any authority whatever, you will use all your force to repel it, and, if possible, get hold and place in confinement the author of such an outrage on the American flag. Your idea in regard to the transfer is a very correct one. As long as the American flag is flying there, there is no other power can be acknowledged. I regret the sickness of your detachment and its reduction in number fit for duty. I hope you will not be long in that situation.

I am, sir, very respectfully, and with much esteem, your very obedient servant,

D. B. MITCHELL.

Captain MASSIAS, *Commanding for the United States on Amelia Island.*

Letters from Governor D. B. Mitchell, and a letter acknowledging the orders given by him in Florida.

MOUNT NEBO, *July* 1, 1828.

DEAR SIR: Your letter of the 21st of June is now before me, and I with pleasure comply with your request.

Whilst I was acting as commissioner of the United States, in 1812, at the time the troubles prevailed in East Florida, and the United States troops were, for certain purposes, placed under my command, it never was my intention, under the state of things then existing, to permit the exercise of any civil

authority by any military officer, and you no doubt recollect my refusing to have anything to do with the regulations prescribed by General Mathews in regard to the collection of duties, &c., &c.; but after the declaration of war, and it was ascertained by the inhabitants that the troops were not likely to be soon removed, they petitioned me to have the laws and regulations enforced by the former Spanish commandant continued and enforced by the United States officer then in command of the post of Fernandina. This I consented to for their convenience and protection, and you, being at that time officer in command, received orders accordingly. As to the power which I had to issue such an order there can be no doubt. My authority will be found on the records of the Secretary of State's office, and every living soul in Fernandina being under the immediate influence and protection of the arms of the garrison, the safety of the post, as well as the safety of the people, would have justified such an order, if I had chosen to issue it without the call of the inhabitants.

The suit which you speak of can only be considered as vexatious, for if properly defended no recovery can be had. If you or your counsel think proper to take out a commission and examine me as a witness, I will look over my papers with reference to that transaction, and state all I know on the subject. There can be no doubt of your ample justification, provided your conduct was not distinguished by some extraordinary acts of cruelty or oppression, which I presume was not the case.

I am, sir, very respectfully, your obedient humble servant,

D. B. MITCHELL.

Captain A. A. MASSIAS, *Paymaster, &c. &c.*

Letters and orders from Brigadier General Flournoy, United States army, relating to the command on Amelia.

ST. MARY'S, *December* 14, 1812.

SIR: You were requested to furnish a statement embracing the power and authority vested in you, as the immediate commandant of the post at Amelia, from what sources, and from whom derived, and whether contained in written or verbal orders.

You will also render a statement of all moneys collected by virtue of the powers you possess. A full statement of all the circumstances attendant or connected with the detention of certain negroes claimed by John Forbes & Co. will be expected.

I am well apprised that the smallness of your force on Amelia will not enable you to guard effectually against insurrection in that island, on the part of those attached to the British interest. You will, however, be steady in your discipline, and circumspect in your manner and intercourse with the inhabitants; and should an attempt be made, or contemplated to be made to drive you from your post, and to re-take the island, you are charged to give me the earliest information thereof, in which event I will march a regiment to the island, and put to the point of the bayonet every man however connected in the transaction.

I have the honor to be, with respect,

THO. FLOURNOY, *Brigadier General United States Army.*

Captain MASSIAS.

Letter from General Flournoy.

FERNANDINA, *December* 20, 1812.

Joseph Jackson having represented that he has business of a private nature to transact at Augustine, to which place he begs leave to go without molestation, it is ordered that he be permitted to depart accordingly.

Michael Marbrete and others, in confinement for violating an order passed on the 19th November last for the government of this post, will be discharged upon his giving to the commandant (Captain Massias) satisfactory assurances that he will not again attempt a violation of any rule or order that may be imposed, but that he will conform himself to the regulations and encourage others to do so.

All persons free from suspicion of entertaining evil intentions towards the government of the United States will be permitted to visit St. Augustine, or other place in this province, leave being obtained from the commandant.

THO. FLOURNOY, *Brigadier General United States Army.*

Extract from orderly book, Amelia Island, East Florida.

DETACHMENT ORDERS.

FERNANDINA, *Amelia Island, July* 12, 1812.

Pursuant to the order of Lieutenant Colonel Thomas A. Smith, of the 1st rifle regiment, commanding the troops of the United States in East Florida, and of this district, Captain Massias, of the rifle regiment, takes command of the detachment stationed at this and the following stations: Point Petre, Georgia, and Camp Pinckney, until further orders; the detail for guard and police will remain as heretofore. Captain Williams, United States marine corps, and Captain Ridgeway, of the United States rifle regiment, will deliver to the commanding officer all papers and orders touching the late command, and will hold themselves in readiness to proceed with the detachment ordered to headquarters.

A. A. MASSIAS, *Captain 1st Rifle Regiment, Civil and Military Commandant.*

DETACHMENT ORDERS.

FERNANDINA, *Amelia Island, East Florida, July* 14, 1812.

Until further orders the guard will consist of one subaltern, one sergeant, two corporals, and sixteen men, *(or privates,)* with two supernumeraries, to be detailed from the whole strength of the detachment, with one non-commissioned officer, and a suitable number of the black prisoners for police duty, the whole to be under the charge of the officer of the day. The two field pieces, with a suitable supply of *amunition*, will always be in readiness for action at a moment's warning; every evening, at sunset, they will be stationed near the picket, under charge of *two sentinels;* all sentinels will be posted by the officer of the day, who has charge of the general police of the garrison and town; a non-commissioned officer and two privates will patrol the town, and visit the sentinels every half hour by day and every fifteen minutes by night; the officer of the day will go the grand rounds by day and night twice at least. Corporal Payton Payne, of the 1st rifle regiment, will act as quartermaster sergeant until further orders. The command ing officer expects vigilance from every one attached to his command; the nature of the service requires it. Every commissioned and non-commissioned officer, musician, and private, are hereby ordered to be under arms in front of the parade and guard station at the third tap of the drum preceding the *reveille*, which will take place at day-break; they will continue under arms until a man can be perceived at the distance of three hundred yards; they will also be under arms at *tattoo* every evening. No commissioned officer will be suffered to leave the post without first having permission from the commanding officer, and only one from each company or detachment can be absent at one time from his company; only one non-commissioned officer and two privates will be permitted to be absent at any one time, and that for one hour only, leave for this indulgence first having been obtained from the officer who shall command their company or detachment. No non-commissioned officer, musician, or private will be allowed to purchase liquor of any kind from the inhabitants, or from any one, without special permission from the commanding officer. Sergeant Austin, of the marine corps, will proceed with the remainder of Captain Williams's detachment to camp near St. Augustine, and report himself to the commanding officer. Four day's provision and twenty-four rounds of ball-cartridge will be issued to each of this command; they will embark at the battery landing on board of boats procured for their transportation.

Signed by order of

A. A. MASSIAS, *Capt. U. S. Rifle Regiment, Commanding.*

PUBLIC NOTICE.

FERNANDINA, *Amelia Island, July* 26, 1812.

Pursuant to the order of Colonel Thomas A. Smith, of the United States 1st rifle regiment, commanding in East Florida, and of his excellency David B. Mitchell, governor of the State of Georgia, and commissioner of the United States relating to affairs in East Florida, Captain Massias, of the United States 1st rifle regiment, having been vested with full power, takes command of the garrison and town of Fernandina and its dependencies until further orders. "With a view to maintain peace and good order among the inhabitants, and that they may not be wholly without law to govern them," the laws and regulations which were in force on the island of Amelia and the town of Fernandina when under Spanish authority are again in force. All those concerned will govern themselves accordingly.

By order of

A. A. MASSIAS,
Capt. U. S. Rifle Regiment, Military and Civil Commandant.

PUBLIC NOTICE.

FERNANDINA, *Amelia Island, July* 31, 1813.

Retailers of liquor will close their shops or taverns at 9 o'clock, (or tattoo,) when the drum will beat through the town; they will keep the same closed and cease to sell liquor until sunrise next morning. They are at all times strictly enjoined, upon pain of being disqualified from the privilege of vending liquor, from selling any liquor to an enlisted soldier. Sailors will not be permited to be on shore after nine o'clock at night, (or drum-beat,) those belonging to the service of the United States under the charge of an officer excepted.

Slaves and people of color will not be allowed to be out of their dwellings after nine o'clock at night, (drum-beat.) The patrol which will go the rounds every quarter of an hour will take up every one who shall not be furnished with a written pass, signed by the master, owner, guardian, or employer, (not a person of color.) The officer of the day will attend to the foregoing orders, and see them carried strictly into effect. All those confined at the guard for the violation thereof will be duly reported daily, at orderly hour, to the commandant, so that all cases may receive due examination and be acted upon without delay.

No vessel whatever, inward or outward bound, United States vessels hoisting the number *of the day*, as ordered by the commander, at the masthead excepted, will be suffered to pass the batteries without coming to an anchor under the guns of the same, in order that the officer of the guard, whose duty it is to repair on board, make his examinations and report the same to the commandant.

No boat whatever will leave the harbor without first reporting to the officer of the guard. All row-boats belonging to fishermen and inhabitants will in future, when not in use, be anchored or staked in front of the battery landing, under the charge of the guard, until required for use by the proper owner. No boat will be allowed to depart, unless in urgent cases, leave first being obtained from the commander, after sunset, and until sunrise, or gun-fire next morning. The commandant is compelled to adopt this measure to prevent smuggling, practiced heretofore to a shameful degree.

Any inhabitant desiring a passport, and *qualified to receive one*, will apply to the commandant, who will grant the same, subject to the same rules heretofore granted by the commandant under Spanish authority, with this difference—*no fee will be exacted.*

The inhabitants are strictly enjoined to keep and maintain peace and good order. Every one who shall be found violating the same will be dealt with accordingly. All well disposed of the inhabitants are called upon to assist the authority in the fulfilment of the foregoing orders.

PUBLIC NOTICE.

FERNANDINA, *Amelia Island, February* 1, 1813.

Store and shop keepers of all descriptions are hereby notified that in future a tax of three dollars per quarter, payable one quarter in advance, for retailing license, heretofore granted by the Spanish authority, will be again exacted, to take date from the 1st instant. All sums arising therefrom to be applied to the maintenance of the poor, and will be paid over to Philip Young, esq., chairman of the committee for the distribution thereof. Store-keepers will immediately apply to Mr. Samuel Bitts for their licenses, to whom they will pay three dollars as aforesaid, and twenty-five cents for his fee as notary. He will be answerable to the committee for the relief of the poor for all moneys received.

A. A. MASSIAS,
Capt. 1st Rifle Reg't, Civil and Military Comd't.

PUBLIC NOTICE.

FERNANDINA, *Amelia Island, E. F., February* 10, 1813.

To prevent the future recurrence of disputes relating to the right of ground or town lots within the limits of Amelia Island, all those claiming under grant of the King of Spain will present their claims to George Clark, esq., surveyor general for East Florida, who, under Spanish authority, possessed that office, and in possession of the Spanish records relating to claims. He is duly authorized to place each claimant in his or their proper grounds. All those who shall be found occupying grounds not his own will remove to the lot which shall be assigned to him by the surveyor general He will be respected accordingly.

A. A. MASSIAS,
Capt. 1st Rifle Reg't, Civil and Military Comd't.

PUBLIC NOTICE.

FERNANDINA, *Amelia Island, E. F., February* 16, 1813.

Every proprietor of a town lot is hereby directed to regulate the same as laid out by the surveyor general, and remove all stumps and other obstructions in front of their respective lots without delay. All those who shall be inclined to ornament the town by planting trees in front of their houses are directed to plant them at the distance of eight feet from the front line of their lots. It is also required that the streets and enclosures be kept clean, and that the filth collected be immediately carried to the river, subject to the inspection of the officer of the day. This caution is indispensably necessary to secure the health of the town.

All owners of mules, horses, and hogs, are henceforward forbid allowing their stock to range at liberty within the limits of the town. The commons is found sufficient, and is appropriated for that purpose.

A. A. MASSIAS,
Capt. 1st Rifle Reg't, Civil and Military Comd't.

I certify that the within is a true copy of all the orders issued by me while in command at Fernandina during the years 1812 and 1813.

A. A. MASSIAS,
Paymaster United States Army.

CHARLESTON, *December* 21, 1831.

Deposition of James Ferguson, esq., relating to the command on Amelia Island.

UNITED STATES OF AMERICA, *South Carolina District:*

Personally appeared before me, Thomas Lee, district judge for South Carolina, James Ferguson, who, being duly sworn, makes oath and says that he was a lieutenant in the 8th infantry United States army, and aide-de-camp to General Thomas Pinckney during the last war; that he accompanied General Pinckney to the town of St. Mary's, in the State of Georgia, in May, 1813; that at the time of his arrival Major, then Captain, Massias was in command of the forces of the United States army at that time occupying Amelia Island, Spanish territory; that General Pinckney visited the town of Fernandina, where those forces were in garrison, and appeared to be satisfied with the conduct of Captain Massias in his command; that this deponent believes that part of East Florida has been occupied by General McIntosh, under the authority of the then governor of Georgia, honorable David Mitchell; and he knows that General Pinckney did not withdraw the troops until he received a commission from the office of the Secretary of the Department of State to treat with the Spanish authorities for the evacuation of East Florida; that this deponent

knows that Captain Massias acted under the orders of General Pinckney from the time he, deponent, reached St. Mary's until he was ordered to deliver up that part of the territory occupied by him to Governor Kindelan, and to return to the command of his company of riflemen stationed at Point Petre. This deponent recollects that Captain Massias had charge of prisoners at Fernandina, but does not recollect to have heard the least intimation of any cruelty, or even harsh treatment having been used towards them, neither does he believe that there had been any; that he had frequent intercourse with the suite of Governor Kindelan, and with Europeans who belonged to the Spanish party, who most probably would have mentioned such conduct had Captain Massias been guilty of it. This deponent remained with General Pinckney in the encampment at Point Petre, three miles below St. Mary's, until the last day of July, 1813, and from what he saw and recollects, believes that General Pinckney was satisfied with the conduct of Captain Massias both in Fernandina and Point Petre; that General Pinckney, not having the services of an adjutant general until the arrival of Colonel J. K. Huger, which was after Captain Massias had evacuated Amelia Island, issued his orders through his aides-de-camp; and this deponent thinks that orders may now be found in General Pinckney's orderly and letter books relating to Captain Massias's command on Amelia Island.

JAMES FERGUSON.

Sworn to before me this 7th November, 1831.

THO. LEE, *District Judge South Carolina.*

Deposition of Archibald Clark, esq., collector at St. Mary's, Georgia, on the subject of command on Amelia Island.

ST. MARY'S, *November* 1, 1831.

DEAR SIR: I have to acknowledge the receipt of your letter of the 18th ultimo, with enclosures, and now, in compliance with your request, and from a sense of public duty, proceed to answer the several questions you have propounded to me, and which will be answered to the best of my recollection, knowledge, and belief.

To your first question, whether I did not receive a verdict in favor of a client I represented when you commanded under the—(orders)—meaning the orders issued by Thomas A. Smith, your commanding officer, and subsequently under those received from General Mitchell, governor of Georgia, then acting as commissioner for the United States, I answer yes; and that I knew, at the time, you had been clothed with authority to exercise the powers of a Spanish commandant, which was understood to be both *civil* and *military*.

To the second I answer that the period referred to was in 1812 and 1813. I was made acquainted that Thomas Backhouse, an Englishman by birth, and then a resident of Amelia island, had been arrested by one of the vessels of the United States under Commodore Campbell, commanding the flotilla on the St. Mary's station, for a violation, or supposed violation, of the revenue laws, and was confined; but *how* or in what manner he got himself enlarged I never understood until the extract of General Flournoy's letter which you enclosed was read by me. These orders will speak for themselves.

To the third, what was the general character of Backhouse as far as came to my knowledge, I answer, he was always considered hostile to the United States up to that period, and to its interests.

To the fourth, what was the treatment to him and all others arrested during your command as officer of the post, I answer, and with truth declare, (and I do it with pleasure, because of my frequent visits to Amelia Island during the period of your command, and of the opportunities afforded me to know and estimate your conduct and management,) that it was marked throughout with a rigid regard to render the situation of the prisoners as comfortable as the then state of affairs and circumstances justified, and with all the humanity that became an honorable and patriot soldier.

The fifth, what was your general conduct, taking all the circumstances into view, is answered in my answer to your fourth question; but did it require more than I have already expressed I would say that your conduct was such *as gave me*, as a citizen of the United States, the most perfect satisfaction.

To your sixth, do I know anything of the confinement of Willis Clark, I answer, I know nothing of my own knowledge. He was imprisoned, as I was then informed and believed, but whether by your authority, after you took command, I cannot at present recollect.

To the seventh, what was the general character of Willis Clark as to sobriety and orderly conduct, I answer that, having at that period no personal acquaintance with the individual named, I can only speak as *to general report*. If rumor was then true, and judging from my own personal observation, I would say that the conduct of Mr. Clark for sobriety was altogether the reverse of what it ought to have been.

In conclusion it becomes me to make known that at the period referred to I resided in St. Mary's, and from the contiguity of Amelia Island, and my acquaintance with United States officers at that post, I made frequent visits, as well friendly towards the officers as on business; hence the knowledge I have, and which has enabled me to answer the questions propounded by you in the mode and manner I have done.

With sentiments of respect I remain, dear sir, your obedient servant,

ARCH'D CLARK.

Major A. A. MASSIAS, *Paymaster, &c.*

Archibald Clark, being duly sworn, deposeth and saith that the answers made by him to the several and foregoing questions are just and true, to the best of his knowledge, recollection, and belief.

ARCH'D CLARK.

Sworn to before me this 5th day of November, 1831.

J. NEWTON, *Chappelle M. council of the town of St. Mary's, Georgia.*

Receipt of John Rodman for $1,262 09—*paid.*

SUPERIOR COURT FOR THE EASTERN DISTRICT OF FLORIDA:

THOMAS BACKHOUSE
vs.
WATERS SMITH AND RICHARD WEIGHTMAN.

Received, at St. Augustine, September 1, 1831, from Thomas Douglass, esq., attorney of the United States for this district, his draft on Major Abraham A. Massias, in my favor, for twelve hundred and sixty-two dollars and nine cents, payable at ten days sight; which draft, when accepted by Major Massias, shall be in full payment for the amount of the judgment in this cause, together with interest thereon and all costs; and on receiving notice of the acceptance of said draft I hereby agree to enter satisfaction on the said judgment, and also on the judgment in this court, in the suit of the said plaintiff against the said Major A. A. Massias.

JOHN RODMAN, *Attorney for the Plaintiff.*

JAMES S. LINN, *Clerk.*

LEITERS AND ORDERS FROM THE WAR DEPARTMENT.

DEPARTMENT OF WAR, *November* 19, 1824.

SIR: I have received your letter of the 12th instant with its enclosures, and in reply to your request that instructions be given to the United States district attorney for East Florida to defend the suits commenced against you by Bacus W. Clark and John Caslin, for acts on your part, as you represent, while in the exercise of your functions as commandant at Fernandina, in East Florida, during the late war with Great Britain; I have to state that instructions will accordingly be given to Mr. Macon, United States attorney for East Florida, and in the event of the suits being decided against you in the court below, he will be directed to report the trial to this department and be prepared to carry them up by appeal to the next superior court, should it be deemed proper.

You will be allowed transportation of baggage from Charleston to St. Augustine and back, which you have incurred while attending to the defence of these suits; and whenever it shall become necessary for you to repair to that place for that purpose. The allowance of transportation of baggage from Charleston to this place cannot be made, as you ought to have applied to this department for leave to repair here, when it would have been decided whether your personal attendance here was necessary. The costs which you have already incurred on these suits will be allowed you, should your conduct, on the termination of them appear, as I am now impressed, to have been correct.

I have the honor to be, your obedient servant.

J. C. CALHOUN.

Major A. A. MASSIAS.

From the honorable James Barbour, Secretary of War.

DEPARTMENT OF WAR, *April* 20, 1826.

SIR: Colonel Joseph M. White is employed to aid in the defence of the suits commenced against you in the courts of Florida, and you will possess him with all the particulars in these cases necessary to enable him to make the best defence possible. If Colonel White do not return to Florida in time to be present at the first court, you will take the proper steps to have the hearing of the cases postponed to the next session of the court, or until he can attend.

I have the honor to be your obedient servant,

JAMES BARBOUR.

Major A. A. MASSIAS, *Charleston, S. C.*

Honorable P. B. Porter, Secretary of War, to Thomas Ringgold, United States attorney at Tallahassee, East Florida, on the subject of suits pending against A. A. Massias.

DEPARTMENT OF WAR.

SIR: I understand that you are already apprised of the fact of certain suits having been prosecuted against Major A. A. Massias, of the army, for acts of his whilst in command at Amelia island, in the year 1812.

The enclosed copies of communications to Mr. Douglass and J. Gadsden, esqs., of Charleston, will make you more fully acquainted with the views of the department, and of the obligations which it has assumed of defending the suits.

In accordance with those views, I have to request that you will defend these cases, and carry them by appeal, if necessary, to the highest tribunal.

The copy of a letter from J. Gadsden, esq., to Major Massias, which is also enclosed, seems to place the subject on the proper footing, and I have only to add that the major, having been harassed for several years by the various proceedings growing out of these cases, it is confidently hoped that they may be soon brought to a favorable termination.

I have the honor to be your obedient servant,

P. B. PORTER.

THOMAS RINGGOLD, Esq., *United States Attorney, Tallahassee.*

Letters from the Secretaries of War, with instructions to defend the suits in Florida.

DEPARTMENT OF WAR, *November* 27, 1827.

SIR: I have received your communication of the 16th instant, covering the copy of a letter from the district attorney of Florida, on the subject of the decision of a suit of Charles W. Clark against you for damages, growing out of acts on your part, as you represent, while in the exercise of your functions as commander at Fernandina, in East Florida, during the late war with Great Britain

A decision being had against you in the lower court, you will take proper measures to have an appeal made to the next highest tribunal.

I have the honor to be your obedient servant,

JAMES BARBOUR.

Major A. A. MASSIAS, *Charleston, South Carolina.*

DEPARTMENT OF WAR, *April* 21, 1828.

SIR: Being advised by Major A. A. Massias that the suits of Backhouse and Clark against him, which arose out of the performance of duties assigned to him at Amelia island, in the year 1812, have been removed from the court of East Florida to that of your district, I request that you will take charge of the same, making use of the evidence which he may lay before you, and which he deems to be amply sufficient for his protection.

I have the honor to be your obedient servant,

JAMES BARBOUR.

JOHN GADSDEN, Esq., *United States District Attorney, Charleston, S. C.*

DEPARTMENT OF WAR, *November* 10, 1831.

SIR: In answer to your letters of September 22 and 26, 1831, I have the honor to state that, in similar cases to that of Major Massias, applicants for relief have latterly been referred by this department to Congress, where necessary laws for such relief have been passed.

This practice I do not think it would be proper for me to interfere with, and I therefore return you the papers which you forwarded to me.

Very respectfully, I am, sir, your most obedient servant,

LEW. CASS.

VIRGIL MAXCY, Esq., *Solicitor of the Treasury.*

Letters from Virgil Maxcy, esq., United States Solicitor.

OFFICE OF THE SOLICITOR OF THE TREASURY, *September* 12, 1830.

SIR: Your letter from Philadelphia, with the enclosures, have just been received.

Instructions have heretofore been given to the district attorney at Tallahassee to take the case of Backhouse vs. A. A. Massias up to the Supreme Court of the United States, and also to forward to Mr. Douglass the necessary document, to show that it had been done to prevent further progress in the suits against the securities; and I have to-day written to Mr. Douglass to inform him that these instructions have been sent on.

I have the honor to be, sir, your most obedient servant,

V. MAXCY, *Solicitor of the Treasury.*

Major A. A. MASSIAS, *United States Army, Philadelphia.*

P. S.—The papers received with your communication are herewith returned, as requested.

SARATOGA SPRINGS, *August* 2, 1831.

SIR: Your letter of the 18th ultimo has, with its enclosures, been forwarded to me at this place, and I have instructed the United States attorney at St. Augustine to take such steps as may be necessary for the protection of your sureties.

I am, very respectfully, sir, your most obedient servant,

V. MAXCY, *Solicitor of the Treasury.*

Major A. A. MASSIAS, *Charleston.*

22D CONGRESS.] No. 500. [1ST SESSION.

AN INCREASE OF THE NUMBER OF SURGEONS AND ASSISTANT SURGEONS OF THE ARMY RECOMMENDED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 20, 1832.

Documents to accompany the bill H. R. No. 295, to increase the number of the surgeons and assistant surgeons in the army of the United States.

WAR DEPARTMENT, *January* 7, 1832.

DEAR SIR: Agreeably to your suggestion that it would not be improper on my part, I enclose herewith a proposed bill for the increase of the medical corps, and the explanatory observations of the Surgeon General, showing the necessity of the measure.

I am, dear sir, respectfully, yours,

LEWIS CASS.

Hon. THOMAS H. BENTON, *Chairman of Military Committee of the Senate.*

SURGEON GENERAL'S OFFICE, *January* 13, 1832.

SIR: In reference to the proposed increase of the surgeons of the army, I have to state that, notwithstanding a very considerable increase of the number of military posts and stations, the number of medical officers is less now than it has been at any period within the last twenty years.

Under the establishment of 1808, before the late war, there were sixty-nine surgeons and mates; under that of 1815, after the war, there were at first seventy-seven, and subsequently sixty-nine; while under that of 1821, with a trifling, if any, reduction of posts, it was reduced to fifty-three.

Even under the establishment of 1802, with half the force, and probably less than half the number of stations, there were thirty-three surgeons and mates, and at least double that number is required at present.

On the reduction of the army in 1821 it was distributed to forty military posts and arsenals, including West Point. In January last there were fifty-one; on the 30th of September last there were sixty-four stations, including the recruiting rendezvous, requiring a surgeon; and, at the same period, there were three surgeons absent in consequence of sickness, and one on furlough, leaving but forty-nine for duty. If every officer of the department were constantly on duty, and but one assigned to a full regiment instead of three, as heretofore allowed by law, there would still be a deficiency of eleven. The amount expended for private physicians, including the recruiting service, during the last three years, has been $12,578. This, however, is by no means the actual cost to the United States. The mere prescription of medicine is but a small part of an army surgeon's duty; his hospital attendants are selected from the soldiery, and have, for the most part, neither the ability nor inclination to perform the duties required of them, even when they are sober and honest; but, in point of fact, one constant source of complaint from almost every surgeon is, that he can obtain but very few who possess either of these essential qualifications, so that it requires his repeated instructions, as well as his personal attendance, to secure even a reasonable share of attention to his patients by day and by night, and still greater vigilance to preserve the public property under his charge from waste and peculation; and even with the greatest exertions of the best surgeons, these things constitute an essential item in the estimate of the expenses of the department, and of the average bills of mortality.

In 1829 the surgeon at Oglethorpe barracks was taken sick about the first of August, and a citizen was employed, who has since been highly recommended for appointment in the army, both by his medical and personal friends, and by the officer who employed him, and has given ample evidence of his qualifications. The number present in August was ninety-five, and in October sixty-one; and the number of deaths reported for the quarter was twenty-three, being nearly one-half of those in the whole army for the same period. The chief cause assigned by the physicians for this mortality was the intemperance of his convalescents; and this was, no doubt, indulged at the public expense, as the extra bills for hospital stores during this short period was seventy-five per cent. more than the amount paid for the whole annual supply for the station, furnished on the requisition of the surgeon. This is, of course, a strong case, but it differs only in degree from the great majority where private physicians are employed; so that an attempt to enforce accountability for public property at such posts has been found perfectly idle, there being no practicable means of securing an indemnity for losses, except the stoppage of the pittance of pay that may be due at the expiration of the service of the citizen employed, while he very reasonably contends

that he cannot be held responsible for property which, from the nature of the case, must be at the disposal of pursers and soldiers, over whom he has no authority or control.

But in consequence of the position of many of the military posts, especially in the south and west, it is often impossible to obtain a private physician, while it requires several months to send an army surgeon from another station where one can be had to supply his place. At least two efficient surgeons are now required at Cantonment Gibson, but the application of the present surgeon can only be complied with by hiring private physicians at other posts from which the army surgeons must be sent. The sickness or death of a surgeon at many stations, as those on the Upper Mississippi, the Missouri, and the upper lakes, would, especially in the winter, leave the post without medical aid, as has been the case at Fort Snelling, and would have been recently at Tampa Bay, but for the accidental arrival of a citizen with a detachment of recruits. It is, therefore, believed that the public service actually requires an increase of the surgeons and assistant surgeons of the army, as it has been distributed for some years past; and that, in point of fact, such increase will not, on the whole, be attended with any material increase of expense to the government.

Very respectfully, your obedient servant,

JOS. LOVELL, *Surgeon General.*

Hon. LEWIS CASS, *Secretary of War.*

22D CONGRESS.] **No. 501.** [1ST SESSION.

COMPROMISE OF TITLE TO ISLAND ON WHICH FORT DELAWARE STANDS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 20, 1832.

WASHINGTON, *January* 20, 1832.

I respectfully invite the attention of Congress to the propriety of compromising the title of the island on which Fort Delaware stands in the manner pointed out by the accompanying report from the War Department. This subject was presented to Congress during its last session, but for want of time, it is believed, did not receive its action.

ANDREW JACKSON.

DEPARTMENT OF WAR, *February* 18, 1831.

SIR: The island below New Castle, upon which Fort Delaware is situated, is held by the United States under a cession by the State of Delaware. A citizen of New York, Dr. Henry Gale, alleges the title to be in him by virtue of a grant of New Jersey, and of subsequent purchases made under that grant.

The agent of Dr. Gale has proposed to surrender to the United States for the sum of $17,000, subject to an examination as to the strength and validity of his title.

The United States having expended large sums in the construction of Fort Delaware, it is not proper that the right of property should be at all questionable.

I present to you copies of an agreement entered into with the agent, and propose that authority be given by Congress to have the title inquired into, and, if ascertained to be defective, then to be compromised upon the terms stated in the agreement, for which purpose an appropriation will be necessary.

Very respectfully,

J. H. EATON.

The PRESIDENT *of the United States.*

It is agreed by James Latounette, agent and attorney in fact of Henry Gale, on the one part, and John H. Eaton, Secretary of War, of the other part, for and on behalf of the United States, as follows:

The United States are possessed of an island, on which is constructed Fort Delaware, situated about seven miles below New Castle, in the State of Delaware, which island is claimed by Henry Gale.

James Latounette, being agent and specially authorized to dispose of said island, proposes, and it is agreed to:

That the United States government may examine into said title, and, on being satisfied that the right and claim of said Gale is a valid one, shall pay the sum of seventeen thousand dollars.

And, on payment of said amount, said agent covenants and agrees to and with the said Eaton to convey the whole of said island, by good and sufficient title, to the United States.

This agreement to be submitted to Congress, and to be binding on the United States, if Congress shall make the appropriation, and the title now held be ascertained to be defective.

Executed this 18th February, 1831.

JOHN H. EATON, *Secretary of War.*
JAMES LATOUNETTE, *Attorney for Henry Gale.*

Witness: LAW. L. V. KLEECK.

22D CONGRESS.] No. 502. [1ST SESSION.

ORGANIZATION AND ALLOWANCES TO THE TOPOGRAPHICAL ENGINEERS OF THE ARMY.

COMMUNICATED TO THE SENATE JANUARY 20, 1832.

DEPARTMENT OF WAR, *January* 20, 1832.

SIR: In answer to your note of yesterday, I have the honor to observe that it appears to me inexpedient to make a permanent allowance of forage to the captains of the topographical corps. A portion of the year only can be occupied by these officers in the labors of the field, because the winter is unfavorable to their operations, and also because much time must be devoted to the preparation of their returns. During this period the public service does not require them to keep horses, and even (which is somewhat doubtful) should their duties while in the field require them at all times to be mounted, it would be more economical, agreeably to the present practice, to allow the necessary expense for this object from the contingent appropriation for surveys than to make a permanent allowance of forage.

I doubt, also, the expediency of limiting the executive discretion in the selection of officers for this corps. I think it should be left, as it was in the ordnance bill, without any statutory restriction. The just rights of the army will certainly not be neglected in filling the appointments created by this law. But there is a class of meritorious officers who have been associated and doing duty with the topographical corps, (that of civil engineers,) from which it may be proper to make selections, and I should regret to see them wholly excluded by this provision.

I would also suggest the propriety of increasing the number of captains from eight to ten, and of reducing the second lieutenants from twenty to ten. It is an important object to have officers qualified to take charge of the surveys, and this we can only expect in the higher grades. The subalterns of the corps must act as assistants till they acquire the necessary practical knowledge. I think ten first and ten second lieutenants will be sufficient in the present state of the service for all the duties required of officers of those grades. And a reduction in the expense of $5,528, according to the present laws, or of $5,352 in the event of the passage of the bill in the House of Representatives regulating the pay of the army, will follow from this change.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

HON. THOMAS H. BENTON, *Chairman of the Military Committee, Senate.*

Difference between the topographical engineers as now existing and as proposed to be organized.

The present number of topographical engineers authorized by law is ten, namely, six majors and four captains. To these are to be added the civil engineers employed under the law of April, 1824, say seven, making the whole number of topographical engineers and of civil engineers acting as topographical engineers seventeen.

The annual expense of the present system, as just represented, is as follows:

For the topographical engineers	$13,916
For civil engineers, as per expenditures of 1831	13,500
Total for one year	27,416

which, divided by seventeen, the number of officers, gives for the average yearly cost of each officer about sixteen hundred and thirteen dollars.

The proposed bill provides for one colonel, one lieutenant colonel, two majors, ten captains, and ten first lieutenants—in all twenty-four officers.

The annual expenditure under this bill will be about $23,250, which amount, divided by the number of officers it provides for, gives for the average annual cost of each officer about $970.

A comparison of the two systems furnishes in favor of the bill proposed an aggregate annual saving of about four thousand dollars, an actual gain in the services of seven additional engineers, and an annual saving in the average annual cost of each engineer of between five and six hundred dollars, and furnishing also an efficiently and well-organized body of officers.

TOPOGRAPHICAL BUREAU, *March* 7, 1832.

SIR: Allow me to make a correction in the estimates and statements of differences which I handed to you on Monday. Having gone over the same with care in the office, I find it as follows:

The statement about the present topographical engineers and civil engineers acting as topographical engineers is correct, namely:

Topographical engineers	$13,916
Civil engineers	13,500
Cost per annum	27,416

Total number, 17; average cost, $1,612.

Proposed corps to be paid at the same rates as officers of the present corps of engineers.

One colonel, one lieutenant colonel, two majors, ten captains, and ten first lieutenants will cost per annum $24,300. Total number, 24 officers, occasioning—

1st. Aggregate saving annually, $3,116.
2d. A gain of seven engineers.
3d. Average cost of each engineer by the proposed bill, $1,012.
4th. Average gain per officer, $600.

The small errors, now corrected, arose from using the rates of the late bill reported in the House of Representatives generalizing the pay of officers, instead of the rates paid to the corps of engineers.

Believe me to be, with great respect, sir, your obedient servant,

J. J. ABERT.

Hon. THOMAS H. BENTON.

22D CONGRESS.] No. 503. [1ST SESSION.

ON THE EXPEDIENCY OF ESTABLISHING ARSENALS IN ALABAMA AND FLORIDA.

COMMUNICATED TO THE SENATE JANUARY 20, 1832.

DEPARTMENT OF WAR, *January* 20, 1832.

SIR: I have the honor to transmit herewith the report of the Colonel of Ordnance, upon the subject of establishing an arsenal in Florida, and another in the northern part of the State of Alabama.

Very respectfully, your obedient servant,

LEWIS CASS.

Hon. THOS. H. BENTON, *Chairman Military Committee, Senate of the United States.*

ORDNANCE OFFICE, *Washington, January* 19, 1832.

SIR: In answer to the resolution of the Senate, "inquiring into the propriety of establishing an arsenal in Florida, and another in the northern part of the State of Alabama," referred to this department, I have the honor to report:

That no application having heretofore been made either by the legislature of Alabama, or by any of her delegation in Congress, for the location of an arsenal in the northern part of that State, nor any exploration made by officers of this department with a view to the location of such an establishment, this department is not, therefore, prepared at present to express an opinion, whether an arsenal is necessary in that part of the State expressed in the resolution. If it shall be required, an officer can be directed to make the necessary exploration during the ensuing summer, and his report on this subject can be submitted for your decision before the meeting of Congress at its next session.

In relation to the necessity for the establishment of an arsenal in Florida, this department has no hesitation in expressing a decided opinion. The situation of this Territory, both with regard to its peculiar geographical position and the character of its population, warrants the establishment of an arsenal near the river Apalachicola, which stream possesses the advantage of a steamboat navigation for a considerable distance into the interior of the States of Alabama and Georgia. In a state of war, the necessity for this establishment becomes more evident, as the two nearest arsenals on which dependence must be placed for the necessary supplies of ordnance, small arms, and military stores for this Territory, are those at Augusta, on the Savannah river, and Mount Vernon, on the west bank of Mobile river, Alabama, which are too remotely situated to afford, with the necessary promptitude, such arms and munitions of war as might be required by the forts on the seaboard of Florida, or by an army operating in the field.

The arsenal at Augusta is situated about two hundred and sixty-nine miles from the junction of the Flint and Chattachoochee rivers, and it would ordinarily require about thirteen and a half days for military supplies to reach the Territory. From the Mount Vernon arsenal to the same point is about the same distance, and the roads through this part of the country are, with little exception, of the same character. About the same length of time would therefore be required for the transportation of military stores from the Mount Vernon arsenal to the forks of the Apalachicola. From these facts, therefore, it would appear that, in the event of sudden commotion within or incursion from without the Territory, reliance for a prompt supply of arms and military stores cannot be placed on either of these arsenals; and on a recent occasion of a disturbance amongst the Indians, (Seminoles,) in the peninsula of Florida, much alarm was excited at the seat of government, (Tallahassee,) because of the fact of there being no deposit of small arms and ammunition within the Territory; and when a supply of small arms did arrive, they were soon lost or destroyed, by reason of there being no suitable persons to take care of them, and no proper place of deposit.

I have not hesitated to express a decided opinion in relation to that part of the resolution of the Senate which relates to Florida, because an exploration of this Territory has been made the preceding summer, by an officer of this department, expressly with a view to the location of an arsenal at some suitable point in Middle Florida. This exploration was made by order of the Secretary of War, at the earnest solicitations of the delegate in Congress from that Territory, and also in consequence of a memorial addressed to the Senate and House of Representatives of the United States, signed by several hundred of the most respectable citizens of Florida, praying for the establishment of an arsenal.

In concluding this communication, I would respectfully recommend that, for the establishment of an arsenal in Florida, the sum of $20,000 be asked for the purchase of the site and the commencement of the necessary buildings.

I have the honor to be, sir, respectfully, your obedient servant,

GEO. BOMFORD, *Brevet Colonel, on Ordnance Service.*

Hon. LEWIS CASS, *Secretary of War.*

IN THE LEGISLATIVE COUNCIL OF FLORIDA, *January* 30, 1832.

Be it resolved, That our delegate in Congress be requested to urge the passage of a law to establish an arsenal in this Territory as a measure highly important to the peace and safety of the country.

Resolved, further, That his excellency the governor be requested to transmit this resolution to the delegate by the next mail.

I certify the foregoing to be true copies from the resolutions delivered to me from the council.

JAMES D. WESTCOTT, JR., *Secretary and Acting Governor of Florida.*

JANUARY 31, 1832.

22D CONGRESS.] No. 504. [1ST SESSION.

ON CLAIM OF AN OFFICER OF THE ARMY FOR AN ALLOWANCE FOR QUARTERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 21, 1832.

QUARTERMASTER GENERAL'S OFFICE, *January* 17, 1832.

SIR: In compliance with your request, I send you enclosed a copy of my answer of the 10th instant to your inquiries relative to the claim of Lieutenant Harvey Brown for rent of quarters at St. Augustine.

I have the honor to be, sir, your most obedient servant,

T. CROSS, *Major and Acting Quartermaster General.*

Colonel WILLIAM DRAYTON, *Chairman of Military Committee, House of Representatives.*

QUARTERMASTER GENERAL'S OFFICE, *January* 10, 1832.

SIR: Your note of the 4th instant, enclosing the memorial of Lieutenant Harvey Brown, for rent of quarters while stationed at St. Augustine, and requesting to be informed "whether the account presented is correctly stated, and whether there be any other objection to its payment than that which is mentioned in the memorial," has been received by me, in the absence of the Quartermaster General. In reply to your inquiries, I have the honor to furnish herewith a copy of the correspondence which occurred on the subject between Lieutenant Brown and the Quartermaster General, together with the final remarks of the latter, and the decision of the Secretary of War on the case; and to observe that, if Lieutenant Brown be entitled to the allowance for the *whole* time, the account presented is correctly stated, the rate charged being reasonable. If, however, the claim should be adjusted on the principle suggested by the Quartermaster General, the time charged for would be curtailed seventeen months—leaving seventeen months and eighteen days to be paid for.

Lieutenant Brown having stated in his memorial "that he reported the case from time to time to the Quartermaster General, and solicited to be permitted to so fit up the public quarters as to render them habitable," it is proper for me to remark that no such solicitation, or any suggestion to that effect, is to be found in Lieutenant Brown's letters; nor does it appear from the letters addressed to him by the Quartermaster General that any such application was made to this office and denied. The only repairs of consequence recommended by Lieutenant Brown, during the period comprehended in his claim, was a thorough painting of St. Francis barracks, which was immediately authorized and effected. The improvement necessary to have rendered the quarters amply sufficient for the accommodation of all the officers at the post, was the erection of four additional chimneys to rooms without fire-places.

I am, sir, respectfully, your obedient servant, &c.

Hon. WILLIAM DRAYTON, *Chairman of Military Committee, House of Representatives.*

A true copy from the records of this office.

THOMAS F. HUNT, *Captain and Assistant Quartermaster.*

QUARTERMASTER GENERAL'S OFFICE, *January* 17, 1832.

[Extract]

FORT MARION, *July* 4, 1826.

"GENERAL: I have made a charge in my account for quarters, which I hope will be allowed me, as I am under the necessity of living out of the barracks, in consequence of there being no rooms suitable for my family. It is true, I have resided out of the barracks ever since I have been at the post, and have not charged for quarters; but I was then doing company duty, and thought, therefore, that I was not entitled to my quarters out of the barracks. As I am now entitled to a kitchen, as well as a room, and there being none at the barracks, I hope you will consider my claim as equitable.

"I have the honor to be, &c.,

"HARVEY BROWN, *Assistant Quartermaster.*"

Brigadier General JESUP, *Quartermaster General.*

Extract of a letter from the Quartermaster General to Lieutenant Harvey Brown, assistant quartermaster at St. Augustine, Florida, dated August 21, 1826.

"The charge for quarters cannot be allowed, for the reason that there are sufficient quarters at the fort. If we enforce the regulations in regard to other officers, we must observe them ourselves; besides, the indispensable expenditure on account of quarters during the present year will exceed the sum appropriated by Congress for that object."

[Extract.]

ST. AUGUSTINE, *September* 20, 1826.

"GENERAL: I hope, sir, you will reconsider your decision as it respects my quarters; for, admitting the rooms at the fort were suitable for me to reside in, (which they are not,) still I could not occupy them, for they are now all, but one or two which leak, occupied, viz: two by the marshal, two by the sheriff, two as a magazine, two as ordnance stores, and one as commissary storeroom. It is true that, at the barracks, there are two rooms that I might occupy, but neither of them has a fire-place, and there is no kitchen unoccupied; so that it is impossible for me to live there, and I have necessarily to be at the expense of a house in the town.

"I have the honor, &c.,

"HARVEY BROWN, *Assistant Quartermaster.*"

Brigadier General JESUP, *Quartermaster General.*

Occupied, as the quarters appear to have been, by civil officers, under the authority of the War Department, I should think Lieutenant Brown equitably entitled to quarters during the winter months.

THOMAS S. JESUP, *Quartermaster General.*

NOTE.—By winter months I mean those months for which the greater allowance of fuel is drawn, viz: from the 1st of November to the 30th of April.

T. S. J.

Disapproved the above.

J. H. EATON.

Extract from the Quartermaster General's letter to Lieutenant Harvey Brown, assistant quartermaster at St. Augustine, Florida, dated November 10, 1826.

"In reply to that part of your letter of the 20th of September, relating to quarters for yourself, I have to inform you that it is impossible to reverse the decision already made. To enable me to enforce the regulations where regimental and company officers are concerned, it is necessary that I should enforce them strictly in regard to the officers of the Quartermaster's department. There are, every year, so many more officers placed on detached duty than are included in the estimate, that it requires the most rigid application of the regulations to keep the expenditure on account of rent of quarters within the appropriation. This year, notwithstanding all claims such as yours have been rejected, that item has been considerably overdrawn."

WAR DEPARTMENT, *April* 21, 1829.

Harvey Brown, assistant quartermaster, claims for quarters, from July, 1826, to this time; his station being at St. Augustine. The claim is disallowed:

1st. Because, by regulation of 1830, quartermasters are required to keep the public quarters in tenantable order. There being public quarters at St. Augustine, Captain Brown should have occupied them; and if not in repair, should so have reported, that orders to place them in repair might have been given.

2d. Captain Brown, on application to the Quartermaster General, was as early as the 21st of August, and afterwards on the 10th of November, 1826, informed that he could not be allowed compensation for quarters.

J. H. EATON.

22D CONGRESS.] No. 505. [1ST SESSION.

ARMY REGISTER FOR 1832.

COMMUNICATED TO THE SENATE JANUARY 24, 1832.

DEPARTMENT OF WAR, *January* 23, 1832.

MILITARY ACADEMY, WEST POINT, NEW YORK.

INSPECTOR.

Brevet Brigadier General Charles Gratiot, chief engineer, (*ex-officio,*) inspector of the Military Academy.

ACADEMIC STAFF.

SUPERINTENDENT AND COMMANDANT.

Brevet Lieutenant Colonel S. Thayer, corps of engineers.

PROFESSOR OF MATHEMATICS.

Charles Davies, A. M.

ASSISTANT PROFESSORS.

First Lieutenant Edward C. Ross, fourth artillery.
Second Lieutenant Walter S. Chandler, second artillery.
Brevet Second Lieutenant Wm. N. Pendleton, second artillery.
Brevet Second Lieutenant George W. Turner, first artillery.
Brevet Second Lieutenant Samuel C. Ridgeley, fourth artillery.
Brevet Second Lieutenant Samuel H. Miller, third artillery.
Brevet Second Lieutenant Jacob Ammen, first artillery.
Cadet Robert P. Smith, first class.
Cadet William H. Sidell, second class.

CHAPLAIN AND PROFESSOR OF ETHICS.

Rev. Thomas Warner.

ASSISTANT PROFESSORS.

First Lieutenant Nicholas Tillinghast, seventh infantry.
Second Lieutenant J. Allen Smith, third artillery.

PROFESSOR OF NATURAL PHILOSOPHY.

Edward H. Courtenay.

ASSISTANT PROFESSORS.

Second Lieutenant T. Jefferson Cram, fourth artillery.
Brevet Second Lieutenant William A. Norton, fourth artillery.

PROFESSOR OF ENGINEERING.

Second Lieutenant Dennis H. Mahan, corps of engineers.

ASSISTANT PROFESSORS.

Brevet Second Lieutenant James Allen, fourth artillery.
Brevet Second Lieutenant Henry E. Prentiss, second artillery.

TEACHERS OF THE FRENCH LANGUAGE.

Claudius Berard.
Julian Molinard.

ASSISTANT TEACHERS.

Cadet Frederick A. Smith, second class.
Cadet Henry Dupont, second class.

TEACHER OF DRAWING.

Thomas Gimbrede.

ASSISTANT TEACHER.

Lieutenant Theophilus B. Brown, third artillery.

INSTRUCTOR OF TACTICS, AND COMMANDANT OF THE CORPS OF CADETS.

Captain Ethan A. Hitchcock, first infantry.

ASSISTANT INSTRUCTORS.

First Lieutenant N. Sayre Harris, third infantry.
Second Lieutenant William E. Basinger, second artillery.
Brevet Second Lieutenant Simon H. Drum, fourth artillery.
Brevet Second Lieutenant Joseph Ritner, fourth infantry.

INSTRUCTOR OF ARTILLERY, AND COMMANDANT OF THE MILITARY ACADEMY DETACHMENT.

First Lieutenant Z. J. D. Kinsley, third artillery.

ACTING PROFESSOR OF CHEMISTRY AND MINERALOGY.

Second Lieutenant W. Fenn Hopkins, fourth artillery, A. M.

ASSISTANT PROFESSORS.

Second Lieutenant William W. Mather, seventh infantry.
Second Lieutenant John C. Casey, second artillery.

SWORD MASTER.

Nicholas A. Jumel.

MILITARY ACADEMY—Continued.

ADJUTANT.

Second Lieutenant Charles F. Smith, second artillery.

ACTING ASSISTANT QUARTERMASTER AND COMMISSARY OF SUBSISTENCE.

Second Lieutenant Lucien B. Webster, first artillery.
Brevet Second Lieutenant James H. Taylor, third infantry.

PAYMASTER AND TREASURER.

First Lieutenant Thomas J. Leslie, corps of engineers.

SURGEON.

Dr. Walter V. Wheaton.

MILITARY STOREKEEPER.

Major Roger Alden.

Officers of the army attached to the Military Academy at West Point.

Engineers	3
Artillery	20
Infantry	6
Medical staff	1
Total	30

Resignations, &c., since the publication of the last Register.

RESIGNATIONS.

COLONEL.

William Lawrence, 5th infantry, July 15, 1831.

CAPTAINS.

James H. Gale, 1st infantry, July 28, 1831.
George C. Spencer, 1st infantry, December 31, 1831.
Charles F. Morton, 2d infantry, September 13, 1831.
Francis W. Brady, 4th infantry, April 30, 1831.

FIRST LIEUTENANTS.

James D. Graham, 3d artillery, August 27, 1831.
William Turnbull, 4th artillery, August 20, 1831.
Edward G W. Butler, 4th artillery, May 28, 1831.
William W. Wells, 4th artillery, July 31, 1831.

SECOND LIEUTENANTS

Catharinus P. Buckingham, 3d artillery, September 30, 1831.
John M. Fessenden, 4th artillery, November 30, 1831.

DISMISSED.

FIRST LIEUTENANT.

Martin Thomas, 2d artillery, January 13, 1831.

DECLINED.

BREVET SECOND LIEUTENANT.

John S. Stoddard, 5th infantry, 1830.

The following list of cadets is attached to the Army Register conformably to a regulation for the government of the Military Academy requiring the names of the most distinguished cadets, not exceeding five in each class, to be reported for this purpose at each annual examination.

REPORTED AT THE EXAMINATION IN JUNE, 1831.

Names.	Studies in which each cadet particularly excels.
FIRST CLASS.	
Roswell Park	Mathematics, natural philosophy, chemistry, engineering, French language, drawing, rhetoric and moral philosophy, artillery and tactics.
Henry Clay	Mathematics, natural philosophy, chemistry, engineering, French language, drawing, rhetoric and moral philosophy, artillery and tactics.
James Allen	Mathematics, natural philosophy, chemistry, engineering, French language, rhetoric and moral philosophy, artillery and tactics.
Henry E. Prentiss	Mathematics, natural philosophy, chemistry, engineering, French language, rhetoric and moral philosophy, artillery and tactics.
Albert M. Lea	Mathematics, natural philosophy, chemistry, engineering, French language, rhetoric and moral philosophy, artillery and tactics.
SECOND CLASS.	
Robert P. Smith, George W Ward	Natural philosophy, chemistry, and drawing.
Jacob W. Bailey, Benj. S Ewell, George W. Cass	Natural philosophy and chemistry.
THIRD CLASS.	
Frederick A. Smith	Mathematics, French, and drawing.
Wm. H. Sidell	Mathematics and French.
Jonathan G. Barnard, Roswell W. Lee, Rufus King	Mathematics, French, and drawing.
FOURTH CLASS.	
William Smith, Harrison Loughborough, John F. Lee, John Sanders, Curran Pope	Mathematics and French.

The western department comprises all west of a line drawn from the southernmost point of East Florida to the northwest extremity of Lake Superior, taking in the whole of Tennessee and Kentucky; and the eastern department all east of such line, including Fort Winnebago.

The headquarters of the general-in-chief are in the District of Columbia.

The headquarters of the western department are at Memphis, Tennessee.

The headquarters of the eastern department are in the city of New York.

Those officers whose stations are changed by transfers and promotions will report for duty accordingly.

By order:

R. JONES, *Adjutant General.*

22D CONGRESS.] No. 506. [1ST SESSION.

APPLICATION OF CERTAIN OFFICERS OF THE ARMY THAT THE PAY OF SURGEONS AND ASSISTANT SURGEONS BE INCREASED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 30, 1832.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

The undersigned officers of the army of the United States, deeply impressed with a sense of the value and importance of the services of the medical staff, and impelled by the friendly interest which the peculiar nature of their duties so naturally awakens in our minds, respectfully beg leave to make to your honorable body such representation in their behalf as we believe to be in consonance with the attributes of justice, and therefore best calculated to insure, on the part of your honorable body, the most favorable consideration touching their present condition.

It is one of the cardinal principles flowing from the form of our government and resulting from the genius of our institutions that the rate of compensation shall always be in a direct ratio to the value of the services rendered; and, taking this principle for our guide, we believe it may be safely averred that the medical staff of the army labor under peculiar disadvantages, and that, independent of certain oppressive disabilities incidentally connected with the tenure of their appointment as medical officers, a spirit of justice calls for further legislative provision with reference to their pay and emoluments. It is not our design to touch upon details or to anticipate that liberal spirit which has ever influenced your honorable body by proposing any specific increase of compensation.

All the information necessary on the subject of the relative emoluments of the several branches of the army is presumed to be in the possession of your honorable body, but we should not do justice to the subject did we fail to present for consideration some facts of primary importance, which we would fain hope may not fail to sustain our petition and induce your acquiescence. We regard it a leading defect of the present system of the organization of the medical staff that the same services are rendered by all its members; that they severally incur the same responsibilities, but receive unequal amounts of pay, &c.; that there is an absence of that great stimulus of human exertion, the prospect of bettering their condition by a graduated increase of emoluments, having reference to length of service, a defect which is found in no other branch of the service, and which is believed to be seriously detrimental to its best interest. It is to be presumed, from the vital importance to the efficiency of the army which results from the employment of the talented and well-educated members of the medical profession, that, in the legislative provision made for their support, there would be found sufficient inducement to retain them permanently in service. Yet from the inadequacy of the compensation, with reference to their real necessities, the disproportionate rate of compensation between themselves and officers of assimilated rank, but more especially to the lucrative practice of the profession in civil life, it follows that resignations are, for the most part, confined to that class which is best calculated to give efficiency to the service and respectability to the medical profession.

Among the regulations which have been deemed necessary for the government of the medical staff, there are a number which are singularly oppressive, and from the operation of which all other branches of the service are exempted. From their limited number they are subject to do duty even when under "arrest;" they cannot receive the indulgence of a furlough unless they provide a substitute to discharge their duties, except by the special sanction of the Secretary of War, and are, moreover, debarred the advantages of private practice, subject to the same restrictions.

We therefore pray that their compensation may be placed on such a footing as your honorable body. on consideration of the subject, may deem correspondent to their services.

JOHN STUART, *Captain 7th Infantry.*
J. L. DAWSON, *1st Lieutenant 7th Infantry.*
J. WEST, *Lieutenant 7th Infantry.*
D. S. MILES, *Lieutenant 7th Infantry.*
L. F. CARTER, *Lieutenant 7th Infantry.*
SAM'L KENNEY, *Lieutenant 7th Infantry.*
A. T. BLEDSOE, *Lieutenant 7th Infantry.*
J. DEAN, *Captain 3d Infantry.*
J. ARCHER, *Lieutenant 3d Infantry.*
WM. EUSTIS, *Lieutenant 3d Infantry.*
S. K. COBB, *Lieutenant 3d Infantry.*
L. P. LUPTON, *Lieutenant 3d Infantry.*

22D CONGRESS.] No. 507. [1ST SESSION.

ON THE CONSTRUCTION OF A MILITARY ROAD FROM GREEN BAY TO PRAIRIE DU CHIEN, IN MICHIGAN.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 31, 1832.

DEPARTMENT OF WAR, *January* 28, 1832.

SIR: Since my report of the 3d instant, relative to a road from Green Bay to Prairie du Chien, the enclosed communication has been received at the department, and is now transmitted, in further compliance with the resolution of the House of Representatives of the 22d ultimo.

I have the honor to be, very respectfully, your obedient servant,

LEW. CASS.

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives.*

SIR: The undersigned officers of the United States army, stationed at Fort Winnebago, near the Fox and Wisconsin rivers, taking into consideration the great difficulties which exist at all times in the navigation of these rivers, and more particularly at low stages of water, and at the close of the season, as the fall supplies do not arrive either at Green Bay or Prairie du Chien in sufficient season to be transported up either of the rivers in boats, owing, as before stated, to the natural obstruction to navigation, are induced to trespass upon the honorable Secretary this representation, with a view of inviting the attention of the honorable representatives of the United States Congress to take into consideration the propriety of making an appropriation of a few thousand dollars for the purpose of repairing a road from Green Bay to a place called the Blue Mounds, in the Territory of Michigan, a distance of about 160 or 170 miles. A great proportion of this road requiring not the improvement of art, it being over a smooth and dry prairie country, the labor would be principally in the erection of a few short bridges, and making causeways over a few narrow swampy places. The undersigned are further influenced in making this appeal in the belief that facilities are necessary to be given for the transmission of military supplies, and also for the purpose of keeping up a lively intercourse between the military posts on this northwestern border.

J. H. PLYMPTON, *Captain 5th Infantry.*
L. ABBOTT, *Assistant Surgeon U. S. Army.*
A. J. CARTER, *Lieutenant 5th Infantry.*
THOS W. McBLANE, *2d Lieutenant 5th Infantry.*
D. PERKINS, *Lieutenant 5th Infantry.*
H. P. VANCLEVE, *2d Lieutenant 5th Infantry.*
G. LAW, *Captain 5th Infantry.*
A. JOHNSTON, *Lieutenant 5th Infantry.*
E. M. LACY, *Lieutenant 5th Infantry.*
C. C. DAVIES, *2d Lieutenant 5th Infantry.*

Hon. LEWIS CASS, *Secretary of War.*

22D CONGRESS.] No. 508. [1ST SESSION.

ON AN APPEAL BY AN OFFICER OF THE ARMY FROM THE JUDGMENT OF A COURT-MARTIAL.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 4, 1832.

Mr. DRAYTON, from the Committee on Military Affairs, to whom the memorial and remonstrance of Lieutenant Colonel Woolley were referred, reported:

The memorialist states, *inter alia*, "that he held the rank of lieutenant colonel in the army, and is advised that he still holds the same, as will appear by a report of Major General Gaines, commanding the western department." That "the law of 1806, for establishing rules and articles for the government of the armies of the United States, after enumerating all the offences meriting a separate specification, and annexing to each the penalty due to them, declares, by a sweeping clause, 'that all crimes not capital, and all disorders and neglects which officers and soldiers may be guilty of to the prejudice of good order and military discipline, though not mentioned in the articles of war, are to be taken cognizance of by a general or regimental court-martial, according to the nature and degree of the offence, and be punished at their discretion.'" That "he has been tried by a court-martial for punishing a soldier under a charge of conduct subversive of good order and m litary discipline;" that "the court found the fact of punishing with a few lashes, but, urged by the consideration that the act was the consequence of a precipitate temper, recommended his case to the clemency of the President, who, notwithstanding, insists on his dismissal from service." That "the act for which this excessive punishment was inflicted is not specified in the law as an offence;" that "it was formerly enjoined by the law as one of the means to be used in maintaining military discipline." That "subsequent enactments having withdrawn the injunction, but not forbidden the act, it is therefore a crime not known to the military law." And the memorialist believes that his case is "the first instance on record where the discretionary power given to a court-martial by the 99th article for the punishment of minor offences has been extended to the highest grade of punishment, and for an offence not known to the military law as a crime;" and he insists that, if it be thus extended, "the 99th article is manifestly unconstitutional." The memorialist further states, that "he would have endured his sentence in silence, had the ceremonials of the law been observed;" but he "avers that the court which sat in judgment upon him had no legal existence; and being driven to his appeal, he calls on Congress, with whom the conservation of constitutional law abides, to shield him from arbitrary will, the action of an incompetent tribunal, wholly astray from the legal exercise of sound discretion, and by which he is to be made the victim of cruel policy, (not followed up, but wholly departed from in subsequent cases;) and which he solemnly avers is viewed by officers of high rank in the army as an act of monstrous injustice."

Annexed to the memorial is a letter written by Major General Gaines to the Secretary of War, in which he says, that "among the apparent errors which have occurred in the detail and proceedings of general courts-martial, he deems it proper to refer to those in the cases of Colonel Chambers and Lieutenant Colonel Woolley." The errors, as they apply to Lieutenant Colonel Woolley, are thus specified: He was tried by seven officers, four of whom were junior to him in rank, "whereas the 64th article of war requires that a general court-martial for the trial of an officer 'shall not consist of less than thirteen, where that number can be convened without *manifest injury* to the service.' The 75th article of war requires 'that no officer shall be tried but by a general court-martial, nor by officers of inferior rank, if it can be avoided.'"

It seems that the commanding general stated, (in Colonel Woolley's case,) "that a greater number than the order designated could not be assembled without *prejudice* to the service. The word *prejudice* is by no means equal in its force and obligation to the words of the law, viz: *manifest injury*." General Gaines also alleges, that "a view of the monthly returns, at the period when trial was ordered, will show that the court could have been as full as the law required." The committee will not transcribe the reasonings which are relied upon by General Gaines, to invalidate the proceedings in the case of Lieutenant Colonel Woolley, as they may be seen at length in his letter. The conclusion at which General Gaines arrives is, that, "in point of law, if not in point of fact, Lieutenant Colonel Woolley is, at this moment, an officer of the army; the proceedings against him, having been contrary to law, are void, or they are voidable, by the lawful interposition of the President of the United States.

It appears by the proceedings of a general court-martial held at Jefferson barracks on the 1st of March, 1829, that the memorialist was arraigned before it, and pleaded in bar to its jurisdiction, upon the ground that the court consisted of only seven officers, whereas by law there should not have been less than thirteen, when that number could be convened without *manifest injury* to the service. This plea being overruled, the memorialist pleaded not guilty. The charges, with their specifications, the sentence of the court, the confirmation of the sentence by the President, and his final order in the case, are all set forth in the following document:

General order announcing the decision of the general court-martial in Lieut. Colonel Woolley's case, May 1, 1829.

ORDER NO. 28.

ADJUTANT GENERAL'S OFFICE, *Washington, May* 1, 1829.

I. At a general court-martial, of which Colonel D. L. Clinch, of the fourth regiment of infantry, was president, held at Jefferson barracks, in the State of Missouri, on the 14th of March, 1829, by virtue of "order No. 3," emanating from the headquarters of the western department, Lieutenant Colonel A. R. Woolley, of the 6th regiment of infantry, was arraigned upon the under-mentioned charges, to wit:

CHARGE I.

"*Conduct subversive of good order and military discipline.*"

Specification: In this: that he, the said Lieutenant Colonel A. R. Woolley, of the 6th regiment United States infantry, while commanding the regiment in question, did punish, with stripes and lashes, Private Thomas Powell, of company "D," of the regiment aforesaid; the punishment so administered being of such extreme severity as to have disabled the said Thomas Powell from the performance of his duty for the period of nine days. This at Jefferson barracks, in the State of Missouri, on or about the 12th day of December, 1828.

CHARGE II.

"*Conduct unbecoming an officer and a gentleman.*"

Specification 1st.—In this: that he, the said Lieutenant Colonel A. R. Woolley, did, in his quarters at Jefferson barracks, Missouri, on or about the 22d day of November, 1828, and without any or adequate provocation, point his finger in an angry and threatening manner towards Captain J. Gantt, of the 6th regiment of infantry, then under his command. This whilst conversing on his, Captain Gantt's, official duties, in the presence of Captain B. Riley, of the aforementioned regiment, of Robert Stewart, a citizen, and of enlisted soldiers of the 6th infantry.

Specification 2d.—In this: that the aforesaid Lieutenant Colonel A. R. Woolley did, at Jefferson barracks, Missouri, on or about the 22d day of November, 1828, and without any or adequate provocation, address rude and ungentlemanly language to Captain John Gantt, an officer under his command, in terms as follows: "You have behaved ungentlemanly, sir." "You have made a false report, sir." "You have stated a falsehood in that note, sir." "You have wilfully and intentionally stated what you know to be false, sir." This in the presence of Captain B. Riley, 6th infantry, of Robert Stewart, a citizen, and of enlisted soldiers of the 6th infantry.

Specification 3d.—In this: that he, the said Lieutenant Colonel A. R. Woolley, while at Jefferson barracks, Missouri, and on or about the 22d day of November, 1828, did, through the medium of a malignant and highly colored charge, procure the trial, by general court-martial held at Jefferson barracks under orders of December 15, 1828, of Captain John Gantt, an officer of his command.

Specification 4th.—In this: that he, the said Lieutenant Colonel A. R. Woolley, having received from Captain Gantt, an officer under his command, a report alleging a failure in the issue of provisions to his, the said Captain Gantt's company, on or about the 28th day of October, 1828, did address to him rude and ungentlemanly language in a conversation touching that report, in words as follows: "You, sir, have since your last return to duty attempted to give the commanding officer as much trouble as you could." "I will attend to your report, not to gratify you, but to satisfy myself, for I know it is not true." "You are too much in the habit of making reports of this kind." "I have discovered your drift." "I see you have a captain flapping at your elbow to push you on against me." "Go ahead, sir, you cannot run against the commanding officer long." This in a loud and angry voice, and with corresponding gestures, at Jefferson barracks, in the State of Missouri, on or about the 24th day of October, 1828, and in the presence of Captain Thomas Noel, of the 6th regiment.

Specification 5th.—In this: that he, the said Lieutenant Colonel A. R. Woolley, at Jefferson barracks, on or about the 10th day of October, 1828, while commanding officer of the 6th infantry, and president of a general court-martial in session at Jefferson barracks, on or about the 10th day of October, 1828, did, then and there, and during the session of the court, address to its judge advocate, Second Lieutenant A. S. Johnston, of the 6th infantry, rude and ungentlemanly language, in terms as follows: "I see the mulish curl of your lip." "I have seen through the whole of this trial a disposition on your part to delay the proceedings of this court." "I have discovered your stubbornness."

Specification 6th.—In this: that he, the said Lieutenant Colonel A. R. Woolley, at Jefferson barracks, on or about the 10th day of October, 1828, while commanding officer of the 6th infantry, and president of

a general court-martial in session at Jefferson barracks on or about the 10th day of October, 1828, did, then and there, and during the session of the court, address to First Lieutenant M. W. Bateman, of the 6th infantry, and a member of the aforesaid general court-martial, rude and ungentlemanly language, in words as follows: "Sir, if you ever give testimony against me I'll pull you up to the bull-ring." "I'll search you to the liver."

Specification 7th.—In this: that he, the said Lieutenant Colonel A. R. Woolley, while in command of the 6th regiment of infantry at Jefferson barracks, Missouri, and on or about the 17th day of October, 1828, having summoned Captain John Gantt to his, Lieutenant Colonel Woolley's quarters, and during a conversation touching the legal and judicious withdrawal of a pass on the part of the said Captain John Gantt, countersigned by the said Lieutenant Colonel A. R. Woolley in behalf of John Stanley, a private of Captain John Gantt's (G) company, 6th infantry, did, then and there, address to the said Captain Gantt rude and ungentlemanly language, in terms as follows: "How dare you infringe on the rights of this soldier?" "You shall not do it." "You dare not do it."

To all which charges and specifications the prisoner pleaded *not guilty*.

The court after mature deliberation on the testimony adduced, decide upon the following finding, to wit:

Specification of 1st charge.

The court find the fact of Lieutenant Colonel Woolley having punished Private Thomas Powell, of company D, 6th infantry, with a few lashes on or about the time and at the place specified.

FIRST CHARGE.

Guilty of the first charge.

1st specification of 2d charge.

Guilty of the entire specification except that portion of it which alleges the presence of "enlisted soldiers," there being but one enlisted soldier present.

2d specification of 2d charge.

Guilty of the specification, except the words "you have wilfully and intentionally stated what you know to be false." And with the further expression of that part of it which alleges the presence of "enlisted soldiers," there being but one enlisted soldier present.

3d specification of 2d charge.

Guilty of so much of the specification as alleges the exhibition of a highly colored charge, (not a malignant one,) under the circumstances of time, place, &c., as specified.

4th specification of 2d charge.

Guilty of the specification.

5th specification of 2d charge.

The court find the facts set forth, without the inference of rude and ungentlemanly language deduced from them.

6th specification of the same charge.

The court find the facts set forth, without the inference attached to them, of rude and ungentlemanly language.

THE SECOND CHARGE.

Guilty of the 2d charge, and do sentence him, Lieutenant Colonel A. R. Woolley, to be dismissed the service of the United States.

"The court, however, urged by the consideration, that the ungentlemanly acts ascribed, in the various findings, to Lieutenant Colonel Woolley, are all referable to the ascendency which an unsteady and precipitate temper exercises over him, respectfully recommend him to the clemency of the Executive—relying for a radical amendment in his mode of treating subordinates, and a general amelioration in his temper and feelings, upon the solemn and enduring nature of the lesson which his trial, his conviction, and the recovery of his former rank only through the considerate lenity of the Chief Magistrate, shall have all conspired to teach him."

II. In conformity with the 65th article of the rules and articles of war, the whole proceedings in the foregoing case have been transmitted to the Secretary of War, to be laid before the President of the United States for his confirmation or disapproval, and orders in the case. The Secretary of War has returned the proceedings, with the following order:

DEPARTMENT OF WAR, *April* 28, 1829.

The President of the United States, to whom has been submitted for consideration the proceedings of a general court-martial, of which Colonel D. L. Clinch was president, for the trial of Lieutenant Colonel A. R. Woolley, approves the same.

The court has recommended Colonel Woolley to the clemency of the President, under a hope expressed, that, for the future, there will be "a radical amendment in his mode of treating subordinates, and a general amelioration in his temper and feelings, upon the solemn and enduring nature of the lesson which his trial, his conviction, and the recovery of his former rank, only through the considerate lenity of the Chief Magistrate, shall have all conspired to teach him."

It would afford the President much satisfaction, could he adopt the recommendation of the court, set aside its verdict, and restore Colonel Woolley again to his rank and to his command. This, I am directed

to say, cannot be done, regard being had to the high obligation of seeing that the laws are faithfully executed.

Colonel Woolley is charged and found guilty of punishing a soldier with lashes. This is so flagrant a violation of the positive law of the country that the Executive clemency cannot be interposed, whereby to excuse, or justify hereafter, any similar conduct in others. Every soldier, before he becomes such, is a free man; and, even after his enlistment, surrenders those civil rights only which are demanded of him by the legal, the constituted authorities of his country. By the laws of that country he feels and believes himself protected, when entering upon his enlistment, from everything of personal abuse, and personal degradation. Even by a court-martial, stripes or lashes cannot be inflicted, because the law prohibits them; still less should they be suffered to be inflicted by an officer, whose duty it is to be the soldier's protector in all his legal rights, and to watch over them with the justice and care of a father. The soldier cannot be subordinate and faithful while he sees himself subjected to the abuse and tyranny of his officer, in despite of the protection which the positive laws of his country assure to him. Personal violence on his part, towards an officer, carries with it the punishment of death; while he, for similar aggression towards him by his officer, is deprived of remedy, if after conviction by a court the offender shall find clemency through the interposition of the Executive.

By order of the PRESIDENT of the United States.

JOHN H. EATON.

III. Lieutenant Colonel A. R. WOOLLEY, of the 6th regiment of infantry, consequently ceases to be an officer of the army of the United States.

By command of Major General ALEX. MACOMB, commanding the army.

R. JONES, *Adjutant General.*

In all modern nations, whether monarchical, aristocratical, or republican, in which standing armies are maintained, peculiar regulations are established for their government. By the Constitution of the United States, the power "to make rules for the government of the land and naval forces," is vested in Congress. Under this power, on the 10th of April, 1806, an act was passed "for establishing rules and articles for the government of the armies of the United States," and this act constitutes the whole code of our law martial. According to it, various crimes and offences are triable by general or regimental courts; and by the 99th of its articles, "all crimes not capital, and all disorders and neglects which officers and soldiers may be guilty of, to the prejudice of good order and military discipline, though not mentioned in the foregoing articles of war, are to be taken cognizance of by a general or regimental court-martial, according to the nature and degree of the offence, and be punished at their discretion." Other articles regulate the proceedings of the courts, and the number and rank of their members; and by the 65th article, "no sentence of a court-martial shall be carried into execution, until after the whole proceedings shall have been laid before the officer ordering the same, or the officer commanding the troops for the time being; neither shall any sentence of a court-martial, in time of peace, extending to the loss of life, or the dismission of a commissioned officer, be carried into execution, until after the whole proceedings shall have been transmitted to the Secretary of War, to be laid before the President of the United States for his confirmation or disapproval, and orders in the case.

Whether the court which sat upon the trial of the memorialist consisted of the requisite number of officers; whether their rank was such as the Articles of War prescribed; whether the offence with which he was charged came within the meaning of the 99th article, were all questions properly to be determined by the court. The memorialist having offered no other plea in bar to its jurisdiction than that which has been mentioned, upon its being overruled went to trial upon the plea of not guilty. The court having convicted him, the proceedings were transmitted to the Secretary of War, and laid before the President "for his confirmation or disapproval and orders." The President rejected the recommendation of the court, confirmed its sentence, and ordered it to be carried into execution. In these proceedings the committee can perceive nothing which would call for the interposition of Congress, admitting their right to interpose; but Congress are not authorized to revise or to reverse the judgment of any tribunal, civil or military. Where an officer in the regular army of the United States conceives himself to be aggrieved by the illegal decision of a court-martial, his appropriate redress would seem to be an appeal to the federal judiciary; but from this he is precluded, as the judiciary act of 1789, which confers jurisdiction upon the federal courts, in the cases therein enumerated, does not grant to them any control over the judgments of courts-martial, which, when approved of by the President, are final and conclusive upon all subjects within their jurisdiction, and must so remain until the rules and articles for the government of the army, now of force, shall be repealed or altered by the authority which enacted them.

As the report of a former Committee on Military Affairs, made to this House on the 23d of December, 1829, in the case of Lieutenant James D. Cobb, might appear upon a superficial examination to be at variance with the opinion of this committee, the facts in that case will be stated for the purpose of showing the difference between them and those which are now under consideration.

On the —— day of ——, 1813, Lieutenant Cobb was tried by a certain number of military officers, denominated a general court-martial, and was sentenced by them to be cashiered. These officers had been ordered to assemble by Colonel Larned, who commanded a cantonment at Greenbush, in New York. On the 29th of January, 1814, after the dissolution of this court, a letter from the Secretary of War, under the directions of the President, was addressed to Colonel Larned, informing him that its proceedings were illegal, as he (Colonel Larned) was not authorized to order a general court-martial. On the 3d of February, 1814, Lieutenant Cobb was ordered by the Adjutant General to repair to Albany and to report himself to Colonel Larned, who had been instructed to institute a general court-martial for his trial. On the 9th of March, 1814, the Secretary of War communicated to Colonel Larned that the President of the United States had decided that Greenbush should be considered "*a separate command,*" so far as related to courts-martial *previously held there;* that this decision of the President was a confirmation of the several sentences of the courts-martial which *had been ordered* by Colonel Larned, and that any further proceedings against Lieutenant Cobb were unnecessary. On the 28th of May, 1814, the Adjutant General wrote to Lieutenant Cobb that, the President having approved of the sentence of the general court-martial at Greenbush, he was no longer in the army.

The 65th of the Rules and Articles of War, authorize "a general commanding an army, or colonel commanding a separate department," to appoint general courts-martial. The President as "commander-in-chief of the army of the United States," may, in his discretion, order a general court-martial, but this power cannot be exercised by any other officer. Colonel Larned was not a general officer, nor did he command "a separate department," consequently he was as incompetent to originate a general court-martial as he was to create a court of star-chamber, or an ecclesiastical inquisition. The President pronounced Greenbush *to have been "a separate department,"* in direct opposition to the fact, in contradiction of his unqualified recognition of that fact, and of his *express decision* that the proceedings of the court at Greenbush were *illegal and void.* The President, with whom is the exclusive power of confirming or disapproving of the sentence of a court-martial by which an officer is cashiered, having annulled the sentence against Lieutenant Cobb, and declared the proceedings against him, *ab initio*, to be illegal and void, these proceedings were illegal and void; and as no court was afterwards convened for the trial of that officer, he never was convicted of any offence by any court whatsoever. Under these circumstances, the committee reported that Lieutenant Cobb was "entitled to all the rights of a 1st lieutenant of light artillery, until the time when that regiment was incorporated with the artillery," and a bill was passed by both branches of Congress, allowing to him his pay and emoluments during the period which intervened between his dismission and the incorporation with the artillery of the regiment to which he had been attached.

As the memorialist, from some passages in his memorial, is manifestly under the impression that he was sentenced to be cashiered for a trivial offence, the committee feel themselves bound to observe that, by an act of 16th May, 1812, courts-martial are prohibited from sentencing a soldier to "corporeal punishment by stripes or lashes." Should an officer, then, assuming a power beyond that of a court, be permitted with impunity to inflict personal chastisement upon those under his command, a spirit of discontent and mutiny, in the opinion of the committee, would be excited in the army which must prove utterly destructive of "good order and military discipline." The committee recommend the adoption of the following resolution:

Resolved, That the memorialist have leave to withdraw his memorial and papers.

To the Senate and House of Representatives of the United States:

The undersigned says that he held the rank of lieutenant colonel in the army, and he is advised that he still holds the same, as will appear by the annexed report of Major General Gaines, commanding the western department.

The law of 1806, for establishing rules and articles for the government of the armies of the United States, after enumerating all the offences meriting a separate specification, and annexing to each the penalty due to them, declares, by a sweeping clause, "That all crimes not capital, and all disorders and neglects which officers and soldiers may be guilty of, to the prejudice of good order and military discipline, though not mentioned in the Articles of War, are to be taken cognizance of by a general or regimental court-martial, according to the nature and degree of the offence, and be punished at *their discretion.*" The undersigned has been tried by a court-martial for punishing a soldier under a charge of conduct subversive of good order and military discipline. The court found the fact of punishing with a *few lashes*, but, urged by the consideration that the act was the consequence of a precipitate temper, the court recommended the case of the undersigned to the clemency of the Executive. The President, notwithstanding, insists on his dismissal from service.

The act for which this excessive punishment is to be inflicted is not specified in the law as an offence. It was formerly enjoined, by the law, as one of the means to be used in maintaining salutary discipline. Subsequent enactments have withdrawn the injunction, but have not forbidden the act. It is therefore a crime not known to the military law.

The undersigned believed that his son, a child, merited parental correction, and he was punished. It was discovered that he had suffered for the act of a soldier. Irritated at the injustice, and at the moment of discovery, the undersigned struck the soldier with the whip, with which he had chastised his child, a few blows, not exceeding half a dozen.

This is believed to be the first instance on record where the *discretionary* power given to a court-martial by the 99th article for the punishment of minor offences, has been extended to the highest grade of punishment, and for an offence not known to the military law as a crime; and if it be thus extended the 99th article is manifestly unconstitutional.

Your remonstrant, however, would have endured in silence, and remained a passive victim, had the ceremonials of the law been observed in offering up the sacrifice. But he avers that the court which sat in judgment upon him had no legal existence; and now, being driven to this appeal, he calls on you, with whom the conservation of constitutional law abides, to shield him from arbitrary will, the action of an incompetent tribunal, wholly astray from the legal exercise of sound *discretion*, and by which your remonstrant is to be made the victim of cruel policy, (not followed up, but wholly departed from, in subsequent cases,) and which your remonstrant solemnly avers is viewed by the officers of high rank in the army as an act of monstrous injustice.

Respectfully submitted,

A. R. WOOLLEY.

WASHINGTON, *December* 27, 1831.

General Courts-Martial.

Among the apparent errors which have occurred in the detail and proceedings of general courts-martial, I deem it proper to refer to those in the cases of Colonel Chambers and Lieutenant Colonel Woolley.

1. Colonel Chambers was tried by a general court-martial, consisting of but five members, and they

all junior to him in rank. Lieutenant Colonel Woolley was tried by seven, of which four were junior to him. Whereas the 64th Article of War requires that a general court-martial for the trial of an officer "shall not consist of less than thirteen, where that number can be convened *without manifest injury to the service.*" Of this fact or matter of opinion the commander ordering the court is supposed to be the judge. He is necessarily, in the first instance, the proper judge as to the number of officers that can, "without manifest injury to the service," be assigned to this duty. But if he cannot take from other duties the number required by law, he is directed to state, in his order constituting the court, that a greater number than the order designates "cannot be assembled without manifest injury to the service." This statement is considered to be in the nature of a *report*, made by the commandant who orders the court; but it is a report of the commandant's *opinion* upon the subject, rather than as a positive fact irrevocably settled. The report, therefore, can only be viewed in the light of any other official report, *founded upon matter of opinion*, so far as to settle the matter reported, until the contrary should appear from more positive evidence. And if the President, after taking a deliberate review of the state of the service, should be convinced that the number of officers could have been increased "without manifest injury to the service," he would infer that the commandant's opinion had been erroneous, and would be at liberty, in the just discharge of the duty confided to him, "to see that the laws are faithfully executed," to remit the punishment awarded by an unlawful court.

In the cases under consideration, it seems that the commanding generals stated that a greater number (than the orders respectively designated) "could not be assembled without *prejudice* to the service." The word *prejudice*, as here used, is by no means equal in its force and obligation to the words of the law, viz, "manifest injury;" which words were omitted in the orders in these cases, apparently to give place to the word "*prejudice.*" A commander might think it in some sort a "prejudice to the service" to take an officer from the command of a fatigue party sent off twenty or thirty miles to obtain *fuel* or building timber, whilst the same commander would not, in an official report or order, deliberately certify that it would be a "manifest injury to the service" to recall the officer for a few days to attend the court, and, in the interim, to place the fatigue party under a sergeant, or even to recall it until the adjournment of the court. There are few, if any general officers, indeed, who would, in time of peace, certify that an officer stationed five hundred miles off could not, without "manifest injury to the service," be ordered from that distance, especially if the life or reputation of an officer or soldier should be in jeopardy, and the laws and justice required the presence of such absent officer. A view of the monthly returns for the periods at which these trials were ordered, with a knowledge of the fact that the country was in a state of profound peace, will show that the courts should have been as full as the law required.

2. Colonel Chambers was tried by a court consisting of five officers, and each of them junior to him; Lieutenant Colonel Woolley was tried by a court consisting of seven officers, and four of them were his juniors; consequently they were both tried by their juniors, whereas the 75th article of war requires that "no officer shall be tried but by a general court-martial, *nor by officers of inferior rank, if it can be avoided.*" *If it can be avoided.* This is imperative; and it will be manifest to any one who will look at the state of the service at the time that the court for the trial of Colonel Chambers might have consisted of two or three general officers, and of some colonels senior to him; and that the court for the trial of Lieutenant Colonel Woolley might have consisted of three general officers, and of seven or eight colonels and lieutenant colonels, senior to him. It is evident, therefore, that both these field officers, who had served faithfully during the war, were tried by courts composed of officers junior to them respectively; and it is likewise evident that this irregularity *could* have been *avoided*, and without manifest injury to the service.

These two requisites, being explicitly prescribed by law, should never be dispensed with, particularly where the accusations are such as to threaten the life or the commission of the accused.

The good of the service often requires that in particular cases of vital importance to the army and the country exemplary punishments are demanded, and that the example, to be in the greatest possible degree effective, should fall upon officers of the higher grades. But the example, to be as it should be, *forcible* and *awful*, must always be the result of an *investigation strictly comformable to the letter and spirit of martial law.* In that case the example cannot fail to be attended with the most salutary effects: all the parties concerned, as well as the public, readily yield respectful obedience to the imperative operation of the law of the land, because this is the only known rule of right and of power which the citizens of a republic, in the plentitude of their sovereignty, impose upon themselves for the purposes of government—for *enforcing what is right*, and prohibiting *what is wrong.* But, upon the other hand, when the officer ordering a court, or the court itself, is found to depart from any known principle or rule of law, the parties affected, as well as the public, are dissatisfied; and, in place of saying to the sovereign power of the republic, "*thy will be done*," and of submitting without a murmur to a decree the offspring of *law* and *justice*, they are naturally shocked at the apparent lawlessness of the verdict pronounced, and are led to apprehend that even in this land of laws and equal rights arbitrary power may predominate over the prescribed rules of even-handed justice.

There can never be a necessity in our service, during a period of peace or war, to bring a field officer before a general court-martial composed principally of company officers. The court for such trials may always, "without manifest injury to the service," consist in part of *general*, and for the most part of *field officers.* Nor should the commander ordering the court be permitted to assign any other reason than that prescribed by law for omitting to order a full court, and of high rank, as the law directs.

Besides, it is a principle of law which is respected in most civilized countries, where the laws are designed to protect the rights of the citizen or the subject, that "all penal laws are to be construed in a manner most favorable to the prisoner." In applying this rule of law to the cases under consideration, it is much to be apprehended that so far from enjoying the benefit of this rule, in cases of a questionable character, the prisoners have been deprived of those benefits expressly secured to them by unquestionable enactments of law. Under these impressions I cannot but think that in point of law, if not in point of fact, Colonel Chambers and Lieutenant Colonel Woolley are, at this moment, officers of the army—the proceedings against them, having been contrary to law, are void, or they are voidable by the lawful interposition of the President of the United States.

All which is respectfully submitted.

EDMUND P. GAINES, *Major General by Brevet, Commanding.*

Hon. SECRETARY OF WAR, *Washington City, D. C.*

22d Congress.] No. 509. [1st Session.

MEMORIAL AND PROCEEDINGS OF A CONVENTION OF MILITIA OFFICERS OF PENNSYLVANIA FOR THE IMPROVEMENT OF THE MILITIA SYSTEM OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 6, 1832.

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

The memorial of a convention of citizens, assembled from the different military divisions of the Commonwealth of Pennsylvania, most respectfully represents: That the people of Pennsylvania are deeply impressed with the belief that the present militia system of the United States is burdensome and inefficient; that, since the passage of the act of 1792, the number of men included within its provisions has increased so much, and will continue to increase so rapidly, that it is inexpedient for the government to attempt to arm and instruct the whole body. They also believe that on no occasion can the necessities of the country require the actual services of so great a number of armed men as is now included within the provisions of that act. They therefore most respectfully request your honorable bodies to revise the present militia system and to make such changes therein as shall enable the government to arm and to instruct at least a portion of those who may be subject to enrolment.

By order of the convention.

J. B. ALEXANDER, *President.*

Attest:
W. S. Franklin, *Secretary.*
January 6, 1832.

Proceedings of the Military Convention which assembled at Harrisburg, Pennsylvania, Monday, January 2, 1832.

The delegates chosen by the different military divisions and brigades of Pennsylvania met at the court-house in Harrisburg, on the 1st Monday of January, 1832.

On motion of Mr. Simpson,

Henry Frick, of Northumberland county, was called to the chair; and,

On motion of Mr. Franklin,

Reah Frazer, of Lancaster, secretary, for the purpose of organizing the convention.

On motion,

Messrs. Franklin, Alexander, of Cumberland, Paxton, Hambright, and Spencer were appointed a committee to examine the credentials of the delegates.

On motion,

The convention adjourned until 12 o'clock, noon.

At 12 o'clock the convention again met.

Mr. Franklin, from the committee appointed to examine the credentials, reported the following list of delegates, viz:

FIRST DIVISION.

CITY AND COUNTY OF PHILADELPHIA.

1st Brigade.—*City:* Colonels James Page, Joseph S. Riley, Henry Simpson, Robert M. Lee,† Robert Cooper; Majors Chalkley Baker, Peter Fritz, William C. Browne,† Lieutenant George Bumm.†

2d Brigade.—*County:* Colonels John Thompson,† John L. Wolf,† A. R. Roumfort,† Kenderton Smith,† Majors N. Nathans, L. Bomeisler,† Franklin Vansant, Captains Joseph Worrell, jr., A. T. Smith,† Lieutenant James Goodman.

SECOND DIVISION.

BUCKS AND MONTGOMERY.

1st Brigade.—*Bucks:* Major General W. T. Rogers, Colonels John Davis, Simpson Torbert, Joseph Hough,† Lieutenant Colonels Thomas Purdy, John Hart, Major Stephen Brock,† Adjutant Michael S. Haney,† Dr. Huston Thompson.

2d Brigade.—*Montgomery:* Lieutenant Colonels Thomas M. Jolley,† James Bush,† James Christman,† Major John H. Sheetz, Captain John H. Hill,† Lieutenants William Hamell,† William Matheys,† William H. Gartley.

THIRD DIVISION.

CHESTER AND DELAWARE.

1st Brigade.—*Delaware:* Colonel Samuel A. Price, Lieutenant John K. Zeilin, J. M. G. Lescure, esq.

2d Brigade.—*Chester:* Colonel William Harris,† Em. Elton,† Majors Thomas Jones,† John Kerlin, Thomas H. Pearce,† Lieutenant David B. Reed.

FOURTH DIVISION.

LANCASTER.

Captain David Miller, Major Frederick Hambright, Captain William Downey, Colonel Reah Frazer, Captains John Flora,† William G. Yetter,† Lieutenant William B. Fordney, Major John McGlaughlin.

FIFTH DIVISION.

YORK AND ADAMS.

1st Brigade.—*York:* Majors Henry Snyder, Jacob Hantz,† Colonels T. N. Haller,† John Keller,† Major Graham †

2d Brigade.—*Adams:* Colonel Michael C. Clarkson, Majors Andrew G. Miller, Jacob Sanders, Elijah Garretson.†

SIXTH DIVISION.

DAUPHIN, LEBANON, BERKS, AND SCHUYLKILL.

1st Brigade.—*Dauphin:* Colonel W. S. Franklin, Lieutenant John Blattenberger, Captain E. W. Roberts.

2d Brigade.—*Schuylkill:* Major William F. Dean.

Berks: General William High, Colonel Henry Boyer, John Potteiger, esq.

SEVENTH DIVISION.

NORTHAMPTON, LEHIGH, AND PIKE.

1st Brigade.—*Northampton:* Brigadier General Shimer,† Colonel George Weber, Major Robert May Brooke,† Colonel John Hourten.†

2d Brigade.—*Lehigh:* Major General John Fogle, Major John W. Hornbeck, Colonel Walter C. Livingston.

EIGHTH DIVISION.

UNION, COLUMBIA, NORTHUMBERLAND, LUZERNE, SUSQUEHANNA, AND WAYNE.

1st Brigade.—*Union:* Colonel Charles M. Straub, Captain James Merrill.

Northumberland: Major General Henry Frick, Major Samuel J. Packer.

Columbia: Colonel Joseph Paxton.

2d Brigade.—*Luzerne:* Captain Jacob Drumheller, Colonel John Butler,† Lieutenant Chas. Dorrance.†

NINTH DIVISION.

LYCOMING, POTTER, M'KEAN, BRADFORD, AND TIOGA.

1st Brigade.—*Lycoming:* General William B. Mitchell, Major Robert Fleming, Captain Wm. Piatt.

TENTH DIVISION.

CENTRE, CLEARFIELD, MIFFLIN, AND HUNTINGDON.

Juniata: Colonel William Kirk, Captain John Murphy, Andrew Parker, Charles W. Kelso, esqs., Major William Sharon.

Huntingdon: Captain John Criswell, Major David McMurtrie, Captains William Williams, David Snare.

1st Brigade.—*Centre:* Brigadier General James Irwin,† Colonel Andrew Gregg,† Major John Potter, Captain Samuel H. Wilson, Lieutenant W. W. Houston, Dr. Constant Curtin, Captains George Buchanan, David Duncan.

Mifflin: Brigadier General George McCullough, Dr. Joseph B. Ard, Majors A. S. Wilson,† David Cummins, Richard Miles.

ELEVENTH DIVISION.

CUMBERLAND, PERRY, AND FRANKLIN.

1st Brigade.—*Cumberland:* General Willis Foulke, Captains Samuel Alexander, James McGowan,† John McCartney, Charles McClure, Lieutenants Mathew Spencer, Edward M. Biddle, Alexander Oliver,† William S. Ramsey, Adjutant John N. Gray, Colonels William M. Greer, William Stough, Majors Peter Lesher,† Samuel Tritt, John McCandlish, Captains George W. Woodburn, Samuel Redett.

Perry: Colonels Henry Fetter, Joseph Speck, Major William Clark, Lieutenant Albert C. Ramsey.

2d Brigade.—*Franklin:* Major Jacob Heck, Captains Jasper E. Brady, William B. Bard, Colonels John Wallace, John McGeehan.

TWELFTH DIVISION.

BEDFORD, SOMERSET, AND CAMBRIA.

1st Brigade.—*Bedford:* Colonel William Compher, Captain Thomas B. McElwee, Lieutenant William Fletcher.†

2d Brigade.—*Cambria:* Major Isaac Teeter, Lieutenant Arnold Downing.

THIRTEENTH DIVISION.

WESTMORELAND AND FAYETTE.

1st Brigade.—*Westmoreland:* Major John B. Alexander, Adjutant J. H. Wells, Captains Morrison Underwood, Hugh Y. Brady, Jacob Gosser, Major Wilson Jack,† Captain Joseph Cook,† Jon. Row,† Lieutenant L. L. Bigelow, Captain Ben. R. Marchand.†

FOURTEENTH DIVISION.

WASHINGTON AND GREENE.

Washington: Major General Charles De Hass,† Brigadier General Wallace McWilliams, Colonels Thomas Ringland, William Patterson, William Waugh, esq.
Greene: Colonels William G. Hawkins, Andrew Buchanan.†

FIFTEENTH DIVISION.

ALLEGHENY, ETC.

1st BRIGADE.—*Allegheny:* General R. T. Stewart,†Andrew Bayne, esq.
[Those marked with a dagger (†) did not take their seats in the convention.]
The roll being called, 83 members answered to their names.
On motion of Mr. McElwee, the following resolution was adopted:
Resolved, That a committee be appointed, to consist of one person from each division, to be chosen by the delegates for each division, in order to report what officers are necessary for this convention, and to nominate persons to fill them.
Whereupon the following persons were appointed said committee:

1st division,	Mr.	Page.	8th division,	Mr.	Paxton.
2d	"	Davis.	9th	"	Fleming.
3d	"	Price.	10th	"	Williams.
4th	"	Hambright.	11th	"	McClure.
5th	"	Miller, of Adams.	12th	"	Downing.
6th	"	Roberts.	13th	"	Wells.
7th	"	Fogle.	14th	"	McWilliams.

On motion of Mr. Ringland,
Resolved, That when this convention adjourns, it adjourn to meet at 3 o'clock p. m.
Adjourned.

IN THE AFTERNOON.

On motion of Mr. Fordney,
Resolved, That the governor, heads of department, State treasurer, adjutant general, and the members of both branches of the legislature, be invited to take seats within the bar of this convention.
On motion of Mr. Straub,
Resolved, That a committee of five be appointed to carry the preceding resolution into effect.
Whereupon
Messrs. Straub, Page, Fordney, Riley, and Brady, of Franklin, were appointed said committee.
Mr. Page, from the committee appointed for that purpose, reported the following officers for the convention:
President—JOHN B. ALEXANDER, of Westmoreland.
Vice-Presidents—WILLIAM B. MITCHELL, of Lycoming,
WILLIAM DOWNEY, of Lancaster.
WILLIS FOULKE, of Cumberland, and
SAMUEL A. PRICE, of Delaware.
Secretaries—*Simpson Torbert,* of Bucks, and
Walter S. Franklin, of Dauphin.

A motion was made that the report of the committee be adopted; which was agreed to unanimously.
The several officers of the convention then took their seats.
Mr. Davis announced that Dr. Huston Thompson had been appointed to supply a vacancy in the delegation from the 1st brigade, 2d division.
A resolution was then offered by Mr. Miller; which was read as follows:
Resolved, That no division or county be allowed more votes in this convention than their respective votes by members in the legislature; but that the members elected or nominated and accepted be allowed seats in the convention.
The chair decided that the resolution was out of order.
An appeal from the decision of the chair was made by Mr. Miller and Mr. Simpson, and the decision of the chair was confirmed by the convention.
On motion of Mr. Roberts,
Resolved, That the editors of papers in this place be admitted to seats within the bar of this convention.
On motion of Mr. Alexander, of Cumberland,
Resolved, That a committee, to consist of one from each division, be appointed to suggest such matters as are most deserving of attention from this convention.
Which was agreed to.
The following gentlemen were selected by the delegates from each division as said committee:

1st division,	Mr.	Page.	9th division,	Mr.	Fleming.
2d	"	Sheetz.	10th	"	Wilson.
3d	"	Zeilin.	11th	"	Alexander.
4th	"	Fordney.	12th	"	McElwee.
5th	"	Snyder.	13th	"	Brady.
6th	"	Franklin.	14th	"	Ringland.
7th	"	Weber.	15th	"	Bayne.
8th	"	Merrill.			

A motion was made by Mr. Alexander, of Cumberland, that the convention should sit in uniform; which was not agreed to.

On motion of Mr. Simpson,

Resolved, That when this convention adjourns, it will adjourn until to-morrow morning at 11 o'clock a. m.

Adjourned.

TUESDAY, *January* 3, 1832.

The convention met; and the roll being called, ninety-six members answered to their names.

On motion of Mr. Nathans, the following resolution was adopted:

Resolved, That the convention adopt for their government the rules and regulations adopted by the house of representatives of this State.

Mr. Riley, from the committee appointed to invite the governor, heads of department, State treasurer, and the members of the senate and house of representatives to take seats within the bar of the convention, reported that they had performed that service.

On motion of Mr. Miller, of Adams, the foregoing committee were instructed to extend the invitation to the attorney general of the Commonwealth.

After some time the governor, heads of department, State treasurer, and attorney general took their seats.

A motion was made by Mr. Ramsey and Mr. Wells to reconsider the vote agreeing to the resolution adopting the rules and regulations of the house of representatives of this State for the government of the convention; which was not agreed to.

Mr. Page, from the committee on the subject, made the following report, in part:

That, inasmuch as it is universally conceded that the present militia system has fallen far short of the grand object for which it was established, and has entailed much ignominy and disgrace upon our military reputation, we deem it expedient that it should be made the subject of amendment, reformation, or encouragement, as will best answer the purpose of reclaiming its character from the obloquy which it has incurred. In an examination of the various plans suggested, the committee have been actuated by a strong and earnest desire to select that which may be the means of adding to the strength and character of the State, and of rendering the performance of duty on the part of its citizen soldiers a matter of pleasure and pride.

Not authorized, by the tenor of the resolution by which they were appointed, to do more than draw the attention of the convention to such matters as may be necessary for their examination, they respectfully offer the following principles as the basis of a system to be recommended to the early and serious attention of the legislature.

First. That the citizens of this Commonwealth liable to militia duty ought to be divided into two classes.

Second. That all such citizens, (not by law exempt,) between the ages of twenty-one and twenty-six years, ought to compose the first class, and be called the *active militia*.

Third. That this class only ought to be subject to drill or military duty in time of peace.

Fourth. That the second class shall be composed of all persons liable to militia duty not embraced within the first class, and be called the second or reserved class.

Fifth. That the second class ought not to be required to do military duty, except when called forth to execute the laws, to suppress insurrections, and to repel invasions, and then such organization ought to be adopted as should unite the two classes into one.

Sixth. That all parades of ununiformed militia ought to be abolished.

Seventh. That the first class be required to uniform themselves; that they be furnished with arms and accoutrements, camp equipage, music, powder, and five days' rations, in each year, and be required to parade, for drill and instruction, five days in each year.

Eighth. The committee, by reason of the peculiar locality of the first division, recommend that the convention refer to the delegates from that division to prepare and report a system suitable to that division, so far as it is necessary the same should vary from the general system.

The first resolution being under consideration,

A motion was made by Mr. Merrill to postpone the question on the first resolution for the purpose of considering the eighth resolution; which was agreed to, and

Said resolution was adopted.

The question recurring on the first resolution,

It was adopted.

The second resolution being under consideration,

A motion was made by Mr. Miller, of Adams, to postpone the further consideration of the report for the purpose of considering the following resolution:

Resolved, That the committee be instructed to report a plan for the better organization and encouragement of the present volunteer force, and that they be a separate force from the enrolled militia; and that parades of the militia be abolished, but they to be enrolled, officered, and classed for service, if required by any contingency.

Which was not agreed to.

A motion was then made by Mr. Frick to amend the resolution by striking out "twenty-six" and inserting in lieu thereof "twenty-eight."

On the question, Will the convention agree to the motion?

A motion was made by Mr. Wilson that the convention now adjourn, to meet this afternoon at 3 o'clock; which was agreed to.

AFTERNOON.

Captain John Longenecker and Henry D. Overholtzer, esq., having been appointed by the delegates from the fourth division to fill the vacancies occasioned by the non-appearance of Captains Flora and Yetter, appeared and took their seats.

The following resolution was offered by Mr. Straub:

Resolved, That where vacancies may have occurred, by the non-attendance of delegates from any brigade, the delegates in attendance have authority to supply the vacancy.

Which was not agreed to.

The convention resumed the consideration of the resolutions attached to the report to the committee appointed to suggest to the convention such matters as deserved their immediate attention.

The question recurring, Will the convention agree to the amendment to strike out "twenty-six" and insert "twenty-eight?"

It was determined in the negative.

A motion was then made by Mr. Davis to strike out the words "between the ages of twenty-one and twenty-six," and insert in lieu thereof "as will uniform themselves voluntarily according to law."

On the question, Will the convention agree so to amend?

A motion was made by Mr. Dean to amend the amendment by adding thereto the following: "And that every such citizen, between the ages of twenty-one and forty-five, who will not equip himself shall pay a certain sum in lieu thereof for the encouragement of volunteers and of the first class of militia;" which was agreed to.

The question recurring, Will the convention agree so to amend?

On motion,

The convention adjourned.

WEDNESDAY, *January* 4, 1832.

The convention met; and the roll having been called, it appeared that the following gentlemen were in attendance:

Messrs. Page,	Messrs. Roberts,	Messrs. Foulke,
Riley,	Dean,	Alexander, of Cumberland,
Simpson,	High,	McCartney,
Cooper,	Boyer,	McClure,
Baker,	Potteiger,	Spencer,
Fritz,	Kern,	Biddle,
Nathans,	Kelchner,	W. S. Ramsey,
Worrell,	Weber,	Gray,
Vansant,	Fogle,	Greer,
Goodman,	Hornbeck,	Stough,
Rogers,	Livingston,	Tritt,
Davis,	Straub,	McCandlish,
Torbert,	Merrill,	Woodburn,
Purdy,	Frick,	Redett,
Hart,	Packer,	Fetter,
Thompson,	Paxton,	Speck,
Bertels,	Drumheller,	Clark,
Boileau,	Mitchell,	A. C. Ramsey,
Sheetz,	Fleming,	Heck,
Gartley,	Piatt,	Brady, of Franklin,
Richards,	Potter,	Bard,
Zeilin,	Wilson,	Wallace,
Price,	Houston,	McGeehan,
Lescure,	Curtin,	Compher,
Kerlin,	Buchanan,	McElwee,
Reed,	Duncan,	Teeter,
Miller, of Lancaster,	McCullough,	Downing,
Hambright,	Ard,	Alexander, of Westmorel'd,
Frazer,	Cummings,	Wells,
Fordney,	Wilson,	Underwood,
McGlaughlin,	Miles,	Brady, of Westmoreland,
Downey,	Kirk,	Gosser,
Longenecker,	Murphy,	Bigelow,
Overholster,	Parker,	McWilliams,
Snyder,	Kelso,	Ringland,
Clarkson,	Sharon,	Hawkins,
Miller, of Adams,	Criswell,	Patterson,
Sanders,	Williams,	Waugh,
Franklin,	McMurtrie,	Bayne.
Blattenberger,	Snare,	

Mr. Page, from the committee appointed to suggest matters for the consideration of the convention, made a further report; which was read as follows:

1. That volunteer corps be encouraged as far as practicable; that, for that purpose, all volunteers, so long as they shall continue to perform military duty, shall be entitled to all the advantages which are allowed to the first class; they may fix their own days of parade, and impose such fines for absence on those days as they may please, and adopt such by-laws as they may approve; that they shall be subject to the same duty of encampment and service in time of peace as the first class; they shall be allowed the usual music at the public expense on their days of parading; that their officers shall take rank of militia officers of the same grade, and their corps shall take rank of the militia.

2. That any person, after his arrival at the age of twenty-six, may, if he will, continue to perform duty with, and be entitled to the advantages of, either the first class or volunteers, but not subject to contribution to the military fund; but on ceasing to perform duty, he shall contribute annually 50 cents to that fund.

3. Every member of the first class and volunteers shall pay a fine of $2 for every day of those required by law, in case he shall fail to parade in uniform without sufficient excuse.

4. That a committee be appointed to draught a memorial to Congress, asking a revision of the militia laws of the United States.

5. That the proceedings of this convention be recommended to the early and serious attention of the legislature, and with that view, that the officers of the convention lay before them an authenticated copy of the journal.

On motion of Mr. Simpson, the following resolution was adopted:

Resolved, That a committee of finance be appointed to collect funds and defray the expenses incidental to the meeting of this convention.

And Messrs. Simpson, McGlaughlin, Snyder, Roberts, and Piatt, were appointed said committee.

The convention resumed the consideration of the second resolution attached to the report of the committee appointed to suggest matters for the consideration of the convention.

The question being on the amendment to said resolution offered yesterday,

The yeas and nays on said question were called for by Mr. Alexander and Mr. Davis, and are as follow:

YEAS.

Messrs. Page,	Messrs. Hambright,	Messrs. W. S. Ramsey,
Simpson,	Frazer,	Greer,
Baker,	Fordney,	Stough,
Fritz,	McLaughlin,	Redett,
Nathans,	Downey,	Fetter,
Worrel,	Longenecker,	Heck,
Vansant,	Overholtzer,	Brady, of Franklin,
Rogers,	Snyder,	Bard,
Davis,	Clarkson,	Wallace,
Torbert,	Miller, of Adams	McGeehan,
Purdy,	Sanders,	Teeter,
Hart,	Franklin,	Alexander, of Westmorel'd,
Thompson,	Dean,	Brady, of Westmoreland,
Bertels,	Hornbeck,	Bigelow,
Boileau,	Straub,	Ringland,
Sheetz,	Packer,	Waugh,
Zeilin,	Wilson,	Bayne,
Price,	McClure,	Tritt,
Kerlin,	Biddle,	McCandlish.—58.
Reed,		

NAYS.

Messrs. Riley,	Messrs. Buchanan,	Messrs. McCartney,
Cooper,	Duncan,	Spencer,
Roberts,	McCullough,	Gray,
High,	Ard,	Woodburn,
Boyer,	Cummins,	Speck,
Weber,	Miles,	Clark,
Fogle,	Kirk,	A. C. Ramsey,
Merrill,	Murphy	Compher,
Frick,	Parker,	McElwee,
Paxton,	Sharon,	Downing,
Drumheller,	Criswell,	Wells,
Mitchell,	Williams,	Underwood,
Fleming,	McMurtrie,	Gosser,
Piatt,	Snare,	McWilliams,
Potter,	Alexander, of Cumberland,	Patterson.—46.
Curtin,		

So it was determined in the affirmative.

The convention then adjourned until 3 o'clock this afternoon.

IN THE AFTERNOON.

The convention resumed the consideration of the amendment to the second resolution attached to the report of the committee appointed to suggest matters for the consideration of the convention.

On the question, Will the convention agree to the resolution as amended?

A motion was made by Mr. Franklin further to amend the resolution by inserting between the words "shall" and "pay" the words "be called the second class, and;" which was agreed to.

The resolution as amended was then adopted.

The third resolution was then adopted, after being amended by striking out the word "this" and inserting in lieu "the first class."

The fourth resolution being under consideration, a motion was made by Mr. Merrill to postpone the further consideration of the same for the present for the purpose of considering the following:

Resolved, That it will be expedient to demand from those between twenty-one and twenty-six years of age who shall neglect or refuse to uniform and equip themselves a higher sum than from those who shall have arrived at the age of twenty-six; which was agreed to.

On the question, Will the convention agree to the resolution?

The yeas and nays were required by Mr. Riley and Mr. Cummings, and are as follow:

YEAS.

Messrs. Reed,	Messrs. Buchanan,	Messrs. Alexander, of Cumberland,
Frazer,	Duncan,	McCartney,
McGlaughlin,	McCullough,	McClure,
Longenecker,	Ard,	Spencer,
Clarkson,	Cummings,	Woodburn,
Merrill,	Miles,	Speck,
Frick,	Kirk,	Clark,
Packer,	Murphy,	A. C. Ramsey,
Paxton,	Parker,	Heck,
Mitchell,	Criswell,	Downing,
Fleming,	Williams,	Wells,
Potter,	McMurtrie,	Underwood,
Wilson,	Snare,	Gosser.—38.

NAYS.

Messrs. Page,	Messrs. Miller, of Adams,	Messrs. Greer,
Riley,	Sanders,	Tritt,
Simpson,	Franklin,	Redett,
Cooper,	Roberts,	Fetter,
Baker,	Dean,	Brady,
Fritz,	High,	Bard,
Nathans,	Boyer,	Wallace,
Rogers,	Weber,	McGeehan,
Davis,	Kern,	Compher,
Torbert,	Kelchner,	McElwee,
Purdy,	Lynn,	Teeter,
Hart,	Fogle,	Alexander, of Westmorel'd,
Bertels,	Hornbeck,	Brady, of Westmoreland,
Boileau,	Straub,	Bigelow,
Sheetz,	Piatt,	McWilliams,
Zeilin,	Sharon,	Ringland,
Price,	Biddle,	Patterson,
Kerlin,	Ramsey,	Bayne.—56.
Snyder,	Gray,	

So it was determined in the negative.

The question recurring, Will the convention agree to the fourth resolution?

A motion was made by Mr. Torbert to postpone the question for the purpose of introducing the following; which was not agreed to:

That the militia of second class shall be enrolled as usual by the proper officers, and that they shall annually pay the sum of ———, to be collected with the county rates and levies, and paid into the treasury of the Commonwealth.

That the second class shall be officered as usual, and that all the officers of the first and second class in each brigade shall annually meet for drill ——— days, for which services they shall be allowed ——— per day; and if the officers request it the State should furnish them with the necessary camp equipage.

A motion was made by Mr. Franklin to recommit to the committee on the subject the report and resolutions, together with the report and resolutions made by said committee this morning; which was agreed to.

On motion, Mr. Roberts was substituted on said committee in place of Mr. Franklin.

On motion of Mr. Franklin, the following resolution was adopted:

Resolved, That no member of this convention be permitted to speak more than twice upon any question before the convention.

The convention then adjourned until 11 o'clock to-morrow morning.

THURSDAY, *January* 5, 1832.

The convention met; and the roll being called, one hundred and eleven members answered to their names.

George Richards, esq., and Captain Philip Wager Reigart having been appointed to supply vacancies, took their seats.

The president of the convention presented the following resolution, transmitted to him by the speaker of the senate:

"IN SENATE, *January* 4, 1832.

"*Resolved*, That the officers and members of the military convention, now sitting in Harrisburg, be invited to take seats within the bar of the senate chamber during the sitting of senate.

"Extract from the journal.

"W. S. FRANKLIN, *Clerk*."

Mr. Waugh presented to the convention the following resolution of the house of representatives:

"IN THE HOUSE OF REPRESENTATIVES, *January* 4, 1832.

"On motion,

"*Resolved*, That the officers and members of the military convention be invited to seats within the bar of this house.

"Extract from the journal.

"FRS. R. SHUNK, *Clerk*."

Mr. Simpson, from the committee to ascertain the amount necessary to defray the expenses of this convention, reported that they have inquired particularly into the matter confided to them, and offer the following; which was adopted:

Resolved, That the members of this convention be assessed the sum of seventy-five cents each, and that the same be paid into the hands of Walter S. Franklin, esq., one of the secretaries of this convention.

Mr. Page, from the committee to suggest matters for the consideration of the convention, reported:

1. That the citizens of this Commonwealth ought to be divided into two classes.

2. That all such citizens as will uniform themselves voluntarily, according to law, ought to compose the first class and be called the active militia; and that all such citizens between the ages of twenty-one and forty-five who will not equip themselves shall be called the second class, and pay a certain sum in lieu thereof for the encouragement of the volunteers and of the first class of militia.

3. That the first class only ought to be subject to drill or duty in time of peace.

And the following in conformity to the principles set forth in said resolutions:

1. That all militia trainings not in uniform should be abolished, and that the second class ought not to be required to do military duty, except when called forth to execute the laws, to suppress insurrections, and repel invasions.

2. That the first class be furnished with arms and accoutrements, camp equipage, music, powder, and five days' rations in each year, and be required to encamp for instruction five days in each year.

3. The militia shall be enrolled, as required by law, by the proper officers, and every enrolled militiaman of the second class, except minors, should annually pay the sum of one dollar, to be collected as the county rates and levies are now by law collected and paid into the treasury of this Commonwealth.

4. The second class should have such officers as may be necessary, and all the commissioned officers in each brigade or regiment shall assemble annually at such time or place as may be fixed upon by the commanding officer of such brigade or regiment for inspection and drill for ——— days in succession, for which attendance and service they should be allowed —— dollars per day each, to be paid out of the fund to be created as aforesaid.

5. That —— dollars per day should be allowed to each brigade or regiment for the pay of musicians during such annual parade, should they desire it, a sufficient quantity of camp equiage to be furnished each brigade or regiment for the acquirement of a knowledge of camp duty. At such parades the officers may by ballot select from their number the individual who shall act as the instructing officers of volunteers to drill in the same manner in brigade or regiment of volunteers; if there be no such brigade, then to be joined in the drill with the militia officers. Volunteers to have the right to make their own by-laws and manage their own funds.

6. The first class to be subject at all times to the requisitions of State executive, in compliance with the provisions of the constitution.

7. That a committee be appointed to draught a memorial to Congress, to be signed by the president, vice-president, and secretaries, in behalf of this body, asking a revision of the militia laws of the United States.

8. That the proceedings of this convention be recommended to the early and serious attention of the legislature, with that view that the officers of the convention lay before them an authenticated copy of the journal.

The first resolution reported by the committee was adopted.

The second resolution being under consideration, a motion was made by Mr. Miller, of Adams, to amend the same by inserting after the words "first class" "and organized volunteers;" which was not agreed to.

A motion was then made by Mr. Nathans to strike out "five," where it last occurs, and insert in lieu "three successive;" which was agreed to.

A motion was then made by Mr. Riley to further amend the resolution by striking out all after the word "powder," and adding in lieu thereof as follows: "And that each company of not less than —— privates be allowed the sum of —— dollars per annum, to be appropriated by them for military purposes, in accordance with the by-laws of the respective companies;" which was not agreed to.

A motion was then made by Mr. Merrill to strike out the words "and be required," and insert "if they think proper;" which was not agreed to.

The resolution as amended was then adopted.

The third resolution was adopted.

The fourth resolution being under consideration, the first blank was filled with "three" and the second with "one."

The resolution as amended was then adopted.

The fifth and sixth resolutions were then adopted.

The seventh resolution was then adopted, and Messrs. Merrill, Riley, Fritz, Fleming, and McClure were appointed a committee in pursuance thereof.

On motion of Mr. Cummings, the eighth resolution was postponed for the present.

The following resolutions were then offered by Mr. Torbert:

Resolved, That the committee appointed to draught a memorial to Congress recommending a revision of the militia laws of the United States be instructed to recommend the passage of a law appropriating to each State annually the sum of two thousand dollars for every representative to which it is entitled in Congress, to be expended under the direction of States respectively in disciplining the officers.

Resolved, That it be recommended to the legislature to pass a resolution requesting our senators and representatives in Congress to use their exertions to effect the passage of a law agreeably to the preceding resolution, and that copies thereof be forwarded to the executives of the several States for the concurrence of the respective legislatures.

Which were not agreed to.

On motion of Mr. Simpson, the following resolution was adopted:

Resolved, That the journal of this convention be printed, and that each member of the lesislature be furnished with a copy of the same, and that each member of this convention be furnished with three copies.

On motion of Mr. Cummings, the following resolution was adopted:

Resolved, That it be recommended to the legislature to so proportion the military force of this State that the corps of artillery be augmented.

Mr. Page, from the committee composed of the delegates of the first division, reported the following resolution, which was adopted:

Resolved, That this convention, in consequence of the peculiar and exposed situation of the city of Philadelphia, recommend to the consideration of the legislature the propriety of such a variation in the general law as will permit the establishment in the district now composed of the city and county of Philadelphia of one division of volunteers, and granting for the purposes of supporting the same all the fines imposed and collected from the first and second class within the said district: *Provided*, That no claim be made by the said division on the general fund, and that it shall determine the number of days of encampment for its own instruction.

The convention adjourned until 3 o'clock this afternoon.

IN THE AFTERNOON.

A motion was made by Mr. Wells and Mr. W. S. Ramsey to reconsider the vote agreeing to the resolution reported by Mr. Page, from the committee composed of the delegates from the first division.

On the question, Will the convention agree to the motion?

The yeas and nays were required by Mr. Wells and Mr. Davis, and are as follow:

YEAS.

Messrs. Miller, of Lancaster, Hambright, Cummings, Kirk, Criswell, McCartney, W. S. Ramsey, A. C. Ramsey, Wells, Underwood, Bigelow, Bayne.—12.

NAYS.

Messrs. Page, Riley, Simpson, Cooper, Baker, Fritz, Nathans, Worrell, Vansant, Rogers, Davis, Torbert, Purdy, Hart, Bertels, Boileau, Sheetz, Richards, Zeilin, Price, Kerlin, Reed, Downey, Longenecker, Reigart, Miller, of Adams, Sanders, Franklin, Blattenberger, Roberts, Dean, High, Boyer, Weber, Kern, Kelchner, Fogle, Hornbeck, Livingston, Straub, Merrill, Frick, Paxton, Drumheller, Mitchell, Fleming, Piatt, Potter, Wilson, Curtin, Buchanan, Duncan, McCullough, Ard, Miles, Murphy, Williams, McMurtrie, Snare, Foulke, McClure, Spencer, Gray, Greer, Stough, Tritt, Woodburn, Redett, Fetter, Speck, Clark, Brady of Franklin, Compher, McElwee, Teeter, Downing, Alexander, of Westmorel'd, Brady, of Westmoreland, Gosser.—79.

So it was determined in the negative.

On motion of Mr. Williams, the following resolution was adopted:

Resolved, That application be made to Congress by this convention for the passage of an act appropriating for the support and discipline of the volunteers and militia of each State a sum of money to be distributed annually, and in proportion to the representation of each State in Congress; which moneys so appropriated shall be placed at the disposal of the government of the States respectively.

On motion of Mr. Brady, of Franklin county, the following resolution was adopted:

Resolved, That there ought to be a provision made by the legislature for the election of one lieutenant for each company of infantry, artillery, and riflemen, and militia of the first class in this State, in addition to the number of officers now allowed by law.

On motion of Mr. Criswell, the following resolution was adopted:

Resolved, That every freeman within this Commonwealth, who shall have equipped himself and served in a regularly organized volunteer company for the term of seven years, shall be exempt from military duty in time of peace.

The following resolution was offered by Mr. Straub:

Resolved, That this convention recommend to the consideration of the legislature of Pennsylvania the propriety of reducing the number that is, under the existing laws, required to compose a company of the first-class militia; which was not agreed to.

The following resolution was offered by Mr. Fleming:

Resolved, That volunteers hereafter to be organized of the same description of force have a similar uniform; which was not agreed to.

On motion of Mr. Franklin, the following resolution was adopted:

Resolved, That it be recommended to the legislature to pass a law requiring all major and brigadier generals and staff officers to equip themselves, and to parade at least once a year.

Mr. Merrill, from the committee appointed to draught a memorial to Congress, reported the following; which was adopted:

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

The memorial of a convention of citizens assembled from the different military divisions of the Commonwealth of Pennsylvania most respectfully represents: That the people of Pennsylvania are deeply impressed with the belief that the present militia system of the United States is burdensome and inefficient; that, since the passage of the act of 1792, the number of men included within its provisions has increased so much, and will continue to increase so rapidly, that it is inexpedient for the government to attempt to arm and instruct the whole body. They also believe that on no occasion can the necessities of the country require the actual services of so great a number of armed men as is now included within the provisions of that act. They therefore most respectfully request your honorable bodies to revise the present militia system, and to make such changes therein as shall enable the government to arm and to instruct at least a portion of those who may be subject to enrolment.

The eighth resolution attached to the report of the committee to suggest matters for the consideration of the convention was then adopted.

On motion of Mr. Davis,

Resolved, That a central committee of correspondence be appointed to promote the objects of this convention; and

Ordered, That Colonel Walter S. Franklin, Captain E. W. Roberts, and Captain Hugh McIlwaine be said committee.

On motion of Mr. Torbert,

Resolved, That the delegates from each division appoint a committee of three to correspond with the central committee.

Whereupon the following persons were appointed:

First division.—Colonel James Page, Colonel Joseph Riley, Major N. Nathans, Philadelphia.

Second division.—Major General William T. Rogers, Doylestown; Colonel John Davis, Davisville; Colonel Simpson Torbert, Dolington.

Third division.—Major John Kerlin, Downingtown; Lieutenant John K. Zeilin, Chester; Lieutenant David B. Reed, West Chester.

Fourth division.—Major Frederick Hambright, Lancaster; Major John Maglaughlin, Elizabethtown; Captain David Miller, Lancaster.

Fifth division.—General Michael Doudel, York; General Thomas C. Miller, Colonel Michael Clarkson, Gettysburg.

Sixth division.—General George D. B. Keim, Reading; Major William F. Dean, Pottsville; Captain E. W. Roberts, Harrisburg.

Seventh division.—Colonel George Weber, Kreidersville; Major John W. Hornbeck, Allentown; Captain Oliver S. Dimmick, Milford.

Eighth division.—General Henry Frick, Milton; Colonel Joseph Paxton, Catawissa; Colonel C. M. Straub, Selinsgrove.

Ninth division.—Colonel James P. Bull, Towanda; James Lowry, esq., Wellsborough; Major Robert Fleming, Williamsport.

Tenth division.—Captain William Williams, Huntingdon; Major Abraham S. Wilson, Lewistown; Captain George Buchanan, Spring Mills, Centre county.

Eleventh division.—General Willis Foulke, Carlisle; Major Alexander Magee, Bloomfield; Captain Jasper E. Brady, Chambersburg.

Twelfth division.—Major Isaac Teeter, Ebensburg; Captain Thomas B. McElwee, Bedford; Captain Daniel Weyand, Berlin.

Thirteenth division.—Major John B. Alexander, Greensburg; Colonel Samuel Evans, Uniontown, Fayette county; Lieutenant L. L. Bigelow, Adamsburg, Westmoreland county.

Fourteenth division.—Colonel John Buckingham, West Buckingham, Washington county; Colonel Isaac Hodgens, Washington, Pennsylvania; Major Corbly Garard, Whiteley, Greene county.

Fifteenth division.—Major E. Travilla, Major A. McFarland, Jonathan Large, esq., Pittsburg.

Sixteenth division.—Brigadier General John Dick, Meadville; Colonel William Hamilton, Mercer; Colonel Joseph Vera, Beaver.

On motion of Mr. Merrill, the following resolution was unanimously adopted:

Resolved, That the thanks of this convention be, and they are hereby, tendered to the president, vice-presidents, and secretaries thereof, for the ability, impartiality, and diligence with which they have discharged their duties.

On motion of Mr. Miller, of Adams, the following resolution was unanimously adopted:

Resolved, That the thanks of this convention be tendered to the commissioners of the county of Dauphin for their kindness in granting the use of the court-house.

On motion of Mr. Nathans, the following resolution was unanimously adopted:

Resolved, That the thanks of this convention be, and they are hereby, tendered to the committee appointed to suggest matters for the consideration of the convention for their diligent discharge of that duty.

On motion of Mr. Page,

Ordered, That Messrs. Page, Ringland, and Franklin be a committee to revise the proceedings of this convention and attend to publication.

The convention then adjourned *sine die*.

JOHN B. ALEXANDER, *President.*
WILLIAM B. MITCHELL,
WILLIAM DOWNEY,
WILLIS FOULKE,
SAMUEL A. PRICE,
Vice-Presidents.

SIMPSON TORBERT,
WALTER S. FRANKLIN,
Secretaries.

22D CONGRESS.] **No. 510.** [1ST SESSION

ANNUAL RETURNS OF THE MILITIA OF THE UNITED STATES FOR 1831.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 7, 1832.

DEPARTMENT OF WAR, *February* 6, 1832.

SIR: I have the honor to transmit herewith abstracts of the returns of the militia of the United States, required by the first section of an act of Congress of the 2d March, 1803, the more effectually to provide for the national defence, by establishing a uniform militia throughout the United States.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives.*

Abstract of the general annual returns of the militia of the United States, by States and Territories, according to the act of March, 1803, for the year 1831.

ADJUTANT GENERAL'S OFFICE, *Washington, February* 6, 1832.

R. JONES, *Adjutant General United States Army.*

22D CONGRESS.] No. 511. [1ST SESSION.

ON THE EXPEDIENCY OF PROHIBITING THE APPOINTMENT OF CAPTAINS IN THE STAFF, OF REDUCING THE NUMBER OF CADETS, AND OF PROMOTING MERITORIOUS NON-COMMISSIONED OFFICERS OF THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 8, 1832.

Mr. DRAYTON, from the Committee on Military Affairs, to whom certain resolutions of the House were referred instructing them to inquire into the expediency of retaining captains with their companies, of vesting a discretion in the Executive to promote meritorious non-commissioned officers, of reducing the number of the cadets at the Military Academy, so as to enable the President to exercise this discretion, and of prohibiting the appointment of any cadet under the age of seventeen years, reported:

It is obvious to every one who is conversant with the details of an army that its police, good order, and discipline depend more upon the ability and personal attention of officers at the head of companies than of any others in a regiment. It is therefore peculiarly important that captains should not be removed from their appropriate commands. If permanently removed, they are succeeded by lieutenants, who do not feel so strong an excitement to the faithful and laborious performance of their duties, as the credit which they ought to receive for their exertions would not devolve upon themselves, but upon their absent captains. This necessarily tends to impair that professional pride and emulation without which a military body becomes a sluggish and comparatively an inefficient mass. If a captain be occasionally removed from his company, his place would frequently be supplied by those who have not his experience, and who differ from him in their opinions and dispositions. The progress of improvement would thus be retarded by a departure from uniformity of system, and dissatisfaction would be produced among the soldiers by novel and perhaps conflicting regulations, sometimes mildly and sometimes harshly enforced, according to the varying tempers of the officers in temporary authority. To remedy the injurious results which the committee have adverted to, they recommend the abolition of the practice of so employing captains as to detach them from the superintendence of their companies.

It is unnecessary to invest the President with a discretion to promote non-commissioned officers to second lieutenancies. This discretion he already possesses under the Constitution; but he cannot appoint a supernumerary or brevet officer without the special authority of Congress. By an act passed on the 29th of April, 1812, the President, when there is no vacancy in the line, is empowered to attach the graduates of the Military Academy to any corps, by brevets of the lowest grade, "provided that there shall not be more than one supernumerary officer to any company at the same time." This power being limited in its application to graduates of the Military Academy, cannot be extended to other persons. Should the President, then, confer a second lieutenancy upon a non-commissioned officer, he would place him over all the brevet second lieutenants previously existing, in violation of a principle of military usage so long established that a departure from it, excepting under peculiar circumstances, would be attended with the most injurious consequences. To enable the President, therefore, to act upon his discretion of promoting non-commissioned officers without violating military usage, the committee have inserted a special provision in the bill which they propose to report.

To ascertain what reduction ought to be made in the number of the cadets at the Military Academy so as to enable the President to promote non-commissioned officers, even should all the graduates be appointed to brevet second lieutenancies, it will be necessary to calculate, with as much accuracy as practicable, the number of graduates which the present establishment furnishes, as well as the number of vacancies which annually occur in the army.

The late Secretary of War, in his report to Congress on the —— day of January, 1831, stated that the number of vacancies for the preceding five years annually averaged twenty-two, while the number of graduates at the Military Academy annually averaged forty. The present Secretary of War, in his report to Congress at the commencement of this session, states the annual average of vacancies during the same period to have been twenty-three, and that of the graduates to have been forty. Neither of these statements agrees with the Army Register, from which it appears that the vacancies from resignations, deaths, &c., during the period referred to, (excepting the year 1828, for which no list was published,) were twenty-seven in 1826, thirty in 1827, twenty-five in 1829, and twenty-four in 1830. Now, assuming for 1828 the mean for the preceding and following year, which is twenty-seven, the whole number of vacancies for the five years was one hundred and thirty-three, making the annual average a little less than twenty-seven. In this estimate eight brevet second lieutenants are included, but it is immaterial in the result whether they are added to the vacancies or subtracted from the graduates. It is further to be remarked that during the five years from 1826 to 1830 inclusive, the number of graduates was greater and that of the vacancies less than in any other equal period which could have been selected. Taking the whole of the interval from the reduction of the army in 1821 to this time, it will be found that the annual average of vacancies would be twenty-eight, and of graduates thirty-six. This being the number of graduates annually furnished by two hundred and sixty cadets, whose term of study is four years, if the cadets be reduced to two hundred and thirty-seven, and their term of study be enlarged to five years, the annual average of graduates would be about twenty-four, a number which would not interfere with the occasional promotion of non-commissioned officers, even should commissions be conferred upon all the graduates; but as the President's power of appointing supernumerary second lieutenants will not, should the bill now reported become a law, be restricted to the graduates at the Military Academy, he may exercise his discretion indiscriminately upon graduates and non-commissioned officers. By substituting five years as the term of study instead of four, the course of instruction at the academy would be extended and essentially improved by affording an opportunity for comprehending within it much practical and scientific knowledge highly important in the education of an officer, from the acquisition of which the cadets have hitherto been excluded solely through want of time.

If the cadet remained only four years at the Military Academy, the committee would recommend that he should not be admitted into it until he was seventeen; but as it is contemplated that his term of study should be five years, it is considered to be preferable that he should be received at the age of sixteen, as

by the time that he has passed through his course of instruction he will have attained the age of twenty-one.

As connected with a part of the subject referred to the committee, they have introduced into the bill submitted by them some provisions for the improvement of the organization and of the general condition of the Military Academy, which they deem to be necessary in order to carry into more perfect execution the important objects for which that institution was erected.

To effect the foregoing purposes, the committee have reported the following bill:

TWENTY-SECOND CONGRESS, FIRST SESSION.

IN THE HOUSE OF REPRESENTATIVES, *January* 4, 1832.

On motion of Mr. Wickliffe,

1st. *Resolved*, That the Committee on Military Affairs be instructed to inquire into the expediency of vacating all present and prohibiting all future appointments in the staff of the army from the captains of the line, and to require that each captain shall be kept with and in command of his appropriate company.

2d. That the Executive be vested with a discretion to appoint from the non-commissioned officers of the army, where they may be found worthy of promotion, a certain portion of the second lieutenants.

3d. That, in order to enable the President to do this, the committee further inquire into the expedieny of reducing the number of cadets in the Military Academy at West Point, and to prohibit the appointment of any cadet who has not arrived at the age of seventeen years.

Attest: M. S. CLARKE, *Clerk.*

22D CONGRESS. | No. 512. | [1ST SESSION.

ON A CLAIM TO LAND IN MICHIGAN UPON WHICH FORT GRATIOT STANDS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 13, 1832.

Mr. DRAYTON, from the Committe on Military Affairs, to whom the petition of Andrew Westbrook was referred, reported:

By referring to a letter dated the 16th June, 1829, written by the Attorney General of the United States to the Secretary of War, upon the subject of the petitioner's claim, it appears to the committee that he is not entitled to the relief which he seeks for; the committee, therefore, recommend the adoption of the following resolution:

Resolved, That the prayer of the petitioner ought to be rejected.

WAR DEPARTMENT, *December* 26, 1829.

SIR: Your letter of the 24th, and the accompanying papers, relative to the claim of Andrew Westbrook, have been received. As furnishing information on the subject, I send you a copy of a letter addressed from the department in June last to the commanding officer at Fort Gratiot, with the opinion which was given by Mr. Berrien, the Attorney General.

Very respectfully, your obedient servant,

JNO. H. EATON.

Col. W. DRAYTON, *Chairman of the Military Committee.*

DEPARTMENT OF WAR, *June* 17, 1829.

SIR: The delay in answering your communication of the 23d of April has been occasioned by the absence of the Attorney General from the seat of government. His opinion I now send you. He having settled that the United States claim to Fort Gratiot is valid and unaffected by that of P. Bonhommie, you will be expected to retain the post until ordered from this department to abandon it. If, for any imputed trespass, or for the retention of the fort and adjacent lands, suits shall be brought against you, or if, under any circumstances, legal proceedings shall arise, you will call for the aid of the United States attorney in Michigan, and employ an assistant counsel should you deem it advisable.

Should anything arise, you will forthwith advise the department. Suits against the United States officers for alleged trespasses becoming frequent, and the damages assessed being often excessive and wrong, it will become necessary to propose to Congress at the next session to direct appeals in all cases where the government shall be a party to the Supreme Court.

I have the honor to be your obedient servant,

J. H. EATON.

Brevet Col. ALEXA. R. THOMPSON, *Fort Gratiot, Michigan Territory.*

ATTORNEY GENERAL'S OFFICE, *June* 16, 1829.

SIR: By the statement of the Commissioner of the General Land Office, it appears that the land on which *Fort Gratiot* stands, and certain lands adjacent to it, had, before the 21st August, 1818, been reserved by the President of the United States for military purposes, and that on that day letters were addressed to the register and receiver of the land office at Detroit, notifying to them the fact of such reservation.

The conflicting claim of Pierre Bonhommie to the same land, it appears by the same statement, was filed on the 31st December, 1808, under the provisions of the second section of the act of 3d March, 1807, but no other proceedings appear to have been had upon such claim before that commission.

This claim was again presented to commissioners acting under the authority of the act of the 11th of May, 1820, and confirmed with a suggestion of the expediency of changing the location, as it includes the lands on which Fort Gratiot stands. The executive department having considered the report of this commission, particularly in relation to lands reserved for military purposes, as being exceptionable, the whole matter was referred to Congress, who thereupon passed the act of 17th April, 1828, which confirms the claims purporting to be confirmed, or recommended for confirmation by the commissioners last referred to, with a proviso that such act should not be construed (*inter alia*) "to extend to any lands occupied by the United States for military purposes."

From this summary it is manifest that Pierre Bonhommie has no claim which can be recognized by the executive department to any lands within the military reservation on which Fort Gratiot stands. Whatever right the priority of his location may have given to him, that right has not been recognized by Congress, under whose authority, as given by the act last referred to, a patent can only issue for so much of the land embraced in his claim as lies without the limits of such military reservation.

It is seen by the statement of the Commissioner of the General Land Office that this land was many years since occupied by the United States for military purposes, and the fact is recognized in the decision of the commissioners. Whether the claim of Pierre Bonhommie, founded on the priority of his location to the military occupation of these lands by the government of the United States, ought to have been recognized by Congress, is not for us to decide. It suffices that that claim was inchoate, and not susceptible of enforcement but by the aid of the government, and that aid has been afforded on terms which expressly forbid the extension of the confirmation to the lands included within the military reservation.

In the actual posture of this matter, I am therefore of opinion that it is the duty of the executive department to maintain the claim of the United States to the lands so included within the military reservation above referred to

I have the honor to be, very respectfully, sir, your obedient servant,

J. M. BERRIEN.

Hon. J. H. EATON, *Department of War.*

22D CONGRESS.] No. 513. [1ST SESSION.

ON CLAIM OF THE OFFICERS OF THE ARMY AT FORT DELAWARE TO BE REIMBURSED FOR LOSSES BY THE DESTRUCTION OF THAT FORT BY FIRE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 18, 1832.

Mr. DRAYTON, from the Committee on Military Affairs, to whom was referred the petition of several officers of the army, praying to be reimbursed for losses which they sustained in consequence of the destruction of Fort Delaware by fire, reported:

That, as a general principle, they should deem it inexpedient to make any compensation to officers for losses which they might incur from the casualty of fire; but as it satisfactorily appears that the petitioners and the garrison at Fort Delaware, in their zeal to preserve the public stores, utterly neglected all attention to their own property, the committee are of opinion that this special circumstance constitutes an exception to a general rule, and entitles the sufferers to relief. They therefore report a bill for that purpose.

To the honorable the Senate and House of Representatives:

The petition of the undersigned officers of the United States army formerly stationed at Fort Delaware, most respectfully showeth: That your petitioners, by the conflagration of the post above named, on the night of the 8th of February last, have sustained considerable losses by the destruction of a large portion of their furniture, stores, and the clothing of themselves and families; and they would state that during the time in which they were employed in endeavoring to arrest the progress of the flames, removing the powder from the magazines, and various other public duties incident to their situation, they were precluded from making those endeavors to save their own property which they otherwise might have made. And whereas their losses are in no manner to be attributed to their carelessness or negligence, but to their endeavors to save the public property, they most respectfully solicit that they may be remunerated therefor. In support of the above statement, they beg leave to refer to the report of the court of inquiry held in relation to the burning of Fort Delaware, of which Brevet Brigadier General Fenwick was president.

They would also represent that the annexed schedule contains, as they believe, a very small estimate of their respective losses. And in thus requesting aid, as in duty bound, your petitioners will ever pray.

W. W. MORRIS, *Col. 4th Artillery.*
B. K. PIERCE, *Maj. U. S. Artillery.*
JNO. GARDNER, *Capt. 4th Artillery.*
CHARLES WARD, *Lieut. 4th U. S. Art.*
ALFRED W. ELWES, *Ass't Surgeon.*
W. P. BAINBRIDGE, *Lieut. U. S. Artillery.*

NEWCASTLE, *Delaware, December* 24, 1831.

HEADQUARTERS OF THE ARMY, *Washington, January* 27, 1832.

SIR: Your letter of the 24th of January, addressed to the Secretary of War, asking for a copy of the proceedings of the court of inquiry of which Brevet Brigadier General Fenwick was president, relating to the burning of Fort Delaware, has been referred to me. I have now the honor to transmit to you a copy of the proceedings in question.

Very respectfully, sir, your most obedient servant,

ALEX. MACOMB, *Major Gen.*

Colonel WM. DRAYTON, *Ho. of Reps., Capitol.*

Proceedings of a Court of Inquiry held at Newcastle, State of Delaware, by virtue of the following order:

ORDER No. 4.

ADJUTANT GENERAL'S OFFICE, *Washington, February* 16, 1831.

On the demand of Brevet Major Pierce, of the 4th regiment of artillery, commandant of Fort Delaware, a court of inquiry, to consist of Brevet Brigadier General Fenwick, 4th regiment of artillery, Brevet Lieut. Colonel Bankhead, 3d regiment of artillery, and Brevet Major Payne, 4th regiment of artillery, members, will assemble at Newcastle, Delaware, on the 19th of February, 1831, or as soon thereafter as practicable, to inquire into the causes and circumstances which led to the burning of Fort Delaware, and to report the facts, together with their opinion thereon.

Lieut. Henry A. Thompson, adjutant of the 4th regiment of artillery, will act as recorder to the court.

Should any circumstance prevent the attendance of a member, the remaining member or members of the court will proceed to the inquiry notwithstanding.

By order of Major General MACOMB.

R. JONES, *Adjutant General.*

NEWCASTLE, *Delaware, February* 21, 1831.

The court of inquiry assembled, pursuant to the above order. Present: Brevet Brigadier General Fenwick, 4th regiment of artillery; Brevet Lieutenant Colonel Bankhead, 3d regiment of artillery; Brevet Major Payne, 4th regiment of artillery, members; Lieutenant Henry A. Thompson, adjutant 4th regiment of artillery, recorder.

Brevet Major B. K. PIERCE, of the 4th regiment of artillery, commanding officer at Fort Delaware, being duly sworn, states: On the night of the 8th instant, at about half past ten o'clock, I heard the sentinel inside the garrison gateway give the alarm of fire. I immediately sprang from my bed and opened the front door of my quarters, from which I could see the greater part of the fort. I looked for a moment, but did not discover any fire. In the meantime the sentinel stepped upon the bridge and hailed the guard. I then observed the smoke ascending from the roof, and the fire shining through the crevice of the door (which is in the roof) over the centre of the quarters occupied by Lieutenant Tuttle, of the engineer corps. I then called as loud as I could for the troops immediately to turn out with axes, buckets, and whatever they could procure, directing the "long roll" to be beat at the same time. With the first men that appeared I repaired immediately to the stairway to the loft where I first discovered the fire; by this time the fire burst forth from the roof in a large body, and it was impossible for any of us to ascend into the loft in consequence of the flames and smoke. A line of men was formed without delay from the ditch to the steps, and the water was thrown on at this place. Finding it impossible to arrest the progress of the flames here, we repaired to another part of the fort to cut away the roof; but the smoke was so dense that we could not remain in the loft. Similar attempts were made at one or two places more with the men, but always met with the same dense smoke to repel us. The whole of the roof, in a very short time, was in a blaze. From the commencement of the fire, and during the whole night, the command were exerting themselves in endeavoring to arrest the fire, and saving all the public property they could. As soon as I discovered the fire spreading, I directed all the powder to be taken from the magazine and to be thrown through the embrasures on the outside. The powder exploded in consequence of the fire falling on it from the roof; there was no other explosion except that which occurred on the outside, and no damage done to the work by the explosion.

Question by the court. What means had you to extinguish the fire? Were there any public buckets, fire engine, or hose? How was water obtained?

Answer. The only means we had were such axes, public and private, as were in the garrison. There were no public buckets, no fire engine, and no hose at the post. The water was obtained from the ditch around the fort by cutting through the ice.

Question by the court. What were the standing orders of the post respecting lights and fires? were they regularly communicated to the officer of the guard?

Answer. The standing orders of the post are, that all lights and fires should be extinguished at the "taps" after tattoo; that no fire or lights should be carried across the parade except in lanterns. They were regularly communicated to the officer of the day and to the guard; and it was a standing order that the guard should be particularly vigilant in discovering and reporting any fire that should proceed from the chimneys or stove pipes, or other places. Aware of my responsibility as commanding officer, I was very particular in pressing upon the whole command the necessity of constant vigilance in regard to fires, particlarly as the roof was always exposed to such a casualty, being made of wood, and of very combustible material. As a means of precaution, the chimneys and stove pipes were frequently burnt out in wet weather.

Lieutenant BROWN, 4th regiment of artillery, being duly sworn, states: When I was first alarmed I ran to the door, and the fire was then making its appearance over the quarters of Lieutenant Tuttle; the fire had not obtained the ridge of the roof. I could distinctly see the fire, and there is not a shadow of doubt in my mind but that the fire communicated to the roof of the large temporary wooden covering which surmounted the walls of the fort from the stove or chimney pipe appertaining to Lieutenant Tuttle's quarters. I am confirmed in this opinion from the fact that, as soon as I could put on my clothes, I proceeded to the magazine immediately contiguous to those quarters, and from thence could see no fire in any other part of the building, although, in a very few seconds, (such was the unparalled rapidity of the flames both to the right and left,) the flames and smoke were seen issuing from the windows on either side. When I reached the parade ground I found a few men clothed, and having ordered them to follow me, I hastily proceeded to the magazine, knowing the doors were wooden, and that no time was to be lost in disposing of the powder. When I got to the door I found that Major Pierce had already preceded me there, and that the men were, under his directions about entering the magazine. Finding my services not required there, I again proceeded to the parade, and from thence to my quarters. Having, as I first crossed to go to the magazine, ordered Sergeant Beal to take some men and go to the company storeroom, and endeavor to save the clothing, the sergeant undertook this dangerous duty, got safely to the storeroom, but was immediately followed by the smoke in such dense columns that his retreat was cut off, and he had to cut through company D's storeroom in order to escape. Finding now that all human exertions to save the upper building were vain, there being no fire engine at the post, I turned my whole attention to my family, and succeeded, with infinite difficulty, (the increase and rapidity of the flames being beyond all possible calculation,) in saving them. After having safely got them out, I attempted to return, in order to save my company quarters; but they were now all in one vivid flame, and there was no getting into the fort by the gateway. I therefore proceeded with ten or fifteen men opposite my quarters, crossed the hard-frozen ditch, and having crept through an embrasure again reached them. Having collected what few buckets we could, we commenced extinguishing the burning beams which were constantly falling on the balcony from the roof above. In this excessively arduous and dangerous employment the detachment continued for about six successive hours. The labor and exertions of the men were incredible; their conduct was beyond all praise. Apparently regardless of the immense flaming beams which were constantly falling, they continued without intermission to keep the fire down during the whole time, although the wooden fronts, the window shutters, windows, and casings were repeatedly in flames. I had very sanguine hopes that their exertions would be crowned with success, and that Lieutenant Morris's and my own quarters would be saved, when it was reported to me that the flames were undermining us. I ran down stairs, and found Lieutenant Morris's kitchen and all the beams overhead in flames. Not yet despairing of saving my own quarters, I directed Corporal Chanier and Private Beal to cut away the floor near a buttress, and where the passage was very narrow, intending here to make a final stand, when it was again reported to me that the fire had taken to the bottom of the floor of my quarters, both to the right and left. I soon found the report to be too true by the flames issuing forth in front and rear. All hope being now gone, I ordered the men to retreat for their lives, which the brave fellows all did in safety by means of a small back stairs which led to my kitchen and from thence through an embrasure, the fire surrounding them on every side. I cannot express, in terms of sufficiently high praise, my admiration of the conduct of the detachment under my command. Their exertions were incessant from about 11 o'clock at night until, I think, about 5 o'clock in the morning, and during a large portion of this time exposed to great danger from the constantly falling timbers. So far as my knowledge extends, the police of the garrison, as it respects fires, has been to enforce the care and caution necessary at all times to be observed in guarding against this dangerous element; and for this purpose the sentinels have always had it in orders to see that all fires were extinguished at tattoo, and also to be vigilant and watchful, that if any fires should occur they might immediately report it.

Lieutenant WARD, 4th regiment of artillery, being duly sworn, states: I was officer of the day on the 8th instant. On my questioning the sentinels on going "the rounds," they all gave their orders as if they understood them correctly, particularly on the subject of fires. I found them all vigilant and attentive to their duties. The flues and chimneys were burnt out (in rainy weather) when it was deemed necessary to have them cleansed. The commanding officer, being under constant apprehension that some accident might occur from fire, endeavored at all times to press upon the command the importance of vigilance in guarding against fire.

Lieutenant TUTTLE, of the engineer corps, being duly sworn, states: The following are the facts as they occurred to me, although, from the confusion of the moment, I may not recollect all the particulars. On the first alarm, my assistant, accompanied by two privates, ascended the staircase over my quarters, and immediately returned and reported that the fire was progressing with surprising rapidity underneath the shingles along the roof, in a westerly direction, and, he thinks, from the distance of a few feet. The fire passed from one curtain to another, as nearly as I can recollect, without bursting from the intermediate faces and flanks. Every effort to save both public and private property was made during the space of nine hours. The quarters, however, were necessarily abandoned; all the officers remaining on the parade, notwithstanding the dense and suffocating volumes of smoke.

Corporal PARSONS, of company A, 4th regiment of artillery, being duly sworn, states: I was acting sergeant of the guard on the 8th instant. The orders I received from the non-commissioned officer commanding the guard whom I relieved, and from the officer of the day, were, to be vigilant about fires, and report them immediately on occurring; and these orders were given to all the sentinels, particularly to No. 2, at the gateway, he being a recruit, but was very attentive to his duty. No. 2 was posted particularly to guard against fires and to give the alarm.

Private HOMEGAN, of company D, 4th regiment of artillery, being duly sworn, states: I was sentinel of the post No. 2 on the 8th instant, and was posted at nine o'clock at night. I discovered a smoke about

half past ten, or between ten and eleven o'clock that night, when I immediately opened the gate and called for the corporal of the guard. I gave the alarm of fire immediately afterwards, and in a very short time the fire burst out from the roof over Lieutenant Tuttle's quarters, very near the stove pipe. My orders were to take charge of the public property; to see that there was no dirt or filth thrown on the parade; to allow no water to be taken from the tanks, except when issued under the charge of Corporal Hays; to prevent all noise and quarrelling; to see, after tattoo, that no light was taken across the parade or about the quarters, except in lanterns; to allow no one to pass without the countersign; if a fire was discovered, to call immediately for the corporal of the guard and give the alarm.

Lieutenant TUTTLE further states: As far as I can judge, an excellent police has been preserved on the island. On the morning of the 9th instant, previous to the ascent of any other person, I visited the summit of the work, and, in presence of witnesses, discovered a portable furnace on the crown of the arch, where some citizens suppose that they first saw the fire, and at some distance in the same direction the remains of a lantern where the fire originated; or whether from accident or design, I can form no opinion.

The court, after a full examination into the causes of the conflagration of Fort Delaware on the 8th instant, have been induced to the following conclusion from the testimony presented to it. The evidence seems to establish the following facts: that the fire was communicated from a chimney to the roof by accident rather than design; that so soon as discovered every exertion was made and every means employed by the officers and men to extinguish it and arrest its progress; that their efforts were ineffectual, both from the want of engines and implements necessary on such occasions, as well as from the very combustible nature of the materials of the roof and platforms. It appears, moreover, from the testimony, that every precaution was taken by the commanding officer, Brevet Major Pierce, of the 4th regiment of artillery, from his instructions and his counsel, to guard against fire; that the guard and sentinels were particularly alert and attentive in the execution of their duty. The court is therefore unanimously of opinion that neither blame nor censure can attach to Major Pierce, the commandant, nor any of his command; that every exertion had been made within the power of the officers and men to save the public property; that although their great exertions proved unavailing, the court is in justice bound to express their further opinion that much credit is due to them for their zeal and persevering efforts to contend with the difficulties constantly opposing them, even to the sacrifice of their private property, and the imminent danger to which their families were so long exposed.

The court adjourned to meet to-morrow, at 9 o'clock in the morning, in order to give the recorder time to make a fair copy of its proceedings.

NEWCASTLE, *Delaware, February* 22, 1831.

The court met pursuant to adjournment. Present: Brevet Brigadier General Fenwick, 4th regiment of artillery; Brevet Lieutenant Colonel Bankhead, 3d regiment of artillery; Brevet Major Payne, 4th regiment of artillery, members; Lieutenant Henry A. Thompson, adjutant 4th regiment of artillery, recorder.

The proceedings having been read over, the court adjourned *sine die.*

JOHN R. FENWICK, *Brevet Brigadier General.*

JANUARY 27, 1832.

ORDER No. 13.

ADJUTANT GENERAL'S OFFICE, *Washington, April* 27, 1831.

I. The proceedings of the court of inquiry of which Brevet Brigadier General Fenwick is president, held at Newcastle, Delaware, in pursuance of Order No. 4, and at the request of Brevet Major Pierce, of the 4th regiment of artillery, the commandant of Fort Delaware, to inquire into the causes and circumstances which led to the burning of Fort Delaware, have been received at general headquarters.

II. The following is the opinion of the court:

The court, after a full examination into the causes of the conflagration of Fort Delaware on the 8th instant, (March,) have been induced to the following conclusion from the testimony presented to it. The evidence seems to establish the following facts: that the fire was communicated from a chimney to the roof by accident rather than design; that so soon as discovered every exertion was made and every means employed by the officers and men to extinguish it and arrest its progress; that their efforts were ineffectual, both from the want of engines and implements necessary on such occasions, as well as from the very combustible nature of the materials of the roof and platforms. It appears, moreover, from the testimony, that every precaution was taken by the commanding officer, Brevet Major Pierce, of the 4th regiment of artillery, from his instructions and his counsel, to guard against fire; that the guard and sentinels were particularly alert and attentive in the execution of their duty. The court is therefore unanimously of opinion that neither blame nor censure can attach to Major Pierce, the commandant, nor any of his command; that every exertion had been made within the power of the officers and men to save the public property; that although their great exercions proved unavailing, the court is in justice bound to express their further opinion that much credit is due to them for their zeal and persevering efforts to contend with the difficulties constantly opposing them, even to the sacrifice of their private property, and imminent danger to which their families were so long exposed.

III. The general-in-chief approves the opinion of the court. The court of inquiry of which Brevet Brigadier General Fenwick is president is hereby dissolved.

By order of Major General Macomb.

R. JONES, *Adjutant General.*

22D CONGRESS.] No. 514. [1ST SESSION.

ON THE CLAIMS OF CONNECTICUT FOR THE SERVICES OF THE MILITIA OF THAT STATE DURING THE WAR OF 1812-'15.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 23, 1832.

DEPARTMENT OF WAR, *February* 20, 1832.

SIR: In obedience to the resolution of the House of Representatives of the 6th ultimo, directing the Secretary of War to report to that House "a statement of the claims of the State of Connecticut against the United States for disbursements made by said State, and for the services and expenses of her militia during the late war, and of such proceedings as may have been had at the War Department in relation thereto," I have the honor to transmit a report of the Third Auditor of the Treasury, which will furnish the information required.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

Hon ANDREW STEVENSON, *Speaker of the House of Representatives.*

A schedule of correspondence, &c., of which copies or extracts accompanied the letter of the Third Auditor to the Hon. Secretary of War, dated February 18, 1832, having relation to the claims of the State of Connecticut.

Correspondence between the Secretary of War and the Governor of Connecticut.

July 4, 1814.—Secretary of War to the Governor.
Aug. 1, 1814.—Governor Smith to the Secretary of War.
Aug. 11, 1814.—Governor Smith to the Secretary of War.
Aug. 17, 1814.—Secretary of War to Governor Smith.
Sept. 3, 1814.—Governor Smith to the Secretary of War.
Sept. 14, 1814.—Governor Smith to the Secretary of War.
Sept. 17, 1814.—Secretary of War to the Governor of Massachusetts. [A marginal note in the correspondence records evinces that a similar letter was written to the governor of Connecticut.]
Oct. 10, 1814.—Governor Smith to the Secretary of War.
Oct. 17, 1814.—Secretary of War to Governor Smith.

Correspondence between the Secretary of War and Brigadier General Cushing.

July 12, 1814.—Secretary of War to General Cushing.
July 27, 1814.—General Cushing to the Secretary of War, [extract.]
Aug. 12, 1814.—General Cushing to the Secretary of War, [extract.]
Aug. 17, 1814.—Secretary of War to General Cushing, [extract.]
Aug. 29, 1814.—General Cushing to the Secretary of War, [extract.]
Sept. 2, 1814.—General Cushing to the Secretary of War.
Sept. 8, 1814.—General Cushing to the Secretary of War.
Sept. 12, 1814.—General Cushing to the Secretary of War.

Correspondence between Brigadier General Cushing and Governor Smith.

Aug. 1, 1814.—General Cushing to Governor Smith.
Aug. 4, 1814.—Governor Smith to General Cushing.
Aug. 10, 1814.—General Cushing to Governor Smith, and district order.
Aug. 11, 1814.—Governor Smith to General Cushing.
Aug. 12, 1814.—General Cushing to Governor Smith.
Aug. 14, 1814.—General Cushing to Governor Smith.
Aug. 17, 1814.—Governor Smith to General Cushing.
Aug. 18, 1814.—General Cushing to Governor Smith.
Aug. 21, 1814.—Governor Smith to General Cushing.
Aug. 22, 1814.—General Cushing to Governor Smith.
Aug. 24, 1814.—General Cushing to Governor Smith.
Aug. 25, 1814.—Governor Smith to General Cushing.

Aug. 30, 1814.—Governor Smith to General Cushing.
Sept. 2, 1814.—General Cushing to Governor Smith.
Sept. 9, 1814.—Governor Smith to General Cushing.

Miscellaneous.

Aug. 11, 1814.—Governor Smith's order to Brigadier General Lusk, referred to in the governor's letter to General Cushing of same date.
Aug. 19 and 20, 1814.—Proceedings of the civil authority and selectmen of New Haven.
Aug. 24, 1814.—Proceedings at a meeting of the governor and council.
Aug. 27, 1814.—Letter of Brigadier General Isham to General Cushing, referred to in General Cushing's letter to the Secretary of War, September 8, 1814.

Sept. 12, 1814.—Letter of Brigadier General Cushing to Brigadier General Lusk, referred to in General Cushing's letter to the Secretary of War of the same date.
Sept. 12, 1814.—General Lusk's reply, referred to in General Cushing's letter to the Secretary of War of the same date.
Sept. 12, 1814.—General Cushing's order, referred to in General Cushing's letter to the Secretary of War of the same date.
Oct. 31, 1816.—Statement of the claims of Connecticut.
Jan. 9, 1817.—Governor Smith's summary view of the circumstances under which the militia of Connecticut were in service.
Feb. 22, 1817.—Directions of the War Department as to the settlement of the claims.
June 26, 1819.—Letter of the Third Auditor to Governor Wolcott.
Statement of remarks by the Third Auditor, made on the reinvestigation of the claims.

TREASURY DEPARTMENT, *Third Auditor's Office, February* 18, 1832.

SIR: In pursuance of the resolution of the House of Representatives of the 6th ultimo, directing the Secretary of War to report to that House a statement of the claims of the State of Connecticut against the United States for disbursements made by said State, and for the services and expenses of her militia during the late war, and of such proceedings as may have been had at the Department of War in relation thereto, and of which resolution a copy has been by you referred to this office, I have the honor to send to you herewith a transcript of the statement of the claims as prepared by the comptroller of the State, a transcript of the instructions given by the War Department on the 22d February, 1817, for my guidance in auditing them, and transcripts of certain other papers, and of the correspondence between the governor of the State and the War Department, between the governor and Brigadier General Cushing, and between the general and the War Department, wherein the circumstances on which the instructions seem to have been predicated are described. Soon after the date of those instructions, to wit, on the 11th March, 1817, a warrant was issued by the Secretary of War for an advance to the State of $50,000 on account, and with which sum the State stands charged. Subsequently the claims received an examination in this office, and a detailed statement exhibiting the result was transmitted by me to his excellency Governor Wolcott on the 26th June, 1819, with a letter, of which a copy is herewith sent. No reply thereto has ever reached me, and the claims remain unsettled. Since then decisions have been made by the War Department on the settlement of the claims of other States, which in some respects were applicable to those of the State of Connecticut. Owing thereto, and to other causes, it has been deemed proper to give to the latter another examination, and the result thereof is particularly explained in a long statement of remarks herewith transmitted. A schedule of the papers sent accompanies them. Various correspondence, other than that therein specified, is on file with the accounts, but being all dated prior to July, 1814, and relating only to militia, the services of which have been recognized by the general government, copies thereof are supposed to be needless, and have not, therefore, been furnished.

With great respect, your most obedient servant,

PETER HAGNER, *Auditor.*

Hon. LEWIS CASS, *Secretary of War.*

ELISHA COLT, *Comptroller of Public Accounts.*

A summary view of the circumstances under which the militia of the State of Connecticut were brought into service during the late war.

1813.

No part of the militia of Connecticut was brought into the field until the American squadron took refuge in the harbor of New London from the superior naval force of the enemy, June 1, A. D. 1813. The pay-rolls of the militia, called into service for the protection of the national vessels and the coast during that campaign were, it is believed, satisfied by the general government, excepting some small detachments suddenly ordered out to repel incursions of the enemy at various points, and who were discharged immediately after the exigency ceased and before notice could be given to the War Department. The pay-rolls of these detachments (small in their amount) were presented by the proper officer to the district paymaster, who informed me personally that he had received orders from Washington to discharge them, but that his funds had then failed. They were afterwards paid by the State and charged to the general government. If other charges appear in our account for militia services during that year the authority for such charges will be found in the correspondence already forwarded. During the same year advances were made by the national government to our quartermaster general and commissary general, *in part*, for expenses incurred in their respective departments. The assumption of all expenses of this nature will be seen in the letter from the Secretary of War of the 13th of July, 1813, and the report of Adjutant General Huntington referred to by the Secretary.

1814.

In the month of April, A. D. 1814, a division of boats from the blockading squadron entered the harbor of Pettipauge, in Saybrook, and burnt and destroyed a great number of our merchant vessels.—(See letter to Secretary of War, April 14, 1814.*) The consternation produced along the coast by this measure rendered it necessary to place guards of militia at several points.—(See letter to the Secretary of War, April 28, 1814.) A subaltern's command of infantry was posted at *Saybrook;* a subaltern's command of cavalry at *New Haven* to serve as videttes, and a subaltern's command of infantry at *Bridgeport.* On the 19th of May, Inspector General Kingsbury, commanding the United States troops within this State, issued orders for the inspection and subsistence of these guards.—(See his letter of the 19th of May, in answer to mine of the 17th; see also letter from Secretary of War of 9th of May, 1814.) By referring to the letters of Colonel Kingsbury, under the several dates of 22d of May, 5th, 15th, and 23d of June, 1814, it will appear that guards of militia were continued at these points, increased at some of them, and new ones established at *Stonington* and at *Mill River*, in Fairfield. They were occasionally agumented in the course of the campaign, and a part of them remained until peace was concluded. It may be added that sections of these guards were posted at *Blackrock*, near Bridgeport, at *Guilford*, near New Haven, at *Killingworth*, near Saybrook, and at *Mistick*, near New London. On the 9th of August, 1814, the hostile squadron off New London attacked and bombarded the town of Stonington, and on the same day Brigadier General Cushing, who had taken command of the United States troops in this State, requested of Major General Williams (who had my orders to furnish aid when necessary) a brigade of militia. The whole of Brigadier General Isham's brigade was thereupon immediately ordered into service. On the 10th General Cushing also requested of me seventeen hundred men, (commanded by Brigadier General Lusk,) being a majority of the detachment organized under the President's instructions of the 4th of July, 1814, which requisition was instantly complied with, and the men repaired to New London and its vicinity as early as was practicable.—(See General Cushing's letter of 10th of August, my reply, orders, &c., and letter from Secretary of War, July 4, 1814.) The command of the force thus in service was assigned to Major General Taylor, who had been detailed under the President's instructions of the 4th of July, 1814.

From the menacing operations of the enemy on our shores it was thought advisable by the governor and council to augment the force at *New Haven* and *Bridgeport* to six hundred men. The expediency of the measure was also admitted by General Cushing.—(See his letters of the 22d and 28th of August, 1814.) That force was accordingly ordered into service early in September, under Lieutenant Colonel Sanford, to strengthen those points and relieve the guards previously stationed.

Some sections of militia were likewise called out in the course of the year 1814 on sudden alarms, and after repelling the enemy were dismissed, under circumstances similar to those which occurred during the campaign of 1813.

Subsistence and supplies for our militia were furnished in part by the United States, the remainder by the State government.—(See Colonel Kingsbury's letter of 22d of May, and General Cushing's, August, 1814.) The accounts of the quartermaster general and commissary general will show to what extent advances were made by the State for those objects. The several muster-rolls and pay-rolls will also exhibit the number of men employed and the periods of service. I am not conscious that any militia were on duty who do not fall under some one of the exigencies and authorizations above-mentioned; nor do I believe that any considerable expense would have been incurred within this State during the war, but for the honorable purpose of saving our national vessels from capture or destruction.

JOHN COTTON SMITH.

JANUARY 9, 1817.

Correspondence between the Governor of Connecticut and the Secretary of War.

FEBRUARY 22, 1817.

The expenses incurred by the State of Connecticut on account of the militia called into service under the sanction of Colonel Kingsbury (see his letters of the 19th and 23d of May and 5th and 23d of June) will be assumed. Those incurred for the militia called out for the defence of the squadron at New London in 1813–'14 will be assumed up to the 12*th of September*, 1814, after which period no part of the expenses

* See also the letters to him of December 16, 1813, and February 5, 1814.

incurred by the State of Connecticut on account of militia services can be paid under the authority of the executive, as the militia were then withdrawn from the command of the United States officer and placed under that of a State officer, called into service by State authority, and not sanctioned by the President.

The expenses incurred for the militia called out by the governor of Connecticut and stationed at New Haven under the command of Colonel Sandford cannot be assumed.—(See General Cushing's letter of the 28th of August, 1814.)

Any expenses attending the call of Major General Taylor into service cannot be paid.

GEORGE GRAHAM.

MR. HAGNER.

TREASURY DEPARTMENT, *Third Auditor's Office, June* 26, 1819.

SIR: I have the honor to transmit herewith a statement of the suspensions and disallowances arising on the examination in this office of the accounts of the State of Connecticut for expenditures made during the late war. This course has been adopted with the view of affording the State the opportunity of furnishing any explanations or additional vouchers before the account is stated for the decision of the comptroller. An early attention is requested to the subject.

With great respect, your excellency's most obedient servant,

PETER HAGNER, *Auditor.*

His Excellency OLIVER WOLCOTT, *Governor of the State of Connecticut, New Haven.*

WAR DEPARTMENT, *July* 4, 1814.

SIR: The late pacification in Europe offers to the enemy a large disposable force, both naval and military, and with it the means of giving to the war here a character of new and increased activity and extent. Without knowing with certainty that such will be its application, and still less that any particular point or points will become objects of attack, the President has deemed it advisable, as a measure of precaution, to strengthen ourselves on the line of the Atlantic, and (as the principal means of doing this will be found in the militia) to invite the executives of certain States to organize and hold in readiness for immediate service a corps of ninety-three thousand five hundred men, under the laws of 28th February, 1795, and 18th of April, 1814.

The enclosed detail will show your excellency what, under this requisition, will be the quota of Connecticut. As far as volunteer uniform companies can be found they will be preferred.

The expediency of regarding (as well in the designations of the militia as of their places of rendezvous) the points, the importance or exposure of which will be most likely to attract the views of the enemy, need but be suggested.

A report of the organization of your quota, when completed, and of its place or places of rendezvous, will be acceptable.

I have the honor to be, with very great respect, your excellency's most obedient and very humble servant,

J. ARMSTRONG,

His Excellency the GOVERNOR *of Connecticut.*

The detail referred to in the foregoing letter is exhibited in a tabular statement of the quotas required from sundry States, and wherein the quota of Connecticut is set down at 300 artillery, 2,700 infantry; total number, 3,000. Number of regiments, 3. General staff, one major general, one brigadier general, one deputy quartermaster general, and one assistant adjutant general.

STATE OF CONNECTICUT, *Sharon, August* 1, 1814.

SIR: Your letter under date of the 4th July last reached me on the 16th of the same month.

Although there appears to be no act of Congress expressly authorizing a detachment from the militia for the purpose mentioned in your communication, yet the respect due to a recommendation from the President having for its object the defence of the country induced me, without unnecessary delay, to convene the council of the State and to submit the proposition to their consideration. That honorable body having advised the executive to detach the number of militia suggested as the proportion of Connecticut, orders were immediately issued to that effect, and you will speedily be informed by the proper officer of their execution.

Permit me, sir, to observe that this measure will probably be less useful here than in those States where the same system of precaution may not have been previously adopted. In general orders issued on the 19th of April last, not only the whole body of militia, but every other description of military force in the State, were directed to be held in readiness to march at a moment's warning. The militia were thoroughly inspected; signals and alarm-posts established; arms and ammunition distributed along the coast at convenient places of deposit; in short, every preparation was made "to strengthen ourselves on the line of the Atlantic" which the means of the State would afford.

The detachment can be no otherwise completed than by a draft through the several brigades. Besides the derangement such a process must occasion, it is evident the corps thus dispersed cannot be brought into the field in season to repel a sudden and powerful incursion of the enemy. Reliance must, after all, be placed upon the troops nearest the scene of danger. But is there not reason to apprehend that all who escape the draft, as well as the volunteers composed of military exempts, may feel themselves excused from that degree of vigilance which they would be otherwise bound to maintain? To prevent this effect I am of opinion it will be still necessary to continue in force the regulations prescribed in the order of April last; and it is respectfully submitted whether the great object in view—the

security of our maritime frontier—will not be as effectually promoted by dispensing with the proposed organization within the limits of this State.

Pursuant to arrangement with Colonel Kingsbury, under the instructions of the President, guards are stationed at several points on the coast. In the absence of regular troops these guards have been hitherto composed of militia. They have, indeed, contributed essentially to the safety of our harbor; but the service falls with great severity upon that industrious class of citizens at this busy season of the year. I need but suggest, sir, that no advances have yet been made by the national government either for the wages of the men or *the military supplies furnished by the quartermaster general of the State.*

With great respect, I have the honor to be, sir, your obedient and humble servant,

JOHN COTTON SMITH.

Hon. SECRETARY OF WAR.

STATE OF CONNECTICUT, *Sharon, August* 11, 1814.

SIR: By a despatch from Brigadier General Cushing I am informed of a sudden and violent attack upon Stonington on the 9th instant, the issue of which was not known on the 10th when the express came away. As you will, doubtless, have received the same or more minute intelligence from that officer, it is unnecessary to detail the particulars as communicated to me, or to hazard any speculations upon the precise views of the enemy in this unexpected movement. That his object is ultimately to reach the national squadron in the Thames there can be little doubt; and that it will be pursued with vigor is rendered probable from the reinforcements which are said to have recently arrived. The attempt, I trust, will be repelled with a becoming spirit.

It will readily occur to you, sir, that the great number of militia brought into the field in consequence of these operations must create a pressing demand for supplies of every description. General Cushing has issued orders for subsistence; but it is understood there is a deficiency of ammunition, and of everything, in short, which appertains to the quartermaster's department. Immediate provision for those objects, as well as seasonable arrangements for the payment of the troops, seem essential to a continuance of the service.

I have the honor to be, with great respect, sir, your obedient and very humble servant,

JOHN COTTON SMITH.

Hon. JOHN ARMSTRONG, *Secretary of War.*

WAR DEPARTMENT, *August* 17, 1814.

SIR: I have the honor to acknowledge the receipt of your excellency's letter of the 1st instant and a subsequent report of your adjutant general, E. Huntington, that the requisition of 4th July had been complied with.

His Excellency J. C. SMITH, *Governor of Connecticut, Sharon.*

STATE OF CONNECTICUT, *Hartford, September* 3, 1814.

SIR: In consequence of the exposed and defenceless situation of the town of New Haven and borough of Bridgeport, I have thought proper, by the advice of the council, to order into service six hundred men for the protection of those places. The general officer of the United States located at New London has been advised of this procedure, and has also been requested to cause the troops to be duly mustered and supplied. He admits the propriety of the measure; but, as I understand, refuses to comply with the request, and on grounds which, in my opinion, are wholly inadmissible.

It is my duty, sir, to inform you of these circumstances, and to express the assurance I feel that you will order the requisite supplies to be immediately furnished.

Disposed, as I am, to repel the attempts of the common enemy by a prudent and vigorous employment of the military force at my command, I shall rely with confidence on such aid as it may be in the power of the general government to afford.

I have the honor to be, very respectfully, sir, your obedient and humble servant,

JOHN COTTON SMITH.

Hon. SECRETARY OF WAR.

STATE OF CONNECTICUT, *Hartford, September* 14, 1814.

SIR: I am informed the agent of the United States at New London has refused any further subsistence to the militia now on duty in that vicinity upon the unfounded pretext that they are withdrawn from service by my authority.

Unwilling to hazard the safety of those posts and the national property in the river by disbanding the troops, I have directed the commissary general of the State to provide for them until the pleasure of the President shall be known.

You will perceive the importance, sir, of apprising me without delay whether the agent is to be countenanced in the course he has thought proper to adopt; and also how far I am to rely on the general government for assistance in the necessary defence of the State.

The near approach of the session of the general assembly renders it desirable that I should be favored with an early and explicit communication upon this highly interesting subject.

I have the honor to be, with great respect, sir, your obedient and very humble servant,

JOHN COTTON SMITH.

Hon. SECRETARY OF WAR.

P. S.—To my letter of the 3d instant no answer is yet received.

DEPARTMENT OF WAR, *September* 17, 1814.

SIR: I have had the honor to receive your excellency's letter of the 7th instant.

The attack of the enemy on Baltimore, and probable eventual attack on other places, with the heavy duties incident thereto, pressing on this department have prevented my answering it at an earlier day.

It may be satisfactory to your excellency for me to explain the views and principles on which this government has acted in regard to the defence of our eastern frontier.

It was anticipated soon after the commencement of the war that while it lasted every part of the Union, especially the seaboard, would be exposed to some degree of danger, greater or less, according to the spirit with which the war might be waged. It was the duty of the government to make the best provision against that danger which might be practicable, and it was proper that the provision should continue while the cause existed.

The arrangement of the United States into military districts with a certain portion of the regular force, artillery and infantry, under an officer of the regular army, of experience and high rank, in each district, with power to call for the militia as circumstances might require, was adopted with a view to afford the best protection to every part that circumstances would admit.

It was presumed that the establishment of a small force of the kind stated, constituting the first elements of an army in each district, to be aided by the militia in case of emergency, would be adequate to its defence. Such a force of infantry and artillery might repel small predatory parties, and form a rallying point for the militia at the more exposed and important stations in case of more formidable invasion. A regular officer of experience stationed in the district, acting under the authority and pursuing the will of the government, might digest plans for its defence; select proper points for works and superintend the erection of them; call for supplies of ordnance, for tents and camp equipage, for small arms and other munitions of war, call for the militia and dispose of the whole force. These duties, it was believed, could not be performed with equal advantage by the officers of the militia, who, being called into service for short terms, would not have it in their power, however well qualified they might be in other respects, to digest plans and preserve that chain of connexion and system in the whole business which seemed to be indispensable.

On great consideration this arrangement was deemed the most eligible that could be adopted under the authority of the United States. Indeed none other occured that could be placed in competition with it. In this mode the national government acts by its proper organs over whom it has control, and for whose engagements it is responsible.

The measures which may be adopted by a State government for the defence of a State, must be considered as its own measures, not those of the United States. The expenses attending them are chargeable to the State and not to the United States. Your excellency will perceive that a different construction would lead into the most important, and, as is believed, into the most pernicious consequences. If a State could call out the militia and subject the United States to the expense of supporting them at its pleasure, the national authority would cease as to that important object, and the nation be charged with expenses, in the measures producing which the national government had no agency and over which it could have no control; this, however, though a serious objection to such a construction, is not the most weighty. By taking the defence of the State into its own hands, and out of those of the general government, a policy is introduced on the tendency of which I forbear to comment. I shall remark only, that if a close union of the States, and an harmonious co-operation between them and the general government are at any time necessary for the preservation of their independence and of those inestimable liberties which were achieved by the valor and blood of our ancestors, that period may be considered as having arrived.

It follows from this view of the subject, that if the force which has been put into service by your excellency had been required by Major General Dearborn, or received by him and put under his command, that the expenses attending it will be defrayed by the United States. It follows likewise, as a necessary consequence, that if this force has been called into service by the authority of the State, independently of Major General Dearborn, and be not placed under him as commander of the district, that the State of Massachusetts is chargeable with the expense and not the United States Any claim which the State may have to reimbursement must be judged of hereafter by the competent authority on a full view of all the circumstances attending it. It is a question which is beyond the authority of the Executive.

Your excellency will perceive that this government has no other alternative than to adhere to a system of defence which was adopted on great consideration, with the best view to the general welfare, or to abandon it, and with it a principle held sacred, thereby shrinking from its duty at a moment of great peril, weakening the guards deemed necessary for the public safety, and opening the door to other consequences not less dangerous.

By these remarks it is not intended to convey the idea that a militia officer of superior grade, regularly called into service, shall not command an officer of the regular army of inferior grade when acting together. No such idea is entertained by the government. The militia are relied on essentially for the defence of the country. In their hands everything is safe. It is the object of the government to impose on them no burdens which it may be possible to avoid, and to protect them in the discharge of their duties in the enjoyment of all their rights.

The various points which are attacked and menaced by the enemy, especially in this quarter, where they are waging in considerable force a predatory and desolating warfare, make it difficult to provide immediately for all the necessary expenditures. Any aid which the State of Massachusetts may afford to the United States to meet these expenditures will be cheerfully received and applied to the payment and support of the militia of that State in the service of the United States. It will be proper that the money thus advanced should be deposited in some bank in Boston, that the disbursement of it may be made under the authority of the government of the United States, as in similar cases elsewhere. Credit will be given to the State for such advance, and the amount be considered a loan to the United States.

I have the honor to be, with the highest respect, sir, your most obedient humble servant,

JAMES MONROE.

His Excellency CALEB STRONG, *&c., &c., &c.*

A note in the margin of the correspondence record of the War Department indicates that a similar letter was written to the governor of Connecticut.

The governor of Connecticut will thank the Secretary of War to inform him whether his communications, under date of the 3d and 14th of September last, have been received at the War Department.

HARTFORD, *October* 10, 1814.

WAR DEPARTMENT, *October* 17, 1814.

SIR: I have had the honor to receive your excellency's communication of ——. The letters mentioned in it had been before received.

The regulations of this department, in conformity to the laws of the United States, having designated commands for different grades of general officers of the militia—two thousand men for a brigadier general—and General Cushing not having called for more than two thousand men at any time, and there not being more than that number of militia in the field, it was thought that the command of them ought not to be committed to a major general of the militia. The tendency of such an arrangement would be to take the force assembled for the defence of the military district No. 2 out of the hands of the officer to whom the President had intrusted it. It was on this principle that my letter to your excellency of —— was addressed, and with intention to explain the principles on which the arrangements of this government were made for the defence of every part of the United States, which explanation I gave in a belief that it would be satisfactory, and that it was particularly my duty to give it at this very important crisis of our affairs. It is, however, distinctly to be understood, that if the whole quota assigned to Connecticut had been called into service, that it would have been proper to have committed the command to a major general of the militia, who, in cases where he and a brigadier general of the army of the United States acted together, would take the command of him.

His Excellency J. C. SMITH, *Governor of Connecticut.*

Copy of a letter from the Secretary of War to several general officers, and of whom Brigadier General Cushing is shown to have been one.

WAR DEPARTMENT, *July* 12, 1814.

SIR: You will receive herewith the copy of a circular letter addressed to the governors of certain States, requiring a body of militia to be organized and equipped and held in readiness for future service.

In case of actual or of menaced invasion of the district you command, you will call for a part or for the whole of the quotas assigned to the States of ——— which shall have been organized and equipped under the aforesaid requisition.

In performing this duty you will be careful to avoid all unnecessary calls, to proportion the call to the exigency, and to have inspected without delay all corps entering on service, to the end that men who, from any cause, are unfit therefor be promptly discharged, and that a due proportion in all cases be maintained between officers and privates.

Extracts from a letter of Brigadier General Cushing to the Secretary of War, dated New London, July 27, 1814.

"On my return to this place from my late tour to Rhode Island, I had the honor to receive your letter of the 12th instant, with inclosures.

"The quota of militia of the State of Rhode Island, or a corps to be substituted by the governor of that State, will be received and posted, as mentioned in my letter from Providence of the 21st instant, so soon as they can be obtained; but at the present moment I see no necessity for a call on the governor of Connecticut. It is, however, probable that this state of things may soon be changed, and a call for the militia become indispensably necessary. At any rate, the necessary camp equipage, quartermaster's stores, &c., ought to be provided and held in readiness for immediate service."

Extract from a letter of Brigadier General Cushing to the Secretary of War, dated New London, Aug. 12, 1814.

"By the letter of the 11th instant from Governor Smith, of which I inclose a copy, marked H, you will see that he has ordered the militia called for on the 10th, but, for the reasons therein stated, claims the right of placing a major general at their head. I shall endeavor to satisfy him that, with the number of men called for, a major general cannot be received, but if he should persist, how is the difficulty to be gotten over? Am I to recognize the major general, and resign the command to him? Will you order a major general of the army to this district, or can the case be provided for by brevet rank?"

Extract from a letter of the Secretary of War to Brigadier General Cushing, dated August 17, 1814.

"You will state to Governor Smith the nature and extent of our rules in regard to militia drafts. The staff they bring with them must be accommodated to the number of effectives called out and actually presenting themselves for inspection and service. Two regiments make a brigade, and two brigades a division. When any number less than four thousand is required a major general cannot be recognized. This regulation is so obviously founded on reasons of economy to the public, and justice to individuals, that I am satisfied the governor's good sense and public spirit will not for a moment resist it. If he should, the proximity of General Dearborn will afford a remedy."

Extract from a letter of Brigadier General Cushing to the Secretary of War, dated

NEW LONDON, *August* 29, 1814.

"I deem it proper at this time to lay before you a copy of my correspondence with Governor Smith from the 14th to the 28th instant inclusive.

"Unwilling to relinquish the project for introducing a major general of miiitia into the service of the United States, the governor has attempted to prevail on me to accept a command of six hundred men, to be posted at New Haven, under the command of Major General Taylor, who, it appears, must be provjded for. I have agreed to accept the men, if properly officered, because it will enable me to discharge an equal number, which must otherwise be marched from this neighborhood; but I have pointedly refused to recognize the major general, or to have the men mustered and supplied on any other consideration but that of their being subject to my orders."

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, September* 2, 1814.

SIR: I have the honor to enclose a copy of a letter from Governor Smith of the 30th August, with my reply of this date.

It is now pretty evident that the governor and council have determined that their militia shall not be commanded by an officer of the United States, and it is possible an attempt may be made to withdraw the brigade now in service. I am, however, of opinion that this will not be done before the meeting of the legislature, and that in that body the measure will meet with the decided opposition of some of the most influential federalists in the State.

I am, sir, very respectfully, your obedient servant,

T. H. CUSHING, *Brigadier General.*

HON. JOHN ARMSTRONG, *Secretary of War.*

Extracts from a letter of Brigadier General Cushing to the Secretary of War, dated

NEW LONDON, *September* 8, 1814.

"The President's proclamation of the 1st instant was received yesterday, under cover from the Department of State, and I shall not fail to exert myself, to the full extent of such means as I can command, for the defence of this district.

"The President's proclamation authorizes me to 'call to the defence of exposed and threatened places portions of militia most convenient thereto,' but it may and probably will happen that a whole division of militia may be necessary, in which case a major general must be recognized, and hence the necessity of sending a major general of the army to command this district. I make these remarks under an idea that Governor Smith will not order his militia to disregard a call from the commanding officer of this district, when made in conformity with and under the sanction of the President's proclamation; and I know that, without such order from him, the whole or any part of the division in this vicinity would be immediately assembled on receipt of my requisition by its commander, who, though not tenacious of command, would, in the event of the whole division being called out, supersede me in the command of the district. To show you that there is no reluctance on the part of the militia to serve under my command, I transmit a copy of Brigadier General Isham's letter to me after he and his brigade were discharged from their late tour of duty. Major General Williams professes the same sentiments, but being of a higher grade, he could not, by the rules of service, act under the orders of a brigadier general."

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, August* 1, 1814.

SIR: I have been notified by the Secretary of War that on the 4th day of July last a requisition was made on the executive of the State of Connecticut for a body of militia, to be organized and held in readiness for immediate service; and I am instructed by him, "in case of actual or menaced invasion of the district" under my command, "to call for a part or the whole of the quotas assigned to the States of Connecticut and Rhode Island which shall have been organized and equipped under the aforesaid requisition." But in the performance of this duty I am charged "to avoid all unnecessary calls, to proportion the calls to the exigency, and to have inspected without delay all corps entering on service, to the end that men who, from any cause, are unfit therefor be promptly discharged, and that a due proportion in all cases be maintained between officers and privates."

It is not deemed necessary to call any part of the quota of Connecticut into the service of the United States at this time, but it is desirable that the draft be made and the men held in readiness for immediate service whenever circumstances may indicate an intention on the part of the enemy to invade any part of the State, and I have, therefore, to request your excellency to inform me whether the quota of militia required of this State by the aforesaid requisition has been or will be "organized and held in readiness for immediate service;" whether, on my requisition, the whole or any part of the said militia will be ordered into the service of the United States for the purposes before mentioned; whether my requisition for this purpose must be made to your excellency in the first instance, or to such general and field officers as may have been detailed for this service; and generally that your excellency would be pleased to favor me with all such information and opinions in relation to the objects and designs of the enemy, and to the defence of this State, as you may think proper to communicate.

I have only to add that, as commanding officer of this military district, it will be my constant endeavor to preserve the strictest harmony and good will between the national troops and the militia, and that the

rights of the latter, as secured by the Constitution and laws of our country, shall be duly respected by every officer and soldier under my command.

I am, sir, your excellency's most obedient servant,

T. H. CUSHING.

His Excellency Governor SMITH.

STATE OF CONNECTICUT, *Sharon, August* 4, 1814.

SIR: I have the pleasure to acknowledge the receipt of your letter of the 1st instant.

The adjutant general is directed to send you a transcript of the general orders issued on the 28th ultimo for organizing and holding in readiness a body of militia, pursuant to a recommendation from the President of the United States. To that document I must refer you for answers to most of your inquiries.

Any sudden approach of the enemy must evidently be met by the troops nearest the place of attack; and the officers of militia are already authorized and required in such emergencies to call out the force under their command immediately, and without waiting for particular instructions. In other cases, where requisitions may be necessary and proper, there will be time to offer these to the executive of the State.

The militia, whenever their services are required, will expect to march under orders received from their commander-in-chief, and such orders as the exigency demands you may rest assured shall be promptly given.

I am gratified, sir, at the solicitude you manifest for the protection of our maritime frontier, and I shall cheerfully communicate to you any information respecting "the objects and designs of the enemy and the defence of the State" which it may be in my power to afford. Equally satisfactory is the assurance that you will "endeavor to preserve the strictest harmony between the national troops and the militia." Your reputation, both as an officer and a citizen, is a sufficient guarantee that the "rights of the militia, as secured by the Constitution and laws of our country, will be duly respected."

With sentiments of sincere regard, I am, sir, your obedient and humble servant,

JOHN COTTON SMITH.

Brigadier General T. H. CUSHING, *&c., &c.*

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, August* 10, 1814.

SIR: By Major General Williams's communication of this date your excellency will be fully informed of the state of things in this quarter, and by the enclosed district order, that the militia ordered out by him, at my request, are to form a brigade under the command of Brigadier General Isham.

Your excellency's communication of the 4th instant was received this morning, since which General Williams has furnished me with your general order of the 28th July; but I have heard nothing from the adjutant general on this subject.

It is my opinion that the safety of this State requires that fifteen hundred infantry and two companies of artillery, duly officered, and to be commanded by a brigadier general of this State's quota of ninety-three thousand five hundred men, required by the President of the United States "to be organized and held in readiness for immediate service," should be immediately detached from the said quota and ordered to this place, for the purpose of relieving the militia now on duty here, if circumstances should justify the measure, or to increase our means of defence in the event of more formidable and vigorous operations on the part of the enemy; and I have the honor to request your excellency to make and place the said detachment under my command. It is desirable that the brigadier general to be detached on this service should be instructed by your excellency to report himself to me by letter immediately after he shall have been so detached, to inform me of his route to this place, and the probable time of his arrival, and to receive and obey any orders he may receive from me while on his march.

I am, sir, your excellency's most obedient servant,

T. H. CUSHING, *Brigadier General, Commanding.*

His Excellency JOHN COTTON SMITH, *Governor of Connecticut.*

DISTRICT ORDERS.

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, August* 10, 1814.

The militia of this State, ordered into service yesterday by Major General Williams, at the request of the commanding general of the district, are to be considered in the service of the United States, and will form a brigade under the command of Brigadier General Isham, who will furnish a return by regiments to the adjutant general of the district the soonest possible.

Until the proper returns of General Isham's brigade can be obtained, the contractor will issue provisions on the requisitions of Major Goddard, countersigned by the commanding general; and the major will be held responsible for the proper application of all provisions so received, and which must be covered by regular returns so soon as the strength of the brigade can be ascertained.

By order of the commanding general.

P. P. SCHUYLER, *Adjutant General.*

STATE OF CONNECTICUT, *Sharon, August* 11, 1814—9 *o'clock a. m.*

SIR: Your communication by express is this moment received. Major General Williams is directed to retain the militia now on duty until they shall be relieved by the force ordered out conformably to your request, or unless circumstances shall justify an earlier dismission. It is probable the draft for the new detachment is not completed; but Brigadier General Lusk, detailed under the orders of the 28th ultimo, is instructed by the return of the express to hasten it as fast as possible, and to march, without a moment's delay, with the *first* and *third* regiments, whose places of rendezvous are Hartford and Norwich. Their numbers will make the complement you require, including artillery.

As the force requested by you will constitute a majority of the detachment, there is an evident propriety that it should be commanded by the major general detailed pursuant to the recommendation of the President. He will accordingly be directed to enter the service as soon as the necessary arrangements will permit. In the meantime Brigadier General Lusk is ordered to report himself to you, agreeably to your desire.

As Major General Williams informs me there will be a deficiency of the munitions of war, the quartermaster general is directed to forward the necessary articles from the arsenal of the State immediately. I entertained a hope that the general government had by this time an abundant supply at New London.

I shall wait with great anxiety the issue of these serious and unexpected operations of the enemy. His progress and ulterior views, so far as they can be ascertained, are subjects on which any communications you may be pleased to make will be thankfully received.

I am, sir, very respectfully, your obedient and humble servant,

J. C. SMITH.

Brigadier General CUSHING.

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, August* 12, 1814.

SIR: I have barely time to acknowledge the receipt of your excellency's letter of the 11th instant, and to enclose a copy of Brigadier General Isham's last report.

Captain Lee informs me that our flag at Stonington has been nailed to the flagstaff; that General Isham and his men are in high spirits, and anxious for the enemy to attempt a landing; and that the congreve rocket is considered quite a harmless thing.

I am, sir, your excellency's most obedient servant,

T. H. CUSHING.

His Excellency JOHN COTTON SMITH, *Governor of Connecticut, Sharon.*

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, August* 14, 1814—11½ *o'clock p. m.*

SIR: A brigade in the army of the United States should consist of two thousand men, and the detachment of militia required of your excellency by my letter of the 10th instant does not exceed seventeen hundred, which is probably less than any brigade of militia in the State of Connecticut. In asking for a brigadier general to command this force, I have certainly gone as far as I am authorized by my instructions from the War Department, which are, "that a due proportion, in all cases, be maintained between officers and privates;" and I trust that, on reflection, your excellency will relinquish the idea of ordering a major general to assume the command of less than a brigade. Should circumstances require a further call for men to the extent of a major general's command, including the seventeen hundred, I shall not fail to include that officer in my requisition.

The enemy left Stonington yesterday, and anchored near the Hammocks, and to-day he has taken a stand, with one seventy-four, one razee, one bomb vessel, and two brigs, between the mouth of Pequonock and Fisher's island, and about four miles from our shore. His barges were seen in different directions during the afternoon, and it is probable he will attempt something to night. We are on the alert in all directions, and hope to give a good account of any force he may hazard on land or bring in contact with our batteries. Besides the force already mentioned, he has in Gardner's bay one seventy-four, one or two frigates, and two smaller armed vessels.

I am, sir, your excellency's most obedient servant,

T. H. CUSHING.

His Excellency JOHN COTTON SMITH, *Governor of Connecticut.*

HARTFORD, *August* 17, 1814.

SIR: The first regiment of detached militia will rendezvous at this city to-morrow. Having myself just arrived, I despatched Colonel Trumbull, one of my aids, for the purpose of conferring freely with you on subjects intimately connected with the service.

As the enemy are said to have abandoned the attack upon Stonington, I will thank you to inform me of the number and position of the hostile squadron, and what apprehensions you entertain with respect to its future operations. I am also desirous of ascertaining what provision you are enabled to make for the troops; not merely for their subsistence, about which I presume there will be little difficulty, but for their accommodation in other respects. Have you tents or barracks, camp utensils, wood, forage, hospital stores, ammunition—in short, is your quartermaster's department furnished? and if not, you will pardon me for asking whether you are in funds for these objects, as well as for the payment of the militia who are to be relieved from duty by the present detachment? These, sir, are momentous inquiries. I sincerely

hope it will be in your power to oblige me with a satisfactory reply. Other topics, which time will not permit me to particularize, will be suggested by Colonel Trumbull.

I had the pleasure to receive your favor of the 12th instant at the moment of my departure for this place. The outrage committed upon our territory, apparently without object or use, has been resisted with a spirit very honorable to the militia.

I am, sir, respectfully, your obedient and most humble servant,

JOHN COTTON SMITH.

Brigadier General CUSHING.

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, August* 18, 1814.

SIR: I have been honored with your excellency's letter of yesterday by Colonel Trumbull, to whom I beg leave to refer for information in relation to the strength and position of the hostile squadron on this coast, and on many other subjects suggested in your letter, a particular and minute reply to which would require more time than I am able to spare at this moment.

It has not been in my power to supply the militia now in service with either tents or camp equipage, and they have been exposed to hardships and privation on this account, which I have felt and most sincerely regretted; but I have instructed the proper officer to provide these articles for the detachment destined for their relief, and have them at this place ready for delivery the soonest possible. On the score of wood, forage, hospital stores, and ammunition, there will be no difficulty; but I am sorry to say that at this moment I have not a well-arranged and well-furnished quartermaster's department, nor is the district paymaster in possession of funds for paying off the militia when discharged. His estimates will be sent to the Paymaster General, and payments made immediately after funds are received for this purpose. But if these funds should not reach here before the men are discharged, I hope and trust that your excellency will give directions for paying them in the first instance from the funds of the State.

Since my letter of the 14th instant, of which a duplicate is enclosed, we have had a little affair at Mystic highly honorable to the militia and citizens concerned, and calculated to increase the mortification which the enemy must feel on a review of his conduct for the last ten days. I enclose a copy of Colonel Belcher's report on this subject. I regret that it has not been in my power to wait on your excellency during my short residence in this district. Had I known in season that you intended to visit Hartford for the purpose of acting on the President's requisition of the 4th of July, I should have availed myself of so favorable an opportunity for paying my respects in person. I would do it now, but the enemy is at the door, and must be watched.

I am, sir, your excellency's most obedient servant,

T. H. CUSHING, *Brigadier General, Commanding.*

His Excellency JOHN COTTON SMITH, *Governor of Connecticut, Hartford.*

HARTFORD, *August* 21, 1814.

SIR: Colonel Seth P. Staples, of New Haven, who is the bearer of this letter, will make you acquainted with the state of alarm existing there, and from the communications he will show you it will be perceived what measures the local authorities deem necessary for the safety of the town.

I am clearly of opinion the means of defence must be increased at that place, it being at once the most inviting and accessible to the enemy of any portion of the State; so, to husband our force as to render the vulnerable points secure without exhausting the strength and resources of the country becomes an extremely important consideration. With your present prospect at New London, are all the troops you have required really necessary at and near that post? May not the services of the third regiment of detached militia, who rendezvous at Norwich on the 23d instant, be dispensed with at this time, and be reserved for future emergencies, especially as the militia in that quarter of the State have been so repeatedly called into the field? If you, however, judge them essential to the security of New London and its vicinity, they must repair thither. But in any event there should be no hesitation in providing for the defence of New Haven, and I shall be prepared to receive a requisition for this important object. In submitting your request, I think it is not expedient to limit the call to the detached militia. Colonel Staples will fully explain to you the effect of such an arrangement which, in a word, to strengthen New Haven, would materially weaken the whole extent of the sea-coast from Saybrook westward. A sufficient and equally effective force can be derived from other sources. Whatever course is pursued, there should be no unnecessary delay, either in collecting the men or in preparing the requisite supplies.

I shall detain Colonel Staples no longer than to assure you, sir, that I am, with much respect, your obedient and very humble servant,

JOHN COTTON SMITH.

Brigadier General CUSHING.

P. S.—Your letter by Colonel Trumbull, with its enclosures, came duly to hand.

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, August* 22, 1814.

SIR: I had the honor to receive your excellency's letter of the 21st instant by Colonel Staples last evening.

It appears that the alarm at New Haven has been produced in part by reports which have run through the newspapers that the enemy are about to send an army to this country for the purpose of taking possession of Rhode Island, Long Island, or New York, as a place of depot, and that when such army shall arrive the destruction of the principal towns on the sea-coast will be attempted; and partly by

information obtained from the fleet by individuals whose fears have been highly excited by the declarations of Mr. Stewart and others that New Haven is destined to inevitable destruction.

It is possible that a fleet and army may soon arrive on this coast, and that the destruction of the principal towns may be attempted, but I have no evidence on which I can rely that such force is destined to this quarter, or that anything here is to be attempted on land; and, in my estimation, the probability that a land force is now on its way to join the fleet in our neighborhood is very much diminished by the recent conduct of the fleet itself, which was calculated to create a pretty general alarm, and bring together a force sufficient to repel his attempts when reinforced.

Since my last all the ships have withdrawn excepting a 74, now at anchor in Gardner's bay, and a large frigate on the outside of the race; and this and the apparent zeal of Mr. Stewart and others connected with the fleet for the safety of New Haven may be a stratagem on the part of the enemy to draw off the force from this place, and give him an opportunity to return and act against it with an increased force, and I therefore deem it inexpedient to dispense with the services of the Norwich regiment at this time, particularly as the whole of General Isham's brigade will be discharged on the 23d, 24th, 25th, 26th, and 27th instant.

I am fully of your excellency's opinion that our means of defence should be increased at New Haven; and so soon as Brigadier General Lusk's brigade shall have been formed, it is my intention to send a battalion of it to that place, if it can be spared from this quarter; and if not, I shall not fail to call on your excellency for an additional force.

I am, sir, your excellency's most obedient servant,

T. H. CUSHING, *Brigadier General.*

His Excellency JOHN COTTON SMITH, *Governor of Connecticut.*

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, August* 24, 1814.

SIR: A copy of your excellency's letter to me of the 11th instant has been transmitted to the Secretary of War, and I have the honor to enclose an extract of a letter from him on the subject of militia drafts, and a copy of the rules referred to in his letter.

In acting on the late requisition of the President for three thousand men to be organized for the service of the United States, I had presumed that your excellency would have pursued the course suggested by that requisition, and formed the State's quota into three regiments of one thousand men each; and, under that impression, in my letter of the 10th instant I did not express the number of privates, non-commissioned and commissioned officers required. It now appears that a different course has been adopted, and the quota of the State formed into four regiments. But although, in point of form, there is considerable difference between the three thousand men as organized by your excellency and the same number as organized in the army of the United States, yet, as a due proportion between officers and privates will be maintained, and no additional expense incurred, I shall consider the spirit and the intention of the rule as having been fully complied with by the organization which your excellency has been pleased to direct.

I am, sir, your excellency's most obedient servant,

T. H. CUSHING, *Brigadier General.*

His Excellency JOHN COTTON SMITH, *Governor of Connecticut, Hartford.*

HARTFORD, *August* 25, 1814.

SIR: The urgent applications made to me for further means of protection by the town of New Haven and the borough of Bridgeport have been laid before the council of the State at this present session. In pursuance of the resolution adopted by that honorable body, as well as from my own conviction of the propriety of the measure, I shall order into service six hundred infantry and artillery to be stationed at those two places, with perhaps a small section of cavalry to serve as videttes. One hundred men to take the place of the present guard will suffice, it is believed, for Bridgeport, whose citizens, following the example of their brethren in New Haven, propose to fortify their harbor by patriotic contribution.

Major General Taylor, already detailed to the command of the militia in service, will take his stand at New Haven with a more immediate view to the defence of that part of the State, and with authority to array a sufficient force at any intermediate point which may be suddenly attacked by the enemy.

It is not deemed advisable to transfer to New Haven any part of the troops now at New London, unless a portion of them can be spared, exclusively of *the third regiment.* Should it appear, as I hope it will, that a reduction of the force at that post may be safely made, justice and humanity alike require that this regiment, detached from the third division, should be favored with the earliest relief from duty.

I trust, sir, you will readily concur in this arrangement, and will make suitable dispositions for mustering the troops which may be ordered to New Haven and Bridgeport, and for furnishing them with the requisite supplies.

Whilst I am writing, your letter of the 24th instant is received. As you seem, sir, not to have understood correctly the views of this government with respect to the late detachment, it is fit that I state them to you distinctly.

The communication from the War Department under date of the 4th July last, relative to a detachment from the militia for the purpose therein mentioned, did not assume the style of a "requisition," and for the obvious reason, that there existed no law to authorize it. The *invitation* (for such was its purport) was accepted by the executive of the State, from a desire to co-operate in what appeared to the President a proper measure of defence for the Atlantic coast. The terms of compliance are contained in the general orders issued on the 28th of July, a transcript of which you have received. In organizing the regiments, I conformed as nearly as possible to the act of Congress passed the 8th of May, 1792. I am not informed that there is now in operation any other act of the national legislature on that subject. If your instructions from the War Department materially interfere with the requirements of this act, it is

indeed a subject of regret, but not of doubt as to the authority which ought in such case to prevail. I am happy, however, to perceive that you do not consider the difference as essentially varying the result.

To the observation of the Secretary of War, that "when a less number than 4,000 is required a major general cannot be recognized," I shall only reply that, in apportioning the quota of *three* thousand to this State, he has expressly assigned a major general to command.

I am sir, very respectfully, your obedient and humble servant,

JOHN COTTON SMITH.

Brigadier General CUSHING.

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, August* 28, 1814.

SIR: Your excellency's letter of the 25th instant was received last evening, and shall be submitted to the Secretary of War by the next mail.

Not having "the communication from the War Department under date of the 4th July" before me when my letter to your excellency of the 24th instant was written, I inadvertently used the term *requisition*, when I should have employed that of *invitation;* and I beg leave to assure your excellency that this was done without any intention or desire of giving to the invitation of the President, or the acceptance of your excellency, a different understanding from that originally intended.

By the return of Brigadier General Lusk's brigade, herewith enclosed, you will find that no more than twelve hundred and two men, officers included, have joined and been mustered for service. This force, though small, I have considered sufficient under present circumstances for New Haven and the sea-coast to Stonington inclusive, and arrangements are making for a major and three companies of the first regiment to take post at New Haven, and one company of the third to relieve the detachment at Stonington, whose term of service will expire on the 29th of this month.

As it is the opinion of your excellency that six hundred men should be stationed at New Haven and Bridgeport, I shall make the necessary arrangements for the muster and supply of that number, so soon as I am informed by your excellency that they, with a due proportion of officers, have been ordered to New Haven for the service of the United States, and to receive and obey my orders. But I must expressly state that, under existing circumstances, a major general cannot be recognized as a part of the State's quota of militia now in service, or permitted to exercise command over them or the six hundred to be posted at New Haven, who will be considered as a part of Brigadier General Lusk's brigade.

Should your excellency think proper to order six hundred men, duly officered, to rendezvous at New Haven, under the conditions in the preceding paragraph, it will be in my power to discharge a considerable portion, if not the whole, of the third regiment; and I shall suspend the march of the detachment of the first regiment to New Haven until I am advised of your excellency's determination on this subject.

I trust your excellency will duly appreciate the frankness with which this communication is made, and rest satisfied of my disposition to give effect to such arrangements in relation to the militia in service as you may desire, so far as they may be deemed compatible with a faithful discharge of the duties required of me by the government of the United States.

I am, sir, your excellency's most obedient servant,

T. H. CUSHING, *Brigadier General.*

His Excellency JOHN COTTON SMITH, *Governor of Connecticut.*

HARTFORD, *August* 30, 1814.

SIR: Colonel Ward has delivered me your letter of the 28th instant.

In referring you to the views of this government respecting the detachment lately organized, it was my design not to criticise your language, but to point your attention to the precise conditions upon which that detachment was formed. The right of command, you will perceive, is expressly reserved; the detachment thus constituted is accepted, and with a knowledge of the reservation just mentioned, you requested a large portion of the troops for public service. Whatever sentiments, therefore, may be entertained as to the right of the executive of the State to direct its military force, when ordinarily employed in the national service, it surely cannot be questioned in the present instance. If, at your particular desire, Brigadier General Lusk was ordered to report himself to you in the manner suggested in my letter of the 11th instant, I trust it evinces a spirit of accommodation which will be duly appreciated.

I think, sir, you will be satisfied, upon reflection, that you should have requested the major general, when you called for a majority of the detachment, especially if you consider that another brigade of militia was at that time on duty, and from appearances the services of both might become necessary. That a brigadier general of the regular army, with no troops *in the field*, should insist on the command of two entire brigades of militia, whose brigadier generals held senior commissions, would have produced a case which neither precedent nor principle could justify. To avoid so unusual and embarrassing a state of things, it became my duty to order the major general into service. Having been properly detailed, no casual diminution of numbers can effect his right of command.

I enclose you the opinion of the council in relation as well to this point as to the employment of a larger force at New Haven and Bridgeport. Their opinion is in perfect accordance with my own, and will therefore be carried into effect. The troops destined for those posts will arrive at New Haven on the 8th, and at Bridgeport on the 13th of September next. If no officer of the United States appears to muster them, that duty will be performed by an officer of the militia, agreeably to the late act of Congress.

If supplies are withheld by your order, they will be furnished by the proper officers of the State and charged over to the United States.

It is hoped the services of the third regiment may be dispensed with for the present.

From the harmony with which the service was conducted the last season under an arrangement not essentially dissimilar, I flattered myself that a temper equally conciliatory would distinguish the present campaign. Whilst I lament that any difference of opinion should exist as to the particular mode of

defending our country at a moment when its dearests interests are in jeopardy, I cannot lose sight of the high duties which I am solemnly bound to discharge.

With respectful consideration, I am, sir, your obedient and humble servant,

JOHN COTTON SMITH.

Brigadier General CUSHING.

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, September* 2, 1814.

SIR: Your excellency's letter of the 30th of August was received this morning by the southern mail.

Whether I have understood "the views of this government (Connecticut) respecting the detachment lately organized" or not is, in my estimation, a question of no importance at this time, since, by referring to my letter of the 10th of August, your excellency will there find the conditions on which the drafted militia now in service were asked for, and have been received into the service of the United States. If these conditions did not accord with "the views of this government, too," it is not for me to assign the motive which induced your excellency to make the detachment; but while I regret that any misunderstanding should exist on this subject, I feel confident that my communications have been explicit to leave a doubt as to the course authorized and enjoined by the government of the United States.

I have stated in my letter of the 28th of August the only conditions on which I am authorized to receive and post a detachment of drafted militia at New Haven and Bridgeport. But your excellency's letter on this subject shall be sent to the Secretary of War by the next mail for his further instructions on the subject.

Should the third regiment be discharged, agreeably to your excellency's request, there would remain but one regiment of drafted militia, (not eight hundred men, including officers,) and with this force a brigadier general and his staff could not be retained.

I have made the necessary arrangements for relieving the detachment at Saybrook and Killingsworth on the 15th instant by detachments from the first regiment of drafted militia now in the service of the United States at this place.

I am, sir, your excellency's most obedient servant,

T. H. CUSHING, *Brigadier General, Commanding.*

His Excellency JOHN COTTON SMITH, *Governor of Connecticut, Hartford.*

A.

HARTFORD, *September* 9, 1814.

SIR: Conformably to the original arrangement, Major General Taylor now goes to take command of the militia on duty at New London and its vicinity. He will retain or reduce their present number according to existing circumstances. Upon this and other subjects connected with the safety of those posts, he is instructed, and will be disposed, to confer with you freely, and to promote, by all means in his power, that concert of operations on which the success of the service must essentially depend.

I am, sir, respectfully, your obedient and humble servant,

JOHN COTTON SMITH.

Brigadier General CUSHING.

I certify that the foregoing is a true copy of the original.

M. MASON, *Aide-de-Camp.*

STATE OF CONNECTICUT, *Sharon, August* 11, 1814.

SIR: The serious operations of the enemy in the vicinity of New London have induced General T. H. Cushing, commanding the United States troops in this district, to request fifteen hundred infantry and two companies of artillery from the detachment directed to be organized under the general orders of the 28th ultimo, who are intended to relieve the militia ordered out by the major general of the third division. As you are detailed for this service, you are hereby directed to hasten the organization of the detachment as fast as possible, and without delay to embody the first and third regiments, whose places of rendezvous are Hartford and Norwich, and which regiments, as they include a sufficient number of artillery, will constitute the force required. You will inform General Cushing by letter of your state of readiness, and take his directions as to the route and place or places of destination, and conform to his instructions until the arrival of Major General Taylor, who will take the command as soon as his health and the necessary arrangements will permit. Your staff, as brigadier general of the detachment, the division inspector and deputy quartermaster general, detailed under the general order, will accompany you. The deputy quartermaster general will make the necessary arrangements for the transportation of the officers' baggage, artillery, and stores

By order of the commander-in-chief. W. M. SMITH, *Aide-de-Camp.*

Brigadier General LUSK.

At a meeting of the civil authority and selectmen of the town of New Haven on the 19th day of August, A. D. 1814.

Whereas information has been received that an additional force has lately arrived and joined the squadron of the enemy near New London, and a further addition is daily expected, and a predatory warfare has commenced at Stonington; and it appears from the examination of persons who have lately arrived from said squadron that the same kind of warfare will probably be continued; that the fleet of the enemy is about to proceed westward in the sound, and that New Haven, in their opinion, is in imminent danger of an attack:

Voted, That Eli Whitney, esq., Colonel Staples, and General Howe be a committee to inquire into the state of the means of defence of the town, and also what further measures, in their opinion, would be proper under existing circumstances, and make report to-morrow morning at 8 o'clock, to which time this meeting is adjourned.

At a meeting of the civil authority and selectmen of the town of New Haven held, by adjournment, on the 20th day of August, 1814, the report of the committee appointed yesterday, regarding the defence of the town, was read and approved.

Voted, That an express be forthwith despatched to his excellency the governor requesting that, for the defence of the city of New Haven and its vicinity, he will immediately order into service a regiment of militia or State troops, two companies of artillery, and one of cavalry, in addition to the force now within New Haven and its vicinity; and that his excellency the governor would immediately order into service the battalion of artillery annexed to the second brigade.

Voted, That in expectation of the forces necessary to man the works, it is expedient to recommend to the citizens of New Haven, East Haven, and the neighboring towns to form a level area and throw up a mound, which shall serve as a breastwork, on Prospect Hill, by voluntary contributions in labor and money; and that General Howe, Colonel Staples, Eli Whitney, esq., Captain Stephen Alling, and Major John Miles, jr., be a committee to devise and superintend the construction of the proper works, and request the aid of the inhabitants of New Haven, East Haven, and its vicinity, to construct the same, and generally to devise such other means of defence as the interests of the town and its vicinity require.

Voted, That Colonel Staples is requested to proceed as an express, in pursuance of the foregoing vote, and that the expense thereof be paid from the treasury of the town.

HENRY DAGGETT, *Chairman.*

A true copy; made, at the request of General Cushing, August 21, 1814.

SETH P. STAPLES.

At a meeting of the governor and council, held at Hartford on the 24th day of August, A. D. 1814, his excellency the governor laid before the council applications from the civil authority and selectmen of the town of New Haven, and the warden and burgesses of the borough of Bridgeport, for an increase of the military force stationed at those places; as also a correspondence, between him and Brigadier General Cushing, in regard to the command of two regiments of the militia of this State, now in service, and requested the advice of the council thereon.

The council, on mature deliberation, cannot doubt the right or expediency, under existing circumstances, of having in service from this State a major general authorized to command such portions of the military force as is or may be in service for its defence.

On a view of the particular exposure of the town of New Haven and the borough of Bridgeport, and the increased danger of an attack, the council do advise that the application in their behalf be complied with, and that a portion of the military force of the State, to the number therein specified, be called into service and placed under the command of the major general of this State already detailed for public service.

NEW LONDON, *August* 27, 1814.

DEAR SIR: Having this day completed the discharge of all the troops in the service of the United States under my command, pursuant to your orders, gratitude forbids that I leave you without suitable expressions of my confidence and regard. For myself and staff, I return you our warmest acknowledgments for the liberal indulgence which you have been pleased to extend to our inexperience and imperfect efforts in the public service, and for your prompt and efficacious aid during our late tour of duty.

Instead of looking on us and our troops with the eye of strict discipline, and demanding correspondent skill and discernment, your correct discrimination has enabled you to view us as *citizen* soldiers.

That one of the veterans of the revolution, himself above the reach of flattery, and too sincere to bestow praise where it is unmerited, should have officially told us "that our arrangements for the defence of the sea-coast were considered highly judicious and military," be assured, sir, is the richest reward we can ever receive for our *well-intended* efforts in the service of our country. Our tour of duty, although short, has been necessarily attended with great privations and distress, but these have been borne without a murmur, in defence of the peaceful habitations of our unoffending neighbors. Of the *little* that could be done for the safety and protection of a neighboring village, delicacy does not forbid, and justice requires, that I say *much* was accomplished, and the troops under my command have left the service with regret that the enemy did not put his feet on the soil which bears freemen.

For your flattering attention and friendly counsel, we again assure the commanding general he holds a firm place in our esteem.

With the highest respect, I have the honor to be your obedient servant,

JIRAH ISHAM, *Brig. Gen'l, late Comm'g Brigade Conn. Militia in service U. S.*

Brigadier General T. H. CUSHING.

I certify that the above is a true copy of the original letter.

M. MASON, *Aide-de-Camp.*

B.

DISTRICT ORDERS.

MILITARY DISTRICT NO. 2, HEADQUARTERS, *New London, September* 12, 1814.

The brigade of drafted militia from the State of Connecticut having been withdrawn from the service of the United States by his excellency Governor Smith, and Brigadier General Lusk, the commanding officer of the said brigade, having refused to receive and obey the orders of the brigadier general commanding this military district, no further supplies of any description are to be delivered to him or his brigade for and on account of the United States, without an express written order from the brigadier general commanding, or from his superior officer actually in the service of the United States.

By order of the commanding general.

P. P. SCHUYLER, *Adjutant General.*

C.

NEW LONDON, *September* 12, 1814.

SIR: I have the honor to acknowledge the receipt of your note of this morning. The following is an extract of the order of his excellency the captain general, dated the 28th of July, 1814:

"The troops thus detached are to be completely armed and equipped according to law, and, until otherwise directed, will be held in readiness to march at a moment's warning, *for the purpose of repelling invasions of the enemy, under such orders as they shall receive from the commander-in-chief.*"

The following is an extract of a letter of instruction to me from Governor Smith, dated Sharon, August 11, 1814:

"You will inform General Cushing, by letter, of your state of readiness, and take his directions as to the route and place or places of destination, and conform to his instructions until the arrival of Major General Taylor, who will take the command as soon as his health and the necessary arrangements will permit."

In addition to the above, Major General Taylor issued his orders to me under date of the 11th of September, 1814, directing me to "discontinue calling at the office of the commanding general of the district orders, and to obey no orders excepting such as shall be issued under the authority of this State." He has also required of me regularly to make report to him of the forces under my command.

From a perusal of the foregoing extracts, you will readily infer the only answer to your interrogations which I have the power to make.

I am, sir, very respectfully, yours, &c.,

L. LUSK, *Brigadier General.*

Brigadier General CUSHING.

I certify that the foregoing is a true copy of the original.

M. MASON, *Aide-de-Camp.*

D.

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, September* 12, 1814.

SIR: The usual reports of the brigade of drafted militia under your command in the service of the United States were not delivered to the adjutant general of the district yesterday, and report says that you have received and are acting under the orders of a militia officer not in the service of the United States. It has therefore become necessary that you assign a reason in writing for withholding your reports, and contradict or admit the fact of your having received and actually executing the orders of an officer not in the service of the United States.

I am, sir, very respectfully, your obedient servant,

T. H. CUSHING, *Brigadier General, Commanding.*

Brigadier General LEVI LUSK,
Commanding a brigade of militia in the service of the United States, New London.

MILITARY DISTRICT No. 2, HEADQUARTERS, *New London, September* 12, 1814.

SIR: The preceding letters, marked A, B, C, D, and E, will show you the situation in which I am placed with respect to militia in the State of Connecticut, and that it will be impossible for me to repel any attack of the enemy within its limits, not directed against the forts in this harbor or the very small and inconsiderable battery in the neighborhood of New Haven.

The letter of Governor Smith was delivered to me yesterday morning by a gentleman styling himself the aid of Major General Taylor. I inquired whether his general had been ordered into service by the government of the United States, and assured him that if this was the case, I would most cheerfully resign to him not only the command of the drafted militia, but of this military district. He replied that General Taylor had no such orders, but that he had been ordered by Governor Smith to take command of the drafted militia of Connecticut in the service of the United States, and would immediately assume the command and issue his orders agreeably to the governor's instructions.

Finding that the usual report of the brigade was not furnished by Brigadier General Lusk, I sent for him to inquire the reason for this neglect, and to admonish him of the consequences which would ensue in the event of his failing to discharge the duties of his station as an officer in the service of the United States, and, as such, not accountable to Governor Smith or any of his militia generals. The brigadier requested a short time to make up his mind as to the course he should pursue, and I heard nothing more from him until two o'clock this day, when his answer to my note was received, and the enclosed district order immediately issued.

I understand that General Taylor is making arrangements for the supply of Lusk's brigade at this place and in its neighborhood, and it will readily occur to you that the power to call militia into service, vested in me by the President's proclamation, cannot be exercised to any beneficial result, since the moment such militia shall have assembled, in pursuance of my requisition, they will be taken from me by the State authorities.

Your letter of the 7th instant was received this morning.

I am, sir, very respectfully, your obedient servant,

T. H. CUSHING, *Brigadier General.*

Hon. JAMES MONROE, *Acting Secretary of War, Washington City.*

Remarks on the accounts of the State of Connecticut.

No. of voucher.	To whom and for what paid.	Sums disallowed.	Sums suspended.
	ACCOUNT No. 1.		
71 to 76	Pay, &c., of Major General Augustin Taylor and the officers of his staff, from August 16 to November 8, 1814 ..... $1,650 37		
	Disallowed. The State executive was informed by General Cushing, of the United States army, that a major general could not be recognized. The requisition of General Cushing called for 1,700 men, to be commanded by a brigadier general; the number mustered into service, including officers, was only 1,202, and to the command of these Brigadier General Lusk was detailed. Had it been otherwise, deductions would have been requisite as follows, viz:		
	For 3 days' travelling pay and rations of General Taylor's 3 waiters, unprovided for by law $4 20		
	For 17 days' pay and rations of the waiters of his two aides de-camp, who were paid from the 1st, though not mustered in service till the 18th September 15 86		
	For pay, &c., of Hez. Goddard, the division quartermaster, from August 25 to November 7, 1814, he having received from the United States the pay and emoluments of a deputy quartermaster general during this period 215 16		
	235 22		
77 to 80	Pay, &c., of Brigadier General Levi Lusk and the officers of his staff, from August 18 to October 12, 1814 ..... $776 84		
	Deduct the amount received for services rendered after September 12, the militia having on that day been withdrawn from the command of the officer of the United States and placed under that of an officer called into service by the State authority, and not sanctioned by the President	410 33	
	Muster-roll made at the expiration of service wanting.		
81	Pay, &c., of Lieut Col. Ezra Brainerd, of the 1st regiment, and the other field and staff officers thereof, from August 18 to October 28, 1814 ..... $1,850 36		
	Deduct:		
	For pay, &c., after September 12 ..... 1,178 60		
	For forage from August 18 to September 12, there being no certificates from the officers of their having actually kept in service the horses for which the allowance was received 68 90		
		1,247 50	
	The sums paid for forage after September 12 amount to $122 64, and are also unsustained by such certificates.		
82	Pay of Captain Nathan Johnson's company from August 18 to October 31, 1814 ..... $1,900 53		
	Subsistence of the officers and their waiters 163 80		
	2,064 33		
	Deduct:		
	For pay after September 12 ..... 1,240 53		
	For officers' rations after September 12 ..... 106 60		
	For 7 days' pay of 7 privates transferred from Captain Deming's company, they appearing by his roll to have not commenced service till August 25, and having been paid from the 18th 12 67		
	For 5 days' pay of 3 privates transferred from Captain Taintor's company, their services, according to his roll, not having commenced till August 23, and they having also been paid from the 18th 3 87		
	For rations of 1 waiter from August 18 to September 12, only 2 waiters appearing by the rolls to have been in service and payments having been made for 3 ..... 5 20		
	For 9 rations drawn from the contractor by Lieutenant Roberts prior to September 12, and for which no credit is given in his account 1 80		
		1,370 67	
	The residue of the payment for rations of one of the waiters is not supported by the requisite evidence of service.		
83	Pay of Captain Moses Goodman's company, from August 18 to October 26, 1814 ..... $1,689 47		
	Subsistence of the officers and waiters 150 00		
	1,839 47		
	Deduct:		
	For pay after September 12 ..... 1,070 44		
	For subsistence after September 12 ..... 96 00		
		1,166 44	
	The officers received 2 days' travelling pay of 2 waiters after discharge, not authorized by law, $1 02.		
84	Pay of Captain Charles Abel's company, and part of Captain Amos Chaffee's company, from August 23 to October 28, 1814 ..... $1,910 28		
	Subsistence of the officers and waiters 146 60		
	2,056 88		
	Deduct:		
	For pay after September 12 ..... 1,314 56		
	For subsistence after September 12 ..... 100 40		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 1—Continued.			
84	For pay of two privates, not appearing by the receipt roll to have been paid	$5 00		
	For pay of the members of Captain Chaffee's company from August 23 to September 12, they not appearing to have been transferred to Captain Abel's company till October 4; evidence of their being in service from August 23 is requisite. The muster-roll of Captain Chaffee is not certified as the other muster-rolls are by the mustering officer, nor by the captain himself, or any other officer	215 91		
			$1,635 87	
	The amount received for 2 days' travelling pay of 2 waiters is not provided for by law.			
85	Pay of Captain Erastus Strong's company from August 18 to October 28, 1814	$1,762 33		
	Subsistence of the officers and waiters	154 40		
		1,916 73		
	Deduct:			
	For pay after September 12	1,146 28		
	For subsistence after September 12	100 40		
	For two rations drawn from the United States contractor prior to September 12, by Erastus Strong, and not credited in his account	40		
			1,247 08	
	Like remark as to waiters' travelling pay.			
86	Pay of Captain Isaac Phelps's company from August 18 to Oct. 29, 1814	1,780 19		
	Subsistence of the officers and servants	156 20		
		1,936 39		
	Deduct:			
	For pay after September 12	1,151 38		
	For subsistence after September 12	102 20		
			1,253 58	
	Payments for 4 days' travelling pay and 1 day's rations for 2 waiters after discharge, $2 52, unauthorized by law.			
87	Pay of Captain Jerrod Strickland's company from August 18 to October 26, 1814	$2,008 34		
	Subsistence of the officers and waiters	151 20		
		2,159 54		
	Deduct:			
	For pay after September 12	1,261 81		
	For subsistence after September 12	96 00		
	For difference between musicians and privates' pay for 2 of the 4 musicians, from August 18 to September 12	1 70		
	For the pay of 2 waiters from the 18th to 23d August, it having been received from the former day, and their services, according to the officers' accounts, not having commenced till the latter	2 58		
	For 26 rations drawn from the United States contractor prior to September 12 by the captain and ensign, and not credited in their accounts	5 20		
			1,367 29	
	Travelling pay of 2 waiters after discharge, $1 02.			
88	Pay of Captain Newhall Taintor's company from August 18 to October 27, 1814	1,657 20		
	Subsistence of the officers and waiters	153 40		
		1,810 60		
	Deduct:			
	For pay after September 12	1,055 94		
	For subsistence after September 12	98 20		
			1,154 14	
	Waiters' travelling pay, $1 02.			
89	Pay of Captain Isaac Webber's company from August 18 to October 27, 1814	1,465 97		
	Subsistence of the officers and waiter	79 60		
		1,545 57		
	Deduct:			
	For pay after September 12	928 79		
	For subsistence after September 12	43 20		
	For 18 rations drawn from the United States contractor by the captain and ensign prior to September 12	3 60		
			975 59	
	Travelling pay of one waiter, 51 cents.			
90	Pay of Captain Dan. Deming's company from August 18 to October 29, 1814	1,658 78		
	Subsistence of the officers and waiters	152 40		
		1,811 18		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 1—Continued.			
	Deduct:			
90	For pay after September 12	$1,084 37		
	For subsistence after September 12	98 40		
	For 21 rations for the ensign, from the 18th to the 25th August, he having been paid from the former and been in service only from the latter day	4 20		
	For 16 rations drawn by the ensign from the United States contractor prior to September 12	3 20		
	For pay and subsistence of the lieutenant's waiter, received from the 26th instead of the 30th August, when his service commenced	1 83		
			$1,192 00	
	Waiter's travelling pay, $1 44			
91	Pay of Captain Jabez Collins's company from August 18 to October 29, 1814	1,719 27		
	Subsistence of the officers and waiters	156 20		
		1,875 47		
	Deduct:			
	For pay after September 12	1,115 47		
	For subsistence after September 12	102 20		
	Waiter's pay after September 12 is overcalculated, and includes travelling allowance, $2 10.		1,217 67	
	One of the privates, whose services commenced after September 12, is noted on the muster-roll as having deserted, whereby he forfeited his pay, $9 61.			
92 to 98	Pay of a detachment of militia stationed at New Haven in September and October, 1814, under the command of Colonel Elihu Sanford, subsistence for the officers and their servants, and forage for the horses of the field and staff officers.			
	Inadmissible; the detachment not having been placed in the service of the United States under the command of General Cushing, as required by him, but kept under that of an officer appointed by State authority, and without the sanction of the President. Had this not been the case, deductions would have been requisite, as follows:		7,043 55	
	Pay, &c., of the field and staff officers, (Vo. 92:)			
	The subsistence of the colonel and one of his waiters is calculated for three days longer than their pay, and longer (according to the pay and receipt-rolls) than they were in service	$4 20		
	The contractor's account shows that 43 rations were drawn in kind for Colonel Sanford's waiter	8 60		
	The major's pay is computed at $60 instead of $50 per month—difference	14 44		
	And the pay of the drum-major and fife-major is calculated at $1 per month each more than is allowed by law	64		
	Payments for forage not sustained by certificates from the officers of their having actually kept in service the horses for which the money was received	90 57		
	Pay, &c., of Captain J. A Bishop's company, (Vo. 93:)			
	Two of the privates (Lyman Burwell and John Todd) have not signed the receipt-roll, and there is no other evidence of the payment of their pay	23 60		
	Pay, &c., of Captain John Butler's company, (Vo. 94:)			
	Five instead of two musicians have been paid; difference between the pay of three of them and that of privates	$4 11		
	No proof of payment of the sums entered opposite the names of Corporal Hall and the three waiters	40 73		
		44 84		
	The sums for the waiters include two days' travelling pay, each $1 53, not provided for by law.			
	Pay, &c., of Captain John Buckingham's company, (Vo. 95:)			
	Difference between musicians' and privates' pay for two of the four musicians	$3 02		
	Three days' travelling pay of three waiters after discharge	2 31		
			$5 33	
	Pay, &c., of Captain A. B. Curtis's company, (Vo. 96:)			
	Same as in Captain Buckingham's company	5 33		
	Residue of the pay of the waiters for which there are no receipts	33 87		
	Pay of John Walker, who is noted as having deserted on the 14th September, and returned to duty on the 5th October, and who has been paid the same as if he had been in service during the whole tour. By deserting he forfeited his pay	12 06		
			51 26	
	Pay of Lieutenant Abm Rogers's detachment, (Vo. 97:)			
	Its services expired, according to the muster-roll, on the 20th October, and it has been paid to include the 22d; the distance to and from camp is noted to have been but 32 miles, and of course it was not entitled to more than one day's travelling allowance after discharge.			
	A day's pay of the detachment	$8 80		
	Two days' travelling pay of the waiter	51		
			$9 31	
99	Pay, &c., of the field and staff officers of the 3d regiment, commanded by Lieutenant Colonel William Belcher, for services from the 23d August to the 28th October, 1814	1,299 65		
	Deduct:			
	For pay, &c., after 12th September	725 81		
	For forage prior to 12th September, there being no certificates from the officers evidencing that they respectively actually kept a horse in service.	53 90		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 1—Continued.			
99	For pay, &c., prior to 12th September, of six of the nine waiters, only three having been mustered	$57 40		
			$837 11	
	Residue of the payments for—			
	Forage	73 49		
	Six waiters	96 63		
	Insufficiently vouched as above	170 12		
100	Pay of Captain Charles Thomas's artillery company, from the 23d August to the 29th October, 1814	863 54		
	Subsistence of the officers and waiters	74 00		
		937 54		
	Deduct:			
	For pay after 12th September	465 30		
	For subsistence after 12th September	37 60		
	For difference between musicians' and privates' pay, from 24th August to 12th September, for one of three musicians	66		
	For pay and rations of the captain and his waiter, and pay of two sergeants, two corporals, and twelve privates for the 24th August, they having been paid by the United States paymaster for that day on Captain Thomas's prior rolls	7 00		
	For pay of a corporal for 24th and 25th August, he having also been in like manner paid for those days on Captain French's rolls	64		
			511 20	
	Residue suspended, there being no muster, and neither pay nor receipt-roll being certified by the captain or any other officer			$426 34
101	Pay of Captain Stephen Billings's company, from the 24th and 25th August to the 20th September, 1814	520 43		
	Subsistence of the officers and waiters	61 80		
		582 23		
	Deduct:			
	For pay after 12th September	151 26		
	For subsistence after 12th September	17 60		
	For difference between first and second lieutenant's pay for three days, payment having been made to two lieutenants during that time, at $30 per month each, and the law admitting of but one	49		
	For a day's pay of the captain, one of the lieutenants, the ensign, four sergeants, two corporals, one musician, forty-one privates, and a waiter, they having been paid by the United States paymaster for the same day (in some instances the 24th, and in others the 25th August) on the rolls of other companies previously in service, and wherefrom they were detached	16 32		
	For residue of the pay of the captain, one corporal, five privates, and pay of a sergeant and two privates, they not having signed the receipt-roll nor otherwise appearing to have been paid	27 44		
			213 11	
	Remainder suspended for want of the muster-roll			369 12
102	Pay of Captain Peter Lord's company, from the 24th August to the 21st September, 1814	589 20		
	Subsistence of the officers and waiters	63 80		
		653 00		
	Deduct:			
	For pay after 12th September	184 50		
	For subsistence after 12th September	19 80		
	For pay of the captain, a sergeant, two corporals, and four privates for the 24th August; of three privates for the 24th and 25th August, and of a sergeant and eight privates for the 24th, 25th, and 26th August, they having, on the rolls of the companies wherefrom they were detached, been paid for the same time by the United States paymaster	12 03		
	For pay of one private and residue of the pay of one sergeant and eight privates, who have not signed the receipt-roll nor appearing otherwise to have been paid	28 30		
			244 63	
	Residue suspended for want of the muster-roll			408 37
103	Pay of Captain Lemuel G. Crocker's company, from the 24th August to the 20th September, 1814	496 76		
	Subsistence of the officers and waiter	56 00		
		552 76		
	Deduct:			
	For pay after 12th September	142 74		
	For subsistence after 12th September	16 00		
	For pay and rations of the ensign for the 24th, 25th, and 26th August, and pay of the drummer for the 24th; of a sergeant for the 24th and 25th; of a private for the 24th, 25th, and 26th, and of another private for the 24th, 25th, 26th, and 27th August, payments for these periods having been made by the United States paymaster on the rolls of other companies from which the officers and men were detached	6 77		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 1—Continued.			
103	For pay of two privates for the 24th, 25th, and 26th August, they being noted as rejected, and not appearing to have been paid	$1 54		
	For pay accruing prior to 13th September, of a sergeant and three privates, who, by a note of the lieutenant colonel on the muster-roll, appear to have been tried at courts-martial held on the 16th and 19th September, and sentenced to punishment by stoppage of pay; as to the sergeant, of $11, as to one of the privates, of $5; and as to the other two, of $2 each; and all of whom were, notwithstanding, paid without any stoppage. Unless the offences were committed after the 12th September, which does not appear, this amount will be inadmissible	19 01	$186 06	
104	Pay of the officers and nine other members of Captain Amos Chaffee's company, from the 23d August to the 5th October, 1814	230 85		
	Subsistence of the officers	79 20		
		310 05		
	Deduct:			
	For pay after 12th September	118 83		
	For subsistence after 12th September	41 40		
			160 23	
	Residue suspended, (see remarks on foregoing voucher, No. 84)			$149 82
105	Pay of Captain James Aspinwall's company, from the 23d August to the 30th October, 1814	1,308 93		
	Subsistence of the officers and waiters	126 40		
		1,435 33		
	Deduct:			
	For pay after 12th September	859 73		
	For subsistence after 12th September	80 20		
	For portion accruing prior to 13th September, of the pay of Ezra Roach, a private, who is noted to have been drowned on the 8th October, and which does not appear to have been paid	5 52		
	For pay of the ensign, one sergeant, and nine privates, for the 23d and 24th August; of another private for the 23d, 24th, 25th, 26th, and 27th August, and rations of the ensign for the 24th August, payment to them for these days having been made by the United States paymaster on the rolls of other companies wherefrom they were detached	8 47		
	For residue of the pay and rations of the ensign and of the pay of the sergeant and eleven privates, whose names are not on the muster-roll of the company	87 53		
			1,041 45	
	For waiters' travelling pay after discharge, $1 02.			
106	Pay of Captain Benjamin Hurd's company for services at Killingworth, from the 6th to the 15th September, 1814	136 61		
	Subsistence of the officers and waiter	20 00		
		156 61		
	Deduct:			
	For pay after the 12th September	44 21		
	For subsistence after the 12th September	6 00		
	For subsistence of waiter from 6th to 12th September, not mustered	1 40		
			51 61	
107	Pay of Captain Caleb Thompson's company, from the 8th September to the 6th November, 1814, and subsistence of the officers and waiters		1,458 73	
	Inadmissible. The company formed part of Colonel Sanford's command.—(See foregoing remark on vouchers 92 to 98)			
	Three waiters' travelling pay and rations after discharge, $1 18.			
	One waiter's pay not receipted for, $15 47, and it is calculated for nine days longer than the officer was in service, $2 36.			
108	Pay of Lieutenant Edmund Bushnell's detachment of cavalry from September 8 to November 7, 1814, and subsistence of the lieutenant and his waiter		1,030 65	
	Inadmissible, same cause.			
	Waiter's travelling pay and rations, $1 70.			
109	Pay of Captain Isaac Bennett's company from September 10 to November 10, 1814, and subsistence of the officers and waiters		1,965 11	
	Inadmissible, same cause.			
	Waiter's travelling pay, $1 02.			
110–115	Pay of Lieut. Colonel Daniel Burritt and other field and staff officers, and also of five officers under his command		351 42	
	Inadmissible. Their services were not rendered till after the September 12, 1814.			
	Computed for four days. The ration return shows the detachment to have been on duty but three days.			
	Captain Beach's pay (voucher 112) overcalculated 30 cents.			
116–120	Pay of Major Noah H. Barnum and other field and staff officers, and also of four companies under his command		2,365 05	
	Inadmissible, same cause.			

Remarks on the accounts of the State of Connecticut—Continued.

No of voucher.	To whom and for what paid.			Sums disallowed.	Sums suspended.
	ACCOUNT NO. 1—Continued.				
116–120	Had it been otherwise, the following deductions would have been necessary:				
	116. Waiter's travelling pay after discharge	$3 18			
	Forage after discharge	3 00			
	Unprovided for by law.				
	Residue of payments for forage	18 18			
			$24 36		
	Not sustained by certificates of the horses having been kept in service.				
	117. Pay of a corporal, a musician, and five privates, not receipted for	40 11			
	Difference between musicians' and privates' pay for one of three musicians	43			
	Travelling pay of three waiters, after discharge, four days	3 18			
			43 72		
	118. Pay of a private whose name is erased from the muster-roll	4 80			
	Travelling pay of three waiters	3 18			
			7 98		
	119. Travelling pay of two waiters five days		2 66		
	120. Overpayment to the captain	$1 93			
	Travelling pay of a waiter	1 33			
	Pay of a private, for which there is no receipt	7 92			
			11 18		
			89 90		
121	Pay of Captain Nathaniel Farrand's company and subsistence of the officers			$610 13	
	Inadmissible, same cause.				
	The captain is noted on the muster-roll as absent without leave. This disentitled him to any pay, and there is no proof that the sum entered in the receipt-roll was paid to him. The amount of that and of the subsistence account is		$66 16		
	The pay of one of the musicians is overcalculated		8		
	Four days' travelling pay of two waiters after discharge		2 12		
			68 36		
122	Pay of Lieutenant Horace Beach's detachment of artillery and subsistence of the officers and waiters			980 67	
	Inadmissible, same cause.				
	Two privates appear by the muster-roll to have been fined one-fourth of a month's pay each, and for which no stoppage has been made		$4 00		
	Difference between the pay of a corporal and a private for one month, (John Dunn having been paid as a corporal from the 23d November, and not appointed as such till 23d December)		2 00		
	Lieutenant Beach's rations computed at three instead of two per day, and for him and his waiter for one day longer than they were in service—difference		15 60		
	Rations of Lieutenant Collins and waiter, computed from 29th October. Their services did not commence till the 8th November—difference		6 60		
			28 20		
123	Pay of Lieutenant Samuel Smith's detachment, and subsistence of himself and waiter			516 05	
	Inadmissible, same cause.				
124	Pay, &c., of Major Charles Sherman and servant			129 49	
	Inadmissible, same cause. No muster-roll.				
125	Pay of Lieutenant Colfax's detachment, and subsistence of himself and waiter			246 91	
	Inadmissible, same cause.				
126	Pay of Lieutenant Noah Walker's detachment and his waiter's subsistence			214 15	
	Inadmissible, same cause.				
127	Pay of Sergeant Roswell Packer's detachment			96 04	
	Inadmissible, same cause.				
128	Pay of Sergeant Leet Hurd's detachment			99 90	
	Inadmissible, same cause.				
129	Pay of Captain Amos Fowler's company from the 7th to 14th September, 1814, inclusive		$184 80		
	Subsistence of the officers and waiters		19 20		
			204 00		
	Deduct:				
	For pay after 12th September		$46 00		
	For subsistence after 12th September		4 80		
	Pay and subsistence for 7th September		25 40		
				76 70	
	The company is represented to have been called out, by order of Lieutenant Colonel Baldwin, on an alarm at Guilford and Branford; and that the lieutenant colonel's account for the rations of the non-commissioned officers and privates, and which is certified both by him and Captain Fowler, manifests the company to have been in service only from the 8th to the 14th September inclusive.				
131	Pay of Sergeant John Osborn's detachment			113 51	
	Inadmissible. Services performed after September 12, 1814.				
132	Pay of Sergeant Peleg Hancock's detachment			523 60	
	Inadmissible, same cause				

Remarks on the accounts of the State of Connecticut—Continued.

No of voucher	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT NO. 1—Continued.			
133	Pay of Lieutenant Benjamin Dowd's detachment, and subsistence of himself and waiter		$491 93	
	Inadmissible, same cause.			
	Pay of two corporals and two privates, overcalculated	$1 84		
	Pay of one of these privates not receipted for.			
	Balance	8 77		
		10 61		
134	Pay of Lieutenant John W. Hanford's detachment, and subsistence of himself and waiter		843 51	
	Inadmissible, same cause.			
135	Pay of Lieutenant Horace Beach's detachment of artillery, and subsistence of the officers and waiters		1,058 32	
	Inadmissible, same cause,			
	Exclusive of the rations for the waiters, the first lieutenant has been paid for four, and the second lieutenant for three, daily. They were entitled to only two each per day. Overpayments, $34 80.			
136	Pay of Captain Joseph Sturgess's company		29 84	
	Inadmissible, same cause.			
	The services are stated to have been rendered on September 30 and October 1, 1814, and the pay is declared at the top of the receipt-roll to be in full for the *parade* therein expressed.			
	Expenses attending *parade* duty of militia are not properly chargeable to the United States.			
137	Pay, &c., of Joseph Trumbull, as aide-de-camp to Governor Smith for three months, between June 1, 1813, and February 22, 1815		318 00	
	There is no muster-roll, nor other proof of service of himself and waiter than his own certificate, nor any account specifying the days whereon he was on duty.			
	For those subsequent to the 12th September no allowance can be made, nor for those prior thereto, unless by the special direction of the Secretary of War. The governor himself does not appear to have been in service.			
138	Pay of Brigadier General Enoch Foote at sundry periods in 1814	$47 24		
	Inadmissible as to services after September 12, 1814	20 28		
	Inadmissible as to services on the 9th and 10th September in relation to Captain Bennett's company, the company being part of Colonel Sanford's command, (see foregoing remark on vouchers 92 to 98)	6 92		
			27 20	
	The charges for organizing a lieutenant's command on the 28th and 29th May, and another like command on the 12th and 13th July, are not considered to be properly chargeable to the United States, and cannot be allowed without the sanction of the Secretary of War			$13 36
139	Pay of Brigade Major Henry May for mustering several detachments		12 30	
	Inadmissible. Three of the charges are for mustering, in May, July, and August, 1814, of detachments under the command of Lieutenants Bellamy, Curtis, and Parks. These detachments were in the United States service, and were, as the rolls show, mustered by Captain Northrop, of the United States army. The rolls afford no evidence of any service by Major May His other two charges relate to Captain Bennett's company —(See last note.)			
140	Pay, &c., of Brigade Major Ralph J. Ingersoll for mustering detachments, 11 days		31 48	
	The services were rendered after September 12, 1814			
141	Pay, &c., of Lieutenant Benjamin Dowd for mustering Captain Bray's and Captain Johnson's companies, two days each	$8 00		
	Inadmissible as to Captain Johnson's company, the services having been rendered after the 12th September.			
	Captain Bray's company having been in the United States service, and been mustered out by Lieutenant Dowd, an allowance is made for two days' pay and rations	3 20		
			4 80	
142	Pay of Captain Joseph A. Bishop for two days' mustering Lieutenant Beach's detachment		3 22	
	Inadmissible. The duty was not performed till after September 12, 1814			
143	Pay of Captain William Ingham for mustering Lieutenant Dowd's detachment		1 00	
	Inadmissible, same cause.			
144	Contingent expenses of Hez. Goddard as paymaster general	$126 11		
	Deduct:			
	Charges dated after 12th September	65 73½		
	Charge for horse hire and expenses of a journey for pay tables, inadmissible	1 96		
			67 69½	
	Residue suspended			58 41½
	There being no evidence showing what portion of the very large quantities of blank rolls and other stationery obtained prior to the 12th September was used in respect of militia (exclusive of Colonel Sanford's detachment) in service before that day, nor what portion of the postage for the third quarter of 1814 was incurred previous to that day; neither is there evidence of any authority for the journey of Jirah Isham (whose expenses are charged) for money for Mr. Goddard.			
145	Pay of Captain Arnold Foote's company, and subsistence of the officers and waiters for three days, omitted on the former roll, voucher 119		72 40	
	Inadmissible. The services of the company were not performed till after September 12, 1814.			
	The pay is overcalculated	$10 48		
	Waiters not mustered	2 74		
	No receipt-roll from the men.			

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 1—Continued.			
151–162	Pay of two regiments called out by order of Brigadier General Foote, on an alarm at Bridgeport and Fairfield in April, 1814	$423 33		
	The officers and men have all been paid for the 15th, 16th, and 17th of April. The report of these troops which is certified by General Foote and whereon he obtained payment for their rations, shows them to have been in service only on the 15th and 16th, and to those days only did that payment extend. Pay for the 17th is therefore deducted	$140 64		
	Pay of a musician and two privates, three days each, and whose names do not appear on the muster-roll, vouchers 154, 158, and 160	2 50		
			$143 14	
1	Pay of Major Sherman's battalion of artillery for services in June, 1813: The officer mustered as 3d lieutenant received the pay of a 1st lieutenant, difference		33	
5	Pay of Ensign B. Bates's detachment for services in July, 1813: The musicians paid at $10 instead of $9 per month, difference		64	
6	Pay of Captain Amos Fowler's company from 16th to 20th of July, 1813, inclusive, and subsistence of the officers and waiters	$111 11		
	The voucher whereon Captain Fowler obtained payment for the rations of the non-commissioned officers and privates, and which he has certified to be a true report from the morning return, specifies the 17th, 18th, 19th, and 20th of July as the period of service, and for those days only did he demand or receive an allowance for their rations. Pay for the 16th is therefore deducted	$19 57		
	The officers have been paid for 6 days rations for themselves and waiters and the subalterns for 3 rations per day instead of two, overpayment	6 40		
			25 97	
7	Pay of Ensign Eleazer Clark's detachment for services in August, 1813: Sundry overpayments		44	
13	Pay of Lieutenant Abraham Young's detachment of artillery for services in September, 1813: The officers were paid at higher rates than the law then in force athorized, overpayments		1 94	
16	Pay of Captain Bates Hoyt's company for services in September, 1813: Roll overadded		1 00	
17	Pay of Captain Alexander Hendric's company for services in September, 1813: Pay of James Ferris, jr., entered twice	$1 33		
	Pay of captain not receipted for	6 66		
			7 99	
21	Pay of Lieutenant John Bull's detachment for services in July and August, 1813, and his rations: The charge for his rations exceeds the amount of his account		1 60	
A	Paymaster General's postage account		17 54	
	Inadmissible. All incurred after September 12, 1814.			
B	Pay of Sergeant John Osborn's detachment from August 27 to October 26, 1814	$254 00		
	Deduct:			
	For pay after September 12	182 73		
	Residue of the pay of one the privates, he not appearing to have been paid	4 69		
			187 42	
C	Charge for Paymaster General's commissions at 1½ per cent on amount of his disbursements	$52,345 91		
	Accounts lodged with George L. Perkins, district paymaster	22,280 92		
		74,626 83		
			1,119 40	
	No allowance can be made in respect of the accounts lodged with the district paymaster, and the compensation (the rate whereof will have to be determined by the Secretary of War, there being no law authorizing the payment of a commission to paymasters) to be allowed in respect of the State paymaster general's disbursements will have to be limited to the portion thereof assumed by the United States.			
	ACCOUNT NO 2.			
2–2	Colonel James Ward, commissary general: Payment to Samuel Hart, jr., for parts of 413 rations furnished at Saybrook by the contractor, not complete		19 30	
	Inadmissible. The contractor has charged for all he supplied as complete rations. His account was adjusted by Colonel Ward.			
2–3	Colonel Ward's charge for balance of profit and loss on sundry articles of subsistence left on hand when the United States assumed the supply of rations in 1813	$104 58½		
	Deduct for two barrels of pork charged beyond the number sold, one barrel appearing to have contained only brine and salt, and the other is presumed to have had beef in it, the number of barrels sold of the latter article exceeding by one the specified quantity on hand	$31 00		
	Cost of one barrel of beef	$9 00		
	Under addition of the cost side of the pork account	6 00		
		15 00		
		$16 00		
	Also for deficiency in the contents of 3 pipes of gin and 27 barrels of brandy, a loss presumed to have been attributable to leakage, and not to the circumstance on which Colonel Ward's charge is predicated.			

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.	Sums disallowed.	Sums suspended.
	ACCOUNT No. 2—Continued.		
2—3	Gin, 10 gallons ..... $7 80 Brandy, 26½ gallons 19 87½ $27 67½	$13 67½	
2—4	Payments for potatoes supplied by George and James Pratt, for Lieutenant Pratt's and Ensign Dowd's detachments, in service at Fort Fenwick in 1813..... Not allowable.	5 16	
2—6	Payments to Asahel Otis and others, for keeping horses in October, November, and December, 1813..... Suspended. The bills are not certified by any officer, nor do they express to whom the horses belonged, or in what service they were employed.	.....	$36 08½
2—9	Charge for interest on advances of money by Colonel Ward and others..... Inadmissible, and Colonel Ward was informed to this effect on the adjustment of his former account.	361 43	
2—11	Charge for Colonel Ward's travelling expenses on a journey to Washington in September, 1813..... Inadmissible. The journey does not appear to have been authorized by any officer of the general government.	97 50	
2—12	Charge for travelling on sundry other journeys, 724 miles, at 9 cents..... Not allowed. No orders requiring the performance of these journeys are produced, nor is any proof of their having been performed, neither are the objects of the journeys explained.—(See also remark on a similar charge of S. E. Dwight, voucher No. 3 to 8, of account No. 2.)	65 16	
2—13	Charge for Colonel Ward's services from June 2 to the 16th of December, 1813, 197 days, at $3 ..... Suspended. The allowance to be made will have to be determined by the Secretary of War; and to enable him to decide, evidence of Colonel Ward's services, and of the necessity for them, after the United States assumed the supply of the troops, should be furnished. A charge is made in another part of the State account for 180 days' services of Hez. Goddard as an assistant to Colonel Ward in 1813.	.....	591 00
3—¼	Payment to Brigadier General Enoch Foote, for 1,036 rations for the 4th and 28th regiments, called out on an alarm at Bridgeport and Fairfield on the 15th and 16th of April, 1814. The number of commissioned and non-commissioned officers and privates mentioned in the return whereon the payment was made is greater than the pay-rolls show to have been in service. According to them, the field and staff and other commissioned officers, and all the non-commissioned officers and privates, were not entitled for the 15th and 16th of April to more than 938 rations. Deduct therefore for 98 rations.....	19 60	
3—½	Payment to Enoch Foote for 15 bushels of potatoes for Lieutenant Bellamy's detachment, in service in April and May, 1814..... Not allowable.	7 50	
3—⅓	Payment to Enoch Foote for potatoes for Lieutenant Curtis's detachment, in service in May, June, and July, 1814 ..... $14 40 Payment to Wm. Goodsell & John Brooks for meat supplied for Lieutenant Curtis's detachment, in consequence of bad meat having been supplied by the United States contractor, and to J. Blackman for transporting the bad meat back to the contractor ..... $77 63 Less the amount received from the contractor for the bad meat.. 63 18 14 45	28 85	
3—¼	Not allowable. Payment to Enoch Foote for potatoes for Lieutenant Parke's detachment, in service in July, August, and September, 1814..... $18 09½ To Lieutenant Parke for travelling rations for the detachment, four days. 23 40 To Nathan Lyon for necessaries furnished to David Lyon, a sick soldier..... 4 53½ Not allowable. The detachment was in the United States service, was paid by the United States paymaster, and was supplied by the United States contractor for the whole period of service specified on the rolls, and for which it received pay. The necessaries for David Lyon are again charged for in an account which will be hereafter remarked on.	46 03	
3—⅕	Payment to Enoch Foote for 900 rations for militia called out at Bridgeport, 3 days. Inadmissible. After September 12, 1814. The account includes charges amounting to $52, for cooking rations, for which no allowance is authorized by law or regulation.	197 11	
3—⅙	Payments to sundry persons for fuel, straw, potatoes, medical attendance, medicine, hospital stores, and nursing sick soldiers of captain Bennett's company..... Inadmissible. The company was part of Colonel Sanford's command.—(See foregoing remark on vouchers 92 to 98.) The payment for the potatoes, $14, and the money allowance to the commissioned officers for fuel, $16, are not only unauthorized, but the latter is expressly prohibited by the regulations.	212 25½	
3—⅐	Payments to sundry persons for fuel, straw, potatoes, rations, medicines, medical attendance, nursing, &c., for Lieutenant Samuel Smith's detachment..... Inadmissible. In service subsequent to September 12, 1814. Otherwise objectionable, in part as follows: Foote & Brooks's bill for wood, overcalculated..... $0 12½ Potatoes, unauthorized..... 6 67 $6 79½ A. Morehouse's bill for straw, overadded..... 43 Bill for 87 rations of meat furnished by E. Foote to supply short issues by the State contractor..... $5 62½	194 76½	

Remarks on the accounts of the State of Connecticut—Continued.

No of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 2—Continued.			
3 –$\frac{1}{7}$	Bill for 1 barrel of beef furnished by him in lieu of bad meat supplied by same contractor	$10 00		
			$15 62½	
	This amount would in no case have been properly chargeable to the United States. It ought to have been deducted from the contractor's account, and this does not appear to have been done.			
	Returns for 344 rations for the detachment, charged at 18 cents, instead of 16 cents, the contract price		6 88	
	The contractor's account contains a charge for 1,320 rations for this detachment, which, with the above 344, make	1,664		
	It was entitled, according to the rolls, to only	1,606		
	At 16 cents	58	9 28	
	Bill of Dr. Beard, overadded		80	
	Allowance to Lieutenant Smith for fuel		5 34	
	Prohibited by the regulations. The quantity charged in the other bills is rather more than the regulations prescribe for both him and his detachment.			
	Foote & Brooks's bill for straw, overcalculated		7	
			45 22	
3–$\frac{1}{8}$	Payment to Brigadier General E. Foote for his rations on May 28 and 29, July 12 and 13, September 9 and 10, and November 8 and 9, 1814			$17 28
	Not allowed. See foregoing remark on the voucher for his pay, (No. 138, account No. 1.)			
3—2	Payments to Salmon Sherwood for fuel, straw, and potatoes for Sergeant John Osborn's detachment, from June 28 to November 22, 1814, $49 25. Deduct:			
	For fuel and straw after September 12		14 32	
	Potatoes during the whole term		7 50	
				21 82
3—$\frac{3}{9}$	Payment to Lieutenant Colonel Asa Comstock for subsistence for the field and staff officers of his regiment going to and from duty August 15 to 25, 1814			10 63
	Not allowed. The dates specified comprised the whole term of service, as appears by the rolls, and the field and staff officers respectively received from the United States paymaster an allowance for 11 days' rations.			
3—4	Payment to Lieutenant Benjamin Dowd for meat, flour, liquor, &c., for his detachment, furnished May 31 to June 5, 1814, before the commissary was notified			34 46
	Not allowed. The detachment was in the United States service, was paid by the United States paymaster, and was supplied by the United States contractor. By Governor Smith's letter to Colonel Kingsbury, of June 2, 1814, the detachment is shown to have been called out in aid of the troops on duty at Saybrook, under Captain Bray, and to have been placed under his command. And the ration returns with the contractor's accounts prove that more rations were issued by him for the militia under the command of Captain Bray than the rolls (including those of Lieutenant Dowd's detachment) show them to have been entitled to during the whole period of service.			
3—5	Payments to sundry persons for fuel, forage for artillery horses, medicines, medical attendance, nursing, hospital stores, rations, rum, vinegar, expenses of a journey to inspect provisions, &c., &c., for the militia in service from May 20 to September 26, 1814, under the command of Captain Bray, $373 24½. Deduct:			
	For horse keeping after September 12		$1 25	
	For medical attendance after September 12		1 06	
	Potatoes, inadmissible		36 51	
	For rations, rum, and vinegar, after September 12, (see preceding note respecting Lieutenant Dowd's debt)		23 62½	
	For expenses of Captain Bray and Lieutenant Elliott on a journey to inspect provisions after September 12. See same remark; they besides received a money allowance for all the subsistence they were entitled to		7 59	
				70 03½
3—8	Payment to Sereus E. Dwight for sundry expenditures made by him for fuel, straw, potatoes, hospital stores, medicines, nursing, medical attendance, &c., $1,837 44½. Disallowances:			
	For potatoes for the detachments of Lieutenants Caleb Cook, Laban Smith, and Reuben Smith, June to October, 1814		$30 26½	
	For fuel and straw for ditto, after September 12		30 30	
	For fuel and forage for Major General Taylor and his aids, fuel, straw, hospital stores, &c., for Colonel Sanford's regiment, and forage of cavalry attached thereto, &c		1,291 23	
	See foregoing remarks on vouchers 71 to 76 and 92 to 98, account No. 1.			
	For fuel, straw, &c., for Lieutenant Beach's detachment In service after September 12, 1814.		132 97½	
			1,484 77	
	Sereus E. Dwight's account for his services in relation thereto		248 55	
				1,733 32

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.	Sums disallowed.	Sums suspended.
	ACCOUNT No. 2—Continued.		
3—8	No allowance can be made for his services after September 12, nor previously, so far as regards General Taylor, his aids, and Colonel Sanford's command. His purchases, &c., in respect of Lieutenants Cook, L. Smith, and R. Smith's detachments, including potatoes, amounted to about $110, and for his services he has charged nearly $40. Evidence of his appointment and of the necessity for his services as to those detachments should be furnished to enable the Secretary of War to decide on the allowance to be made. Upwards of $42 of the sums charged are for travel, at 9 cents per mile, in addition to other compensation at $2 50 per day. An assistant deputy quartermaster general was entitled to only $1 93 per day and to no allowance for travel. Transportation of baggage is not allowable to an officer on travelling three or four miles to make a purchase, as here charged, but only when ordered on distant commands.		
3—9	Payment to Nathaniel Griffing for rations and potatoes supplied in September, 1814.	$80 33	
	Not allowable. As to 35 rations for Lieutenant Reuben Smith's detachment, because rations for this detachment, which was in the United States service, were, for the period in question, drawn from the United States contractor; and as to the remaining rations, because the same were furnished for part of Colonel Sanford's command.—(See foregoing remark on vouchers 92 to 98.)		
	Charged at 1 cent per ration beyond United States contract price.		
3—10	Payments to sundry persons for fuel, straw, potatoes, medicines, hospital stores, &c., for militia under command of Brigadier General Lusk and Lieutenant Colonel Brainerd $1,022 01½		
	Wood furnished prior to September 12, 1814 ..... $5 17		
	Nursing sick soldiers to September 12, 1814 ..... 5 00		
	10 17		
		1,011 84½	
	Residue inadmissible. The articles (except a portion of the potatoes, and for which no allowance is authorized by law or regulation) having been supplied after September 12, 1814.		
	Hospital account overcharged $3.		
3—11	Payments to Wm. Lord and others for wood, medical services, and medicines for Captain Aspinwall's and Captain Chaffee's companies, in service at Stonington $30 63		
	Wood, August 29 and September 6, 1814 ..... $6 50		
	Medicine, &c., September 1 to 12, 1814 ..... 4 98		
	11 48		
		19 15	
	Residue inadmissible. Supplied after September 12, 1814.		
3—12	Payments for fuel, straw, potatoes, &c., for Captain Nathan Johnson's company..	163 06	
	Inadmissible. The articles, with the exception of medicines, for which there is a charge of $1 45 not vouched, having all been supplied after September 12, 1814		
3—13, 14	Payments for fuel, straw, potatoes, &c., for Major Noah S. Barnum's detachment...	359 01	
	Inadmissible. All furnished after September 12, 1814.		
3—15	Payments for wood for Lieutenant Colfax's detachment	19 52	
	Inadmissible. Same cause.		
3—16	Payments for fuel, straw, &c., for detachments commanded by Lieutenants Walker and Dowd	37 80	
	Inadmissible. Same cause.		
3—18	Payment to Captain Benjamin Hurd for rations for his company, in service from September 6 to 15, 1814, at 17 cents $63 07		
	Allow for 251 rations to which the company was entitled, from September 6 to 12, at 16 cents, the United States contract price 40 16		
		22 91	
	Residue inadmissible.		
3—19	Payment to Lieutenant Colonel Benjamin Baldwin for 490 rations for Captain Amos Fowler's company, September 8 to 14, 1814, at 20 cts. 98 00		
	Allow for 350 rations furnished from September 8 to 12, at 16 cents.... 56 00		
		42 00	
	Residue inadmissible.		
3—20,	Payments to Ichabod Ward, Hubbil Brooks, and Solomon Dewey, for rations, &c., supplied by them	14,744 81	
21, & 22	Inadmissible. As to $9 44 for 59 rations for three non-commissioned staff officers of the regiments commanded by Lieutenant Colonels Brainerd and Belcher, for days prior to September 13, 1814, and included in a return for October following, because the issues for those regiments before that day by the United States contractor appear to have exceeded the number they are shown by the rolls to have been entitled to, and the rations of these men ought to have been drawn, as the same became due, out of those issues. As to $15 40 for beef and liquor purchased August 29, 1814, in consequence of bad meat and an insufficient quantity of liquor having been supplied by the contractor, because either the contractor ought to have been resorted to for a reimbursement of this expense, or the proper measures ought to have been taken at the time for having him charged with it in his account with the United States, long since settled, viz: a survey, condemnation, and notification to the accounting officers. And as to the residue, because the rations, &c., (with the exception of a portion of such as were for Colonel Sanford's command, and respecting which see foregoing remark on voucher 92 to 98,) were not supplied till after September 12, 1814. Had not this difficulty existed, deductions therefrom would have been requisite as follows, viz:		
	For excess in the cost of 74,057 rations, charged at 1 cent each; 1,194 rations, charged at 2 cents each; and 732 rations, charged at 4 cents each higher than the United States contract price $793 73		

Remarks on the accounts of the State of Connecticut—Continued.

Nov. of voucher.	To whom and for what paid.			Sums disallowed.	Sums suspended.
	ACCOUNT No. 2—Continued.				
	For 1,200 rations, part of 43,060, (exclusive of the aforesaid 59,) charged as furnished for the regiments of Lieut. Colonels Brainard and Belcher, which, according to the rolls, were entitled to only	68,241			
	And whereof the United States contractor is shown by his accounts to have issued	26,381			
		41,800			
	At 16 cents	1,200	$192 00		
	For 1,409 rations, part of those charged in respect of Major Barnum's detachment, viz:				
	In Ich. Ward's account	5,905			
	In Sol. Dewey's account	2,084			
	In Major Barnum's account.—(See voucher No. 3—13 of account No. 2)	1,071			
		9,060			
	Deduct:				
	This number turned over to Sergeant R. Parker's detachment	45			
		9,015			
	The rolls of Major Barnum's detachment, showing it to have been entitled to no more than	7,606			
	At 16 cents	1,409	225 44		
	For 9 rations for Sergeant R. Parker's detachment, the number specified in the return for 15 men, 23 days, (agreeing with the rolls,) being 354 instead of 345		1 44		
	For 10 rations for Henry Campbell, Nov. 16 to 26, 1814, taking care of State horse, which it would seem could in no case be properly chargeable to the United States		1 60		
	For 15 rations for Sergeant Hancock's detachment, more by that number being charged for than the rolls show it to have been entitled to		2 40		
	For 407 pounds of bread furnished in consequence of the supply of bad bread. The date of the supply is not known; the receipt on the bill is dated October 27, 1814. If the bad bread was supplied after the 12th September, 1814, by the State contractor, the amount should have been deducted from his account, and which has not been done; if supplied by the United States contractor before the 13th September, the foregoing remark as to the bad beef is applicable		16 28		
	For 217 rations, part of the number charged for Lieutenant Reuben Smith's detachment, being	450			
	This detachment having been supplied by the United States contractor with	1,398			
		1,848			
	And having been entitled, according to the rolls, to only	1,631			
		217	33 72		
	For 60 rations, part of the number charged for Sergeant Osborn's detachment, being	945			
	It having been supplied by the United States contractor with	1,350			
		2,295			
	And been entitled, according to the rolls, to but	2,235	9 60		
	For potatoes	$79 48			
	Extra whiskey	58 10			
	Not provided for by law or regulation	137 58			
		1,413 79			
3—23	Payments by Hez. Goddard for fuel, forage, straw, potatoes, and hospital and contingent expenses		995 46½		
	His compensation		631 67		
			1,627 13½		
	Deduct:				
	Amount of vouchers 23, 25, 26, 27, and 32 of the fuel account, the wood not having been supplied till after the 12th September, 1814		17 17		
	Amount of voucher 28 of same account, being for a payment to Lieut. Col. William Moore, for wood supplied 10th September, 1814, a like sum being charged in Mr. Goddard's account with the United States on a duplicate voucher		10 00		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.			Sums disallowed.	Sums suspended.
	ACCOUNT No. 2—Continued.				
3—23	Amount of voucher 31 of same account, being for a payment to Samuel Smith for wood supplied September —, 1814, to Captain Taintor's company quartered in his house. Mr. Goddard's account with the United States also containing a charge founded on a voucher of the same amount in the same name and for wood supplied for the same company, September —, 1814. In neither case is the day specified; and if the vouchers do not both relate to the same parcel of wood, the charge in the State account would not be admissible till the wood it applies to should be shown to have been furnished before the 12th of that month		$4 00		
	Amount of vouchers 19, 20, 21, 22, 23, 37, and 38 of the forage and straw account, the articles not having been supplied till after the 12th September, 1814		136 14		
	Amount of voucher 18 of same account, being for 35 bushels of corn charged in gross as delivered from August to October, 1814, and of course the portion supplied previous to the 13th September cannot be ascertained		40 83		
	Amount of vouchers 4 and 5 of same account, one amounting to $2 25 for corn supplied in June, 1814, and the other to $16 for keeping a horse from the 7th January to the 29th April, 1814, and neither affording explanation whereby their admissibility as against the United States can be judged of; there were no militia in service in 1814 till near the termination of the last mentioned period		18 25		
	Amount of vouchers 33, 35, and 36 of same account on duplicates, whereof Mr. Goddard obtained credits in his account with the United States:				
	B Gardner	$13 32			
	J. S. Avery	24 67			
	David Avery	1 50			
			39 49		
	Amount of the account for potatoes, the supply whereof was not authorized by law or regulation		114 26		
	Amount of vouchers 14, 15, 16, 18, 19, and 20 of the hospital account, the services and supplies therein mentioned having been rendered and furnished after September 12, 1814		32 51		
	Amount of voucher 2 of the contingent account, being for provisions supplied by Turner Miner on the evening of August 15, 1814, for Lieut. Col. Comstock's regiment, which appears to have commenced its services on and to have drawn rations for that day from the United States contractor		10 38		
	Amount of vouchers 4 and 8 of the same account, being for compensation of Arnold Clark and James Baxter, in the commissary department, from the 9th to the 29th of August, 1814, at $1 50 per day, each, exclusive of $9 36 for tavern expenses. Evidence of the nature of their services and of the necessity for them will be requisite to enable the Secretary of War to decide on those charges. Rations for the troops were supplied by the United States contractor; and for services of Mr. Ward as commissary general, and of Mr. Goddard as assistant commissary general, compensation is elsewhere charged by the State		69 36		
	Amount of vouchers 6 and 7 of same account, being for 722 rations of liquor supplied by John Lathrop, and an additional quantity by Lieut. Col. Freeman Tracy for the regiment of the latter while on march to Stonington Point in August, 1814. The militia were not entitled by law or regulation to extra liquor while on march complete rations for the regiment were drawn from the United States contractor from and including the 9th of August, the day on which its services commenced		28 75		
	The bread and meat parts of the 722 rations appear to have been furnished by Ebenezer Huntington, and the voucher shows the days for which they where issued to have been the 9th and 10th of August, for both of which complete rations for the regiment were drawn from the United States contractor.				
	Amount of Mr. Goddard's compensation as ass. com. general, viz:				
	For 180 days in 1813, 60 days in 1814, at $2 50	$600 00			
	Travelling expenses 4 times to Stonington Point, (128 miles to and from,) and 3 times to Saybrook, (120 miles,) in 1813, and twice to Stonington, and once to Saybrook in 1814	31 67			
			631 67		
				1,152 81	
	A note at foot of the account shows that it has not been paid, and no allowance can be made on it without the sanction of the Secretary of War; and to enable him to decide, evidence of Mr. Goddard's services, designating the days whereon the same were rendered in each year, and the necessity for them, will be requisite. For his services as deputy quartermaster from June 8 to December 1, 1813, and for 110 days between them, and February 13, 1815, sums amounting to nearly $760 are elsewhere charged by the State, exclusive of pay and emoluments as division quartermaster, received by him from August 17 to November 8, 1814, on the rolls of Major General Taylor's staff; and he appears, too, to have been allowed, on settlement of his accounts with the United States, the pay and emoluments of a deputy quartermaster general, from August 25 to November, 7, 1814.				

Remarks on the accounts of the State of Connecticut.—Continued.

No. of voucher.	To whom and for what paid.	Sums disallowed.	Sums suspended.
	ACCOUNT No. 2—Continued.		
3—24	Ebenezer Huntington's account for 772 rations of meat and bread for Lieut. Col. Freeman Tracy's regiment, on the 9th and 10th of August, 1814, and 200 rations of meat and bread for Lieut. Col. Belcher's regiment, on the 23d of same month, including commission at 5 per cent. for purchasing the same	$129 44	
	There are no vouchers for the purchases nor evidence of payment to Mr. Huntington. Complete rations for Lieut. Col. Tracy's regiment, for the 9th and 10th of August, were drawn from the United States contractor, and the foregoing remark on vouchers 20, 21, and 22, shows that, for Lieut. Col. Belcher's regiment, many more were supplied by the contractors of the United States and the State than it was entitled to.		
3—25	James Ward, commissary general, for services in 1814:		
	285 days, at $3 — $855 00		
	Travelling expenses at sundry times, 1,330 miles, at 9 cents — 118 80		
	Stationary, $6; postage, $6 30 — 12 30		
		986 10	
	The sanction of the Secretary of War will be requisite before any allowance can be made in this case; and to enable him to decide, explanatory evidence, designating the days whereon the services and journeys were performed, the occasion for the former, and the objects of the latter, will be necessary.		
	Until August there were no militia in service save some small detachments successively on duty as guards at several points, and beyond September 12 no compensation can be allowed.		
	Rations for the militia up to that day were chiefly supplied by the United States contractor, and for services of assistants to Mr. Ward charges are elsewhere made in the State account.		
	For the stationery and postage there are no vouchers, and Mr. Ward in another account (voucher 2—10 of account No. 2) has charged $14 80 for stationery and postage in 1813 and 1814.		
3—26, 27	Payments to William Lord and others for fuel, straw, potatoes, and medicine for Sergeant Peleg Hancock's detachment	81 67	
	Inadmissible; not supplied till after September 12, 1814. The quantity of fuel furnished is more than double that to which the detachment was entitled.		
3—28	Payments by Hez. Goddard to sundry persons for wood — $41 34		
	Disallowed as to payments to John Forsyth, Isaac Bishop, Levi Bishop, Nathan Way, Amos Crocker, and Zacc. Wheeler, (vouchers Nos. 5 to 12 inclusive,) for wood supplied August 29, 30 and 31, and September 2, 3, 8 and 10, 1814, because Mr. Goddard has obtained credit for them in his account with the United States on another set of vouchers — 22 09		
	And as to the payments to Charles Jeffery and Ph Caverly, (vouchers 13 and 14,) because the wood was not furnished till after September 12 — 7 75		
		29 84	
3—29	Payment to Thompson & Thatcher for medicines	2 69	
	Inadmissible; supplied after September 12, 1814.		
3—30	Payment to Nathan Hempstead for necessaries for the hospital	15 00	
	Inadmissible; same cause.		
3—31	Payment to Ichabod Ward for 1,620 rations and 10 pounds of candles for Lieut. Dowd's detachment	277 90	
	Inadmissible; same cause.		
	Otherwise deductions would have been requisite for 410 rations, more by that number being charged for than the detachment was entitled to. The period specified in the charge is from December 13, 1814, to April 1, 1815. The services terminated on the 4th of March — $69 70		
	And for excess in the cost of the residue beyond the United States contract price — 12 10		
		81 80	
	Less this amount credited in Lieutenant Dowd's account (vouchers 3—32) for proceeds of beef, &c., sold after the detachment was discharged, exclusive of $11 therein charged for beef purchased — 24 71		
		57 09	
3—32	Payments for fuel, straw, potatoes, medical services, &c., for same detachment	48 76	
	Inadmissible; all supplied after September 12, 1814. The period to which these payments apply is from January 1 to March 4, 1815, and within which 12 cords of wood are charged as having been furnished for a lieutenant and 15 non-commissioned officers and privates, being by one-fourth more than they were entitled to.		
3—33	Payments for rations for soldiers of Captain A. Bray's company, September 5, 6 and 7, 1814	8 42	
	Inadmissible; the company was in the United States service, and more rations are shown by the United States contractor's accounts to have been issued for it by him than the rolls evince it to have been entitled to.		
3—34	Payment to Lucy Vail for necessaries for a sick soldier and attendance on him	7 44	
	Inadmissible; after September 12, 1814.		
3—35	Nathaniel Griffing, for wood for Captain Caleb Thompson's company	1 08	
	Not supplied till after September 12, 1814, and no proof of payment.		
3—37	Payment to Sol. Dewey for rations for Lieutenant H. Beach's detachment	692 00	
	Inadmissible; the rations not having been supplied till after September 12, 1814.		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed	Sums suspended.
	ACCOUNT No. 2—Continued.			
3—37	Deductions would otherwise have been requisite for 137 rations supplied beyond the number the men are shown by the rolls to have been entitled to; of this excess 62 are shown to have been drawn for Lieutenant Beach's waiter, and for whose subsistence he obtained the money allowance from the paymaster, at 20 cents	$26 40		
	For difference between the rate charged for the residue and the United States contract price for 3,243 rations, at 4 cents	129 72		
	And for difference between the rate charged for candles for the guards and the United States contract price—64 pounds, at 5 cents	3 20		
		159 32		
3—38	Payment to Walter Budington for corn and oats and for keeping a horse		$46 33	
	Inadmissible; after September 12, 1814. No evidence of connexion with the public service.			
3—39	Payment to Sereus E. Dwight for fuel, straw, potatoes, hospital stores, &c., for Lieutenant Beach's detachment		275 31	
	Inadmissible; all supplied after September 12, 1814.			
3—40	Payment to Sereus E. Dwight for his services in procuring these supplies		38 64	
	Inadmissible; same cause.			
3—41	Payment to Enoch Foote for rations, fuel, straw, potatoes, &c., for Lieutenant Hanford's detachment		661 27	
	Inadmissible; same cause.			
	Rations charged at 4 cents each beyond the United States contract price, for 2,322	$92 88		
	Potatoes	11 12		
		104 00		
3—42	Payment to Enoch Foote for sundries	217 75		
	Inadmissible as to an account of Doctor Daniel Beard for medical attendance on the sick of Captain Bennett's company, because the services were rendered after September 12, 1814	46 00		
	And as to 10 rations, part of the number charged for the adjutant and quartermaster of Lieutenant Colonel Lockwood's regiment for five days' services in September, 1813, the charge being at the rate of three daily for each instead of two, the number prescribed by law at that time	2 00		
			48 00	
3—43	Payment to Doctor David Hull for medical services rendered to Lieut. Hanford's detachment		55 19	
	Inadmissible; performed after September 12, 1814.			
3—44	Payment to Captain Nathaniel Farrand for fuel, forage, potatoes, &c., procured for his company		59 05	
	Inadmissible; not obtained till after September 12, 1814.			
3—45	Payment to James Ward, commissary general, for services, travelling expenses, postage, and stationery		214 69	
	Inadmissible; all in 1815.			
4—1	Payments to sundry persons for oats and for keeping horses		108 76	
	Inadmissible; after September 12, 1814. The expense is not shown to be connected with military services; it is represented to have been for State horses.			
4—2	Payments to sundry persons for fuel and potatoes for militia under command of Major Young		25 22	
	Inadmissible; not furnished till after September 12, 1814, with the exception of some potatoes, for which no allowance can be made.			
4—3	Payments to sundry persons for potatoes and hospital stores for militia under Major Young's command		20 97	
	Inadmissible; the articles were in part supplied after September 12, 1814, and the whole are before charged for in vouchers 3—10, $\frac{3}{4}$, of account No. 2.			
4—4	Payment to Major Young for an advance to Captain Aspinwall for wood and potatoes		6 29	
	Inadmissible; the advance does not appear to have been made before October, 1814, and, if prior to September 12, no allowance could have been made without vouchers for the disbursements. Several of the vouchers whereon charges are before made are in the name of Captain Aspinwall.			
4—5	Payments to Brigadier General Levi Lusk, and the field and staff and other commissioned officers under his command, in lieu of fuel		179 01	
	Inadmissible; a considerable portion of the period to which the payments apply was after September 12, and for the time prior thereto no allowance can be made, a money compensation in lieu of fuel being prohibited by the regulations. Large quantities appear to have been purchased, and the officers ought to have drawn their allowance in kind.			
4—6	Sundry allowances made by commissioners for adjusting military claims, $997 56.			
	1. On an account of Thomas Lee for expenses of removing Richard Lee, his son, a sick soldier, to his home, and of procuring for him medical aid, &c.		48 34	
	Not allowable; the United States do not provide medical aid, &c., for a sick soldier who voluntarily returns home and is attended there.			
	3. On an account of Enos Camp for expenses incurred in consequence of his having been taken sick while in the service of the militia		59 81	
	Inadmissible; the papers show him to have been taken care of in the hospital as long as the militia remained in service, and the allowance appears to have been for extra expenses and for his father's attendance on him there, and also for medical aid, &c., after his return home.			

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.	Sums disallowed.	Sums suspended.
	ACCOUNT No. 2—Continued.		
4—6	4. On an account of Sylvester Peck for expenses incurred in removing him home and procuring medical aid, &c., for him there, he having been taken sick while in service in the militia	$40 21	
	Inadmissible; the expenses did not arise till after September 12, 1814, and, had it been otherwise, the foregoing remarks on Thomas Lee's case would apply.		
	5. On an account of Ezra Hinsdale, for expenses of procuring medical aid, &c., for his son, Wolcott Hinsdale, after his discharge	82 79	
	Not admissible. Whilst in service he appears to have been provided for by the hospital department.		
	6. On an account of Nathan Lyon, for boarding and nursing his son, David Lyon, who returned home sick on furlough	69 78	
	Inadmissible.—(See remark in the case of Thomas Lee.)		
	7. On an account of Solomon Rogers, for wood and candles for a guard at Waterford.	8 00	
	Inadmissible. Supplied after September 12, 1814.		
	9. On an account of Hannah Phelps, for bread, meat, &c., furnished the militia volunteers at the alarm at Stonington August 9 and 10, 1814		$24 37
	For "volunteers not attached to any particular corps, but who were on duty at Stonington and Mystic when the attack was made on the former place," the United States contractor appears to have issued 165 rations from the 10th to the 12th of August, 1814, and he appears also to have issued for the regiments of Lieutenant Colonels Belcher, Tracy, and Randall, whose services commenced on the 9th of August, rations for that day and for the subsequent days whereon those regiments remained on duty. The volunteers, therefore, to which Mrs Phelps's account applies must be more particularly designated before its admissibility can be judged of. The officer who commanded them should be named.		
	10. On an account of Giles R. Hallam, for bread, cheese, liquors, &c., for Lieutenant Colonel Randall's regiment during the attack on Stonington, August 9 and 10, 1814	72 05	
	Inadmissible. Rations for this regiment for those days were drawn from the United States contractor to an extent as great as it was entitled to.		
	11. On an account of Isaac H. Osborn, for expenses of his sickness while a soldier under command of Lieutenant Hanford	21 85	
	Inadmissible. The expenses arose after September 12, 1814. The certificate of Lieutenant Hanford shows that he was sent home sick January 4, 1815, and that he returned on the 23d. For twelve days' attendance on him, room rent, diet, &c, an allowance appears to have been made by the State in the account of James Knapp, (vouchers 3—41 of account No. 2,) the amount of which is before charged.		
	12 On an account of Joseph Bulkley, for expense of his board and attendance on him 21 days while sick	25 60	
	Inadmissible. He also belonged to Lieutenant Hanford's detachment, and for 21 days' attendance on him, room rent, diet, &c., charges are made in the beforementioned account of James Knapp.		
	13. On an account of Lieutenant Charles Park, for travelling rations for himself and waiter, four days	3 20	
	Inadmissible. The detachment he commanded was in the United States service, and was paid by the United States paymaster and supplied by their contractor. In his pay account he charged for rations for himself and waiter for only one day less than the entire period of service specified on the rolls; for his waiter's travelling allowance he was not entitled to any payment. He therefore obtained from the United States paymaster as much as he was entitled to, the one day's rations for himself amounting to no more than the three days' travelling rations of his waiter, for which he was paid.		
	14. On an account of Brigade Quartermaster Henry Wheat, for services in the quartermaster and commissary departments after his discharge, for horse hire and forage previous and subsequent thereto, postage, stationery, &c	250 00	
	For horse hire and forage the charges, amounting to $114, are inadmissible, the law not authorizing a brigade quartermaster to have a horse in service, and the residue cannot be allowed without the sanction of the Secretary of War. There are charges for boat hire, ferriage, cartage, postage, and stationery, not vouched, amounting to $28.		
	16. On an account of the town of Guilford, for expenses of procuring surgical aid, &c., for Jared Ball, who broke his leg while in service in the militia and was sent home	28 41	
	Inadmissible. The expenses arose after September 12, 1814.		
	Charge for Mr. Ward's services as commissary general, 15 days	45 00	
	Inadmissible, the services having been rendered after September 12, 1814. Had it been otherwise, evidence of service and of the necessity for employing him would have been requisite to enable the Secretary of War to decide on the compensation to be allowed.		
5—1	Payment to Lieutenant Horatio G Lewis, for wood purchased for his detachment in November, 1813, and June, 1814, and for his proportion of fuel during several periods of service in 1813 and 1814, $62 33.		
	Disallowed as to the charges for his proportion of fuel, a money allowance in lieu thereof being prohibited by the regulations	26 33	
5—2, 3, 4	Payments to Thomas Palmer, Stephen Babcock, and William Wilter for baking six barrels of flour into bread, in August, 1814	28 25	
	Not allowable. Expenses of this nature are not properly chargeable to the United States; the militia then called into service were supplied by the United States contractor.		
5—5	Payment to Francis Arney & Co., for rum and gin for Lieutenant Colonel Randall's regiment of militia, August 10, 1814	12 67	
	Inadmissible.—(See foregoing remark on Giles R. Hallam's account, voucher 4—6, 10 of account No. 2.)		
5—6	Payment to Lieutenant J. W. Hanford, for wood	8 00	
	Inadmissible, the supply having been made after September 12, 1814.		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 2—Continued.			
5—7	Payment to Lieutenant Horace Beach, in lieu of nine cords of wood for his use		$63 00	
	Inadmissible after September 12, 1814; prohibited, besides, by the regulations.			
	Charge for ten days' services of Mr. Ward as commissary general		30 00	
	See remark on a similar charge above.			
	ACCOUNT No. 3.			
	Account of J. Mix, quartermaster general, No. 1.			
A 2	Payments to sundry persons for seventeen horses and ten wagons and harness, purchased in June, July, and August, 1813	$1,683 50		
	Amount credited as the produce of the sale of eight wagons and eight horses	780 00		
			903 50	
	Before the admissibility of this item can be judged of it will be necessary to know for what purpose the horses, wagons, &c., were purchased; what necessity existed for thus procuring them, and in what manner they were employed. It will also be necessary to have produced the account of the above-mentioned sale, and evidence of the disposition made of the horses, wagons, &c., to which that sale did not extend. The account current of the quartermaster general expresses that four horses and one wagon and harness were delivered to E. Tracy, who was a deputy commissary of the United States, but no receipts from him are furnished nor is the date of delivery specified, and in his accounts with the United States no credit for any such delivery can be found. Another horse is represented to have died in service, but no certificate relative thereto is adduced, and the remaining four horses, wagon, and harness are in no way accounted for. As to $1,003 of the payments, the vouchers are in the name of Jere. S. Halsey, a person employed to assist in purchasing the horses, &c., and require, therefore, to be sustained by the bills and receipts of the persons from whom his purchases were made.			
A 3	Sundry payments for transportation by land in June, July, and August, 1813	$152 94		
	14. Captain Noah Sabin, for transporting the artillery piece of his company from New London to Pomfret, June 25, 1813	10 00		
	Not allowed. On another bill, afterwards charged, he has been paid for its transportation both to and from Pomfret.—(See C $1\frac{1}{3}$, account No. 3.)			
	21 R. Jeffery	$0 50		
	48. R Hempstead	25		
		75		
			10 75	
	Cartage of potatoes inadmissible.			
A 4	Sundry payments for transportation by water in June, July, and August, 1813	228 65		
	2 D. Starr, oars	$1 40		
	16. D Stoddars, boat, sail, and oars	35 00		
	27. Gurdon Bill, boat and oars	35 82		
	38. Daniel Baker, boat	18 00		
	40, 41. Ephraim M. Frink, oars	4 64		
		94 86		
	Credit—one boat sold	20 00		
		74 86		
	Before the admissibility of these items can be judged of, further evidence and explanation will be necessary, such as is pointed out in the foregoing remark concerning horses, wagons, &c.			
	32. Pardon T. Taber, freight of 98 barrels of provisions, arms, ammunition, &c., and four days' detention; paid July 21, 1813	43 29		
			118 15	
	In the account rendered to the United States by Colonel Ward, the then commissary general of the State, he has made a charge of $100, unsustained by any vouchers, for expenses of removing commissary stores on the 14th July, 1813, while the troops were absent and the enemy's approach hourly expected; and of which expense this payment by his assistant seems obviously to have formed part. If it did, the charge is inadmissible; if it did not, the fact must be made manifest. So far as regards the provisions, if the transportation was otherwise occasioned, the expense would not seem to be properly chargeable to the United States, but to the State contractor who supplied the troops.			
A 9	Sundry payments for quarters	$87 35		
	Inadmissible as to part of the sum paid to Samuel Hurlbut, he having received $8 10 for one month and twenty-three days, at $30 a year, and hire at that rate, amounting to only $4 42		3 68	
A 10	Sundry contingent expenses	$262 31½		
	7. E. Chappell, for boards and joists for the arsenal	$1 17		
	10. Jason Rogers, for a lightning-rod for arsenal	9 40		
		10 57		
	Not properly chargeable to the United States			
	69. Ichabod Ward, State contractor, for provision barrels and boxes	13 18		
			23 75	
	Inadmissible.			

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.			Sums disallowed.	Sums suspended.
	ACCOUNT No 3—Continued.				
B 2	Sundry payments for transportation by water, September to December, 1813		$155 87		
	Inadmissible as to payments to—				
	1. J. Dudley		1 16		
	13. A. Miller		4 00		
	27. Joseph Swan		83		
	For transportation of provisions to Saybrook and Stonington for the detachments stationed there			$5 99	
	The United States contractor by whom the provisions were supplied, having been by his contract bound to deliver them free of expense to the United States.				
B 3	Sundry payments for transportation by land, September to December, 1813		$528 47½		
	8. Samuel Lamb	$4 00			
	9. Stephen Miner	2 50			
	48. Nathaniel Clark	5 79			
	52. J. Swan	4 65			
			16 94		
	Inadmissible, for the reason last above expressed.				
	33. Ebenezer Grosvenor, adjutant	5 40			
	34. William Todd, quartermaster	4 80			
	36. Dudley Rhodes, surgeon's mate	5 16			
	42. J. L. Tomlinson, paymaster	8 40			
			23 76		
	These sums were paid to the officers named, who belonged to Lieutenant Colonel Sanford's regiment, for transportation of their baggage to and from New London. Lieutenant Colonel Sanford having been paid for the hire of a team employed in transporting the baggage of the field and staff officers of his regiment to New London and home, the officers individually were not entitled to any allowance.				
	43. Robert Morrison, major of Lieutenant Colonel Sterling's regiment, overcalculated		2 00		
				42 70	
B 4	Sundry contingent expenses, 1813		285 15		
	4. Captain John French, for boards stated to have been paid for by him		51		
	The boards appear to have been supplied by Ezra Chappell, and on whose bill a charge is made in the account exhibited to the United States by Colonel Ward.				
	27. James Baxter, for 40 days' services; receipt dated November 1, 1813, $50.				
	Payments appear to have been made to him by Colonel Ward for 125 days' services, terminating on October 12, 1813, and in respect whereof charges are made in the account rendered by the colonel to the United States. Deduct, therefore, for 20 days		25 00		
	29. Hez. Goddard, for office rent June 9 to December 15, 1813, for quartermaster's department		30 00		
	Not allowable; he appearing to have received a like sum from Colonel Ward for office rent for the commissary department, and which is charged in the colonel's said account.				
	30. Hez. Goddard, for storage of camp equipage, arms, and accoutrements from June 26 to December 15, 1813		35 00		
				90 51	
	Not properly chargeable to the United States.				
B 6	Sundry payments for barrack hire in 1813		410 17½		
	13. S. S. Walworth. The separate charge for the officers of Lieutenant Nathan Johnson's company is inadmissible, the previous charge being for quarters for the company, including officers		1 00		
	24. D. D. Beebe, room rent for the commissioned officers of Captain Comstock's company, &c., at 50 cents per week	$5 62			
	The length of time they occupied the room is not specified; they were in service, however, only from September 13 to November 1, 1813, on which latter day the bill was paid; the amount for the whole period would not exceed	3 50			
			2 12		
	27. Jonathan Leeds. Although the voucher amounts to $3 25, the sum charged, Lieutenant Colonel Sterling has certified thereon that no more was paid than $2		1 25		
	41. William Lord, barrack hire for the first detachment stationed at Stonington post under Lieutenant H. G. Lewis, two months, at $2 50		5 00		
	This seems obviously to be a double payment, the detachments Lieut. Lewis commanded were according to the rolls in service in succession from June 13 to August 11, 1813, and were the only militia appearing to have been then on duty at Stonington. After the latter day, and until the middle of September, other militia appear by the fuel vouchers, &c., to have been stationed there under the command successively of Lieut. Burr and Lieut. Loomis. And on September 23, 1813, (see voucher 5 of account B 1—6,) Mr. Lord appears to have been paid $7 50 for quartering the detachment at Stonington 90 days.				

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.			Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.				
B 6	50. Eunice Peabody, quarters from June 2 to November 1, 1813, at $2 per month	$12 50			
	The period comprehends but five months	10 00			
			$2 50		
				$11 87	
B 9	Sundry payments for drum-heads, &c., in 1813		29 35		
	4. John Bingham, September 11, 1813, for two drum-heads, stated to have been furnished by him about 12 days before		2 00		
	Not allowed; he having on another voucher been paid $2 on August 27, 1813, for two drum-heads he procured on that day.				
	21. Captain John French, for a drum-head, sticks, and cord, and expense of repairing a drum, June 4 and 8, 1813		3 92		
				5 92	
	Inadmissible; there being with the account rendered by Colonel Ward a bill of Captain French for payments made by him on June 3 and 8, 1813, for repairing a drum, &c., and whereon a charge of $4 is there made.				
B 10	Sundry payments for expenses incurred in the pursuit of deserters, 1813, $92 87.				
	8. Daniel Tinker, for use of his vessel, July, 1813			5 00	
	Previously charged on another bill —(See account A 4—28.)				
B 11	Payments for a wagon, and in exchange for a horse, 1813			52 00	
	See foregoing remarks concerning horses and wagons purchased. The charges are further objectionable: first, as to that for a payment of $10 to Martin Lee in exchange for a horse, because there is no voucher for it; and next, as to that for a payment to Coddington Billings of $42 for a wagon, stated to have been delivered in July, 1813, to J. S Halsey, inasmuch as the latter appears to have been employed at the time in making the purchases, and to have been paid upwards of $1,000 for wagons and horses without rendering any vouchers from the persons of whom he bought the same.				
B 12	Payments for clerk hire in the quartermaster's department:				
	1. Ebenezer Perkins, July 28 to August 16, 1813		$18 00		
	2. Arnold Clarke, October 12 to December 15, 1813		68 75		
	3. Jeremiah H. Goddard, June 8 to November 1, 1813		146 00		
				232 75	
	Requiring the sanction of the Secretary of War.				
D	Payment to Hez. Goddard for services from June 8 to December 1, 1813, as deputy to the quartermaster general, (Colonel Mix,) 175 days, at $2 75			481 25	
	See foregoing remark on the charges for his services as assistant to the commissary general, (Colonel Ward,) voucher 3—23 of account No. 2.				
E	Account of John Mix, quartermaster general, $6,124 98.				
	6. Elisha Sill, sundry expenses in mounting two cannon at Saybrook fort, by order of Governor Smith, in July, 1813				$58 26½
	Suspended; there being no evidence that the work was authorized or sanctioned by any officer of the United States. The correspondence of Governor Smith with the Secretary of War, though relating to other forts, is wholly silent as to the one at Saybrook. The account, too, is unsustained by vouchers for the disbursements.				
	18. Ebenezer Huntington, for expenses of making cartridges, &c., at Norwich in February, March, and April, 1813				64 78
	Suspended. This expense is not shown to be properly chargeable to the United States; it was incurred before any militia were called out, and there is no proof that the cartridges were ever applied to the public use.				
	19. Luther Bradley & Co., for repairing, oiling, cleaning, painting, &c., four pieces of field artillery, together with the harness and apparatus, in April, 1813			100 51	
	Not properly chargeable to the United States; the expense having been incurred before any militia were called out, it could not have been occasioned by the use of the artillery in the public service.				
	20. Luther Bradley, for payments stated to have been made for making cartridges, and for his superintendence				80 08
	Suspended. The account is dated in May, 1813, and is liable to the same remark as that on E. Huntington's; and is further objectionable inasmuch as there is neither evidence of any payment to him nor vouchers for his disbursements.				
	21. Charles Sherman, for making cartridges in May, 1813				14 81
	Suspended. Same cause as is assigned respecting the payment to E. Huntington.				
	22. William Williams, for making cartridges in February, 1813				68 09
	Suspended Same cause.				
	23. Titus Bradley, for transportation of powder from Hartford to New Haven, April 1, 1813				8 00
	The powder is presumed to have been for the cartridges made under the superintendence of Luther Bradley, whose account is dated at New Haven.				
	24. Joseph Porter, for transportation of cannon and musket balls from Farmington to New Haven, March, 1813			4 50	
	Not admissible. Unconnected with the public service.				
	25. Isaiah Rowe, for transportation of cannon and musket balls from Hartford to New London, February 2, 1813			12 00	
	Not admissible. Unconnected with the public service				
	26. Levi Clark, for transportation of cannon and musket balls from Norwich to Hartford, February 2, 1813			12 00	
	Not admissible. Unconnected with the public service.				
	27. Robert McKee, for storage of powder belonging to the State, from May 1, 1813, to May 1, 1814			35 00	
	Not properly chargeable to the United States				
	28. Enoch Foote, for expense of mounting a cannon, at Bridgeport, in May, 1814, and of procuring apparatus for the same		$48 87		
	29. Luther Bradley, for expense of mounting two cannon and procuring apparatus, at New Haven, in May, 1814		203 07		
					251 94

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.	Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.		
E	The expense does not appear to have been incurred in respect of any militia in service, nor is it shown that the cannon were ever in the public use. The carriages, &c, would have to be delivered over to the United States if the expense were to be rendered admissible. Each of the accounts is unsupported by vouchers for the disbursements.		
	30. Ste & Henry Huggins, for 6 casks of gunpowder to prove State ordnance, March, 1814	$135 00	
	Inadmissible. Not properly chargeable to the United States.		
	31. Titus Bradley, for transportation of ammunition from Hartford to New Haven, March, 1814		$4 00
	Suspended. No evidence of connexion with the public service. No militia appear to have been then on duty.		
	39. Wm. Malay; credit is given in his account for $5 as received of Colonel Ward; the amount received, and which is charged in the State account (see account No. 3, A 1-$\frac{3}{4}$,) is $9—difference	4 00	
	40. Orchard Fowler; 41. Simeon Manvill, transportation of artillery and ammunition from New Haven to Killingworth, June 10, 1813	18 50	
	Not shown to be properly chargeable to the United States By a charge in an account of Captain A Bray, the artillery pieces, &c., are presumed to have been for the use of his company, which does not appear to have been then on duty. It has been decided by the Secretary of War that expenses incurred by a State in transporting munitions from one part thereof to another, by way of preparation, and not for the use of militia in service or called out at the time, are not properly chargeable to the United States.		
	42. Captain Charles P. Miller, for transportation of the artillery piece No. 5 to and from New London, and to and from Saybrook, in June, 1813	18 00	
	Disallowed. There is no receipt on the account. For its transportation to and from Saybrook Captain Miller received payment on another voucher, and for its transportation to and from New London a payment was made to Nathan Stark, and in respect of each of these payments a charge is made in another part of the State account.		
	44. Brevet Quartermaster Henry Wheat, for sundry payments charged as having been made by him in 1813		325 31
	The vouchers, 42 in number, to which his account refers must be furnished before any allowance can be made. A duplicate of his account was preferred in 1813, by Colonel Mix, to the Secretary of War, and which could not be acted on for want of the vouchers.		
	44. Charges in Aaron Halliday's account for cooking for the troops, and for earthenware, &c., broken and lost	20 00	
	Inadmissible.		
	58. Major Chauncey Whittlesey, for hire of a wagon and horse to transport his baggage to New London in August, 1813, 40 miles $7 00		
	The regulations do not authorize the employment of a wagon and horse for the transportation of the baggage of a single officer, but make a provision under which a major was entitled, for the distance stated, to. 4 00	3 00	
	64. M. K. Botsford, for hire of wagon and two horses for transporting baggage of Lieutenant Colonel Shepard and Major Smith to New London, 100 miles 38 50		
	See last note Entitled to 22 00	16 50	
	66. Major Peter B. Gleason. The charge exceeds the amount paid	14	
	70. Captain E. H Buell, for hire of three wagons to transport the baggage of his company to New London, at $7 each 21 00		
	The regulations authorize the employment of only two 14 00	7 00	
	71. Asahel Deming, whose team was employed in the transportation of baggage to New London in September, 1813, for expenses of suits instituted against him for avoiding toll-gates	6 22	
	Inadmissible.		
	77. Ezra Adams, jr., for transporting the baggage of Major A. P. Humphrey to New London, 65 miles $8 00		
	See note No 58. Entitled to 6 50	1 50	
	78. Moss K. Botsford, for hire of wagon and two horses to transport the baggage of Lieutenant Colonel Shepard and Major Smith from New London in September, 1813 29 75		
	See note No. 64 22 00	7 75	
	82. Captain E. H. Buell, for hire of three wagons for transporting the baggage of his company from New London 21 00		
	See note No. 70 14 00	7 00	
	87. Major C. Whittlesey, for hire of wagon to transport his baggage from New London in September, 1813 5 00		
	See note No. 58 4 00	1 00	
	90. John Babcock, jr., and J. Gordon, for services of two horses and driver, carrying Major G. L. Perkins's express, July 9, 1813, and toll	20 20	
	Disallowed; the same being included in an account of Major Perkins, the whole amount whereof is charged in another part of the State account.—(See account No. 3, A 1$\frac{7}{8}$.)		
	91. Gersham Bun; expense of mounting a 12-pound gun on a ship-carriage at Black Rock, in Fairfield, December 1, 1813		25 00

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.	Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.		
E	Not shown to be properly chargeable to the United States. The expense does not appear to have been incurred in respect of militia on duty at the time, there not having then been any in service. The carriage would have to be delivered over to the United States if the charge were to be rendered admissible.		
	92 Gersham Bun, for transportation of muskets from General Hubbard's to New Haven, and from New Haven to Fairfield, January 4, 1814	$4 00	
	No militia then in service.—(See foregoing remarks, No. 40-41.)		
	96. Titus Bradley, for transporting 12 casks of powder from Hartford to New Haven, and back again to Hartford, in April, 1814	6 00	
	No militia then in service at New Haven —(See same remarks.)		
	97. Foote & Brooks, for gunpowder furnished to S. P. Staples for proving iron ordnance belonging to the State, May, 1814	17 00	
	Not properly chargeable to the United States.		
	99. Captain Charles Thomas, for drag-ropes, bridle, collars, hames, &c., for the artillery of his company, May 9, 1814	24 01	
	His company does not appear to have been then or previously in the public service. The expense, therefore, as it could not have been occasioned by injuries sustained in that service, is considered to be not properly chargeable to the United States.		
	103. Elisha Buell, for transportation of muskets from New London to Marlborough, in November, 1813; from Marlborough to Hartford, and from New London to Marlborough, in February, 1814; from Marlborough to Hartford, and from New London to Marlborough, in May, 1814; and muskets and cartridges from Hartford to Marlborough, and from Marlborough to Norwich, in June, 1814	58 75	
	There is nothing to show this expense to be properly chargeable to the United States.—(See foregoing note, No. 40-41.)		
	104. Joel Griffing, for transporting a brass field-piece from New London to Guilford; paid May 25, 1814	11 25	
	Same remark.		
	105. Nehemiah Hubbard, for payments made by him for cleaning arms and making cartridges, &c., in May, 1814	43 19½	
	There is no evidence as to the arms that the cleaning had been rendered necessary by use thereof in the public service, nor as to the cartridges, that they were ever applied to that service.		
	106. Luther Bradley, for transportation in May, 1814, of muskets to Stamford, Norwalk, Killingworth, Bridgeport, and New Haven, and two cannon from the place where they had been proved, to New Haven	59 68	
	This would seem to have been such an expense as is excluded from allowance by the before-mentioned decision of the Secretary of War.—(See foregoing remark, No. 40-41.)		
	111. Richard McCurdy, for transportation of 4 boxes of muskets, 11 kegs of cartridges, and a bundle of flints, to Lieutenant Colonel Wm. Moore, 4th, at Waterford, in June, 1814	3 67	
	Same remark.		
	113. Captain Amaziah Bray, for sundry expenditures: As to the payment to John E. Bray and Ph. Hill, for a journey to New Haven to procure artillery	5 00	
	See same remark.		
	120. Titus Bradley, for transportation in June and July, 1814, of 26 casks of powder, 346 cannon balls, &c., to New Haven, and 12 casks of powder and 8 boxes of cannon balls to Fairfield	38 53	
	At each of these places there was only a lieutenant's command on duty, and for whose use it would seem that such supplies could not have been sent.—(See foregoing remarks, No. 40-41.)		
	121 Enoch Foote, for payments to Ebenezer Sherman and Israel Blackman, for transportation of rations from New Haven to Bridgeport, June and July, 1814, for the detachments commanded by Lieutenants Curtis and Parks	31 00	
	These detachments were in the United States service, and the rations were furnished by the United States contractor, who, by his contract had to deliver them free of any expense beyond the contract price. The charge is therefore inadmissible; it is, besides, unsustained by any vouchers for the payments to Sherman & Blackman.		
	124. Jos. Trumbull, aide-de-camp to Governor Smith, for compensation for journeys at the governor's request, to confer with Generals Burbeck and Cushing, and Commodore Decatur, 7th and 24th June, 1813, and 17th August, 1814, at $5 a day, $32; expenses of the journey in 1814, $11 97.		
	The expenses of the journeys in 1813 are admitted in his account to have been paid to him at the time, and are charged in another part of the State account, amounting to $32 39.		
	If, by a decision of the Secretary of War, an allowance should be made on Colonel Trumbull's account for pay, &c., (see foregoing remark on voucher No. 137 of account No. 1,) his charge for compensation on these journeys would not be admissible; they are therefore suspended		$32 00
	126. Luther Bradley, account dated New Haven, September 3, 1814, $21.		
	Disallowed as to the charge for helving 30 pickaxes, presumed to have been for Lieutenant Colonel Sanford's command, (see foregoing remark on vouchers 92 to 98 of account No. 1)	10 00	
	127. Enoch Foote, for payments for transportation from New Haven to Bridgeport of provisions for the detachment on duty at the latter place in August, 1814, (same remark as on voucher No. 121)	19 00	
	128. T. & J. Dwight, for 22 shovels and 8 spades furnished, at New Haven 26th August, 1814	34 50	
	They are not shown to have been delivered to any militia in the United States service, and are presumed to have been procured for Lieutenant Colonel Sanford's command.—(See above remark, No. 126, and Governor Smith's letter of 25th August, 1814.)		
	131. J. Ripley, for transportation of a box of pickaxes to New Haven, 27th August, 1814, (see above remark, No. 126)	2 50	

Remarks on the accounts of the State of Connecticut—Continued.

No of voucher.	To whom and for what paid.	Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.		
E	132. J. Stevens, for transporting an artillery piece from Stamford to Saugatuck, 4th August, 1814	$3 50	
	No militia in service at either place.—(See for-going remark, Nos. 40 and 41.)		
	133. Ste. Morehouse, for transporting an artillery piece from Saugatuck to New Haven, 4th August, 1814	4 50	
	This was previous to the call of militia into service for the defence of New Haven, save a small guard which had been stationed there during the summer.—(See said remark Nos. 40 and 41.)		
	134. William Mansfield, for 100 tin pans for militia at New Haven	66 67	
	Inadmissible Not procured till after 12th September, 1814, and they were, too, for Colonel Sanford's command.		
	135. Harry Phelps, for transporting an artillery piece from New Haven to Simsbury for the use of Captain Pettibone's company, in August, 1814	9 00	
	An expense not properly chargeable to the United States, the company not having been then on duty, or under orders for actual service.		
	136. William S. and S. Hotchkiss, for 116 6-pound shot, furnished at New Haven 3d September, 1814, (see foregoing remark, No. 128)	20 88	
	137. Anson Brewster & Co., for fees on receiving and delivering powder, &c., at the magazine and Hartford from May, 1813, to 7th October, 1814	15 54	
	Allowance can be made only in respect to such charges as applied to militia in service prior to 13th September, 1814, and to make this a detailed account, with dates, &c., will be requisite.		
	139. Samuel Perkins, for transportation of field-piece and carriage from Windham to Norwich in June, 1814	4 00	
	No militia then on duty at either place.—(See note, Nos. 40 and 41.)		
	139. Nathaniel Griffing, for transportation of ammunition from New Haven to Guilford, 18th July, 1813; no voucher		$6 50
	141. Charles Sherman, for boxes for ammunition, canisters, rings, blocks, flannel, paper, &c., September, 1813, and May, July, and August, 1814, at New Haven	22 98	
	No evidence that the articles were procured for any militia in service at the time, or that the same were ever delivered to any militia in service prior to 13th September, 1814; the militia on duty at New Haven in that year consisted only of a lieutenant's command, and the detachment commanded by Colonel Sanford; respecting which see remark on vouchers Nos. 92 to 98 of account No. 1.		
	142. Lieutenant Colonel Asa Comstock, jr., for expense of transporting the baggage of the field and staff officers of the 33d regiment, from the 15th to the 25th August, 1814	19 68	
	The receipt on the bill is not signed, and as he appears to have received $19 84 on a bill made out in the name of Oliver Comstock, for transporting baggage for the 33d regiment, 15th and 26th August, 1814, (and in respect of which a charge is made in another part of the State account,) the charge of $19 68 is presumed to be an erroneous one. If otherwise, a voucher for the expenses paid by Colonel Comstock, and evidence of payment to him, will be requisite.		
	143. Lieutenant John L. Tomlinson, for transportation of the artillery and baggage of his detachment to New Haven in September, 1814	9 50	
	Disallowed. His detachment formed part of Colonel Sanford's command.		
	144. Captain Amaziah Bray, for sundry disbursements Disallowed as to a portion caused after the 12th September, 1814	2 05	
	145. Lieutenant Abm. Rogers, for transporting baggage of his company	5 50	
	After 12th September, 1814, and the company, besides, was part of Colonel Sanford's command.		
	146. Captain John Butler, for transporting baggage of his company, Sept. 8, 1814	8 75	
	The company was part of Colonel Sanford's command.		
	147. Captain John Buckingham, for transporting baggage of his company, September 8, 1814	10 50	
	The company was part of Colonel Sanford's command.		
	148, 149, 150. Major General Aug. Taylor, and W H Taylor and Charles S. Masters, his aides-de-camp, for transportation of their baggage in September, 1814	88 60	
	Inadmissible.—(See remark on vouchers Nos 71 to 76, account No 1) Overcalculated as to each of the aids, $1 56, and as to the general, 20 cts.; in all, $3 32.		
	151. Joseph B Gilbert, for eight pans	7 00	
	Not furnished till after the 12th September, 1814.		
	152. Jeremiah Sturges, for mounting cannon on ship-carriages at Fairfield, in September, 1814, (two bills)	61 40	
	One of the bills, amounting to $40 82, shows the work to have been performed after the 12th, and the amount of the other bill is not shown to have been properly chargeable to the general government, there being no evidence that the remounting was rendered necessary by the use of the cannon in the public service.		
	153. Enoch Foote, for sundry payments for building barracks and mounting cannon, &c., at Bridgeport, in September and October, 1814 $659 19		
	One of the bills contains a charge for storage of provisions, 5½ months, ending November 9, 1814, at $2 per month, and which, so far as regards the part accruing before the 13th September, is admissible 7 19		
		652 00	
	What portion of the residue is applicable to articles furnished or work performed prior to the latter day is not ascertainable from the vouchers. Whatever it may have been, however, if it was (as is inferable) in respect of the part (Captain Bennett's company) of Colonel Sanford's command which was stationed at Bridgeport, that portion would be as objectionable as the other. One bill overcharged in the account $3.		
	154. William Strong, for expense of mounting two cannon on ship-carriages at Milford, and for superintending the work	105 18	

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.			
E	Subsequent to September 12, 1814; and had it been prior thereto, no allowance could have been made without explanatory testimony and the sanction of the Secretary of War. It cannot be found that there were any militia on duty at Milford.			
	155. Samuel Nevins, rent of house for barracks, from 13th June to 5th October, 1814	$22 40		
	Allow from 13th June to 12th September	18 00		
			$4 40	
	156 David Buell & Co., for 222 9-pound cannon balls delivered at Saybrook and New Haven		155 44	
	Not furnished till after 12th September, 1814.			
	158. Lieutenant Samuel Peck, for transporting the baggage of a company to New-Haven, September 8, 1814		3 50	
	The company was part of Colonel Sanford's command.			
	160. Colonel E. Sanford, for transportation of the baggage of himself and other officers of his staff to New Haven, September 8, 1814		9 00	
	Not allowable.			
	161. Captain A. B. Curtis, for transportation of the baggage of his company to New Haven, in September, 1814, &c.		15 75	
	The company was part of Colonel Sanford's command.			
	163. Chauncey Deming, for transporting tin from New Haven to Farmington		1 20	
	Not shown to have been transported before September 12, 1814; the receipt for the money is not dated till 1815, and there is nothing to show that the expense, if incurred before September 12, 1814, was properly chargeable to the United States.			
	164. Jos. B. Gilbert, for 9 milk pans, 1,500 tin cups, and 380 shot canisters, furnished in January and August, 1814		145 07	
	The articles are none of them shown to have been applied to the public service. No militia appear to have been stationed at Hartford, where the voucher is dated, and in January, 1814, there do not appear to have been any militia on duty.			
	Charge for freight of musket balls from Hartford to Saybrook		50	
	No date, no voucher, nor any explanation by which the expense, if incurred prior to September 12, 1814, can be ascertained to have been properly chargeable to the United States.			
F	John Mix, quartermaster general, for services, travelling allowance, stationery, postage, and occasional clerk hire		1,169 63	
	In his account he has charged for numerous journeys performed between June, 1812, and November, 1814, occupying 213 days, and during which he is stated to have travelled 3,292 miles; within this period he has also charged for 45 days' services in office, and for stationery, postage, and occasional clerk hire. Of the sums charged there are several, amounting to $144 40, for journeys, &c., in 1812 and 1814, before any militia were called out, and therefore deemed to be inadmissible; and others, for journeys, &c., after September 12, 1814, are so under the decision of the Secretary of War. Several more relate to journeys at times when there were no militia in service, or to places where there were none on duty, and concerning which there is no explanation manifesting them to be properly chargeable to the United States; the purposes of the other journeys, too, are either wholly without explanation or are but insufficiently explained. To enable the Secretary of War to decide on the allowance to be made, an exposition of the object of each journey will be necessary, and it should be accompanied by accounts and vouchers for the postage, stationery, and clerk hire, exhibiting dates; the charge for postage amounts to $40 15, and extends from July, 1812, to October, 1814.			
	Account of John Mix, quartermaster general, No. 2.			
	For sundry payments, amounting to	$130 36		
	2. Oliver Orris, for transporting of ammunition from Hartford to New Haven, Milford, Bridgeport, and Norwalk	36 00		
	After September 12, 1814; the expense, besides, is not shown to have been incurred in respect to any militia in service at those places at the time.			
	3. Charge for 7 days' services of Mr. Mix at New London, in June, 1813, stated to have been omitted in his former account, and for his travelling allowance	30 36		
	See remarks as to that former account.			
	5. G. Hastings, for journey express from New Haven to New London	13 00		
	After September 12, 1814.			
	6 and 7. Charges for postage on 10 letters, and 3 days' services of Mr. Mix in answering them	10 50		
			89 86	
	After September 12, 1814.			
	Account of Jared Scarborough, quartermaster general, No. 3.			
1 B	Sundry payments for transportation by water	123 38½		
	1. Elisha Chester, for ferriage of 16 barrels and 2 boxes of provisions for the detachment at Stonington, June 4, 1814	1 01		
	Not properly chargeable to the United States; the provisions were furnished by the United States contractor, who, under his contract, had to deliver them free of any other expense than the contract price.			
	2. Elisha Satterlee, for freight of a hogshead of tents from Stoddard's Ferry	50		

Remarks on the accounts of the State of Connecticut—Continued.

No of voucher.	To whom and for what paid.			Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.				
1 B	Not shown to have been for any militia in service at the time; paid June 9, 1814.				
	3. James Wade, for freight of arms and ammunition from New London to Norwich; paid June 27, 1814		$1 88		
	No evidence of connexion with the public service; no militia appear to have been on duty at Norwich.				
	6. Elisha Chester, for freight of 20 barrels of provisions for Lieutenant Hough's detachment, July, 1814		1 62½		
	See foregoing remark, No. 1. Lieutenant Hough's detachment was stationed at Stonington, and was supplied by the United States contractor.				
	9. Hezekiah Smith, for transporting 12 barrels of provisions to Saybrook Point, and attention to provisions left at sundry times		1 87		
	The payment appears to have been made July 20, 1814; the militia then on duty at Saybrook were under command of Captain A. Bray, and were supplied by the United States contractor.				
	See foregoing remarks on E. Chester's accounts.				
	13. Elisha Chester, for ferriage at sundry times, in July and August, 1814, of 74 barrels of provisions		6 20		
	See same remarks.				
	14. David Frink for oars		1 84		
	After September 12, 1814.				
	15. John V. Cornell, for boat and oars		16 00		
	After September 12, 1814.				
	16. Joseph Phillips, for ferriage		6 31		
	After September 12, 1814.				
	17. Jedh Randall, for ferriage		4 25		
	After September 12, 1814.				
	18. Rock Williams, for ferriage		9 78		
	After September 12, 1814.				
	19. John S. Avery, for ferriage		4 17		
	After September 12, 1814.				
	20. Elisha Chester, for ferriage	$18 47			
	Prior to September 12	3 10			
	Residue after September 12		15 37		
				$70 80½	
1 C	Sundry payments for transportation by land		831 00		
	1. C. Beckwith, for transportation of 640 rations to Saybrook		5 00		
	The voucher does not state for whose command the rations were supplied, nor when they were transported; the receipt at foot for the money is dated May 6, 1814.—(See foregoing remarks as to the payments to E. Chester, which are presumed to be applicable to this charge.)				
	2. Peter J. Smith, for truckage of 14 casks of powder to the arsenal		50		
	Not shown to be properly chargeable to the general government.				
	3. Lynda Rowland, for transportation of 9 barrels of provisions, 20 stands of arms, and camp equipage, &c, to Lyme; paid June 1, 1814	$6 00			
	Presumed to have been for Captain Bray's command, which commenced service on May 24, 1814, and was, according to Colonel Kingsbury's letter of the 22d of that month, to cover Lyme, Saybrook, and Killingworth. It was supplied by the United States contractor; deduct, therefore, in respect of the provisions, say one-half	3 00			
			3 00		
	5. Peter J. Smith, for carting 100 guns and powder from court-house to wharf	50			
	Expense, &c., of loading guns and powder	75			
			1 25		
	See remark as to No. 2.				
	6. Taber Huntley, for transportation of 27¾ cwt. of provisions to Lyme, May 20, 1814	4 62½			
	7, 8, and 9. Benjamin Brown, for transportation of 26 barrels and 1 box of provisions, receipts dated June 8, 10, and 18, 1814	11 87½			
			16 50		
	For Captain Bray's command, which was supplied by United States contractor, see remarks on payments to E. Chester.				
	14. Charles Crary, for transporting 10 barrels and 1 box of provisions to Stonington Point, July 2, 1814		5 00		
	See same remarks; the militia then on duty there were supplied by the United States contractor.				
	15. Sylvester Champion, for transportation of a pipe of gin to Saybrook for Captain Bray's command, May, 1814		2 50		
	See foregoing remarks on Nos. 6, 7, 8, and 9.				
	18. Charles Crary, for transporting provisions to Stonington Point, 9th and 25th of July, 1814		9 00		
	Same remark as on No. 14.				
	19. Joshua Swan, for transporting provisions to same place; paid June 10, 1814		10 00		
	Same remark as on No. 14.				

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.			
1 C	20. Jere. Williams, for freight of six barrels provisions from Lyme wharf to Saybrook, July 13, 1814	$0 50		
	Same remark as on Nos. 6, 7, 8, 9.			
	21. George Wolcot, for transporting provisions from Lyme ferry to Saybrook for militia under command of Captain Bray, paid July 19, 1814	5 00		
	Same remark.			
	41. Lieutenant Samuel L. Hough, for transportation of provisions from New London to Stonington, July, 1814	2 86		
	His detachment was supplied by the United States contractor.—(See remarks 14 and 18.)			
	48. Benjamin Brown, for transporting provisions 18th and 23d July, and 4th and 6th August, 1814	18 62½		
	(See foregoing remark on vouchers 6, 7, 8, 9.)			
	50. Robert Jeffery, for transporting field piece	50		
	After September 12, 1814.			
	51. Richard Hempstead, for cartage of wood	75		
	After September 12, 1814.			
	52. Peter Smith, for carting baggage	75		
	After September 12, 1814.			
	59. Henry Gardner, for carting tent-poles, &c	50		
	After September 12, 1814.			
	60. Quartermaster Thomas Gleason, for carting rations	1 00		
	After September 12, 1814.			
	61. S. J. Beckwith, for carting tents, &c	1 00		
	After September 12, 1814.			
	62. William Lord, for so much stated to have been paid to Joseph Bailey for carrying provisions to Stonington, September, 1814	4 00		
	No voucher for the payment to Bailey, nor proof that the service was performed before September 13, 1814. Mr. Lord's receipt is not dated till October 27, 1814.			
	63. George Williams, second, for carrying sick soldiers to Saybrook	2 50		
	After September 12, 1814.			
	64. Daniel Kirtland, for cartage, &c.	5 84		
	After September 12, 1814.			
	65. Giles Blague, for carting wood	1 84		
	After September 12, 1814.			
	66. Henry R. Wolcott, for carting provisions	1 00		
	After September 12, 1814.			
	67. John Kirtland, for use of wagon	50		
	After September 12, 1814.			
	68. Samuel Humphrey, for transportation of rations	1 00		
	After September 12, 1814.			
	69. Elijah Griffiths, for transportation of rations	50		
	After September 12, 1814.			
	70. David B. Beebe, for cartage of provisions at sundry times	40 12		
	After September 12, 1814.			
	71. James Day, for journey	2 00		
	After September 12, 1814.			
	72. Lieutenant A. C. Kasson, for transporting baggage	2 00		
	After September 12, 1814.			
	73. K. B. Fairchild, for transportation rations	83		
	After September 12, 1814.			
	74. David Avery, for cartage at various times	60		
	After September 12, 1814.			
	75. Ezekiel Fox, for carting arms, &c., August 10, 1814	2 00		
	On another voucher a charge for this is made in the account of Mr. Goddard, rendered to the United States, and for which he received credit on settlement.			
	76. Gurdon Crocker, for cartage of provisions to Lyme ferry, 17th June, 1st, 12th, and 18th July, and 4th August, 1814	27 19		
	(See foregoing remark on vouchers 6, 7, 8, 9.)			
	77. Rosevill Parker, for transportation provisions	1 50		
	After September 12, 1814.			
	78. Ph. Raymond, for sundry truckage	3 95		
	After September 12, 1814.			
	79. David B. Beebe, for carting provisions	9 00		
	After September 12, 1814.			
	94. Major Charles Sherman, for stage hire on sundry journeys	18 75		
	After September 12, 1814; also unexplained.			
	98. John S. Avery, for journey, express, on the 9th August, and for cartage on the 11th, 12th, 14th, 15th, 23d, and 26th August, and 26th September, 1814	46 75		
	The voucher, except as to the charge dated 26th September, is a duplicate of one filed with Mr. Goddard's account rendered to the United States, and for which he, on settlement of that account, received credit. The charge in September is inadmissible, for the cause before explained.			
	99. David Avery, for sundry cartage from August 10 to September 12, 1814	59 25		
	The whole of this is included in a voucher filed with the account rendered the United States by Mr. Goddard, and for which he received credit as aforesaid.			
	100. David Avery, for cartage	15 00		
	After September 12, 1814.			

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.			
1 C	101. Sylvanus Smith, for cartage	$2 55		
	After September 12, 1814.			
	102. Wm. Lynde, for cartage 5 times	4 37		
	Not shown to have been prior to September 13, 1814; receipt dated November 19, 1814.			
	103. Otis P. Fox, for transportation of arms	2 00		
			$397 67½	
	After September 12, 1814.			
1 D	Sundry payments for 9 horses, and 2 wagons and harness, purchased in June, July, August, and October, 1814	810 50		
	Amount credited as the produce of the sale of 9 horses and 2 wagons	553 20		
			257 30	
	As to the purchase in October no allowance can be made, and as to the residue it will be necessary to have information, &c., as is before pointed out with respect to other like purchases.			
1 E	Payments for shoeing horses and repairing wagon	$14 71		
	After September 12, 1814		9 53	
	Residue suspended, see last note			$5 18
1 F	Payments for quarters for militia	425 75		
	1. Comfort Pratt, for 20 days' use of his store and kitchen as barracks, receipt dated May 20, 1814	2 50		
	Before charged in the State account on a bill of Lt. Aaron Brainerd, containing a charge for the payment to Mr. Pratt.—(See account No. 2, vouchers 3—23 C.			
	5. Comfort Pratt, for one [omitted,] and kitchen, occupied by detachment under Lieut. Benjamin Dowd, 4 weeks and 4 days in November and December, 1813	2 25		
	Lt. Dowd's detachment appears to have been in service from October 30, to December 1, 1813, and for quartering it 30 days Mr. Pratt was paid $4 on a bill dated November 31, 1813, and whereon a charge is before made in the State account.—(See account No. 3—1, voucher B, 6—62.			
	26 Nicholas Starr, for cleaning the court-house at New London after the militia left it	1 56		
	Subsequent to September 12, 1814.			
	30. John Comstock, for quarters for Lieut. Allyn and Ensign Pease, from August 25 to October 24, 1814, $4.			
	Portion after September 12, 1814	2 75		
	31. Chester Kimball, for quarter for Chaplain Loomis, from August 25 to October 24, 1814, $4.			
	Portion after September 12, 1814	2 75		
	32. Richard Comstock, for quarters for Captain Goodman and his subalterns, from August 25 to October 21, 1814, $6.			
	Portion after September 12, 1814	4 05		
	32. Stoughton J. Beckwith, for quarters for Captain Strickland and subalterns, 4 weeks, from August 22 to September 25, 1814, $2.			
	Portion after September 12, 1814	75		
	34. John Comstock, for room for Captain Stickland and subalterns, from August 25 to September 25, 1814, $2.			
	Portion after September 12, 1814	81		
	35. John Comstock, for quarters for Captain Taintor and officers, 4 weeks	2 50		
	No date; they were in service until near the end of October, 1814, and at which time the bill was paid.			
	36. John Comstock, for quarters for Captain Taintor and officer, 6 weeks.	3 75		
	No date; they were in service until near the end of October, 1814, and at which time the bill was paid.			
	37. Chester Kimball, for 8 weeks' quarters for Major White, $4.			
	Paid October 25, 1814, (2 days before the end of his services,) between when and September 12 there were 6 weeks	3 00		
	38. Robert Douglass, for quarters for Captain Phelps and subalterns, August 26, to October 25, 1814, $4.			
	Portion after September 12, 1814	2 81		
	40 Elizabeth Champlain, for quarters	2 00		
	Paid October 26, 1814; no other date mentioned, nor is there any explanation as to the troops for whom the quarters were furnished.			
	41. Abraham Shepard, for 8 weeks' quarters for Major Young, $4.			
	Similar to No. 37	3 00		
	42. Nathaniel Otis, for 8 weeks' quarters for sergeant major and quartermaster sergeant, $4.			
	Similar to No. 37	3 00		
	Robert Douglass, for quarters for Captain Strong and subalterns, August 26 to October 25, 1814, $4.			
	Similar to No. 38	2 81		
	44. Nathaniel Otis, for 10 weeks' quarters for Lieut. Col. Brainerd, $5.			
	He was in service from August 18 to October 28, 1814.			
	Portion after September 12, 1814	3 21		
	45. Robert Douglass, for quarters for Captain Collins and subalterns, 6 weeks	3 00		
	Receipt dated October 27, 1814, no other date mentioned; their services ended October 29, 1814.			
	46 Nathaniel Otis, for quarters for Quartermaster Thomas Gleason, from August 23 to October 26, 1814, $4.			
	Portion after September 12, 1814	1 70		
	47. Nathaniel Pendleton, for 5 weeks quarters for Captain Aspinwall and subalterns	2 50		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.			
1 F	No date other than that of payment, [October 27, 1814.] They were in service till October 30, 1814.			
	48. William Lord for two months barrack rent, for a detachment at Stonington, September and October, 1814, $10. Portion after September 12	$8 00		
	49. Nathaniel Otis, for quarters for surgeon's mate, Joseph M. Gilbert, eight weeks, $2. Similar to No. 37	1 50		
	50. William Willcox, for use of house and stable	2 00		
	After September 12, 1814.			
	52. Israel Rogers, for quarters for Captain Foote and subalterns, 3 weeks	2 25		
	After September 12, 1814.			
	53. Charles Brown, for quarters for Major Barnum, three weeks	2 25		
	After September 12, 1814.			
	54. Charles Brown, for quarters to Surgeon's Mate J. Graves, three weeks	1 50		
	After September 12, 1814.			
	55. Stoughton J. Beckwith, for quarters for part of Captain Foote's and Captain Taintor's companies	5 00		
	After September 12, 1814.			
	56. Amos Keeney, for quarters for Captain Strong's soldiers, August 28 to September 3, 1814 $2 50			
	For quarters for Captain Foote's company, one month 2 50			
		5 00		
	A voucher for the first item is on file with the account rendered by Mr. Goddard to the United States, and on which he received credit for $2 50			
	Captain Foote's company did not enter on service till after September 12, 1814.			
	57. Elizabeth Starr, for cleaning court-house after the soldiers left it	3 00		
	Receipt dated in December, 1814, and the work is not shown to have been performed before September 12, 1814.			
	58. Comfort Pratt, for quarters for Captain Bray's 1st and 2d detachments, the whole time, $2 50 each $5 00			
	For quarters for Captain Johnson's company 2 50			
	For quarters for Captain Farrand's company 2 50			
	For storeroom for the provisions, 5 months 5 00			
		15 00		
	Captain Bray's 1st detachment was in service from May 20 to July 19, 1814; his 2d from July 20 to September 16, 1814.			
	For use of store for barracks, and storehouse, and kitchen to cook in from May 20 to July 18, 1814, Mr. Pratt was paid on another voucher, (see account No 3—3, voucher F 5,) and in respect of which a charge is made by the State.			
	As to the 1st detachment, the present charge is therefore inadmissible $2 50			
	Captain Ferrand's company did not enter the service till after September 12, 1814 2 50			
	The period Captain Johnson's company (which continued in service till the end of October, 1814) was furnished with quarters is not specified 2 50			
	The last charge is inadmissible, in part because it extends beyond September 12, 1814, and in other part because for use of a store for storeing provisions, from May 20 to September 16, 1814, a payment of $10 was made to Captain Bray, and for which a charge is made by the State.—(See account No. 3—1, voucher E 144) 5 00			
		12 50		
	59. Charles Dolph, for quarters for part of Captain Ferrand's company	3 00		
	After September 12, 1814.			
	60. Hamlin Williams, for quarters for part of Captain Johnson's company and part of Captain Ferrand's company	4 00		
	After September 12, 1814.			
	61. Comfort Pratt, for quarters for the detachment of Lieutenant Noah Walker	3 00		
	After September 12, 1814.			
	62. Samuel Stillman, for quarters for part of Captain Johnson's company.	2 50		
	After September 12, 1814.			
	63. Samuel Willcox, for quarters for three companies, May 20 to November, 1814, $15. Portion after September 12, 1814	5 67		
	64. William Wilcox, for quarters for part of Captain Ferrand's company, and Sergeant Hurd's guard	3 00		
	After September 12, 1814.			
	65. William Wilcox, for stabling horses, &c	3 00		
	After September 12, 1814.			
	66. Nathaniel Hempsted, for use of his house as a hospital for the militia, and care of his family from August 29 to November 12, 1814, at $1 a day $76 00			
	For window broken by a soldier when crazy 2 88			
		78 88		
	For use of his house, for the purpose mentioned, up to September 12, 1814, he was paid by Mr. Goddard on another voucher, and whereon the latter charged and received credit in his account rendered to the United States. The residue is inadmissible for the reason before assigned.			
	67. John J. Avery, for quarters for several companies, for damages done by them, and for cartage of provisions	36 50		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.			
1 F	In the instances where dates are specified they are subsequent to September 12, 1814, and the others are presumed to have been so.			
	68. Eben Avery, for eight weeks quarters for Surgeon John S. Peters, $4. Similar to No. 37	$3 00		
	69. John Comstock, for quarters for Captain Goodman's company, 4 days. After September 12, 1814.	1 50		
	70. Solomon Rogers, for quartering a guard, 45 days. After September 12, 1814.	3 75		
	71. Daniel Rogers, for quartering the militia. After September 12, 1814.	15 00		
	72. David B. Beebe, for use of his land, occupied as an encampment. Not shown to have been prior to September 12, 1814.	5 00		
	Account overadded	1 00		
			$262 50	
1 G	Payment for camp equipage, &c.	21 02½		
	3. Increase Wilson, for copper and copper nails, for guns at Stonington. After September 12, 1814.		1 04	
1 H	Payments for stationary, &c.	30 65		
	4. Henry Jackson, for paper furnished to Captain Ferrand. After September 12, 1814.	50		
	5. Samuel Green for morning reports, blank books, &c. After September 12, 1814.	4 64		
	6. John Maniere, for paper, &c. After September 12, 1814.	4 34		
			9 48	
1 I	Payments for drum-heads, &c.	16 42		
	7. Norris Galpin, for drum-head. After September 12, 1814.	83		
	8. Captain Jerrod Strickland, for drum-head furnished to Norris Galpin. Presumed to be the one above-mentioned, and if otherwise it is not shown to have been furnished before September 12, 1814. Norris Galpin was the drummer of Captain Strickland's company.	1 00		
	9. Lieutenant Laban Fisher, for drum-head. Not shown to have been furnished before September 12, 1814.	1 00		
	10. Stephen Holt for drum-cord. After September 12, 1814.	34		
	11. Captain Arnold Foote, for a drum-head. After September 12, 1814.	75		
	12. N. S. Lester, for 4 drum-heads furnished to Captain Chaffee, Amos Mallory, and D. Daniels. Not shown to have been supplied before September 12, 1814.	3 00		
			6 92	
1 K	Payments for contingencies.	589 94		
	3. Captain John French, for artillery apparatus, January 8, 1814. Not shown to be properly chargeable to the United States. No militia in service at the time. The articles, if their cost were to be allowed, would have to be delivered over or be accounted for.	21 25		
	5. S. Hurlbut for sheet lead for gun-aprons, June 23, 1814. Same remark, save that there were some small detachments in service; the lead, however, is not shown to have been furnished for any of them.	2 56		
	9. Arnold Clarke, for work in the arsenal in May and June, 1814, airing tents, ammunition, &c. Not properly chargeable to the United States.	8 19		
	10. Adam Stanton & Son, for sundries for Captain Bray's company in June and July, 1814. The voucher is the duplicate of one filed with the account of the captain, whereon a charge is before made in the account of the State.—(See account No. 3—3, E 144.)	3 60		
	18. James Baxter, for making 12,000 musket cartridges, May 1814. The expense is not shown to have been incurred in respect of any militia then in service, of which there were only small detachments, nor are the cartridges shown to have been applied to the public use.	36 00		
	19. George Merril, 2d, for making inquiry after horses for sale. See remarks respecting the horses purchased.	50		
	21. James Baxter, jr., for services in the arsenal, breaking up damaged cartridges, &c., May 19, 1814. Not properly chargeable to the United States.	1 43		
	25. Chester Huntington for repairing gun-carriage, August 8, 1814. No evidence that the reparation became necessary in consequence of damages done in the public service, nor that the carriage was then, before, or afterwards in that service.	11 58		
	28. Captain John French, for repairing gun-carriage, cleaning and oiling harness, &c., August 8, 1814. The company under his command entered the public service on the following day; the work is not shown to have become necessary by any prior use of the carriage, &c., in that service.	12 75		
	29. Isaac Webber, for repairing boat. After September 12, 1814.	50		
	31. Henry J. Cobb, for boring two cannon at Stonington and making tools for the purpose, &c., August 1, 1814. Not appearing to be properly chargeable to the United States.	12 35		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.			Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.				
1 K	32. Chauncey Arnold, for repairing the arsenal, and for materials		$7 05		
	After September 12, 1814; and, had it not been so, it would have been inadmissible.				
	33. Nathaniel Palmer, jr., for wood and iron work for mounting two field pieces, August 1, 1814		30 73		
	34. Jabez Holmes, for apparatus, August 1, 1814		4 50		
	Not shown to be properly chargeable to the United States.				
	37. John Douglass, for cooper's work		2 09		
	After September 12, 1814, and otherwise objectionable.				
	38. Daniel H. Russel and Lewis Coe, for expenses of pursuing deserters	$4 96			
	39. Amasa Clark, for expenses of pursuing deserters	17 83			
	40. Henry S. Granger ... do ... do	11 75			
		34 54			
	Portion on September 11 and 12, 1814	3 60			
	Residue after the latter day		30 94		
	42. Kimball Prince, for repairing arsenal		9 18		
	After September 12, 1514; and, had it not been so, it would have been inadmissible.				
	43. Jonathan G. Stanton, for a coffin for a deceased soldier		4 00		
	After September 12, 1814.				
	45. Lieutenant Noah Walker, for junk and stationery		1 00		
	After September 12, 1814.				
	46. William Willard, for paper		56		
	After September 12, 1814.				
	47. Ransom Pool, for expense of removing tents to Hartford		11 48		
	After September 12, 1814.				
	48. Henry Campbell, for driving a load of tents, &c.		2 50		
	After September 12, 1814.				
	49. Archibald T. Robertson, for mending harness		83		
	After September 12, 1814.				
	50. Peyton R. Randall, for cart-wheels to mount old cannon on at Stonington point		17 00		
	Not shown to have been furnished prior to September 12, 1814; nor, if they were, to be properly chargeable to the United States.				
	51. Thos. Hollister, for keeping horses and drivers taking tents to Hartford (See No. 47.)		3 98		
	53. Samuel Hurlburt, for 62 pounds of rope-yarn for wadding, delivered June, 1813		7 44		
	A charge for this is before made in the State account.—(See account No. 3–1 B, 4–20.)				
	54. Captain Charles Thomas, for wads for artillery		5 69		
	Not shown to have been supplied prior to September 12, 1814. The company remained in service several weeks afterwards, and the payment was not made till 1815.				
	55. George G. Jewett, for repairing two wagons		7 75		
	After September 12, 1814.				
	56. Chester Huntington, for sundry iron work		13 55		
	After September 12, 1814.				
	57. Elias Perkins, for use of his stable for cavalry and wagon horses, August 15 to December 15, 1814	$12 00			
	Portion after September 12, 1814		9 10		
	58. John J. Avery, for land for encampment for the militia, Sept., 1814		12 00		
	No portion shown to have been prior to September 12, 1814.				
	59. James Baxter, for 71 days' services, at $1 50 per day		106 50		
	No portion shown to have been prior to September 12, 1814; paid January 4, 1815.				
	60. Jere. H. Goddard, for 25 days' services in the quartermaster's department in September, October, and November, 1814		25 00		
	No portion shown to have been prior to September 12, 1814.				
	61. Arnold Clark, for 60 days' services in the quartermaster's department from September to November, 1814		90 00		
	No portion shown to have been prior to September 12, 1814.				
				$513 52	
1 L	Payment to Hez. Goddard for services as deputy in the quartermaster general's department, 110 days, from December 15, 1813, to August 17, 1814, and from November 9, 1814, to February 13, 1815		275 00		
	Travelling allowance on sundry journeys, from May 2 to December 9, 1814, at nine cents per mile		46 15		
				321 15	
	It is unascertainable from the account for services, what portion of them were rendered prior to the 13th September, 1814. An account in detail, setting forth the dates and nature of the services performed, will be necessary to enable the Secretary of War to determine what compensation is to be made.—(See foregoing remark on the charge for compensation for Mr. Goddard's services as assistant commissary general, account No. 2, voucher 3—23.) The account for his travelling allowance is not shown to have been paid. There are charges in it amounting to $14 20, dated after September 12, 1814; others as to journeys, the object of which is not explained; and others as to journeys, the expense of which is not shown to be properly chargeable to the United States.				
2 L	Additional payments by Hez. Goddard		$750 27		
	His additional compensation		165 50		
			915 77		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.			Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.				
2 L	For expenses of erecting signal poles, in May and June, 1814:				
	1. Stephen Billings	$49 92			
	3. N. Wheeler	110 00			
	14. W. Moore, 4th	174 10			
	20. Charles Thomas	25 25			
			$359 27		
	Credited as received for signal-poles		30 19		
			329 08		
	Requiring the sanction of the Secretary of War. There is no evidence that their erection was authorized or sanctioned at the time by any officer of the United States. General Cushing's letter of the 22d May, 1814, to Governor Smith, describing the arrangement which had been settled by the general and certain officers sent by the governor, "as sufficient to afford protection to the coast," is silent on the subject.				
	4. James Baxter, jr., for services		25 00		
	After September 12, 1814.				
	5. Joseph Wright, for storage of provisions, in part		1 50		
	6. Thomas Howe, for transportation		2 00		
	After September 12, 1814.				
	7. Oliver Burdick, for transportation		2 00		
	After September 12, 1814.				
	8. Stephen Holt, for bedcords		1 50		
	After September 12, 1814.				
	10. John Starr & Son, for nails		60		
	After September 12, 1814.				
	11. Thompson & Thatcher, for sweet oil		4 50		
	After September 12, 1814, except as to 92 cents. Not shown to be properly chargeable to the United States.				
	12. Charles Thomas, for transportation		1 00		
	After September 12, 1814.				
	15. William Lord, for storage of field pieces, ammunition, &c., one year, ending in March, 1815	$12 00			
	Admitted as to 3½ months prior to September 12, 1814, while militia were on duty at Stonington	3 50			
			8 50		
	16. Philip Raymond, for truckage		11 40		
	After September 12, 1814, and otherwise objectionable.				
	17. James Baxter, for services		69 00		
	After September 12, 1814, and otherwise objectionable.				
	22. Azariah Stanton, for transportation		2 84		
	After September 12, 1814, and otherwise objectionable.				
	23. Ephraim M. Frink, for wharfage		1 00		
	After September 12, 1814, and otherwise objectionable.				
	24. John French, for painting, &c., artillery carriages		21 75		
	After September 12, 1814, and otherwise objectionable.				
	25. George Haley, for transportation		1 50		
	After September 12, 1814, and otherwise objectionable.				
	26. Hubbil Brook, for transporting provisions		10 50		
	After September 12, 1814, and otherwise objectionable.				
	27. William Barker, for transportation		8 49		
	After September 12, 1814, and otherwise objectionable.				
	28. Asa Dutton, for transporting 84 passengers in stages from New London to Saybrook, and back to New London, April 8 and 9, 1814		105 00		
	Requiring explanation. The voucher is not certified by any military officer, and affords no other information than is above expressed.				
	29. William Lord, for barrack rent		10 00		
	After September 12, 1814.				
	30. Daniel Stoddard, for storage of tents		3 00		
	Not shown to have been before September 12, 1814, nor if prior thereto, to be properly chargeable to the United States.				
	31. Peter Smith, for cartage of ammunition, &c		75		
	Not shown to have been before September 12, 1814, nor if prior thereto, to be properly chargeable to the United States.				
	32. Martin Lee, for wharfage		1 95		
	After September 12, 1814, and otherwise objectionable.				
	33. Boston Freeman, for carting tent-poles		34		
	After September 12, 1814, and otherwise objectionable.				
	34. Ebenezer Bryant, for box for muskets, and repairing another		2 67		
	After September 12, 1814, and otherwise objectionable.				
	35. John French, for boards		79		
	After September 12, 1814, and otherwise objectionable.				
	38. Hez. Goddard, for storage of tents, &c		50 00		
	No part shown to have been before September 12, 1814, nor if anterior thereto, to be properly chargeable to the United States.				
	39–40. Hez. Goddard, for additional compensation for services		165 50		
3 L	All after September 12, 1814.			$842 16	
	Sundry expenditures by Walter Budington, assistant quartermaster, at New Haven, from Sept. 1814, to June, 1815, and his compensation		3,951 33		
	Less, credited for double charges		155 09		
			3,796 24		
	With the exception of the under-mentioned items, the expenses were incurred, so far as can be ascertained from the vouchers, either after September 12, 1814, or in respect of the detachment under Colonel Sandford's command, which entered on service a few days previously, viz:				

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.			Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.				
3 L	Account B, voucher 39. Colonel Sandford, for postage June and July, 1814	$0 86			
	Account C. Charge for room for Lieut. Smith's guard, 4 months.	40 00			
	Account D, voucher 1. New Haven Powder House Company, for use of half the powder house from Sep. 10, 1813, to Sep. 10, 1814, paid under a resolve of the general assembly	27 00			
	7. Jeremiah Sturges, for payments for rent of a house for Sergeant Osborn's guard at Fairfield, June 26 to November 22, 1814, $5, and for transportation of provisions for it, at five different times, $40	45 00			
	Account G, voucher 20. Charles Sherman, for amount expressed to have been paid for expenses of an escort for two field pieces to Killingworth, June 10, 1813	36 42			
	21. John Hubbard, for store-room for arms from June 18, 1813, to Nov. 21, 1814, and for taking in and delivering same	21 00			
	33-1. New Haven and East Haven Toll-bridge Company, for toll of cavalry in service in June and July, 1813, and April and May, 1814	35 55			
	33-2. William Myers, express June 11, 1813	10 00			
			$215 83		
			3,580 41		
	The item for postage is not shown to have been connected with the public service. Colonel Sandford does not appear to have been in that service at the time		86		
	The charge for a room for Lieutenant Smith's guard is not sustained by any voucher either evidencing the supply by Mr. Budington of a room of his own for the purpose, or the payment by him of the sum charged to any other person for hire thereof. (The period of service of the guard appears to have been from June 13 to October 12, 1814; for one of the months therefore no allowance could be made if the charge were to be sufficiently vouched)		40 00		
	The rations for Sergeant Osborn's guard, supplied before September 12, 1814, were furnished by the United States contractor, who was bound to deliver them at Fairfield at his own expense	$40 00			
	Of the rent, the portion which accrued after September 12 is	2 37			
			42 37		
	As to the payment to Mr. Sherman, (whose bill is neither sustained by vouchers for his disbursements, nor sets forth any particulars,) see the foregoing remark on vouchers 40 and 41 of account No. 3-1 E		36 42		
	The payments for rent of half the New Haven powder house, and for storage of arms, &c., at John Hubbard's, are considered to be not properly chargeable to the United States		48 00		
				$3,748 06	
	Those for tolls and express hire are passed.				
	Independent of the inadmissibility of the residue of Mr. Budington's expenditures, in consequence of their relating to transactions after September 12, 1814, or to Colonel Sandford's command, many of them appear to be otherwise objectionable. For charges (exclusive of those for his own compensation) amounting to nearly $500, there are no vouchers.				
	The amount expended in the purchase of three horses, two carts, and a wagon, and in keeping and shoeing the horses, and in repairing the wagon, &c	$466 82			
	Deduct proceeds of sale thereof, &c	257 20			
			$209 62		
	And in constructing barracks at Fort Wooster, &c	969 50			
	Deduct proceeds of sale	145 05			
			824 45		
			1,034 07		
	Could not have been admitted without explanatory testimony, the returns of the sales, and the special sanction of the Secretary of War.				
	The amount expended in the purchase of spades, shovels, frying-pans, lanterns, jugs, pails, baskets, &c		$118 12		
	Stationery and blank reports, &c		80 40		
	Junk, match-rope, &c		38 78		
	Drum, fife, drum-heads, &c		38 19		
			275 49		
	Is not sustained by any evidence of the application of the articles to the public service, or showing what ultimately became of any of them, except that a credit of $7 is given for jugs sold. As to charges amounting to $85 for 85 day's hire of Jacob, a Swede, in September, October, and November, 1814, it would have been necessary to have explanatory evidence as well with respect to the manner in which he was employed as to the need there was for his services.				
	The charges for Mr. Budington's compensation		$480 00		
	The charges for hire of a carriage for his use		32 00		
	The charges for hire of a clerk		42 00		
	The charges for hire of a store from September, 1814, to June, 1815		100 00		
	The charges, and for expenses of several journeys after the war		37 10		
			691 10		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.			
3 L	Would also have required full explanation, and to be sanctioned by the Secretary of War before the same could have been allowed.			
	The charge for his expenses on a journey to New York after powder, &c.	$26 74		
	And for payments for freight, wharfage, and cartage of 19 cannon and 100 kegs of powder in November and December, 1814.—(Vouchers 3, 6, and 8 of account D, and 1 and 3 of account F)	74 46		
		101 20		
	Would not, it is conceived, have been admissible as against the United States; they are presumed to relate to purchases then made in New York, when the militia (save some small detachments on duty as guards) had been discharged.			
	The charges for transportation of military stores after the war, and for services of General Foote in collecting the same.—(See vouchers 5, 12, 16, 19, 23, 25, 26, 29, 31, 32, 34, and 36 of account G, and other charges therein, unvouched)	$173 53		
	Would have required explanatory evidence showing the stores so collected and transported to have been in the use of the militia in actual service, and not any distributed by way of general preparation.			
	S. E. Dwight's bill, (voucher 2, account C,) for services at Guilford with A. J. Chittenden, September 9, 1814	$2 50		
	Would also have required explanation. Charges amounting to $50 or $60 for cleaning and repairing arms, oil, repairing artillery, cleaning and repairing harness, &c., &c., are unsupported by any proof that the expense was occasioned by the use of the articles in the public service.			
	E. Foote's account (voucher 23, account G) contains a charge of $15 for an alleged payment to Abraham Benson, on quartermaster's order, unsustained either by the order, by any receipt for the money, or by any explanation as to the purpose for which it was paid; also other charges unvouched, amounting to	$13 12½		
	The items after enumerated would have been inadmissible.			
	Account B. Charge for a brand S. C	1 25		
	Voucher 43. Charge for interest	77		
	Account C, voucher 6. Charge over calculated	60		
	9. Payment to Lieutenant Edmund Bushnell, for *extra duty* of seven of his detachment of cavalry	12 31		
	22. George Bradley, for shoeing horse, October 14, 1814; charged in a prior bill	84		
	Account E, voucher 14. Charge for 84 feet of timber, at 10¼ cents; extended $12 60 instead of $8 82	3 78		
	17. Nails, over calculated	10		
	Account C, 7. Printing *enlisting orders*, and advertising for 110 men, and music	5 50		
	8, 9, 10. Carting cannon to *Fort Hale, March* 1 and 2, 1815	13 50		
	23. E. Foote, for storeage in *February, March, April, and May*, 1815	8 00		
	Over charged in Mr. Scarborough's abstract in respect of Mr. Budington's accounts	50		
4 L	Sundry expenditures at Hartford by James R. Woodbridge, from April 27 to October 28, 1814, and his compensation	1,371 22		
	Deduct:			
	12. Julius Jones, for making cartridges in May, June, and July, 1814	$240 75		
	Thread	8 82		
		249 57		
	30. Hudson & Goodwin, for cartridge and wrapping paper, May, June, July, and August, 1814	92 13		
	Sundry charges in May, June, and July, 1814, unvouched, for thread, twine, &c	18 56		
		360 26		
	No evidence of application to the public service, nor of the ultimate disposition made of the articles.			
	20. Titus Bradley, for transportation of 110 camp kettles and three boxes of axes and tin cups from Hartford to New Haven, September 4 and 7, 1814	$7 35		
	22. Ephraim Hunt, ditto	2 00		
		9 35		
	The articles are presumed to have been for the use of Colonel Sanford's detachment, called out for the defence of the latter place at this period. No other militia in service there except a lieutenant's command, which had been on duty a considerable time.			
	23. Gift Johnson, for a journey to Newtown with arms, Sept., 1814	22 50		
	Whether before or after the 12th of that month does not appear. The arms, however, are presumed to have been for the use of Colonel Sanford's command, as Captain A. B. Curtis's company, forming part thereof, and whose services commenced on the 8th of September, is shown to have marched from Newtown.			
	9. Asher Gillet, for transportation of bread from Hartford to New London, August 28, 1814	$16 00		
	25. Henry Brace..... 27. Chester Seymour. 31. Leonard Braman. } for transportation of one load of provisions each from Hartford to New London, September 11, 1814	66 00		
		82 00		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.			Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.				
4	Rations for the militia in service at New London were supplied by the United States contractor up to and including the 12th September, and he was bound to deliver them there at his own expense. The provisions transported on the 11th of that month were doubtless those furnished by the State contractor for the supply of the militia after their withdrawal from the United States service on the following day.				
	1. William Bradford, for carting eight boxes of muskets to Middleton, April 27, 1814	$5 00			
	2. Jere. Glover, for transporting 17 boxes and 19 casks of ammunition, &c., May 3, 1814, to be delivered to S. Hart at Saybrook, G. Jewett at Pettipauge, and R. McCurdy at Lyme	8 00			
	3—1. Lemuel Gurney, for transporting 2 boxes to S. Hart, May 9, 1814	50			
	3—2. Daniel Gains, for transporting 4 boxes of muskets, 11 kegs of cartridges, and 500 flints to Lyme, June 4, 1814	3 71			
	5. Gift Johnson, for transporting a load to Guilford, July 23, 1814, and 4 loads from the arsenal to the powder-house	21 00			
	37. Daniel Whittlesey, for transporting 4 boxes of muskets and ammunition to Lyme and Saybrook, June 2, 1814	1 83			
	11. Jere. Glover, for transporting 1 box of muskets and 1 box of cartridges to Saybrook, August 1, 1814	75			
			$40 79		
	In none of these cases are the articles shown to have been transported for the use of militia at the time on duty or called out. They would seem to have been forwarded for deposit at sundry places by way of general preparation; and if so, the expense is not properly chargeable to the United States, as has been decided by the Secretary of War.				
	Charge for a payment to E. Huntington, July 23, 1814, for express riding. Unvouched and unexplained.		2 00		
	Charges for carting powder, April 28, 1814	$2 25			
	Charges for carting powder, May 4, 1814	63			
	Charges for carting powder, June 5, 1814	4 38			
	Charge for carting a load to Norwich, June 16, 1814	14 00			
	Charges for carting powder, June 24, 1814	3 24			
	Charges for carting powder, July 23, 1814	2 14			
	Charges for freight of powder, &c., to Saybrook, Aug. 30, 1814	1 00			
	Charges for cartage of stores at sundry times, Sept. 10, 1814	2 23			
			29 87		
	Unvouched and liable to the foregoing remarks on the items amounting to $40 79.				
	29. Nathan Seymour	$22 00			
	32. Daniel Gains	2 00			
	33—1. Gift Johnson	52 50			
	33—2. Sally Sepson	5 00			
	34 David Allen	61 50			
	35. Asher Gillet	11 00			
	36. Benjamin Reed	17 00			
	Cartage and postage, (no vouchers)	1 42			
			172 42		
	All after September 12, 1814.				
	Services of Mr. Woodbridge, 78 days between July 25, 1813, and October 7, 1814, at $2 50	195 00			
	30 miles' travel, at 9 cents	2 70			
			197 70		
				$916 89	
	Evidence showing the days on which the services were rendered, and the necessity for them, should be furnished, to enable the Secretary of War to decide on the allowance to be made. None of his disbursements appear to have been made prior to April, 1814; nor do any militia appear to have been stationed at Hartford, where the vouchers are all dated.				
5	E. Goodrich, for services as deputy to the quartermaster general, after September 12, 1814			24 36	
	No evidence of service.				
6	Sundry disbursements by Jared Scarborough, quartermaster general, from November, 1814, to January, 1816, and his compensation		3,837 53		
	The expenses, so far as can be ascertained from the vouchers, were none of them incurred prior to September 12, 1814, save such as are hereinafter enumerated, viz:				
	4. Lieut. Col. E. Brainerd, for transportation of baggage in August, 1814	$16 00			
	6. Lieutenant D. Woodruff, for ditto in July, 1814	13 75			
	7. Captain N. Johnson, for transportation of sick soldiers in August, 1814	2 25			
	9. Joseph Hill, for powder furnished and used at Pettipauge, April 8, 1814	19 00			
	11. Luther Bradley, for services in receiving, taking care of, and delivering munitions of war sent to New Haven, from the commencement of the war to September, 1814 $30 00 And for sundry artillery apparatus, August 30, 1814 31 84	61 84			
	15. E. Terry, for journeys and express in August, 1814	49 50			
	16. William H. King, for journeys and express in June, 1814	20 06			
	20. Town of Lyme, for powder at Pettipauge, April 8, 1814 $19 00				

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.			Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.				
6	21. Charles Smith, for powder at Pettipauge, April 8, 1814	$4 00			
	22. John Hart & Co., ditto	18 00			
			$41 00		
	23. Lieut. Col. Comstock, for transportation of baggage, August 15, 1814		19 84		
	25. William H. Conklin, for powder, &c., April, 1814		16 85		
	27. Jared Hayden, for cannon balls for Saybrook fort, June, 1813		20 00		
	29. Lieutenant Charles Parkes, for transportation of baggage in July, 1814		10 50		
	31. Nathaniel Griffing, for hire of horses used in drawing artillery on alarms, July and November, 1813, and June 2 and September 7 and 8, 1814		8 50		
	34. Lieut. Col. Baldwin, for services in calling out and posting a detachment, September 8, 1814	$6 00			
	For express hire	5 00			
	And for other services in providing for their subsistence and drawing their pay	2 00			
			13 00		
	36. Jared Shepherd, for repairing gun-carriages at Bramford, August, 1814	6 00			
	38. Timothy Johnson, ditto	1 91			
			7 91		
	40. S Hart, for barrack rent from May 30 to Sept. 15, 1814		16 50		
	41. H. Atwater, for express service, September 8, 1814		3 50		
	42. B. Baldwin, for barrack hire from September 8 to 14, 1814		8 00		
	45. D. B. Beebe, for use of land for parade ground, August, September, and October, 1814		5 00		
	47. Timothy Shepard, for an express to Captain Buckingham, September 3, 1814		4 40		
	51. Eleazer Porter, for horse and chaise hire, February 20, 1814, (inspecting ordnance on the seaboard)		14 00		
	56. John Butler, for transportation of baggage, September, 1813		14 00		
	60. E. Huntington, for truckage of ammunition, &c., and services in inspecting a field-piece and directing repairs thereof, June and July, 1814	$4 47			
	And for trucking arms for the 20th reg't, Aug. 16, 1814.	2 25			
			6 72		
	63. D. Kirtland, for timber for platform, July, 1814		5 00		
	64. E. Foote, for postage and extra expenses occasioned by the war, from May, 1814, to May, 1815		114 22		
	65. Hez. Howe, for expense of erecting signal poles in June, 1814		72 43		
	66. Gorham & Lines, for hire of horses to draw artillery of the first battalion, September 8, 1814		2 00		
	89. Captain B. Burnham, for transportation of baggage, August, 1814		10 66		
	92. Captain Am. Bray, for storage of two brass artillery pieces, from June, 1813, to June, 1815		16 00		
	96. George W. Jewett, for side box for a field-piece, March, 1814		2 00		
	97. Charles Jeffery, for transporting marines, &c., April 8 and 9, 1814		10 00		
				$624 68	
				3,212 85	
	11. The account of Mr. Bradley requires to be more sufficiently explained before its admissibility can be judged of. If the services related to munitions from time to time sent to New Haven, by way of general preparation, compensation for them is not properly chargeable to the United States; allowance can be made only for such as related to militia (exclusive of Colonel Sanford's command) in actual service, and it cannot be found that any were on duty at New Haven before the summer of 1814, and then only a subaltern's command, till the call of Colonel Sanford's command into service, in the early part of September.				
	As to the artillery apparatus, the articles are not shown to have been procured to supply others worn out or destroyed in the public service, nor to have been obtained for use of militia other than Colonel Sanford's command			61 84	
	34. Lieutenant Colonel B. Baldwin's services were of a nature not authorized by law or regulation to be performed by an officer of his rank, nor does he appear to have been ordered to render them. The detachment consisted only of one company, and which continued in service but a week, and for its rations he was paid at 4 cents each above the United States contract price			8 00	
	36 & 38. The reparations are not shown to have been made on artillery in the public service, or to have been occasioned by prior use of the artillery while in that service			7 91	
	40. Portion after September 12, 1814			45	
	42. ----------do----------do----------			2 28	
	45. ----------do----------do----------			2 84	
	47. Captain Buckingham commanded one of the companies of Colonel Sanford's detachment			4 40	
	51. Not properly chargeable to the United States			14 00	
	60. The first item does not appear to have been connected with any militia in service			4 47	
	64. No vouchers for the expenses charged, nor explanation with dates whereby the admissibility of any part can be judged of			114 22	

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 3—Continued.			
6	65. Expenses of erecting signal poles	$72 43		
	See foregoing remark on similar charges, (voucher 2 of account No. 3—3.) For a considerable portion there are no subordinate vouchers, and the bills produced are not receipted.			
	66. The artillery were attached to Colonel Sanford's command	2 00		
	92. Not properly chargeable to the United States	16 00		
	96. The field-piece was not then in the public service, nor is the expense shown to have been incurred in repairing a damage previously done in that service	2 00		
			$3,525 69	
	The remaining expenditures charged in Colonel Scarborough's account comprise several—			
	For the erection of barracks, (vouchers 8, 30, and 30,) amounting to	$187 00		
	For cleaning and repairing arms, (vouchers 8, 24, 32, 61, 75, and 77,) amounting to	339 90		
	For mounting cannon, repairing harness, &c., (vouchers 30, 35, 37, and 48,) amounting to	184 66		
	For transportation of military stores after the war, (vouchers 60, 67, 68, 69, 70, 72, 73, 74, 75, 76, 80, 81, 83, 88, and 93,) amounting to	249 06		
	For storage of munitions, (vouchers 60, 61, and 92,) amounting to	72 87		
	For stationery, (vouchers 10, 13, and 81, &c.,) amounting to	14 37		
	For repairing wagons, and keeping and trimming horses, &c., (vouchers 12, 55, 79, and 93,) amounting to	35 34		
	For transporting powder to Saybrook and Killingworth, December, 1814, (voucher 17)	14 00		
	For a signal pole, (voucher 26)	24 75		
	And for Colonel Scarborough's compensation	996 54		
	Which, in addition to the general cause preventing their admission, (namely, their not appearing to relate to transactions prior to September 13, 1814,) are liable to other objections, such as have been before pointed out with respect to like items.			
	Voucher 59 is for a payment of $22 7[illegible] to Major Jesse Smith for transportation of his and Adjutant Holley's baggage from Salisbury to Middleton, in October, 1814, and of the service of either of whom no evidence could be found.			
	Vouchers 28, 33, 57, 58, and 87, for advertising rules and regulations for the quartermaster's department, do not appear to be properly chargeable to the United States, $10 25.			
	Vouchers 11 and 39 show that five 18-pounders and two brass 6-pounders, with carriages, harness, and apparatus, were loaned to the State by the United States, no evidence of their return is adduced, and the charges for their transportation and reparation, amounting to $381 63, would have required to be sanctioned by the Secretary of War before they could have been allowed.			
	Account of Jared Scarborough, No 4.			
	For various expenditures		166 91	
	All after September 11, 1814, except a portion of the rent of the New Haven powder-house, which commenced on the 10th of that month, and is not, as has been previously noted, considered to be properly chargeable to the United States.			
	The expenditures, as to $110 91, were for horse keeping, &c., and commission on the sale of horses after the war; and as to $35 75 more, for freight, &c., of military stores after the war. One of the bills, amounting to $60 54, is not receipted.			
	ACCOUNT No. 4.			
	Charge extracted from an account of Ebenezer Huntington, adjutant general, for detaching militia in May, 1812, under a requisition from the President		----------	$12 00
	A voucher, describing the services performed and evidencing the payment of the amount by the State, will be necessary before the admissibility of the charge can be judged of. There do not appear to have been any Connecticut militia in actual service in 1812.			
1	William Williams, for grant of assembly in his favor, passed May session, 1813		170 99	
	The condition of the grant is represented to be the lease of a lot and magazine or powder-house in New London, from the Rev. Henry Channing; the charge in the State account expresses the amount to be for repairs and rent of a building at New London for a magazine. In neither way is the expense shown to be properly chargeable to the United States; there is, besides, no proof of any expenditure by William Williams.			
2	Ichabod Ward, for an allowance granted by the general assembly in October session, 1813, for loss on a contract for supplying rations to the militia in that year		200 00	
	Not allowable without the special sanction of the Secretary of War. A charge of $104 58, for balance of profit and loss on articles remaining on hand when the United States assumed the supply, is made in the State account No. 2; and in the account of Colonel Ward against the United States there are charges for payments to Ichabod Ward of $80 for loss on hogsheads and beef shanks, and of $165 for expenses in consequence of the troops having been unexpectedly dismissed. The report and papers connected therewith are not produced.			
3	Ebenezer Huntington, adjutant general, for time, horse hire, and expenses on various journeys in 1813, viz:			
	To Hartford, May 25 to June 2	$49 72		
	New London, August 28	12 75		
	New Haven, September 4	43 08		
	New London, September 5	7 50		
	Pomfret, September 8	14 50		
	New London, September 12	7 50		
	New London, September 16	12 75		
		$147 80		

Remarks on the accounts of the State of Connecticut—Continued.

No. of voucher.	To whom and for what paid.		Sums disallowed.	Sums suspended.
	ACCOUNT No. 4—Continued.			
3	For time, making a detachment, September 8	$12 00		
	For Russell Hubbard's bill for printing general orders and circulars	9 62		
	And for sundry postages, &c	11 23		
			$180 65	
	The account is wholly silent as to the object of the journeys, except as to the one to Pomfret, which is expressed to have been "by resolve of assembly to settle limits of companies;" a matter, it would seem, peculiarly of State concern, and the attendant expense therefore not properly chargeable to the United States. Other of the charges may be alike objectionable. An account for his pay and emoluments as adjutant general, from June 3 to July 26, 1813, certified by Governor Smith, was rendered to and paid by the United States district paymaster, S. H. Eakin; had compensation for his services from May 25 to June 2 been then considered chargeable to the United States, it is inferable that the account alluded to would have been made to include the latter period as well as the former. The bill for printing general orders and circulars is not produced, nor any evidence of its payment by the adjutant general; neither is there any description of the purport of the orders and circulars whereby the expense of printing them is manifested to be properly chargeable to the United States. Expenses unconnected with militia in actual service are not so chargeable.			
	The charges should be fully explained in order to enable the Secretary of War, whose sanction will be requisite, to decide thereon.			
6	Seth P. Staples, for services performed and expenses incurred in May and June, 1814, in carrying into effect a resolve of the general assembly, directing the commander-in-chief to take proper measures for the examination, proof, and preservation of certain iron ordnance of the State		386 80	
	A State concern, and the expense not properly chargeable to the United States.			
7	Ebenezer Huntington, adjutant general, for forming 6 companies of exempts, and filling and issuing 96 commissions to exempt officers, in May and July, 1814	$30 00		
	For his annual allowance of stationery	12 00		
	For journey and expenses to Hartford, July 29, 1814, to meet the governor, by his order, four days	27 00		
	For making a detachment in August, 1814	12 00		
	For payments to expresses	5 00		
	And for postages from December, 1813, to August, 1814	6 72		
			92 72	
	The first and second items are clearly inadmissible as against the United States. The object of the journey to Hartford must be explained before the propriety of the charge for it as against the United States can be judged of. The charges as to the expresses are unvouched, and those for postage are not shown to have been connected with the militia that were or had been in actual service. As to more than half the amount charged, the dates manifest the expense to have been incurred when there were no militia on duty.			
9	Wm. C. Bull, for an injury sustained by the blowing up of an ammunition box while firing on the enemy at Pettipauge, on the 8th April, 1814		27 92	
	The payment appears to have been made pursuant to a grant of assembly. No allowance on this charge can be made without the sanction of the Secretary of War, and to enable him to decide, the papers whereon the grant was founded will be necessary. Those produced do not show the nature of the injury, whether it was to the person or his property. A charge of $19 is made in another part of the State account on a bill in his name of the same date for powder.			
10	Adjutant General Eben. Huntington, for his services and expenses on two journeys to New London, August 17 and September 11, 1814			$20 82
	Explanation as to the objects of these journeys will be necessary before the propriety of the charges for them as against the United States can be judged of. The first is expressed to have been on business with General Cushing, the nature of which is not mentioned, and General Cushing's letter to the governor, of the 18th August, is wholly silent on the subject. The last journey, it will be seen, was taken on the day next preceding that on which the militia were withdrawn from the command of the United States officer.			
11	Walter Budington and W. S Hotchkiss, for expense of erecting a battery on the pier at New Haven, in August, September, and October, 1814		343 83	
	The grant of assembly authorized the payment of only $300, and no more appears by the receipt to have been paid by the State. The work is expressed to have been approbated by the governor, but its construction is not shown to have been authorized or sanctioned by any officer of the United States. The correspondence at the time between the governor and General Cushing, relative to the defence of New Haven, is wholly silent as to this battery. Of the sums charged, (which include $14 59 for interest, not allowable, $18 38 for spirits, presumed to be so, and $31 46 for horse and chaise hire, &c., without any specification as to the object of the journeys,) there are vouchers for the payment of no more than $162 46. The sanction of the Secretary of War will be requisite before any allowance can be made, and to obtain this explanation may be necessary.			
12	Baptist Society in Waterford, for an allowance granted by the general assembly for damage done to their meeting-house by the militia detached for the defence of New London, and who are alleged to have rendezvoused at the meeting-house		80 00	
	The papers whereon the grant was founded are not produced, and those exhibited do not show whether the damage was done before or after the 12th September, 1814, nor afford sufficient explanation whereby to judge of the admissibility of the charge if prior thereto. The building is not stated to have been used or occupied as barracks or quarters for the militia. The using one as a place for them to rendezvous or assemble at is not authorized by the regulations.			
13	Proprietors of Fort Fenwick, for the use of land and damages done by the militia stationed there in 1813, 1814, and 1815	$75 00		
	An allowance for the period anterior to the 12th September, 1814, is made of	46 80		
			28 20

22d Congress.] **No. 515.** [1st Session.

STATEMENT OF CONTRACTS FOR CANNON AND SHOT MADE FROM 1820 TO 1832.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 25, 1832.

DEPARTMENT OF WAR, *February* 24, 1832.

SIR: In compliance with the resolution of the House of Representatives of the 16th instant, directing the Secretary of War to lay before that House "a statement of the contracts, and with whom made, for cannon and shot, and the prices paid for each, from the year 1820 to the present time," I have the honor to transmit a report of the lieutenant colonel of ordnance, which affords the information required.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

Hon. ANDREW STEVENSON, *Speaker of the House of Representatives.*

ORDNANCE OFFICE, *Washington, February* 24, 1832.

SIR: In compliance with the resolution of the House of Representatives of the 16th instant, directing "that the Secretary of War be directed to lay before this House a statement of the contracts, and with

whom made, for cannon and shot, and the price paid for each, from the year 1820 to the present time," which was referred to this office, I have the honor to transmit herewith a statement which contains the information desired.

I have the honor to be, sir, respectfully, your obedient servant,

G. BOMFORD, *Brevet Colonel, on Ordnance Service.*

Hon. LEWIS CASS, *Secretary of War.*

ORDNANCE OFFICE, *Washington, February* 24, 1832.

22D CONGRESS.] No. 516. [1ST SESSION.

APPLICATION OF INDIANA FOR A MORE PERFECT AND UNIFORM ORGANIZATION OF THE MILITIA OF THE UNITED STATES.

COMMUNICATED TO THE SENATE FEBRUARY 27, 1832.

A JOINT RESOLUTION relative to a more perfect organization of the militia of the several States.

Be it resolved by the general assembly of the State of Indiana, That our senators in Congress be, and they are hereby, instructed, and our representatives requested, to use their exertions, both by their votes and influence, to procure the passage of a law providing for a more perfect and uniform organization of the militia of the several States of the Union, in pursuance to the Constitution of the United States.

Resolved, That his excellency the governor of this State be directed to transmit to each of our senators and representatives in Congress a copy of the foregoing resolution; also a copy to the governors of other States in the Union, with a view that the same may be submitted to the consideration of their respective legislatures.

H. H. MOORE,
Speaker of the House of Representatives.
DAVID WALLACE,
President of the Senate.

Approved January 26, 1832.

N. NOBLE.

22D CONGRESS.] No. 517. [1ST SESSION.

ON THE EXPEDIENCY OF ERECTING FORTIFICATIONS ON THE PENOBSCOT RIVER AND BAY, IN MAINE.

COMMUNICATED TO THE SENATE MARCH 1, 1832.

IN THE SENATE OF THE UNITED STATES, *February* 27, 1832.

On motion of Mr. Sprague—

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of providing by law that fortifications shall be erected and completed, as soon as may be, on the Penobscot river and bay, sufficient for the protection thereof.

Attest. WALTER LOWRIE, *Secretary.*

The committee direct it to go to the Hon. Secretary of War for his opinion and observations.

THOMAS H. BENTON.

DEPARTMENT OF WAR, *March* 1, 1832.

SIR: In answer to your note requesting my opinion in regard to "the expediency of providing by law that fortifications shall be erected and completed, as soon as may be, on the Penobscot river and bay sufficient for the protection thereof," I have the honor to enclose a report of General Gratiot, chief engineer, which contains the views of the department upon the subject.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

Hon. THOMAS H. BENTON, *Chairman of the Military Committee, Senate.*

ENGINEER DEPARTMENT, *Washington, March* 1, 1832.

SIR: On the subject of the resolution of the Senate, relative to fortifying Penobscot river, which was referred by you to this office, I have the honor to report that, in projecting a system of defence for the coast of Maine, it has been found impracticable to provide for fortifying any considerable proportion of the numerous good harbors with which that coast abounds; and it was therefore determined by the board of engineers to recommend fortifying in the most careful manner that harbor which should appear to be best situated as a depot and rendezvous for a fleet, and which would thus be not only most useful to ourselves, but the greatest object of cupidity to an enemy. Such a harbor is found on Mount Desert island, and to this point it is proper that the first expenditures for fortifying the coast of Maine should be applied. The suspension for some years past of topographical surveys for military purposes has prevented the completion of that of Mount Desert island, and consequently the plans of defence are not prepared. Application

has, however, been made to Congress during the present session for means to continue those surveys, and should they be granted, this will be one of the first in order.

The defence of other secondary points on this coast it will also be necessary to provide for, and among them, as one of the most importance, is that of Penobscot river; but the bay is so extensive, and provided with so many good anchorages, that the cost of defending it by permanent fortifications is altogether disproportioned to the present importance of the object. It is therefore proposed to protect the commerce of the river and bay by works placed at the Narrows, opposite Bucksport, the lowest point on the river at which this object can be readily effected. With regard to the urgency of constructing these works, it is thought that, considering their relative importance compared with that of many others not commenced, the board of engineers has with propriety classed them among those to be constructed at a remote period, as will appear by reference to their revised report and to the table of works annexed to my annual report at the commencement of this session.

I am of opinion, therefore, that it is not expedient to "provide by law that fortifications shall be erected and completed, as soon as may be, on the Penobscot river and bay." I will add, too, that the want of disposable officers of the corps of engineers would, under any circumstances, make it inexpedient to increase the number of works under construction beyond what is suggested in my general report.

Respectfully submitted.

C. GRATIOT, *Brigadier General.*

Hon. LEWIS CASS, *Secretary of War.*

22D CONGRESS.] **No. 518.** [1ST SESSION.

ON THE EXPEDIENCY OF FUNRISHING THE MILITIA, WHEN IN THE SERVICE OF THE UNITED STATES, WITH BLANKETS AND CLOTHES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 8, 1832.

Mr. DRAYTON, from the Committee on Military Affairs, to whom was referred a resolution of this House instructing them "to inquire into the expediency of furnishing blankets and clothes to the militia when engaged in the service of the United States," reported:

That they deem it inexpedient to provide that the militia, when in the service of the federal government, should be furnished by it with clothes; but they are of opinion that the government ought to furnish them with blankets whenever they shall be in its service for a continued period of six months. They have therefore directed their chairman, in order to carry their intention into effect, to prepare an amendment to be added to "a bill to provide more effectually for the national defence by organizing, arming, and establishing a uniform militia throughout the United States, and to provide for the discipline thereof," which has been read twice and committed to the Committee of the Whole House on the State of the Union.
